U. S. Government

RESEARCH REPORTS

January 15, 1960
Vol. 33. No. 1

. . . A monthly listing of Government research reports available to industry . . .

UNIVERSITY OF MICHIGAN
FEB 1960
ENGINEERING LIBRARY

In this issue:

Failure in Temperature Regulation During Progressive Dehydration

Low Surfacant Content Amphoteric Cleaners

Symposium on Electronics Maintenance

Power Generation and Distribution

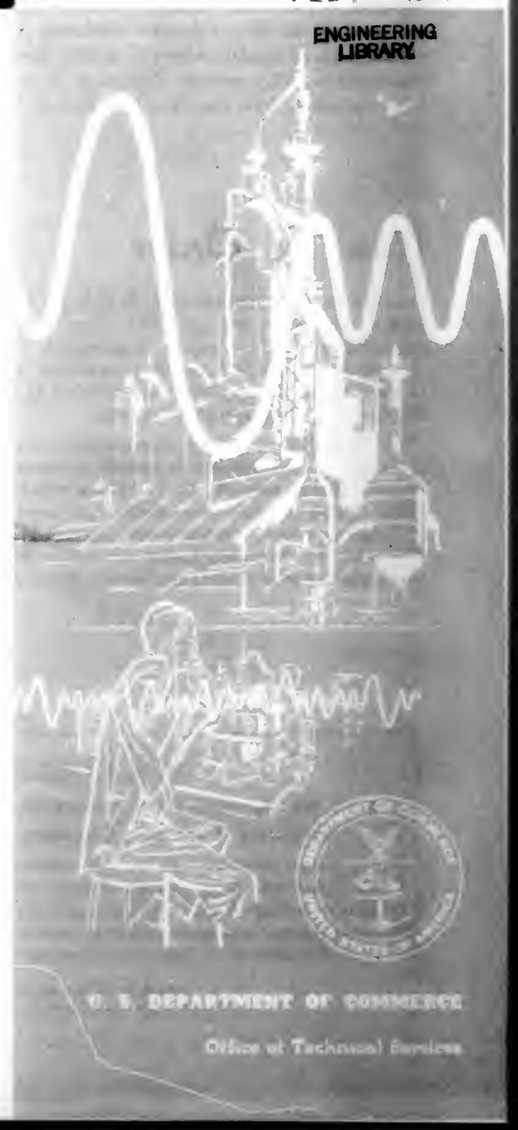
Cryogenic Materials Data Handbook

Perceptron Simulation Experiments

An Emission Spectrographic Method for the Analysis of Zinc-Base Die Castings

The Chemistry of Boron Hydrides and Related Hydrides

Complete list of printed reports begins on page 1



U. S. DEPARTMENT OF COMMERCE
Office of Technical Services

The PB Reports . . .

announced in this publication have just been released, usually by agencies of the U. S. Government, for dissemination to the public. In most instances they result from Government or Government-sponsored research.

The Office of Technical Services is responsible, under Public Law 776, 81st Congress, for the collection and distribution of these technical reports in the interest of American science and industry.

The more important reports are reprinted for sale to the public by OTS. Many of the reports are so specialized that the demand for them does not warrant reproduction of printed copies; originals of these documents are deposited at the Library of Congress. There they may be inspected in the Annex Reading Room, or copies may be ordered from the Library in either photocopy or microfilm.

PB reports of special interest to smaller businesses are abstracted in OTS's monthly *Technical Reports Newsletter*, available from the Superintendent of Documents, Washington 25, D. C., at $1 a year domestic, $1.50 foreign.

Since 1945 thousands of business firms have used PB reports in their research programs. These reports now constitute one of the world's largest collections of non-confidential technical information, numbering over 250,000 items. OTS has published catalogs of related reports in more than 300 areas of industrial interest. For further information relative to any of its activities, you are invited to write OTS, U. S. Department of Commerce, Washington 25, D. C.

Except to the extent indicated by acknowledgment of authorship, OTS does not edit PB reports, nor does it accept responsibility for the information and conclusions contained in them. If copyrighted material appears, permission for its use should be requested from the copyright owners. Any national security restrictions that may have applied to these reports have been removed. Patents may cover the subject matter of any report, and the reader is advised to make patent searches before developing applications based on the reports.

How To Order

ALWAYS USE COMPLETE TITLE AND PB NUMBER of each report ordered. The letter "s" accompanying some PB numbers means "supplement," "t" means "translation," and "r" means a partial or complete revision. These letters should be included as part of the PB number. Prepayment is required.

TO ORDER FROM LC • Address your order to Library of Congress, Photoduplication Service, Publications Board Project, Washington 25, D. C. Make check or money order payable to Chief, Photoduplication Service, Library of Congress. State whether report is desired in microfilm or photocopy. Microfilm copies are in 35 millimeter film and require special reading equipment; if you do not have such a machine you may be able to use one at a library in your area.

TO ORDER FROM OTS • Address your order to Office of Technical Services, U. S. Department of Commerce, Washington 25, D. C. Make check or money order payable to OTS, Department of Commerce. Reports available from OTS may also be ordered through Department of Commerce field offices.

TO ORDER FROM OTHER SOURCES • When an agency other than OTS or LC is the source, use the full address included in the abstract of the report. Make check or money order payable to that agency.

U. S. GOVERNMENT RESEARCH REPORTS

U. S. DEPARTMENT OF COMMERCE
Frederick H. Mueller, Secretary

OFFICE OF TECHNICAL SERVICES
John C. Green, *Director*

Issued monthly. Annual subscription $6 ($3 additional for foreign mailing). Single copy 60 cents. In the U. S. make remittance payable to Superintendent of Documents and mail either to a Department of Commerce field office or to Superintendent of Documents, U. S. THEORETICAL ANALYSIS OF THE PAR-SCOPE: AN OSCILLOSCOPE DISPLAY FOR WEATHER RADARS, by Edwin Kessler, III. July 59, 37p. 20 refs. Instrumentation for Geophysics and Astrophysics no. 12; AFCRC-TR-59-244.
Order from OTS $1.00 PB 161 100

The PAR-Scope, an oscilloscope display for use with pulsed radars and fluctuating targets, uses gated averaged amplitude information as one coordinate and azimuth or elevation as the other coordinate; its display is a profile of the average reflectivity of the target for the radar waves. The PAR-Scope is operated with a scanning antenna, permitting simultaneous operation with the Range-Height Indicator or Plan-Position display. Such combinations provide means for rapid three-dimensional quantitative mapping of average reflectivity in the vicinity of the radar, and should be of importance in studies seeking to relate the distributions of radar weather echoes to the air motions. Theoretical analysis of PAR-Scope performance considers the response of the scanning system to spatial variations of average reflectivity and to the rapid fluctuations characteristic of weather echoes. It is shown that reflectivity distributions of major interest can be easily represented to an accuracy within 1 db of that implicit in the radar calibration.

Harvard Coll. Observatory [Cambridge, Mass.]
THE OPERATION OF A SOLAR OBSERVATORY AT SACRAMENTO PEAK, NEW MEXICO, by Donald H. Menzel, Henry J. Smith and Barbara Bell. Final rept. on Contract AF 19(604)146., 22 Dec 58, 34p. 55 refs. AFCRC TR-58-288.
Order from LC mi$3.00, ph$6.30 PB 138 810

Miscellaneous Operations included the improving of the photographic laboratory, devising of new processing techniques, and general collaboration on standardization of photographic procedures. Considerable new work has been done in the field of optical engineering, toward the long-range improvement of existing equipment and the construction of new accessories. Some attention given to the problem of automatic data reduction. Solar-Terrestrial Correlations studies have been carried on relative to geomagnetism, corona, sunspots, flares, and various terrestrial ionospheric effects. Theoretical developments in magnetohydrodynamics, the dynamics of ionized media, collision processes and shock waves, torsional oscillations and solar magnetic fields have simplified and clarified many important subjects. Another important theoretical study has been the development of new techniques for calculating the intensities of spectral lines of complex atoms.

Lowell Observatory, Flagstaff, Ariz.
THE COLOR-MAGNITUDE DIAGRAM OF THE PLEIADES CLUSTER II, by H. L. Johnson and R. I. Mitchell. Final rept. on Contract Nonr-1674(00) [1958] 17p. 13 refs.
Order from LC mi$2.40, ph$3.30 PB 138 610

Two or three-color photographic and photoelectric photometry of virtually all of the known members of the Pleiades cluster is given. The photographic photometry was done on plates taken with the 13-inch telescope, while the photoelectric work was done with the 21-inch and 42-inch reflectors of the Lowell Observatory. We believe that a number of the stars that were previously thought to be members of the Pleiades are actually not members. We find a total of 262 members and 27 probable brighter than $V = 16$. No white dwarfs were found; they would have been if they were brighter than $M_V = 11.8$. A sudden increase in the width of the main sequence is observed at $V = 12.0$. This scatter may be associated with the probable fact that the fainter stars

are still in the process of gravitational contraction. A "flare" of one faint Pleiades star was observed, and five other faint stars are thought also to be "flare" stars. It is suggested that the "flare" activity might be connected with the process of gravitational contraction of young late-type stars.

Manchester U. (Gt. Brit.).
RESEARCH ON MOON ECHO PHENOMENA, by J. V. Evans. Final technical rept. for 1 May 56-1 May 59 on Contract AF 61(514)947. [1959] 33p. 23 refs. AFCRC-TR-59-184.
Order from LC mi$3.00, ph$6.30 PB 143 520

The research work summarized is concerned with the study of radio reflections from the moon. Results have been obtained both at 100 Mc/s and 120 Mc/s which indicate that at these frequencies the moon behaves as a quasi-smooth reflector such that 50% of the returned power is reflected from a region at the centre of the visible disc having a radius of about 1/10th of the moon's radius. The echoes show long period fading which has been attributed to the magneto-ionic effect in the earth's ionosphere. By observing this fading on two close spaced frequencies it has been possible to obtain measures of the total electron content of the ionosphere. These results indicate that for most of the time there are three times the number of electrons above the height of the critical frequency to the number below. Hence the ionosphere must extend to about 1,000 kms. above the surface of the earth.

Minnesota U. School of Physics, Minneapolis.
AURORAL X-RAYS, COSMIC RAYS AND RELATED PHENOMENA DURING THE STORM OF FEBRUARY 10-11, 1958, by J. R. Winckler, L. Peterson and others. Nov 58, 36p. 12 refs.
Order from LC mi$3.00, ph$6.30 PB 143 418

Balloon observations were made during the auroral storm of February 10-11, 1958 at Minneapolis. Strong x-ray bursts in two groups were detected. The groups appeared coincident with two large magnetic bays, with strong radio noise absorption, and with the passage across the zenith of a very large array of auroral luminosity. From the x-ray intensity and measured energies an electron current of 0.6×10^6 electrons/cm^2/sec is present. These electrons ionizing the upper D-layer account for the increased cosmic noise absorption. The x-rays themselves are 1000 times less intense and do not provide sufficient ionization. Visual auroral forms during this storm are reported to have lower borders at the 200-300 km level. There is thus a difficulty in bringing the electrons to the D-layer without an accompanying visible aurora. A cosmic ray decrease accompanied the storm and was observed to be from 4% to 6% at sea level, 21% in the balloon altitude ionization, and 15% in total energy influx at 55° geomagnetic latitude. Compared to the great intensity of the magnetic and auroral phenomena in this storm, the cosmic ray modulation is not exceptionally large.

Northwestern U., Evanston, Ill.
A STUDY OF THE STARS IN THE ORION CLUSTER (1) [AND] A STUDY OF THE GALACTIC CLUSTER h PERSEI (2) by K. Aa. Strand. Final rept. on Investigation and Research in Astronomy, Contract Nonr-2115(00). Oct 58, 5p.
Order from LC mi$1.80, ph$1.80 PB 143 707

Brief comments were made on the several directions of research.

Ohio State U. Research Foundation, Columbus.
RELATIVE SOLAR INTENSITY OBSERVATIONS AND ATMOSPHERIC TRANSMISSION OF STARLIGHT, by Roger Hosfeld, George J. Neilson, and J. Allen Hynek. Final rept. on Contract AF 19(604)2039. 1958, 22p. 1 ref. RF proj. 717; AFCRC TR-58-259.
Order from LC mi$2.70, ph$4.80 PB 139 169

Under this contract a photoelectric photometer was developed for measuring the surface brightness of the sun by comparison with the intensity of stars during the daytime. A stepwise method of decreasing the solar signal was incorporated into the procedure. The signal reduction was accomplished by the use of objective and focal plane diaphragms, optical scattering, and electronic attenuation, with each step subject to calibration. The photometer also permits photoelectric examination of solar surface details of the order of 3 seconds of arc in diameter. Stellar scintillation studies carried out during this investigation were primarily concerned with the variations in scintillation signals observed through a rectangular aperture at different orientations in azimuth, and their relationship to wind direction and velocity in the earth's upper atmosphere. A compact, specialized telescope developed for this purpose utilized a rotating rectangular section of an off-axis parabolic mirror of 24-inch focal length.

BEHAVIORAL SCIENCES

Aero Medical Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
TRACKING PERFORMANCE AS A FUNCTION OF FEEDBACK SPECIFICITY, by Darwin P. Hunt. Rept. on Criteria for the Design and Arrangement of Displays. Mar 59, 39p. 8 refs. WADC Technical rept. 58-584; AD-212 311.
Order from OTS $1.00 PB 161 070

The research reported herein was conducted to determine (a) the relationship between complex compensatory tracking and the specificity of displayed error, i.e., the number of categories of error information, and (b) the extent to which this relationship is influenced by task difficulty and amount of practice. Tracking error and control motion were the criterion measures. The results suggest that (a) linear increments in the number of categories of error information result in a negatively accelerated reduction in the tracking error; (b) as the operator becomes more proficient, the superiority of the greater number of categories is reduced; (c) the effects of the number of categories of information on control motion depends upon the difficulty of the task; and (d) although the amount of control motion generally decreases as the operator becomes more proficient, the magnitude of this decrease is greater for the "easy" task than for the "difficult" task.

School of Aviation Medicine, Randolph AFB, Tex.
CHANGES IN PLASMA CORTICOSTEROIDS AND BICARBONATE AS A RESULT OF PILOTING SUPERSONIC AIRCRAFT, by Henry B. Hale, James P. Ellis and Clyde H. Kratochvil. Apr 59, 5p. 10 refs. Rept. 59-61.
Order from LC mi$1.80, ph$1.80 PB 143 742

While flying high-speed military aircraft, pilots frequently hyperventilate to a degree sufficient to induce marked alkalosis. Psychogenic factors are thought to be responsible for the hyperventilation. Comparison was made of pre- and postflight plasma bicarbonate (determined titrimetrically) and corticosteroid levels (Sweat's technic) for 20 instructor pilots and 47 student pilots flying F-100 aircraft for 50 minutes. No differentiation of students and instructors was possible on the basis of either pre-or postflight values; therefore, the data for the two groups were combined. The plasma bicarbonate value following the flight was $1.1 \pm .24$ mEq./liter (mean $\pm$S.E.) lower than before the flight. Free 17-hydroxycorticosterone was increased $5.8 \pm .70$ μg./100 ml., while conjugated 17-hydroxycorticosterone increased $5.7 \pm .75$. The free corticosterone-like fraction increased $3.1 \pm .34$ μg./100 ml., while the conjugated corticosterone-like fraction increased $3.2 \pm .35$. Each of these changes was significantly different from zero ($P < .001$). No statistically significant correlation was found between the fall in bicarbonate and any of the increases in steroid fractions.

Personnel and Training

Human Resources Research Office, George Washington U., Washington, D. C.
THE DEVELOPMENT OF JOB DESCRIPTIONS FOR NIKE AJAX BATTERY OFFICERS, by Charles L. Darby, William F. Brown and others. Rept. on [Contract DA 49-106-qm-1]. Apr 59, 81p. Technical rept. 54.
Order from LC mi$4.80, ph$13.80 PB 143 565

This study is the first stage of a research project designed to determine the level of skill and knowledge required of officers assigned to NIKE AJAX batteries, so that courses of instruction can be scientifically devised to train officers for maximum effectiveness. Job descriptions were developed for the positions of Battery Commander, Battery Executive Officer, Integrated Fire Control Platoon Leader, and Launcher Platoon Leader. Information was obtained from experienced battery officers, based on the job descriptions, through check-list responses indicating the training needs associated with selected activities. The activities judged most important for all four officer positions were: serving as battery control officer, insuring equipment readiness, and training and evaluating operators.

Institute of Personality Assessment and Research, U. of California, Berkeley.
THE USE OF TRAIT RATINGS IN AN ASSESSMENT OF 100 AIR FORCE CAPTAINS, by Donald G. Woodworth and Donald W. MacKinnon. Rept. on Contract AF 18(600)08. Sep 58, 44p. 17 refs. WADC-TN-58-64; AD-202 845.
Order from LC mi$3.30, ph$7.80 PB 143 386

As part of a project for developing officer assessment techniques, 30 rating dimensions were used by 10 raters to record their psychological evaluations of 100 captains. A cluster analysis of these ratings yielded three reliable cluster scores. Analyses indicated that the three cluster scores could be defined as measuring general effective intelligence, personal soundness and assessability, and effective leadership. The three cluster scores did not correlate significantly with available Air Force criterion evaluations of the subjects. When the subject officers were differentiated on the basis of being rated or nonrated, it was found that the correlations between cluster scores and two of the criteria rose to levels which were significant within the rated group. This was interpreted as an indication that differentiation on the criterion side of the relationship is needed for significant advancement toward an understanding of the Air Force officer personnel evaluation variables, or the relating of psychologically meaningful measures to these criteria.

Naval Personnel Research Field Activity, San Diego, Calif.
DEVELOPMENT AND STANDARDIZATION OF WOMEN'S MECHANICAL TEST FORM 6W, by Bernard Rimland and John H. Steinemann. Dec 58, 18p. 3 refs. BuPers Technical Bulletin 58-14.
Order from LC mi$2.40, ph$3.30 PB 143 254

MECH 6W represents an improvement over the previous test used for Waves in several respects. The raw score mean on the 100 item MECH 6W is 49, as compared with 36 on the previous test. Only four per cent of Waves tested fell below the chance level on MECH 6W as compared with 22 per cent on the previous test. The standard deviation has been raised from 8.11 to 10.94. The correlation between MECH 6W and the previous test is .80 for a sample of 300 Waves and .91 for a sample of 412 male recruits. (These coefficients are to some extent inflated by an overlap of items in the two tests, however). Adoption of MECH 6W for the testing of Wave recruits appears warranted.

Naval Personnel Research Field Activity, San Diego, Calif.
EFFECT OF EXTRANEOUS NUMERICAL INFORMATION ON THE U. S. NAVY ARITHMETIC TEST, by Bernard Rimland. March 59, 17p. 5 refs. BuPers Technical Bulletin 59-4.
Order from LC mi$2.40, ph$3.30 PB 143 252

The subtests containing extraneous information tended to be less homogeneous (i.e., to have smaller variances, Kuder-Richardson reliabilities and smaller item-test correlation coefficients) than the subtests composed of the same items without extraneous information. The findings of this research do not support

the inclusion of extraneous information in arithmetic reasoning items if a relatively pure and homogeneous measure of arithmetic reasoning is desired, as is the case in the Navy Arithmetic Test.

Naval Personnel Research Field Activity, San Diego, Calif.
EFFECTS OF TIME LIMITS AND OF "RIGHT ANSWER NOT GIVEN" IN THE U. S. NAVY ARITHMETIC TEST, by Bernard Rimland. May 59, 18p. 6 refs. BuPers Technical Bulletin 59-5.
Order from LC mi$2.40, ph$3.30 PB 143 253

The use of "right answer not given" as a possible response to the arithmetic reasoning items was not found superior to the use of five numerical choices. The use of "right answer not given" as a possible response increased the difficulty of the test to a slight (but statistically significant) extent. No evidence was found indicating that any combination of 10, 12 or 14 minute time-limits for the computation subtest and 30, 35 or 40 minute time-limits for the reasoning subtest was better than the original operational combination of 12 and 35 minutes. The insensitivity of the Arithmetic Test to reductions of about seven minutes consideration should be given to reducing the time limits, providing that later research shows this to be possible with no reduction in validity.

Naval Personnel Research Field Activity, Washington, D. C.
VALIDITY OF NON-COGNITIVE TESTS AT NUCLEAR POWER SCHOOL (SUBMARINE) by David Kipnis and Albert S. Glickman. May 59, 16p. 1 ref. BuPers Technical Bulletin 59-6.
Order from LC mi$2.40, ph$3.30 PB 143 251

The results obtained with the experimental tests indicate that they may be valuable supplements to current cognitive predictors of NP school performance. If confirmed by additional research already in progress, two potential benefits are in prospect: (a) it will be possible to increase the accuracy of selection, improve quality of manpower input, and increase the level of performance in programs such as these; or (b) it will be possible to increase the pool of men capable of performaing satisfactorily while maintaining the standards that are considered satisfactory at present.

Navy Experimental Diving Unit, Naval [Weapons Plant] Washington, D. C.
MECHANICAL RESPIRATOR TECHNIQUES IN THE EVALUATION OF SCUBA, by G. M. Janney and W. F. Searle, Jr. 30 June 58, 46p. Research rept. 6-58.
Order from LC mi$3.30, ph$7.80 PB 139 171

A "mechanical respirator" has been and is currently used in research and evaluation projects at the Experimental Diving Unit to determine breathing resistance in breathing apparatus. The equipment and the procedure followed when using it are described. The accuracy and the usefulness of the data obtained through the use of the mechanical respirator are discussed.

Personnel Lab., Wright Air Development Center, Lackland AFB, Tex.
FEASIBILITY OF A METHOD FOR ESTIMATING SHORT-TERM AND LONG-TERM EFFECTS OF POLICY DECISIONS ON THE AIRMAN PERSONNEL SYSTEM, by John W. Merck and Frank B. Ford. June 59, 21p. 1 ref. WADC-TR-59-38; AD-217 079.
Order from LC mi$2.70, ph$4.80 PB 143 689

This report describes and indicates the utility of a model which simulates the flow of airmen through the Air Force personnel system under a given set of policies. This model makes it possible to estimate, with as much accuracy as is available in the input information, the effects of that set of policies at future points in time. These effects may be gauged in terms of the future distribution of grade levels, career fields, or other pertinent information which may be built into the model.

Personnel Lab., Wright Air Development Center, Lackland AFB, Tex.
OCCUPATIONAL CLASSIFICATION IN SOME MAJOR GOVERNMENT AGENCIES, by Joseph E. Morsh and Forrest R. Ratliff. WADC-TN-59-37; AD-212 540.
Order from LC mi$4.80, ph$13.80 PB 143 690

On the basis of information obtained during personal visits and conferences, current practices in occupational classification in some major military and civilian agencies of the Federal Government are reported. The following agencies are included: Department of the Air Force, Bureau of Naval Personnel in the Department of the Navy, the Adjutant General's Office in the Department of the Army, the Bureau of Labor Statistics and the Bureau of Employment Security in the Department of Labor, the Census Bureau in the Department of Commerce, and the United States Civil Service Commission. The prime purpose of the survey was to generate hypotheses for the furtherance of occupational classification research in the Air Force. In a concluding section of the report the present state-of-the-art of occupational classification is discussed and research implications are suggested.

Personnel Research and Development Corp., Cleveland, Ohio.
THE INFLUENCE OF RATING SCALE CONSTRUCTION UPON THE CHARACTERISTICS OF RATINGS RENDERED. Rept. on Contract Nonr-2221(00). Oct 58, 136p. 5 refs.
Order from LC mi$6.90, ph$21.30 PB 143 703

Four rating scale formats were used by the first and second line supervisors of four groups of clerical workers. The formats varied from unstructured to highly structured. The format incorporating trait titles and behavioral descriptions of scale steps demonstrated marked superiority over both more and less structured formats. This format demonstrated higher interrater reliability, less halo and less leniency than did the other formats. Variability was approximately equal for all formats. The study will be reported in four parts. Part I will report respective reliability, leniency, halo, and variability. Part II will be concerned with the characteristics of the eight scales as

they are influenced by the several formats. The comparisons of these self ratings with ratings made by superiors will be presented in Part III. To verify the results of the basic study, truncated versions of Formats I and III were used in two clerical and one manufacturing situation in industrial organizations. These results will be presented in Part IV.

School of Aviation Medicine, Randolph AFB, Tex.
THE PRESENT STATUS OF PHYSICAL FITNESS IN THE AIR FORCE, by Bruno Balke and Ray W. Ware. May 59, 10p. 8 refs. Rept. 59-67.
Order from LC mi$1.80, ph$1.80 PB 143 374

Work capacity, a sensitive and realistic measure of "physical fitness," was determined on more than 500 military and civilian Air Force personnel for the purpose of collecting material for the standardization of physical performance capacity. A treadmill test permitted an evaluation of results in physical as well as in physiologic terms. On the basis of results, physiologic considerations, and observations of men at various stages of physical training, an arbitrary rating scale of work capacity is suggested. According to this pilot study 42 percent of the test population had to be rated as "poor" and 40 percent as "fair." Only 18 percent could be considered as having a "good" or better physical condition. Sedentary living habits, more than aging or other factors, were apparently the main antagonists of good physical fitness.

Washington U., Seattle.
DIFFERENTIAL PREDICTION OF NAVAL SCIENCE AND APTITUDE GRADES AT THE UNIVERSITY OF WASHINGTON FROM BATTERIES OF FOURTEEN AND OF THREE VARIABLES, by Thomas D. F. Langen. Rept. on Predictor Selection Techniques, Contract Nonr-477(08). Oct 58, 95p. 41 refs.
Order from LC mi$5.40, ph$15.30 PB 143 714

The Washington Pre-College Differential Grade Prediction Battery is an effective instrument for the selection of Naval ROTC students for either the subsidized or the non-subsidized programs. It is slightly superior to either of the instruments now used by the Navy Department in selecting such students. The results of this exploratory study are such as to warrant further study on a larger scale.

Aero Medical Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
TRANSFER OF TRACKING PERFORMANCE AS A FUNCTION OF A DELAY BETWEEN THE CONTROL AND THE DISPLAY, by Marvin Levine. Rept. on Learning and Transfer in Reference to Training Aid Design, Contract AF 18(600)50. Nov 53, 33p. 13 refs. WADC Technical rept. 53-237.
Order from LC mi$3.00, ph$6.30 PB 138 912

Using a one-dimensional, compensatory tracking task, an investigation was made into the way tracking performance transfers as a function of changes in an exponential delay inserted between the operator's control and his display. The research was divided into two studies. The first investigated performance on a transfer task containing a 3.000 second exponential delay following training with delays of either .015, .150, .900, 2.100, or 3.000 seconds in the system. The second investigated performance on a transfer task containing a delay of .015 seconds following training with delays of either .015, .900, or 3.000 seconds in the system. The results show that (a) when operators transfer to the longest delay, training with any of the shorter delays is equally efficient; (b) when operators transfer to the shortest delay, training efficiency decreases with decreasing similarity of the training and transfer situations.

Applied Mathematics and Statistics Lab., Stanford U., Calif.
A LINEAR LEARNING MODEL FOR A CONTINUUM OF RESPONSES, by Patrick Suppes. Technical rept. no. 19 on Contract Nonr-255(17). 18 Oct 58, 29p.
Order from LC mi$2.70, ph$4.80 PB 143 018

The aim of the present investigation is to formulate and analyze a linear model for simple learning with a continuum of responses. The analogous model for a finite number of responses has been extensively studied both experimentally and mathematically.

Arizona State Coll., Tempe.
FIRST-ORDER CONDITIONING OF MEANING AND THE PARALLEL CONDITIONING OF A GSR, by Arthur W. Staats, Carolyn K. Staats, and Hugh L. Crawford. Technical rept. no. 6 on Psychological Processes in Language Communication, Contract Nonr-2305(00). Sep 58, 9p. 13 refs.
Order from LC mi$1.80, ph$1.80 PB 143 696

A GSR was conditioned to the word LARGE, as it was presented in a list of words to the Ss, using shock and noise as UCS. The word BIG was also presented at the end of the list to test for generalization of the conditioned GSR. Generalization did not occur. Subsequent to this conditioning procedure, the evaluative meaning of LARGE, and its synonym BIG were measured using an appropriate semantic differential scale. Negative evaluative meaning had been conditioned to LARGE. This meaning did not generalize to BIG. Thus, the same procedure which conditioned a GSR to a word also conditioned negative evaluative meaning to the word--but in neither case did the conditioned response generalize to a synonym word. It was found, in addition, that the intensity of the conditioned GSR was significantly correlated with the intensity of the conditioned meaning response. The results support the theory that word meaning consists of responses which are classically conditioned to a word through systematically pairing it with certain aspects of the environment. Alternative interpretations of the relationship of the GSR and meaning response were discussed. It was pointed out that further studies utilizing the methodology of the present experiment might shed light on the unanswered questions raised by the discussion. In general it was felt that the present procedure would be useful in establishing the principles of the learning of word meaning.

Arizona State Coll., Tempe.
MEANING AND (M): CORRELATED BUT SEPARATE, by Arthur W. Staats and Carolyn K. Staats. Technical rept. no. 7 on Psychological Processes in Language Communication, Contract Nonr-2305(00). Oct 58, 12p. 17 refs.
Order from LC mi$2.40, ph$3.30 PB 143 391

Two approaches to meaning were summarized and contrasted. Word meaning may be considered to be the verbal responses made to the word, or word meaning may be a conditioned response, part of the response elicited by the object denoted by the word. The present paper described the latter as meaning and distinguished word meaning from a word's verbal associates. The correlation between intensity of meaning and verbal associate measures which has been reported was seen to be a result of the artifact that the same operation strengthens both: the more often a word is paired with its associates the stronger the connections between them. In addition, the meaning of the associates is conditioned to the word. This view was supported by showing that the associates of a word have the same meaning as the word. The two approaches to meaning were discussed further and it was concluded that words could not gain meaning through verbal associations per se. Originally, it is through pairing words with systematic aspects of the environment that their meaning is gained. The meaning acquired in this process may later be conditioned to other words.

Army Ordnance Human Engineering Lab., Aberdeen Proving Ground, Md.
THE MOTIVATIONAL EFFECTS OF REST PERIODS ON PERFORMANCE, by Samuel A. Hicks. Aug 59, 21p. Technical memo. no. 8-59.
Order from LC mi$2.70, ph$4.80 PB 143 532

This study investigated the effects of different rest schedules on the performance of a heavy rotary task. The schedules used were: (1) Fixed Interval (FI) - rest after a given amount of time (2) Fixed Ratio (FR) - rest after a given number or responses. Forty enlisted men were used as subjects for this experiment. The results indicate that for the type of task under consideration here the FR schedule elicits greater total output than does the FI schedule. There are indications that this effect may be a direct result of the work load or physical strength of the operator. Variables requiring further investigation are cited in this report.

Colorado U., Boulder.
SOCIAL AND PERSONALITY FACTORS IN ATTITUDE CHANGE, by O. J. Harvey. Annual technical rept. on Contract Nonr-2149(02). Nov 58, 14p.
Order from LC mi$2.40, ph$3.30 PB 143 462

Connecticut Coll., New London.
CONFORMING BEHAVIOR AND PERSONALITY VARIABLES, by Mortimer H. Applezweig and George Moeller. Technical rept. no. 8 on Contract Nonr-996(02). Apr 58, 25p. 25 refs.
Order from LC mi$2.70, ph$4.80 PB 138 603

Conforming behavior of 41 college freshman women, as measured in an Asch situation, was compared with 38 scales of the Edwards Personal Preference Schedule, the Gough California Psychological Inventory, and the Gordon Personal Profile. It was found that only the Abasement scale of the Edwards, and possibly the Sociability scale of the Gordon were able to generate significant relationships with a kind of behavior which should have been predictable from some 12 to perhaps 27 of the 38 measures used. Excepting the five scales of Gough's 18, on the basis of questionable comparability of samples, a total of 33 measures were correlated with conformity behavior. Only two were found to have construct validity for this type of social conformity criterion.

Educational Testing Service, Princeton, N. J.
EMPIRICAL TRIAL OF METHODS FOR ESTIMATING THE DISTRIBUTION OF TRUE SCORES, by Frederic M. Lord. Rept. on Contract Nonr-2214(00). Oct 58, 16p. 2 refs.
Order from LC mi$2.40, ph$3.30 PB 143 698

For each of two groups of examinees, the third and fourth moments of the distribution of true scores on a French achievement test are estimated by two different methods. One set of estimates results directly from the classical assumptions that the errors of measurement are distributed normally and independently of true score. The other set of estimates is obtained under the "item-sampling" model. A check is obtained on the item-sampling model by (a) applying it to the two groups separately, (b) applying it to the same groups combined. Pearson type-I curves are fitted to the estimated moments and the resulting estimated frequency distributions of true scores are drawn. The two methods of estimation are found to give almost the same results for the four-semester group, but somewhat different results for the eight-semester group. Theoretical considerations show that the two methods must give nearly the same results when a test is highly reliable. A manageable formula displaying the relation between the two methods of estimation in the case of the third true-score moment is presented.

Educational Testing Service, Princeton, N. J.
RESPONSE SET AS A MEASURE OF PERSONALITY, by Norman Frederiksen and Samuel Messick. Rept. on Contract Nonr-694(00). Feb 58, 34p. 36 refs. AD-156 771.
Order from LC mi$3.00, ph$6.30 PB 138 339

The present research was primarily oriented toward the use of response sets to measure stylistic consistencies revealed in test-taking behavior. The study was concerned with whether or not set scores could be obtained independently of content and with at least potentially useful reliability. Also investigated were the extent to which set and content scores obtained from different tests measure the same or different characteristics, and the extent to which set scores change with experimental conditions designed to modify set. The major findings were: (1) Reliable set scores can be obtained. (2) The three "criticalness" set scores were found to be substantially intercorrelated. (3) "Critical" instructions altered mean

criticalness set scores in the expected direction to an extent that is significant for one test, nearly significant for another test, and non-significant for the third test. (4) Although uncritical tendencies are correlated with acquiescence, the two response sets are not identical. (5) Content scores from the report-writing tests were found to be intercorrelated with each other, but low correlations were obtained between content and set scores. (6) Content scores were related to Mathematics Aptitude, Reasoning, and Vocabulary, but "criticalness' set was generally unrelated to ability. (7) Patterns of correlations with personality variables suggest the possibility of using different response sets to measure various personality consistencies.

Iowa State U. [Iowa City].
SENTENCE COMPLETIONS E: SUSCEPTIBILITY TO "SCORE FAKING", by Arthur L. Benton, Harold P. Beechtoldt, and Joan D. Kemble. Rept. on Research on Aptitude-for-Service Tests for Enlisted Personnel, Contract Nonr-311(11). 15 Apr 58, 5p. 1 ref.
Order from LC mi$1.80, ph$1.80 PB 138 841

Sentence Completions E consists of 20 incomplete sentences, each with three possible endings which the subject is required to rank in terms of the one that best describes how he thinks or feels, the one that least well describes how he thinks or feels, and the one that occupies an intermediate position in these respects. There are six possible response patterns associated with each ranked item. For each item there is one response pattern which was found on two independent samples both to be modal for enlisted men with records of successful naval service and also to discriminate significantly between these men and groups of men with records of unsuccessful naval service, as defined by discharges for reasons of personal inadequacy or delinquent conduct. The test is scored in terms of the number of these discriminating response patterns which appear in the total performance.

Louisiana State U., Baton Rouge.
GROUP EFFECTIVENESS, COERCION, CHANGE AND COALESCENCE AMONG DELINQUENTS COMPARED TO NON-DELINQUENTS, by Howard A. Bryant, D. A. Dobbins, and Bernard M. Bass. Technical rept. no. 15 on Behavior in Groups, Contract N7onr-356(09). Oct 58, 16p. 14 refs.
Order from LC mi$2.40, ph$3.30 PB 143 392

The hypothesis was tested that institutionalized delinquents are more susceptible to peer group influence than non-delinquent boys matched in intelligence and age. Three groups of 5 delinquents at each of 4 age levels: 14, 15, 16 and 17, were contrasted with 12 corresponding groups of boys from a small town public high school. Each member of each group privately ranked 5 cities according to their estimated size. A discussion followed in order to obtain a group decision. Then a final private decision was recorded by each member. Rank order correlations within and between members were the measures of agreement and accuracy used to test the hypothesis. Although non-delinquents were significantly more in agreement before and after discussion, delinquents increased more in agreement as a consequence of discussion, although not significantly so. The hypothesis generally was supported that delinquents are more sensitive to the effects of interaction with their peers; they coalesce more (but not significantly according to parametric tests); they shift their opinions significantly more; they profit more in accuracy (but not significantly) and they are more coerced by their peers accepting the opinions of others more publicly than privately at all age levels examined. It would appear that delinquents, even more than non-delinquents, are likely to respond to suggestion to change, if the suggestions come from peers during discussion and if group decisions are permitted. The results are consistent with observations about the significance of the gang to the delinquent and suggest that changing attitudes and reeducating delinquents will be facilitated by judicious use of their own peer groups.

Louisiana State U., Baton Rouge
TEST OF A PROPOSED THEORY OF LEADERSHIP, by Bernard M. Bass. Annual rept. no. 4 on Behavior in Groups, Contract N7onr-356(09). 15 Nov 58, 6p. 12 refs.
Order from LC mi$1.80, ph$1.80 PB 143 422

Analyses of data based on an original experiment with 255 subjects have been finished. Attention has been focused on testing specific hypotheses drawn from a theory of leadership and group behavior. The theory itself, with a review of the literature, has been completed. New experiments and methodological examinations carried out. (See also PB 137 057)

Naval Retraining Command, San Diego, Calif.
INTERPERSONAL VARIABLES RELATED TO RECIDIVISM IN MILITARY DELINQUENCY, by Virginia Ives, Marguerite Q. Grant, and Kelley B. Ballard. Technical rept. no. 8 on Rehabilitation Research, Contract Nonr-1535(00). 15 Dec 57, 15p. 10 refs.
Order from LC mi$2.40, ph$3.30 PB 138 649

Ninety-one men confined for military disciplinary offenses were interviewed just prior to their restoration to regular duty. The interviews were tape-recorded and the recordings were rated twice independently on 430 rating items. Each of these items was correlated with a dichotomous success-failure criterion based upon a report of each man's duty status six months after restoration. Forty-seven items proved to be significantly related to restoration behavior. The majority of these items appear to be related to aspects of the man's level of interpersonal maturity. The present study is seen as preliminary and will be followed by a more detailed study on a larger sample.

Minnesota U., Minneapolis.
MISCELLANEOUS STUDIES IN WORD ASSOCIATION, by James J. Jenkins and Wallace A. Russell. Technical rept. no. 24 on The Role of Language in Behavior, Contract N8onr-662(16). [1958] 14p. 7 refs.
Order from LC mi$2.40, ph$3.30 PB 143 393

Personnel Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
SOME STATISTICAL METHODS FOR DETECTION OF NONSTANDARD TEST ADMINISTRATION, by Leland D. Brokaw. Jan 59, 36p. 11 refs. WADC-TN-59-34; AD-210 475.
Order from LC mi$3.00, ph$6.30 PB 143 540

This paper reports the application of statistical techniques to the detection of fallacious values in test score distributions. Fallacious scores may appear from several sources, including cheating, improper procedures of test administration, or errors of scoring. Three techniques were chosen which are peculiarly appropriate to the task of detection of abnormalities of score distributions occasioned by the shifting of a group of scores from its proper place within the distribution: the sign test, the Kolmogorov-Smirnov test, and the significance of the difference between standard deviations. The techniques were applied to eight 100-case samples of basic airmen who had been tested and retested at Lackland Air Force Base on alternate forms of the Armed Forces Qualification Test. A control sample was selected, and the test scores from the other seven samples were altered to replicate conditions encountered operationally. The sign test proved more efficient than the other techniques, identifying six of the seven samples containing fallacious data. The other two techniques each identified four of the seven samples, but not the same four samples.

Psychological Labs., Carnegie Inst. of Tech., Pittsburgh, Pa.
VARIABLES UNDERLYING SOCIOMETRIC STATUS. III. CONFORMITY BEHAVIOR: A PSYCHOLOGICAL REINTERPRETATION, by E. P. Hollander. Technical rept. on Contract Nonr-1849(00). Oct 58, 17p. 15 refs.
Order from LC mi$2.40, ph$3.30 PB 143 705

The central thesis developed is essentially as follows: an individual functions within a social field largely in terms of his perception of the "group expectancies" regarding his behavior. Depending upon his motivational and perceptual states, as they relate to certain features of the social field, he will be more or less given to behavior in keeping with these expectancies. Expectancies are not static but rather depend upon the outcome of past interaction between the individual and relevant others. A core element then is the historical or time-linked effects of interaction in determining the countervailing perceptions of the individual and these others.

Psychological Labs., Carnegie Inst. of Tech. Pittsburgh, Pa.
VARIABLES UNDERLYING SOCIOMETRIC STATUS. IV. SOME FURTHER FINDINGS ON LEADERSHIP, FOLLOWERSHIP AND FRIENDSHIP, by E. P. Hollander. Technical rept. on Contract Nonr-1849(00). Nov 58, 12p. 5 refs.
Order from LC mi$2.40, ph$3.30 PB 143 460

Using poor nomination data secured from graduating medical students at the University of Pittsburgh, an analysis was undertaken paralleling previous the analysis by Hollander and Webb of nominations on leadership, followership, and friendship. Corroboration of these earlier findings was obtained. Some implications were seen regarding the differential evaluative base underlying these nominations.

Psychological Research Association, Inc., Arlington, Va.
A REPORT ON RESEARCH CONCERNING A METHOD FOR OPTIMIZING THE EFFICIENCY OF TRAINING PROGRAMS, by James F. Parker, Jr. Annual rept. on Contract Nonr-2489(00). Dec 58, 14p. 1 ref.
Order from LC mi$2.40, ph$3.30 PB 143 617

This report is intended to describe the basic nature of the program and to indicate results which might be forthcoming. It is not designed as a definitive report on results obtained during a particular phase of the project.

Psychologisch Laboratorium van de Universteit te Nijmegen (Netherlands).
THE PROCESS OF ASSIMILATION WITH STRANGERS TO A NEW LIVING AND WORKING ENVIRONMENT. Annual Technical rept. no. 1, 1 Feb 58-1 Mar 59, on Contract DA 91-508-EUC-285. Mar 59, 71p. 1 ref. AD-213 233.
Order from LC mi$4.50, ph$12.30 PB 143 366

The investigation is carried in two separate parts (I and II). Investigation I refers to the process of assimilation with unmarried Italians, natives of Sardinia, who are employed as miners in the Dutch National Coalmines. In this investigation 3 groups of 20 Italians are interviewed. Investigation II refers to the process of assimilation with 40 Indian-Dutch families who were expelled from their native country and settled in the Netherlands in the hope of building up a new existence. The present Report can only give an account of the results of phase I, investigation II.

Vanderbilt U., Nashville, Tenn.
AUTHORITARIANISM AND LEADER ACCEPTANCE, by Edward P. Crockett (Master's thesis). Technical rept. no. 5 on Contract Nonr-2149(02). Oct 58, 22p. 29 refs.
Order from LC mi$2.70, ph$4.80 PB 143 708

The relationship between authoritarianism and acceptance of formal leadership in established organizations was examined from the following standpoints: (a) Acceptance of formal leadership as a function of member authoritarianism. (b) Leader acceptance as a function of leader authoritarianism. (c) Leader acceptance as related to the degree of correspondence between authoritarianism in the leader's and follower's personalities.

Vanderbilt U., Nashville, Tenn.
EXTRAPUNITIVENESS AND AUTHORITARIANISM: CHANGES IN ATTITUDINAL CORRELATES AS A RESULT OF FRUSTRATION, by Jack M. Wright. Technical rept. no. 7 on Contract Nonr-2149(02). [1959] 26p. 17 refs.
Order from LC mi$2.70, ph$4.80 PB 143 710

The results of relating changes in professed attitudes of individuals (as a result of frustration) to extrapunitiveness, as measured by the P-F Study, and authoritarianism, as measured by the California F-scale, and relating these changes to one another, and summarized below. When frustrated by an authority figure, authoritarians increased (in a positive direction) their evaluations of peer group, authority figures, people in general, and self, more than did nonauthoritarians. Evidence was also found to the effect that authoritarians are more easily frustrated than are nonauthoritarians. Through the technique of partial correlation, evidence was found of a tendency on the part of authoritarians to suppress aggression toward a frustrating authority, necessitating an increased positive evaluation of self and others as a form of compensation. Lack of any significant correlations between the P-F Study and changes in the variables, or with the F-scale, is discussed as being the result of lack of consideration on the part of this instrument of certain factors of a social nature which aid in determining reactions to frustration.

Vanderbilt U., Nashville, Tenn.
RECIPROCAL INFLUENCE OF GROUP AND THREE TYPES OF LEADERS IN AN INSTRUCTED SITUATION, by O. J. Harvey. Technical rept. no. 4 on Contract Nonr-2149(02). Oct 58, 21p.
Order from LC mi$2.70, ph$4.80 PB 143 706

The small groups studied were squads from an Army airborne division. From these, three different types of leaders were sociometrically determined. The formal leader was the official squad leader but not preferred as leader by the men. The informal leader was preferred by the men to be the squad leader but was not the official leader. The formal-informal leader was both the official squad leader and preferred by the men to be. The total number of subjects was 354, 285 experimental and 69 control. In comparison to the control groups, the leaders in all conditions conformed markedly to the judgments of the members despite the large differences in the leader and members' stimuli. Even in those conditions where leaders did depart from group judgments in their own evaluations, the influence on the group was almost nil. Significant differences occurred among the different leaders in the extent to which they were influenced by group judgments. Most conforming to the evaluations of other members of the group was the unpopular formal leader in the absolute, or more uncertain, condition. Possible implications of this for military leadership were indicated. Authoritarianism, group satisfaction and solidarity, and informal status in the group did not relate to influencibility. However, members' popularity in the squad did correlate significantly to their influence by the leader in the informal-absolute and informal-gradual conditions, the conditions in which the leader was the one preferred by the men to be their leader.

Vanderbilt U., Nashville, Tenn.
STATUS AND CONFORMITY TO PRESSURES OF INFORMAL GROUPS, by O. J. Harvey and Conrad Consalvi. Technical rept. no. 6 on Contract Nonr-2149(02). Oct 58, 16p. 10 refs.
Order from LC mi$2.40, ph$3.30 PB 143 709

This study was concerned primarily with the differential conformity of the leader, second and lowest ranking member to pressures in the informal group. The informal groups were 27 cliques sociometrically selected from a training school for delinquent boys. The main finding of the study was that the second status member, the one only one step removed from the top, was significantly more conforming to judgments of the other members than was either the leader or lowest status man. The leader was least conforming but, due perhaps to smallness of the sample, not reliably less than the lowest status person.

GENETIC DIFFERENCES IN HEMOGLOBIN AS MARKERS FOR BONE MARROW TRANSPLANTATION IN MICE, by Raymond A. Popp, G. E. Cosgrove, Jr., and R. D. Owen. Mar 59, 4p. 18 refs. AFSAM rept. 59-44.
Order from LC mi$1.80, ph$1.80 PB 143 368

Both hemoglobin type and red cell serotype seem to be autonomously controlled by the genotype of the nucleated cell from which the erythrocyte is derived. Thus, genetic differences in hemoglobin can be used as markers for bone marrow transplantation in irradiated mice. Hemoglobin typing may be particularly useful where the H-2 markers cannot be used.

Anatomy and Physiology

Aero Medical Lab., Wright Air Development Center Wright-Patterson AFB, Ohio.
THE EFFECTS OF POSITIVE ACCELERATION ON THE RELATION BETWEEN ILLUMINATION AND INSTRUMENT READING, by William J. White and Mitchell B. Riley. Nov 58, 13p. 7 refs. WADC Technical rept. 58-332; AD-206 663.
Order from LC mi$2.40, ph$3.30 PB 143 544

The following basic findings resulted from an analysis of the data from this experiment: (1) At the higher levels of instrument illumination, increasing acceleration and decreasing luminance produce relatively small increase in reading errors. (2) At marginal levels of illumination, acceleration and luminance interact to produce a relatively large increase in error. (3) Intensity of illumination can compensate for the decline in visual performance at stress levels above 1 g.

Aero Medical Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
SHORT TIME HUMAN TOLERANCE TO SINUSOIDAL VIBRATIONS, by Gerd H. Ziegenruecker and Edward B. Magid. Rept. on Acoustic Energy Control. July 59, 18p. 15 refs. WADC Technical rept. 59-391.
Order from OTS $0.50 PB 161 083

Short time human tolerance criteria for sinusoidal vibration from 1 to 15 cps were determined using 10 healthy male subjects ranging in age from 23 to 34 years. At each frequency, the amplitude was increased at a constant rate from zero to the point where the subject stopped the run because he thought that further increase might cause actual bodily harm. The lower levels of tolerance were found to be between 1 and 2 g at 3 - 4 cps and at 7 - 8 cps. The highest tolerance level of 7 - 8 g was found at 15 cps. Subjective tolerance limits were found to be caused by one or more of seven specific sensations or symptoms. Physiological observations during vibration exposure were also made.

PHYSIOLOGICAL EFFECTS OF INERT GASES, by S. F. Cook and H. A. Leon (U. of California). Rept. on Contract AF 29(600)1313. June 59, 40p. 42 refs. AFMDC-TR-59-26; AD-216 891.
Order from LC mi$3.00, ph$6.30 PB 143 657

This report presents the results of investigations on the use of helium and other inert gases in sealed cabin environments. Included in the report is an extensive bibliography of previous work in this field as well as results obtained from experiments conducted under the above contract. This Technical Report is prepared from progress reports and the final report submitted by Professor Cook during and upon completion of the studies.

Aviation Medical Acceleration Lab., Naval Air Development Center, Johnsville, Pa.
THE EFFECT OF TEMPERATURE ON TOLERANCE TO POSITIVE ACCELERATION, by Benjamin F. Burgess, Jr. Rept. no. 16 on Proj. NM 19 01 12.1; 26 May 59, 13p. 3 refs. NADC-MA-5905.
Order from LC mi$2.40, ph$3.30 PB 143 738

With the advent of space flight, the problems associated with the physiological effects of extreme temperatures may become a critical factor relating to pilot performance under conditions of high acceleration. In order to determine the effects of high environmental temperatures on G tolerance, six trained centrifuge subjects were exposed to positive acceleration in the heated gondola of the Johnsville centrifuge. Seven thermocouples were located at strategic places over the body surface in order to obtain an accurate recording of skin temperature. Although humidity was not controlled, it was recorded during all centrifuge runs. The environmental temperatures studied ranged from 75°F to 160°F where a decrement in G tolerance of 1 G has been obtained at the upper temperature range.

Aviation Medical Acceleration Lab., Naval Air Development Center, Johnsville, Pa.
A STUDY OF THE EFFECTS OF POSITIVE ACCELERATION UPON ERYTHROCYTE HYDRATION IN HUMAN SUBJECTS, by Richard L. Fenichel, and George H. Kydd. 12 May 59, 15p. 9 refs. Rept. no. 1 on Proj. NM 19 02 12.2; NADC-MA-5904.
Order from LC mi$2.40, ph$3.30 PB 143 250

The seven subjects employed in this study were exposed to a standardized pattern of positive G. Each subject experienced positive accelerations, which were begun at 1.5 G and were increased at half G increments, with 5-minute rest periods between runs, until the subject lost peripheral lights. Table I shows the acceleration schedule that was employed. Blood samples were drawn before the acceleration series was begun, after the third run, and after the run in which the subject lost peripheral lights.

California Agricultural Experiment Station, Davis.
PHYSIOLOGICAL RESPONSES TO ARTIFICIAL ALTERATIONS IN WEIGHT, by C. F. Kelly, A. H. Smith, and C. M. Winget. Annual progress rept. no. 2, 15 Apr-15 Dec 57, on Contract Nonr-2211(01). 15 Dec 57, 30p.
Order from LC mi$2.70, ph$4.80 PB 138 628

These experiments indicate that chickens can survive accelerative forces up to 4 G_S, though with considerable mortality and growth repression. Up to 2.5 G_S, however, this treatment appears to have little effect (i.e., normal growth and negligible mortality). No definite syndrome has been established for birds dying while exposed to an accelerative force. Birds grown under an accelerative force show some anatomic changes. Physiological changes observed have been quite variable, and sometimes contradictory between different trials. It is assumed that these differences arise from other factors (age of animals, temperature acceleration schedule, etc.) and can be rationalized with the accumulation of more data. Consistent changes have been observed in heart rate (increased) and respiratory frequency (decreased). On return to normal gravity, the physiological differences between centrifuged birds and their controls disappear in about 3 weeks. In some cases there is a period of over compensation (viz.: respiratory frequency, which is decreased in centrifugation, becomes faster than the controls during the first two weeks at normal gravity.) Some progress has been made on the development of a high-G_S strain.

California Inst. of Tech. [Pasadena].
FACTORS STIMULATING PRODUCTION OF HEMOGLOBIN AND RED CELLS. Annual rept. for year ending 31 Dec 57 on Contract Nonr-220(09). 6 Dec 57, 2p.
Order from LC mi$1.80, ph$1.80 PB 138 650

PERCEPTRON SIMULATION EXPERIMENTS, by Frank Rosenblatt. Rept. on Contract Nonr-2381(00). June 59, 37p. 8 refs. Rept. VG-1196-G-3.
Order from OTS $1.00 PB 161 065

A number of papers and reports have been published describing the theory of a new brain model called the perceptron. The perceptron is a minimally constrained "nerve net" consisting of logically simplified neural elements, which has been shown to be capable of learning to discriminate and recognize perceptual patterns (References 5, 6, 7, 8). This paper is concerned with a report of digital simulation experiments which have been carried out on the perceptron, using the IBM 704 computer at the Cornell Aeronautical Laboratory. These experiments are intended to demonstrate the performance of particular systems in typical environmental situations, free from any approximations which have been used in the previously published mathematical analyses. In the simulation programs, the action of every cell and every connection in the network is represented in detail, and visual stimuli are represented by dot patterns corresponding to illuminated points in a retinal mosaic.

Florida U. Coll. of Medicine, Gainesville.
ESTIMATION OF THYROXINE OUTPUT BY THE THYROID GLANDS OF NORMAL AND ADRENALECTOMIZED RATS BY MEANS OF A SIMPLE COOLING TEST, by Melvin J. Fregly. May 59, 8p. 17 refs. AFSAM rept. 59-28.
Order from LC mi$1.80, ph$1.80 PB 143 383

Adrenalectomy, administration of propylthiouracil, or a combination of these two treatments increased significantly the rate of cooling of rats restrained and subjected to air at 5° C. Propylthiouracil administration increased rate of cooling 55 percent above that of untreated control rats while adrenalectomy increased rate of cooling 84 percent. The combination of these two treatments increased rate of cooling 99 percent. Dead rats cooled 201 percent faster than control rats. Administration of graded doses of thyroxine to both adrenalectomized-PTU-treated rats and to normal-PTU- treated rats indicated that 1.9 and 4.4 gamma per day of thyroxine, respectively, were required to return rate of cooling to that of comparable controls. These doses are, therefore, the best estimates of thyroxine outputs by thyroids of these animals. The results suggest that adrenalectomy is accompanied by diminished thyroid function. This fact makes difficult any evaluation of the relative roles of thyroid gland and adrenal glands in the maintenance of body temperature of rats exposed to cold.

Institute of Andean Biology, Lima (Peru).
CREATININE EXCRETION AND BODY COMPOSITION AT HIGH ALTITUDES, by Emilio Picón-Reátegui. Feb 59, 9p. 16 refs. AFSAM rept. 58-98.
Order from LC mi$1.80, ph$1.80 PB 143 749

To test the hypothesis that urinary creatinine can be used in the prediction of body compartments we have measured urinary creatinine excretion and related these data to body mass and to body compartments on the same subjects.

Johns Hopkins Hospital, Baltimore, Md.
A BUBBLE METHOD FOR ESTIMATION OF P_{CO_2} AND P_{O_2} IN WHOLE BLOOD [AND] AN ANALYSIS OF ERRORS IN THE BUBBLE METHOD FOR ESTI-

MATION OF P_{CO_2} AND P_{O_2} IN WHOLE BLOOD, by Richard L. Riley, Richard H. Shepard and others. Nov 58, 21p. 22 refs. AFSAM repts. 58-(135, 136). Order from LC mi$2.70, ph$4.80 PB 143 385

A detailed description is presented of a bubble-equilibration method for determination of carbon dioxide and oxygen tensions in blood. This modification represents an attempt to adopt the best features of previously published methods with special emphasis on speed, simplicity, and standardization of technic.

Mount Zion Hospital, San Francisco, Calif.
STUDIES OF THE RELATIONSHIPS BETWEEN NEUROPHYSIOLOGICAL AND BEHAVIORAL PROCESSES IN MAN, by Bertram Feinstein. Final rept. for 1 Apr 56-30 June 58 on Contract AF 18(603)48. 17 July 59, 49p. 6 refs. AFOSR-TR-59-58; AD-216 107. Order from LC mi$3.30, ph$7.80 PB 143 356

Instruments and test facilities developed for research in cerebral electrophysiology under the present contract are described. Two papers are included, a stereotaxic technique in man allowing multiple spatial and temporal approaches to intracranial targets, by Bertram Feinstein and Elwood W. Wright, and a stimulus pulse polarity reversal unit, by W. Watson Alberts (reprint).

Pennsylvania U., Philadelphia.
THERMAL RADIATION IN PHYSIOLOGY, by James D. Hardy. Final rept. for 15 Nov 57-1 July 58 on Contract Nonr-551(11). 15 Nov 58, 7p. 13 refs. Order from LC mi$1.80, ph$1.80 PB 143 466

Development of a radiometer for recording and measurement of skin temperature.

Quartermaster Research and Engineering Center, Natick, Mass.
EFFECT OF CONTINUOUS COLD EXPOSURE ON NOCTURNAL BODY TEMPERATURE OF MAN, by M. B. Kreider, P. F. Iampietro and others. July 59, 10p. 6 refs. Technical rept. EP-117. Order from LC mi$1.80, ph$1.80 PB 143 413

Effects of continuous cold stress on 24-hour patterns of body temperature were studied in 5 men. Cold stress consisted of living at 60°F (15.6°C) for 14 days, wearing only shorts. This cold period was preceded and followed by 2 weeks at 80°F (26.7°C). Activity (minimal) and diet were the same for the entire 42-day period. One blanket was used at night. Rectal temperatures (T_r) and skin temperatures (T_s) were measured. During sleep T_r fell more rapidly and to lower values (35.6°C) during cold exposure than during the control period (36.1°C). During sleep T_s was slightly lower in the cold than in the control period; also, T_s did not exhibit the gradual drop characteristic of sleep in the control period. Comparison of T_r and T_s between the first 2 days and the last 2 days of cold period revealed the following differences: (1) nocturnal T_r fell 0.23 degrees C(0.4 degrees F) lower on the later cold nights; (2) nocturnal toe temperatures were 15 degrees C (27 degrees F) higher on the later cold nights. Temperatures of the arch followed the same pattern as those of the toe. No significant differences were found in daytime temperatures between early and later cold days. The data suggest that evidence for acclimatization to cold in terms of altered body temperature responses may be fruitfully sought in responses during rewarming and/or sleep.

St. Louis U. School of Medicine, Mo.
FAILURE IN TEMPERATURE REGULATION DURING PROGRESSIVE DEHYDRATION, by Alrick B. Hertzman and Iain D. Ferguson. Rept. on Physiology of Flight, Contract AF 33(616)3357. July 59, 32p. 44 refs. WADC Technical rept. 59-398. Order from OTS $1.00 PB 161 084

During exposure to an ambient temperature of 43.3°C. (110°F.) without food or water, the body weights of young male subjects decreased at the rate of 0.5 per cent per hour of exposure, their body temperatures rose 0.1°C. per hour, but the total sweat production changed little despite the increase in body temperature Calculations indicated that the latter was due to a slightly inadequate sweating which in turn was attributed to a rising thermal threshold for sweating. Regional sweating rates varied widely during the exposure, particularly on the upper parts of the body. Cutaneous conductances, thermal circulatory indices and the pad pulses in the finger and toe changed very little; there was no evidence of peripheral circulatory failure in these experiments. The theoretical implications are discussed.

School of Aviation Medicine, Randolph AFB, Tex.
AUDITORY ACUITY MEASURED BY AUTOMATIC AND MANUAL AUDIOMETRY, by Max H. O'Connell. Nov 57, 6p. 11 refs. Rept. 58-13. Order from LC mi$1.80, ph$1.80 PB 138 995

Auditory thresholds were established for 24 subjects on the Rudmose model ARJ-3 audiometer, on the SAM model 56-2 automatic audiometer, and on the standard Maico H-1 audiometer. The test results are compared by percent agreement and probability of such differences occurring by chance. The result of one retest per subject is also given. Additional test-retest data obtained at the 1955 Wisconsin State Fair, using the SAM model 56-2, are presented.

School of Aviation Medicine, Randolph AFB, Tex.
MEASUREMENT OF AUDITORY THRESHOLD BY MANUAL AND SAM AUTOMATIC AUDIOMETRY, by Max H. O'Connell and Paul M. Baccaro. Mar 59, 11p. 10 refs. Rept. 58-131. Order from LC mi$2.40, ph$3.30 PB 143 746

Threshold data were obtained on two groups of unskilled listeners -- one group with "normal" hearing and the other with "subnormal" hearing. No significant differences were found between the single descent and triple descent audiometric technics when averaged

over the two groups; test-retest reliability coefficients were .84 and .96 for the normal and subnormal groups, respectively. The SAM Model 57-1 automatic audiometer provided test results which were significantly different from the average of single and triple descent audiometry. Test results showed significantly poorer thresholds at 500, 1000, and 6000 cps, a significantly better threshold at 4000 cps, and no significant difference at 2000 cps for the normal group. The subjects in the subnormal group showed significantly poorer thresholds at 500, 1000, 2000, and 6000 cps, significantly better thresholds at 4000 cps, and no significant difference at 3000 cps. Although the results showed statistically significant differences between manual and automatic audiometry, the three test methods yielded mean threshold scores which were highly similar.

School of Aviation Medicine, Randolph AFB, Tex.
PHYSIOLOGIC RESPONSE TO SUBGRAVITY: MECHANICS OF NOURISHMENT AND DEGLUTITION OF SOLIDS AND LIQUIDS, by Julian E. Ward, Willard R. Hawkins, and Herbert D. Stallings, Jr. Jan 59, 5p. 4 refs. Rept. 59-2. Order from LC mi$1.80, ph$1.80 PB 143 585

In order to study the mechanics of nourishment during weightlessness, 165 subgravity parabolas were flown in an F-94C aircraft. Twenty-five experimental subjects attempted to drink from an open container, a contained fitted with pierced lid and plastic straw, and a plastic squeeze bottle. Observations were made regarding deglutition of solids, including swallowing of both well and poorly masticated boli. Drinking from open containers proved to be more difficult than had been anticipated. For reasons of safety, closed containers, such as squeeze bottles, must be used to transfer liquids to the mouth under conditions of zero-gravity; the use of straws is not practical. Deglutition of liquids or well masticated solids can be accomplished with little or no difficulty in the weightless state. However, a large solid bolus of food is a potential aspiration problem. Regurgitation of stomach contents may become a serious annoyance during orbital flight. Only a small quantity of liquids should be taken at one time. Movements or abdominal pressures, which may initiate vomiting, must be avoided.

School of Aviation Medicine, Randolph AFB, Tex.
SOURCES OF VARIABILITY AMONG ARTICULATION TESTS FOR NORMAL EARS WITH PB WORD LISTS, by Asher S. Wolfe and Max H. O'Connell. Mar 59, 7p. 12 refs. Rept. 58-123. Order from LC mi$1.80, ph$1.80 PB 143 747

Results of the experiment indicated that: (1) test scores were poorer for the higher signal intensity levels; (2) one test list was definitely more intelligible than the other three lists at all presentation levels; (3) linear increases in articulation scores, as the tests proceeded, were not significant thus tending to refute a learning effect; and (4) the low reliability of these lists precludes the acceptance of the test material as a reliable measurement tool.

University Hospitals, Iowa City, Iowa.
BEATS IN COCHLEAR MODELS, by Juergen Tonndorf. June 59, 22p. 18 refs. AFSAM rept. 59-57. Order from LC mi$2.70, ph$4.80 PB 143 584

Beats in cochlear models were studied from two aspects: (1) Their effect upon cochlear fluid motion which, occurring along elliptic orbits, essentially represent Lissajous figures. The orbits expanded and contracted synchronously with the beat rate. Thereby, a partial rectification (asymmetric expansion) became apparent which, occurring in opposite directions in the two scalae across the partition, constituted the beat. This latter phenomenon was caused by the stiffness gradient of the cochlear partition. (2) Their effect on the traveling wave pattern along the partition was originally described by Bekesy. Stroboscopic examination revealed that the beat frequency modulates the two primaries thus producing two additional side bands. The displacement pattern of the membrane when viewed by high-speed motion picture photography, however, did not give any evidence of these five frequencies. Only the intertone (and the beat) were present. It then became apparent that the model is really a pattern analyzer of complex sound. In terms of cochlear fluid motion, it is able to resolve complex Lissajous figures by a spatial filter action along the partition into simple Lissajous figures. Any deviation from steady Lissajous figures, which ordinarily result from primaries in relation of integral numbers, produces beats. Thus beats of imperfect unison as well as of mistuned consonances have essentially the same cause: a cyclic phase change between the two primaries.

Vision Research Labs., U. of Michigan, Ann Arbor.
THE EFFECTS OF TARGET SIZE AND SHAPE ON VISUAL DETECTION: II. CONTINUOUS FOVEAL TARGETS AT ZERO BACKGROUND LUMINANCE, by H. Richard Blackwell and Stanley W. Smith. Rept. on Proj. Michigan, Contract DA 36-039-sc-52654. Jan 59, 26p. 8 refs. 2144-334-T. Order from LC mi$2.70, ph$4.80 PB 143 442

In this experiment, the luminance difference for threshold detectability has been measured for 45 targets of varying size and shape at a zero background luminance. Measurements have been made on eleven observers with the method of constant stimulus utilizing the temporal forced-choice procedure. Foveal presentation has been used, with an exposure duration of 0.010 second. The targets used have included circles, rectangles, multiple-legged targets, and special targets composed of two rectangular areas of different dimensions. In all cases, noncircular targets were less detectable than circular targets of equal area. The data for noncircular targets have been subjected to empirical and theoretical analyses. The empirical analysis described the data of the present study in some detail. The data were also analyzed in terms of the theoretical analysis, based upon an element contribution hypothesis, with additional empirical factors. Application of this analysis to the data from the present study required modification of one of the two empirical factors derived from the first study, and addition of a third empirical factor. Accordingly, the theoretical analysis appears to have demonstrated somewhat less descriptive generality than the empirical analysis. (See also PB 142 793)

Vision Research Labs., U. of Michigan, Ann Arbor.
THE EFFECTS OF TARGET SIZE AND SHAPE ON VISUAL DETECTION: III. EFFECTS OF BACKGROUND LUMINANCE, DURATION, WAVELENGTH AND RETINAL LOCATION, by S. W. Smith, H. R. Blackwell, and C. M. Cutchshaw. Rept. on Proj. Michigan, Contract DA 36-039-sc-52654. Dec 58, 21p. 11 refs. Rept. no. 2144-346-T.
Order from LC mi$2.70, ph$4.80 PB 143 444

This experiment studied the comparative detectability of circular and noncircular targets under a variety of conditions. It was found that noncircular targets were usually considerably less detectable and were never more detectable than circular targets of equal area. The primary objective was to investigate to what extent two targets of markedly noncircular form are more or less detectable than circular targets of equal area. A long thin rectangle and a cross produced from two long thin rectangles were selected for study on the basis of earlier studies in the present series. Background luminance was varied over a considerable range, as were target duration, spectral composition and retinal location. Detection thresholds were measured by the temporal forced-choice procedure. (See also PB 143 442)

Vision Research Labs., U. of Michigan, Ann Arbor.
THE EFFECTS OF TARGET SIZE AND SHAPE ON VISUAL DETECTION: IV. SOME RELATIONS WITH PREVIOUS INVESTIGATIONS, by H. Richard Blackwell. Rept. on Proj. Michigan, Contract DA 36-039-sc-52654. Feb 59, 24p. 12 refs. Rept. no. 2144-335-T.
Order from LC mi$2.70, ph$4.80 PB 143 441

The basic approach of the present report is to reanalyze data from the earlier reports in the series to facilitate comparison with the data of earlier investigators. An investigation has been made of the adequacy of the perimeter theory of Lamar, et. al., in rectifying data from the previous papers in this series. This formulation is shown to have considerable predictive success with the data of Kristofferson and Blackwell. However, it is believed that the formulation cannot be supported in detail, and that the empirical and theoretical formulations offered in earlier papers in the present series represent refinements on the perimeter theory. (See also PB 143 444)

Biochemistry

Arctic Aeromedical Lab., Ladd AFB, Alaska.
THE EFFECT OF AN EXCESS OF VITAMIN A ON OXYGEN CONSUMPTION AND I^{131} METABOLISM IN RATS, by Gisle Bang, Delilah Metz, and Kaare Rodahl. Aug 57, 21p. 9 refs. Technical rept. 57-39.
Order from LC mi$2.70, ph$4.80 PB 143 529

The effects of excess of vitamin A--both single doses and repeated doses over prolonged periods--on the energy metabolism and the I^{131} metabolism in rats have been studied. It may be concluded that the feeding of an excess of vitamin A has no effect on the resting metabolism, the thyroid uptake of I^{131}, the plasma I^{131}, the PBI^{131}, or the conversion ratio in normal male rats under the conditions studied.

Army Chemical Corps., Fort Detrick, Md.
RECOMMENDED PROCEDURES FOR THE IDENTIFICATION OF SELECTED PATHOGENIC MICROORGANISMS: BACTERIA, FUNGI, AND ANTIBIOTIC SUSCEPTIBILITY DETERMINATIONS, by Joshus M. Leise, Harold Friedlander and others. Second edition, rev. Mar 58, 105p. 48 refs.
Order from OTS $2.50 PB 161 063

The manual is organized in a sequence identical with that of the basic steps followed in identification procedures, with the sections on methods and materials placed at the end: Section I, Treatment of Unknown Samples, describes the concentration and fractionation procedures. Section II, Initial Identification Procedures, outlines the steps to be followed in identifying either mixed or pure cultures. Section III, Inoculation of Media, lists the various media which are to be inoculated with the unknown sample to insure the growth and subsequent identification of the unknown pathogenic microorganisms. Section IV, Colonial Descriptions of Pathogenic Microorganisms, describes the colonial appearance of selected pathogens on eight of the media listed in Section III. Section V, Group Identification, arranges the microorganisms into groups to facilitate tentative identification if one assumes that the organism in question is pathogenic. Section VI, Specific Microorganism Identification, contains descriptions of and identification procedures for each microorganism and toxin listed in the manual. Section VII, Determination of Antibiotic Susceptibility, gives directions for determining the antibiotic susceptibility of the isolated microorganism. Section VIII, Methods, comprises detailed descriptions of some of the procedures referred to in the text. Section IX, Materials, lists the formulas for some of the media and reagents referred to in the text, including the source of components.

California U., Los Angeles.
THE BINDING OF STEROIDS BY BLOOD PROTEINS, by B. H. Levedahl. Annual progress rept. for Jan 56-Jan 57 on Contract Nonr-233(39). 18 Dec 56, 5p.
Order from LC mi$1.80, ph$1.80 PB 130 572

The object of this program is to study the interaction of steroid hormones with serum proteins so that the mechanism of interaction of steroids and proteins can be accurately described.

Duke U. School of Medicine, Durham, N. C.
PHOTOGRAPHIC MEASUREMENT OF RETINAL VENOUS BLOOD OXYGEN; VALUES IN NORMAL SUBJECTS AND THE EFFECT OF CHANGE IN BODY POSITION AND IN THE INHALATION OF LOW AND HIGH OXYGEN MIXTURES, by John B. Hickam and Regina Frayser. Feb 59, 13p. 6 refs. AFSAM rept. 58-155.
Order from LC mi$2.40, ph$3.30 PB 143 745

A method is described for measuring by photographic means the percent oxygen saturation of retinal venous blood. In observations on 34 normal, seated subjects, the retinal venous blood oxygen saturation was estimated to be 57 percent. S.D. 11 percent. When the arterial blood oxygen is reduced by breathing a low oxygen mixture, the retinal venous blood oxygen falls, but less than the arterial oxygen, with a resultant decrease in the retinal arteriovenous oxygen difference. Presumably this is associated with an increased retinal blood flow, resulting from the visible dilatation of the retinal vessels. In 12 subjects, changing from the seated to the recumbent position caused an apparent small drop in retinal venous oxygen saturation, but the change was not statistically significant. In 17 subjects, breathing 100 percent oxygen caused an increase of 24 percent in the retinal venous blood oxygen saturation. This effect is much larger than anticipated and the mechanism of the increase is still obscure.

School of Aviation Medicine, Randolph AFB, Tex.
AORTAL CHOLESTEROL CONCENTRATIONS AFTER LINODOXINE ADMINISTRATION IN DOGS, by Lawrence J. Milch, Lesly G. Robinson and others. June 59, 5p. 5 refs. Rept. 59-73.
Order from LC mi$1.80, ph$1.80 PB 143 375

Linodoxine was added to the diet of 6 dogs fed excess fat, cholesterol, and propylthiouracil over a 9- to 11-week period. Administration of this drug mixture was associated with significantly ($P < .05$) decreased concentrations of aortal cholesterol as compared to a simultaneously maintained group of dogs fed the same diet containing a placebo mixture of coconut oil in place of Linodoxine. Linodoxine was also associated with a significant shift of serum β-lipoproteins toward classes of higher density, a reversal of the trend noted in the placebo-fed group of dogs.

Texas U. Medical Branch, Galveston.
PROPERTIES OF ERYTHROCYTES WHICH MAY INFLUENCE THE CONVERSION OF PROFIBRINOLYSIN TO FIBRINOLYSIN, by S. N. Kolmen, M. Mason Guest and D. R. Celander. June 59, 9p. 15 refs. AFSAM rept. 59-72.
Order from LC mi$1.80, ph$1.80 PB 143 376

Evidence is presented that erythrocytes adsorb urokinase, a urinary activator of plasma profibrinolysin, and that in the adsorbed state urokinase not only remains active but is "protected" from factors normally present in plasma. When washed red cells, devoid of components of the fibrinolytic system, are exposed to plasma they acquire simultaneously inhibitors to urokinase and an agent capable of lysing a fibrin clot. Evidence is presented that these acquired properties are the result of adsorption to the erythrocyte of factors present in plasma and that this adsorption is affected by the fibrinolytic status of the animal from which the plasma and erythrocytes are obtained. The significance of the erythrocyte in the development of in vivo fibrinolytic activity is discussed.

Medical Specialties and Equipment

Microwave Lab., Stanford U., Calif.
DEVELOPMENT OF A LINEAR ELECTRON ACCELERATOR FOR MEDICAL AND RADIOGRAPHICAL PURPOSES. Final rept. for 1 Mar 52-31 May 58 on Contract Nonr-225(06). May 58, 38p. 5 refs. ML rept. no. 518.
Order from LC mi$3.00, ph$6.30 PB 142 959

A sealed-off linear electron accelerator for medical use has been developed, and its operation for routine cancer therapy has proved very satisfactory. The construction of more compact accelerators operating at shorter wavelengths has been shown to be feasible. The major cost of such accelerators is in the rf power supply and the mechanical mounting, and it is in these components that further development is required if the overall cost is to be significantly reduced. This final report summarizes the individual aspects of the contract research, and also contains a list of the Technical Reports that have been issued. A reprint of a summary paper on "The Stanford Medical Linear Accelerator," not previously issued, is also included.

School of Aviation Medicine, Randolph AFB, Tex.
CLINICAL EVALUATION OF DEVICES AND TECHNICS FOR THE REMOVAL OF TOOTH STRUCTURE, by Jack L. Hartley and Donald C. Hudson. Mar 59, 22p. 121 refs. Rept. 58-103.
Order from LC mi$2.70, ph$4.80 PB 143 382

Dental handpieces utilized for the removal of tooth structure have been evaluated. A clinico-laboratory study was made of all currently available handpieces, the newer concepts of operative and crown and bridge procedures, and the necessary armamentarium. The studies indicated that instruments which produced the ultrahigh speeds (180,000 to 225,000 r.p.m. and above) resulted in maximum cutting effectiveness, minimal pulpal trauma, reduced operator fatigue with optimum control, low patient annoyance, and increased life of cutting instrument. At present, these speeds are attained by the air turbine handpieces.

School of Aviation Medicine, Randolph AFB, Tex.
A CLINICAL EVALUATION OF THE CAVITRON PORTABLE PROPHYLAXIS UNIT, by Clarence M. McCall and Lucian Szmyd. July 59, 13p. 4 refs. Rept. 59-86.
Order from LC mi$2.40, ph$3.30 PB 143 379

A clinical evaluation of the ultrasonic scaling technic was carried out on 240 military subjects. The ultrasonic technic was found to be as effective as the conventional scaling method in the removal of calculus while the conventional oral prophylaxis technic was superior to the ultrasonic method in the removal of stain. Most of the subjects preferred the ultrasonic method of oral prophylaxis over the conventional scaling technic. No statistical difference in tooth sensitivity or tissue trauma was noted between the two scaling technics.

School of Aviation Medicine, Randolph AFB, Tex.
FREE 17-HYDROXYCORTICOSTEROID LEVELS IN PAROTID FLUID, SERUM, AND URINE FOLLOWING THE ORAL ADMINISTRATION OF SYNTHETIC ANALOGS OF HYDROCORTISONE, by Ira L. Shannon and John R. Prigmore. May 59, 4p. 3 refs. Rept. 59-79.
Order from LC mi$1.80, ph$1.80 PB 143 743

In a study of free 17-hydroxycorticosteroids, measurable levels were consistently found in human parotid fluid. Under the influence of synthetic adrenocortical analogs, altered parotid steroid levels closely paralleled changes evidenced in serum and urine 17-OHCS concentration. These findings suggest that steroid values in parotid fluid can be used as an indicator of adrenocortical status.

School of Aviation Medicine, Randolph AFB, Tex.
THE INFRARED SPECTRAL CHARACTERISTICS OF HUMAN WHOLE STIMULATED SALIVA COLLECTED FROM INDIVIDUALS CLASSIFIED AS TO DENTAL CARIES EXPERIENCE, by Norman O. Harris, Arnold Swanson, and Vincent Segreto. June 59, 8p. 35 refs. Rept. 59-60.
Order from LC mi$1.80, ph$1.80 PB 143 372

Infrared spectral curves (2-16 μ) were accomplished on the saliva of 398 United States Air Force enlistees, who were classified according to dental caries status. Slight variations in the characteristic absorption spectra of human saliva appeared correlated with the carious surface score. Infrared scores, based on spectral curve characteristics, were inverse to 24-hour bacterial turbidity readings and directly correlated to flow rate. Infrared analysis presents a potential method for evaluating the immediate caries susceptibility status of an individual; however, this hypothesis needs confirmation in a time-function study.

School of Aviation Medicine, Randolph AFB, Tex.
SPECTROPHOTOMETRIC CHARACTERIZATION OF LIGHT-INDUCED CHANGES IN AUTOPOLYMERIZING RESINS. EFFECT OF ULTRAVIOLET LIGHT UPON PLASTIC SPECIMENS CONTAINING EXCESS LIQUID, by Bertram Eichel, Theodore E. Fischer and others. Nov 56, 6p. 4 refs. Rept. 56-124.
Order from LC mi$1.80, ph$1.80 PB 128 453

Nonpigmented Kadon and Fastcrown polymerized specimens into which excess liquid had been incorporated were characterized spectrophotometrically following their exposure to ultraviolet radiation. After long-wave ultraviolet radiation, Kadon exhibited increased visible and near ultraviolet absorption with increased liquid content. Short-wave ultra-violet radiation did not produce increased absorption effects with the increase in liquid. Fastcrown specimens containing excess liquid showed colored substance production following exposure to short-wave ultraviolet radiation and the S-1 lamp. With increase in liquid content, a parallel increase in absorption in the near ultraviolet region was clearly evident. Results suggest that the employment of excess liquid in the liquid-powder mix even at normal room temperatures is the responsible factor for the excessive color produced in plastics following their polymerization.

AEROBIOLOGICAL STUDIES: SONIC-SPEED, LIQUID IMPINGER FOR COLLECTING SAMPLES OF MICROBIOLOGICAL MATERIALS FROM AEROSOLS, by C. E. O'Bryon. July 48, declassified 29 Aug 56, 35p. 32 refs. Special rept. no. 98.
Order from LC mi$3.00, ph$6.30 PB 143 722

A sonic-speed, liquid impinger used by the Aerobiology Branch in collecting samples of particulate matter (containing such materials as bacteria, dye tracers, toxins, and viruses) from aerosols is described. This sampler consists of a 125-ml. filtering flask containing an intake tube held in place by a rubber stopper with the lower end of the tube 5 mm. from the floor of the flask. The intake tube is a tube 1 cm. in diameter having a piece of capillary tubing sealed to its lower end. The diameter of the capillary tube or orifice is such that the maximum flow, or the flow at which the velocity of air through the orifice is the same as that of sound, is the desired sampling rate. Twenty-five ml. of a liquid suitable for holding the particulate matter to be sampled is used in the impinger. Sampling efficiency was found to be high (well over 90 per cent) by material-balance and series-sampling procedures.

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATIONS ON THE RELATION, IF ANY, BETWEEN VIABILITY AND ELECTRIC CHARGES ON AIR-BORNE MICROORGANISMS OR PARTICLES CONTAINING SUCH MICROORGANISMS, by Clyde Orr, Jr., and Margaret C. Kordecki. Final rept. on Contract DA 18-064-404-CML-39. 30 June 55, 87p. 13 refs.
Order from LC mi$4.80, ph$13.80 PB 143 535

The principal results obtained are: (1) There is little or no relation between the charge on an air-borne microorganism and viability or nonviability. (2) Wet and dry dispersions revealed no significant differences in regard to the relation between charge and viability. (3) Atmospheric conditions have no significant effect on the relation between charge and viability. (4) Temperature and humidity have little or no effect on the charging of microorganism aerosols. Radiation and ionization, on the other hand, tend to increase the charging. (5) Radiation and ionization, probably through a lethal agent such as ozone, decrease viability. (6) No additives were found which produced significant changes in the charge-viability relationship. (7) Ordinarily, the charges on aerosol particles contribute little to the loss of the particles on surfaces, etc. (8) Viable, air-borne microorganisms can be collected and cultured using thermal precipitation. (9) Serratia marcescens cell size and density vary in a definite fashion with relative humidity, a maximum density occurring at a relative humidity of about 40 per cent.

Illinois U., Urbana.
INVESTIGATION OF THE EFFECTS OF SALTS AND LIMITATION OF MOISTURE CONCENTRATIONS ON THE GERMINATION OF SPORES, by H. O. Halvorson. Rept. no. 3 (Final) for 1 Jan-31 Dec 56 on Contract DA 19-129-567. 1 Jan 56, 5p. 2 refs. QFCIAF File no. M-204; AD-128 285.

SOME EFFECTS OF CERTAIN CHEMICAL AGENTS ON MOTOR AND MENTAL PERFORMANCE, by Earl Davy and George Grosser. Mar 59, 27p. 4 refs. CWL Special Pub. 2-20.
Order from LC mi$2.70, ph$4.80 PB 143 717

The effect of sublethal concentrations of GB on humans were experimentally investigated following whole-body exposure of human subjects to GB at a concentration of 2 mg/m^3 for 2 minutes. Subjects were exposed to GB and post-exposure performance on a battery of tests was compared with performance during the final pre-exposure session. The battery of tests, related to steadiness, dexterity, addition ability, reaction time, and eye-hand coordination, was administered during three pre-exposure and three post-exposure sessions. Performance was not severely impaired by GB exposure at the Ct employed. Improved performance was noted in many tests. While hand steadiness may be slightly impaired in proportion to cholinesterase activity decrement, the extent of cholinesterase inhibition was found to be unrelated to the extent of either an impairment or an improvement of performance on the other tests.

[Army Chemical Warfare Labs.] Army Chemical Center, Md.
THE TOXICOLOGY OF FIRE, by John A. Zapp, Jr. Apr 51, declassified 29 Jan 56, 119p. 50 refs. Medical Div. Special rept. no. 4.
Order from LC mi$6.00, ph$18.30 PB 143 732

An investigation into the casualty producing factors in flame attack. The experiments first carried out were designed to measure quantitatively and continuously before, during and after flame attack the air temperature and the concentration of various gases in the atmosphere (O_2, CO, CO_2, and hydrocarbons) which might contribute to the production of casualties. The methods finally adopted are described. Problems of protection against flame attack were also studied.

Army Medical Research and Nutrition Lab., Denver, Colo.
THE LOW INCIDENCE OF ACUTE REACTIONS IN HUMANS TO AN INTRAVENOUS FAT EMULSION, by Allan L. Forbes, Mayna R. Allen and Hugh F. Gray. Rept. on Metabolism and Nutrition. 8 Oct 58, 28p. 13 refs. Rept. no. 227.
Order from LC mi$2.70, ph$4.80 PB 138 599

The administration of 868 units of an intravenous fat emulsion to 204 subjects resulted in definite acute toxic reactions in 7.8% of subjects; clearly defined febrile reactions occurred in 4.9%. Chills occurring in 2.5% of subjects were the only serious reactions. If acute toxic reactions were going to occur during a series of infusions, they appeared with few exceptions on the first infusion. Tolerance developed to febrile reactions on serial infusions. The rate of administration did not affect materially the incidence of reactions within reasonable limits; a 600 ml unit could be administered safely in 1.75 hours. The majority of acute toxic reactions appeared to represent hypersensitivity phenomena. The fat emulsion studied is considered an acceptable preparation for clinical use from the point of view of infrequency of acute toxic reactions. The importance of turning primary attention to possible chronic toxicity problems is emphasized.

Army Medical Research Lab., Fort Knox, Ky.
THE EFFECTS OF INTENSE VIBRATION, by A. J. Riopelle, Marion Hines (Emory U.) and Merle Lawrence (U. of Michigan). Rept. on Task, Noise, and Vibration Problems, Contracts DA 49-007-MD-(535, 634). 10 Oct 58, 63p. 16 refs. Rept. no. 358; AD-203 637.
Order from LC mi$3.90, ph$10.80 PB 143 264

The primary effects of vibration are physiological and anatomical in nature. Behavioral decrements are secondary and probably a consequent of these changes.

Audiology Lab., Northwestern U., Evanston, Ill.
SOME FACTORS AFFECTING THE SPONDEE THRESHOLD IN NORMAL-HEARING SUBJECTS, by Tom W. Tillman and James F. Jerger. May 59, 6p. 3 refs. AFSAM rept. 59-69.
Order from LC mi$1.80, ph$1.80 PB 143 378

This experiment was designed to investigate the effects of (1) knowledge of test vocabulary and (2) practice in responding to spondee words at threshold intensities on the spondee threshold in normal-hearing subjects. Results of this experiment were: (1) practice in responding to spondee words at threshold intensities does not influence the spondee threshold in normal-hearing subjects, and (2) normal-hearing subjects given prior knowledge of the test vocabulary yield spondee thresholds 4 to 5 db lower than those yielded by subjects not given such knowledge.

Brooke Army Medical Center, Fort Sam Houston, Tex.
RADIATION AND THERMAL BURNS, by Duane L. Larson, Charles R. Baxter and others. Annual research progress rept. on Proj. no. 6-59-12-028. 30 June 59, 138p. 47 refs.
Order from LC mi$6.90, ph$21.30 PB 143 605

Contents:
Biochemical alterations:
Relationship of dark urine to septicemia
Acute cardiopulmonary response to extensive thermal trauma

Metabolic responses:
- Wound management and nitrogen metabolism in burned rats
- The effect of varying the calories on the nitrogen balance of burned patients
- Absorptive capacity of the small intestine during the course of a severn burn .

Infection and immunologic studies:
- Evaluation of the use of gamma globulin in the severely burned patient
- Immuno-electrophoretic studies of serum globulins in thermal injury
- Studies of urinary tract infections in burned patients
- Serologic demonstration of existence of "burn toxin" in the serum of newly burned individuals and the antibody of this toxin in convalescent burned patients
- The use of pooled antigen to induce antibody paralysis in neonatal rats
- Antiseptic effect of PVP-I and bis quaternary compounds on selected bacteria inoculated to the burned skin surface of rats

Clinical management:
- Clinical operation, burn center
- Early excision of extensive areas of full-thickness burns
- The effects of environmental conditions upon the response to thermal trauma in rats
- Environmental factors in burns. I. O_2 utilization vs. ambient temperature

Central Tuberculosis Lab., Southwest Florida Tuberculosis Hospital, Tampa.
A BACTERIOLOGIC STUDY OF RESECTED LUNG TISSUE, by Robert Cacciatore and Frank P. Dunbar. Apr 59, 6p. 9 refs. AFSAM rept. 58-120.
Order from LC mi$1.80, ph$1.80 PB 143 748

During the 17-month period from July 1956 through November 1957 all resected lung tissues were examined by bacteriologic procedures designed to investigate some of the problems of isolating and determining the drug-susceptibilities of cultures of Myco, tuberculosis. This report presents the results of the study.

Duke U. Medical Center, Durham, N. C.
THE INFLUENCE OF VENOUS INFUSION OF GASEOUS CARBON DIOXIDE ON OXYGEN SATURATION OF ARTERIAL BLOOD AND CARDIAC OUTPUT IN THE ANESTHETIZED DOG, by F. G. Hall and John Salzano. Rept. on Physiology of Flight, Contract AF 33(616)3821. July 59, 9p. 4 refs. WADC Technical rept. 59-378.
Order from OTS $0.50 PB 161 074

The formation of gas bubbles in the blood stream has been a problem of high-altitude flight. When gaseous bubbles of oxygen and nitrogen are infused into the venous system, profound injury results. Gaseous CO_2 however may be infused at rates of 100 ml. per minute without irreversible damage. A notable feature of the procedure is reduction of arterial oxygen saturation of hemoglobin. Cardiac output was measured in dogs before, during, and after intravenous infusion of gaseous CO_2. Slight decreases in output occurred but not great enough to indicate a significant impairment in blood flow through the pulmonary system. Infused CO_2 moves rapidly into the expired gas. Lowered oxygen saturation of blood following infusion of CO_2 can be explained in part by Bohr effect. However, this does not account entirely for level of oxygen unsaturation and something more than Bohr effect seems involved.

Harvard U. [Cambridge, Mass.]
THE STUDY OF FATIGUE IN NORMALS AND PATIENTS WITH NEUROLOGICAL AND PSYCHIATRIC DISORDERS, by Robert S. Schwab and Mary A. B. Brazier. Final rept. for 1947-1957 on Contract N5ori-76/08. Oct 58, 22p.
Order from LC mi$2.70, ph$4.80 PB 143 395

The normal subject shows better motor performance than patients with psychiatric fatigue but the differences are not very marked nor are they consistant. There is a marked difference, however, between the motor performance between the normal subject and those suffering from myasthenia gravis. The difference in training, general physical tone of a person not in the hospital or not ill, might account for some of the minor discrepancies. We have confirmed previous observations that neostigmine or other anticholinesterase drugs do not improve the muscular performance of normals or patients with psychiatric fatigue, and in the figure one can see a slight decrement in the performance after the injection of such a drug. In both examples shown there was a slight increase in the blood lactic acid after the injection of neostigmine, in normals, and psychiatric fatigue. In patients with myasthenia gravis, however, there is a marked increase in motor performance as well as increase in lactic acid after the injection of neostigmine. We are impressed with the striking and objective difference between the ordinary test situation where motivational levels were not altered and the increase in motor performance following a strong suggestion and urging, and even more impressive improvement in motor performance with a finite reward such as five dollars. It was agreed that usually in the ordinary testing of average subjects, particularly if they have repeated tests several times under the same laboratory conditions and personnel, that representative values are not too difficult to find. In any individual situation the motivational level may be of extreme importance in the differential diagnosis or in the concept of the dynamics in the fatigue and impaired state.

Hospital Henri-Rousselle, Paris (France).
RELATION OF THE VISCERAL AFFERENTS ON THE ACTIVITY OF THE BRAIN STEM RETICULAR FORMATION, by P. C. Dell. Technical rept. on Contract AF 61(052)45. [1959] 17p. 8 refs. AFOSR-TR-59-93; AD-219 422.
Order from LC mi$2.40, ph$3.30 PB 143 587

This report comprises two parts: 1/ a preliminary study on the arousing potentiality of afferent impulses in connection with the cortical control of reticular activity 2/ a study of the effects of the humoral changes induced by hypoxia on the reticulo-cortico-reticular system.

Karolinska Institutet, Stockholm (Sweden).
RESEARCH REPORT FOR 1958, by Arne Engstrom. Rept. on Contracts AF 61(052)21 and AF 61(052)15.

[1959] 27p. AFOSR-TN-340; AD-213 661.
Order from LC mi$2.70, ph$4.80 PB 143 071

The report is an account of the scientific activities at the Department of Medical Physics, Karolinska Institutet, during 1958. Several new techniques have been developed with the aim to be applicable to the study of the molecular structure of minute parts (on cellular level) of the nervous tissue. There is considerable work to formulate certain general theories regarding information transfer in minute structures and also to investigate carefully the physico-chemical aspects of tracer experiment for metabolic studies.

Neurological Research Unit., Medical Research Council (Gt. Brit.).
CORRELATION OF INTRACELLULAR POTENTIALS WITH ELECTRO-CORTICOGRAM. Final technical rept. no. 1, 1 Jan-31 Mar 59, on Contract DA 91-508-EUC-309. 23 Apr 59, 15p. AD 217 435.
Order from LC mi$2.40, ph$3.30 PB 143 390

The primary object of these experiments was the correlation of the activity of single cortical neurones (Betz cells) recorded with micropipettes, with the pattern of electrical activity recorded with larger electrodes. In particular, a correlation was sought between the membrane potential of Betz cells with the various clinical and electrical phases of a generalized seizure. From the results of the experiment during an induced seizure and a number of experiments during strychnine spikes it appears likely that the cortical neurones cease to discharge continuously during the clonic phase of the seizure. This appears to be associated with a hyperpolarization but there is not as yet sufficient evidence to make this a causal relationship. It is expected that in the following period of investigation the causal nature of this relationship may well be demonstrated and that the existence of a Golgi cell type of hyperpolarization-inhibition mechanism may be demonstrated. Such a demonstration would cast a rather different light on the Jacksonian concept of a seizure as an "uncontrolled" discharge of nerve cells.

School of Aviation Medicine, Randolph AFB, Tex.
AN EVALUATION OF PATIENTS SUSPECTED OF HAVING NOISE-INDUCED HEARING LOSS, by Ralph N. Kraus. June 59, 17p. 17 refs. Aeromedical Reviews no. 4-59.
Order from LC mi$2.40, ph$3.30 PB 143 367

The results of an evaluation of 77 U. S. Air Force flight-line personnel with defective hearing are reported. The evaluation revealed that 29 patients had a conductive-type, 7 had a functional-type, and 41 had a perceptive-type defect. Twenty-two of these perceptive cases were unilateral. In only 19 cases was noise exposure considered to be a possible cause of defective hearing. The difficulties encountered in attempting to determine whether defective hearing in a specific patient is caused or aggravated by noise exposure are discussed.

School of Aviation Medicine, Randolph AFB, Tex.
MIGRAINE IN ITS AEROMEDICAL ASPECTS, by Ellis R. Taylor. July 58, 23p. 24 refs. Aeromedical Reviews no. 8-58.
Order from LC mi$2.70, ph$4.80 PB 143 756

Problems in the disposition of migraineurs have become so difficult that a study of the general and aeromedical literature was made to provide a solid foundation for administrative guidelines as well as clinical management. The results of this study are presented along with a general discussion of the natural history of the disease.

School of Aviation Medicine, Randolph AFB, Tex.
THE RELATIONSHIP BETWEEN THE CONCENTRATIONS OF SERUM LIPOPROTEINS AND SERUM LIPIDS, by Bernard S. Schlessinger, Margaret F. Allen and others. Mar 59, 6p. 15 refs. AFSAM rept. 59-45.
Order from LC mi$1.80, ph$1.80 PB 143 369

These studies report (1) the extent of correlation between ultracentrifugally determined serum lipoproteins, (2) the errors of measurement involved in all determinations, and (3) age-specific values for all serum parameters in the same population. It was found that although a high correlation exists between a linear combination of ultracentrifugally determined lipoproteins and the serum concentrations of cholesterol and phospholipid, the prediction of lipoprotein levels from the purely chemical measurements is not entirely satisfactory. Therefore, for the time being at least, all measurements will have to be accomplished.

Pharmacology and Toxicology

Army Chemical Warfare Labs., Army Chemical Center, Md.
THE EFFECT OF SODIUM DINITROCYANOMETHIDE ON ISOLATED CAT PAPILLARY MUSCLE, by Edmund F. Murtha. 6 Aug 57, 9p. 2 refs. Technical rept. CWLR 2154; AD-139 349.
Order from LC mi$1.80, ph$1.80 PB 130 726

Isolated cat papillary muscles were immersed in modified Locke's solution containing sodium dinitrocyanomethide in concentrations ranging from 0.13 to 4.00 mg./ml. Concentrations of or greater than 0.20 mg./ml. gradually reduced and in some experiments abolished the force of the isometric contractions of the muscle; these effects were sometimes accompanied by alterations in the electrogram, although in several experiments there was no evidence of effect on conductivity. The results of these studies agree in general with the findings of another recent investigation which suggests that cardiac depression may be one of the mechanisms of action in sodium dinitrocyanomethide intoxication.

[Army] Chemical Warfare Labs., Army Chemical Center, Md.
PHYSIOLOGICAL ACTIONS OF GB IN A WARM ENVIRONMENT, by H. M. Frankel and F. N. Craig. 4 June 56, declassified 28 Mar 58. 28p. 14 refs.

CWLR-2032.
Order from LC mi$2.70, ph$4.80 PB 143 527

GB was administered to Rhesus monkeys by either an intramuscular injection of an average of 30 γ/kg. or an exposure of the body, not including the head, to an average vapor concentration of 115 mg./m^3 for 30 minutes. Mortality increased when the environmental temperature was elevated. In each method of administration of GB, 4 out of 5 monkeys died at 100°F. At 77°F., one out of 5 died with intramuscular injection and none out of 5 died with body exposure. The loss of cholinesterase (ChE) activity in the red blood cells was more rapid in the monkeys that died than in the survivors. In preliminary experiments the method of restraint was found to influence survival in exposures to heat alone. Wher the monkeys were immobilized on an animal board, 5 out of 6 died in about 5 hours; when more freedom of movement was permitted all 5 survived the same exposure to 100°F.

Army Chemical Warfare Labs., Army Chemical Center, Md.
STUDIES ON THE STRUCTURE OF CLAM POISON, PART II, by W. A. Nevill and E. A. Metcalf. Rept. for 1 July 55-30 June 56. Apr 59, 31p. 13 refs. CWL Special Pub. 1-9.
Order from LC mi$3.00, ph$6.30 PB 143 716

The purpose of the work described in this report was four fold: to obtain a crystalline derivative of clam poison suitable for spectral and microanalytical studies, to isolate and to determine quantitatively the suspected fragments obtained from degradative experiments, to investigate the peroxide oxidation of the poison in greater detail and to synthesize compounds for use as models in determining the mode of attack of acids and oxidizing agents on the poison.

Army Chemical Warfare Labs., Army Chemical Center, Md.
SWIMMING OF ALBINO MICE, by Charles G. Wilber and Joseph B. Hunn. Technical rept. for 5 Jan-16 June 58 on Biological Sciences Research. Oct 58, 9p. 5 refs. CWLR 2248.
Order from LC mi$1.80, ph$1.80 PB 139 143

Albino mice were forced to swim to exhaustion in baths of different temperatures at various simulated altitudes up to 30,000 feet. Swimming time was influenced more by bath temperature than by simulated altitude. Crowding decreases the mean swimming time.

Army Medical Research and Nutrition Lab., Denver, Colo.
THE EFFECT OF SEX HORMONES ON ENERGY BALANCE AND BODY COMPOSITION OF RATS, by Robert A. Huseby and Harry J. Krzywicki. 17 Dec 58, 11p. 10 refs. Rept. no. 229.
Order from LC mi$2.40, ph$3.30 PB 139 174

The present study was undertaken to investigate the influence of the administration of an estrogenically active substance, diethylstilbestrol, at a more physiological level upon both the caloric and nitrogen balance and final body composition of young, actively growing, castrate male rats. The study was set up so that data obtained by metabolic balance techniques could be compared with those obtained by direct body composition analysis.

California U., Berkeley. Medical Center, San Francisco.
THE EFFECT OF DEPRESSANT DRUGS AT ALTITUDE, by John E. Preston. Rept. on Contract Nonr-222(29). [1958] 14p. 37 refs.
Order from LC mi$2.40, ph$3.30 PB 143 875

The effects of two Central Nervous System depressant drugs (PBS and Codeine HCl) were studied in vivo and Pentobarbital Sodium effects were studied in vitro. In vitro studies showed a progressive inhibition of oxygen and, to a slightly greater degree, inorganic phosphate uptake by brain homogenate as the concentration of PBS was increased. The effect of PBS on the respiration (P/O values) with various added substrates was studied. In vivo toxicity studies were made using two strains of rat, Sprague-Dawley females and Long Evans males, and determining the LD_{50} values for each drug by two methods, Thompson and Weil and Litchfield-Wilcoxon. The LD_{50} values for PBS in the two strains of rat were not significantly influenced by altitude nor did acclimatization to altitude affect the value appreciably. Codeine HCl in rats was almost twice as toxic at altitude (12,470 feet) as indicated by a LD_{50} value roughly one-half (52.0 mg/Kg) than at sea level (101.1 mg/Kg). Also acclimatization to altitude did significantly decrease the toxic effect of Codeine HCl in rats as indicated by the LD_{50} value of 63.0 mg/Kg.

Medical Coll. of Virginia, Richmond.
HEALTH HAZARD OF MILITARY CHEMICALS, by J. H. Weatherby. Final rept. for 1 Nov 55-30 June 58 on Contract DA 18-108-405-cml-31. 1 July 58, 18p.
Order from LC mi$2.40, ph$3.30 PB 143 783

Progress is reported on studies on toxicity of pentaborane, with special reference to alterations in liver function.

Pharmakologisches Institut der Universität, Frankfurt (Germany)
SNAKE VENOM, by Peter Holtz. Final technical status rept. for Dec 58-Feb 59 on Contract DA 91-508-EUC-291. 21 Apr 59, 15p. AD-217 433.
Order from LC mi$2.40, ph$3.30 PB 143 389

Freshly gained, lyophilized venom of Naia nivea was dialysed exhaustively. The lyophilized dialysate was split into three fractions (α, β and γ) by adsorption on a column of alkaline aluminum hydroxyde and elution with buffers of different molarities. By using sublimable buffers, it was possible to obtain polypeptide fractions free from salt. The lyophilized crude venom, the dialysate, the residue of the dialysis and the fractions α, β and γ of the dialysate were investigated with regard to (1) their toxicity, (2) their inhibitory actions on muscle and neuromuscular transmission, and (3) their cardiovascular effects. By ultrafiltration and dialysis it was possible to separate the fibrinogen coagulating activity of the venom from the constituents responsible for the formation of bradykinin. Apart from the formation of bradykinin, the dialysate contained esteratic activity (hydrolysis of the benzoyl-arginine-methyl-ester), but no tryptic activity; it did not split benzoylargininamid. Tryptic and coagulating activity remained in the residue of the ultrafiltration or of the dialysis.

Radiobiology

Air Force Missile Development Center, Holloman AFB, N. Mex.
RADIATION HAZARDS OF PRIMARY COSMIC PARTICLES, by Rudolf A. Hoffman. July 59, 40p. 84 refs. AFMDC-TR-59-32.
Order from LC mi$3.00, ph$6.30 PB 143 682

The studies encompassed in this task were primarily designed to determine the biological effects of the primary cosmic particles and more specifically, the heavy primary particles (nuclei ≧ 6).

Aviation Medical Acceleration Lab.; Naval Air Development Center, Johnsville, Pa.
PRELIMINARY STUDIES ON THE MECHANISM OF RADIATION DAMAGE TO OXIDATIVE PHOSPHORYLATION IN SPLEEN MITOCHONDRIA, by B. David Polis and Freeman W. Cope. Rept. no. 6 on Proj. NM 11 01 12.7. 9 July 59, 11p. 12 refs. NADC-MA-5908.
Order from LC mi$2.40, ph$3.30 PB 143 426

Whole-body X-irradiation of rats strongly inhibits oxidative phosphorylation of spleen mitochondria. The addition of serum albumin to the reaction mixture to a great extent reverses this inhibition. The inference is drawn that X-irradiation increases the permeability of spleen mitochondria, allowing the leakage of a heme protein, called mitochrome, which was recently isolated in this laboratory. The inhibitory effects of mitochrome on X-irradiated mitochondria are counteracted by serum albumin in-vitro, so that a partial recovery from the changes caused by irradiation is attained. The data further suggest the possibility of reversing the effects of X-radiation on mitochondria by cofactor replacement, with the implication that resolution of the components involved might be of therapeutic value in irradiation sickness.

California U. School of Medicine, Los Angeles.
LATE EFFECTS OF TOTAL-BODY ROENTGEN IRRADIATION, by Baldwin G. Lamson, Marta S. Billings, and Leslie R. Bennett. May 59, 15p. 7 refs. AFSAM rept. 59-33.
Order from LC mi$2.40, ph$3.30 PB 143 381

Two hundred forty-two female Wistar rats were observed throughout their life span following 1,000 r hypoxic total-body or partial-body irradiation. Hypoxic radiation with superimposed anesthesia resulted in 67 percent 30 day mortality, compared to 9 percent mortality without anesthesia. Selection of the colony by acute postirradiation deaths did not influence the magnitude of late radiation sequelae as measured by life-shortening. Growth retardation during the second postirradiation year was well correlated with life-shortening. Life-shortening was observed after partial-body irradiation to an extent approximately proportional to the weight of radiated tissue. Nephrosclerosis was not observed unless the upper abdomen was included within the radiation field. Other than nephrosclerosis, a similar incidence of disease was observed at death in control and irradiated rats whether partial-body or total-body irradiated.

Oak Ridge National Lab., Tenn.
CHEMICAL PROTECTION OF THE MOUSE AGAINST LEUKEMIA INDUCTION BY X-RAYS, by A. C. Upton, D. G. Doherty, and G. S. Melville, Jr. Apr 59, 5p. 18 refs. AFSAM rept. 59-64.
Order from LC mi$1.80, ph$1.80 PB 143 373

Administration of mercaptoethylguanidine shortly before a single whole-body exposure to 150 or 300 r of x-rays inhibits the induction of granulocytic leukemia and prevents the induction of thymic lymphoma in RF mice. Mice treated with the drug also exhibit less shortening of the life span by radiation than do untreated controls.

Radiobiological Lab., U. of Texas, Austin.
RADIATION-INDUCED GASTROINTESTINAL DEATH IN THE MONKEY, by Stephen G. Wilson, Jr. June 59, 18p. 19 refs. AFSAM rept. 59-77.
Order from LC mi$2.40, ph$3.30 PB 143 582

This report describes the unique changes produced in the gastrointestinal tract of Macaca mulatta monkeys by supralethal doses of gamma radiation and discusses some of the inferences which may be made concerning the probable mechanism of the observed intestinal ulcers.

Radiobiological Lab., U. of Texas, Austin.
TOXIC EFFECTS OF S, 2-AMINOETHYLISOTHIURONIUM DIBROMIDE, by George S. Melville, Jr. and Thomas P. Leffingwell. Aug 59, 8p. 4 refs. AFSAM rept. 59-75.
Order from LC mi$1.80, ph$1.80 PB 143 583

The toxicity and pathologic effects of S, 2-aminoethylisothiuronium dibromide (AET-DiBr), a radioprotectant compound, have been studied in rats. The compound is highly toxic to these rodents when given in acute doses, either orally or intraperitoneally. The chronic toxicity and pathology of AET-DiBr has been examined by means of serial intraperitoneal injections. At low doses, large total amounts of the drug can be tolerated. The acute and chronic effects of sodium chloride, sodium bromide, sodium acetate, and sodium nitrate have been tested. Neither the anions nor the cation appears to contribute to the toxicity of isothiuronium salts.

NEUTRON ACTIVATION OF GOLD DENTAL RESTORATIONS IN SMALL PRIMATES, by Robert W. Zellmer, Jack L. Hartley and others. July 59, 6p. 6 refs. AFSAM rept. 59-68.
Order from LC mi$1.80, ph$1.80 PB 143 377

Dental gold alloys of various kinds were used to cast inlays which were placed in the molars of 10 small primates. These primates were then exposed to the neutron flux of an atomic detonation. The inlays were removed and the neutron-induced activity of the gold was measured in a scintillation counter. Calculation of the total activity showed a correlation with the neutron dosages received by the primates.

School of Aviation Medicine, Randolph AFB, Tex.
THE RADIOBIOLOGY OF THE CANCER CELL, by A. C. Upton (Oak Ridge National Lab.). Jan 59, 22p. 176 refs. Rept. 59-22.
Order from LC mi$2.70, ph$4.80 PB 143 072

Through study of the effects of ionizing radiation, fundamental information has been gained about the biology of normal and neoplastic cells and about the process of neoplasia. A variety of disturbances have been observed in irradiated cells, including alterations in metabolism, growth, and differentiation, but existing evidence suggests that the most significant primary action of radiation is on the genetic apparatus of the cell. That radiation-induced genetic effects may initiate tumor formation is highly conceivable; however, some other mechanism seems to be involved in certain instances of radiation carcinogenesis. Whatever the mechanism, the development of malignancy appears to be a complex, multistage process. The material basis for the large variation in radiosensitivity that exists among cells of different types is still poorly understood; however, with increasing knowledge of the mode of action of radiation and of the factors influencing the radiosensitivity of the cell, ways are being found to increase, decrease, and repair radiation injury. These advances hold promise of providing means of enhancing the effectiveness of radiotherapy in the treatment of cancer and of reducing the hazard of radiation as a carcinogenic agent.

RESEARCH ON LOCALIZED RADIO-LESIONS, PART II. EFFECT OF HIGH ENERGY PROTONS ON THE BRAIN OF THE RABBIT, by Bror Rexed, William Mair and others. Technical rept. no. 1, App. 4 on Contract AF 61(514)1247. 1 May 59, 18p. 7 refs. AFOSR-TN-59-976.
Order from LC mi$2.40, ph$3.30 PB 143 586

The present report deals with the effect of high energy protons on the brain of rabbits. One of the reasons for this investigation was the possible application of high energy heavy particles to stereotaxic radiosurgery in man: It is therefore essential to know their effect on the central nervous system. Irradiated brains were examined histopathologically, up to about one year after irradiation. There was destruction of nerve cells, myelin sheaths and axons. Thick walled capillaries, small perivascular haemorrhages and macrophages appeared in the early stages of the lesion. There was proliferation of astrocytes. Astrocytes with nuclei three or four times the normal size appeared at 4 weeks and subsequently giant cells with one or more nuclei were frequently seen but always within the irradiated region. No large haemorrhages were ever seen. The need for studies on the central nervous system at much later periods after irradiation is stressed.

THERMAL ANALYSIS IN THE SYSTEM MAGNESIUM CHLORIDE-$TiCl_x$, by K. Komarek and P. Herasymenko. Technical rept. no. 3 on Thermodynamic Properties of Titanium Halides in Molten Salt Systems, Contract Nonr-285(13). Oct 56, 17p.
Order from LC mi$2.40, ph$3.30 PB 130 016

Thermal analysis of the mixtures of magnesium chloride and titanium chlorides fused in specially designed titanium metal crucibles was made in the range from 0 to 100 wt% $TiCl_x$. Chemical analyses of the solidified samples show that titanium dichloride is the prevalent species. The ratio, $\%TiCl_2/\%TiCl_3$ is fairly constant at all contents of magnesium chloride and is equal to about 7.7. Magnesium-chloride-free $TiCl_x$ has a melting point of 1025°C. The salt produced by fusion and solidification appears to be chemically less reactive than titanium dichloride obtained by disproportionation of solid titanium trichloride. The phase diagram of the system $MgCl_2$ - $TiCl_x$ derived from these measurements is of the peritectic type. The peritectic point lies close to the $MgCl_2$-side at about 0.35% $TiCl_x$. The peritectic temperature is 716°C. The solid solubility of $TiCl_x$ in $MgCl_2$ at the peritectic temperature is about 0.35% $TiCl_x$. The possibility is not excluded that the fused salt contains titanium di- and monochloride and that trichloride forms on cooling by disproportionation of monochloride. However, special experiments will be needed to prove or disprove the possibility of formation of monochloride.

CHEMISTRY OF ALLENIC COMPOUNDS, by Thomas L. Jacobs and Ronald S. Bauer (Doctoral thesis). Technical rept. on Contract DA 04-495-ORD-527. June 58, 92p. 87 refs. AD-137 095.
Order from LC mi$5.40, ph$15.30 PB 142 948

This investigation was concerned with the synthesis and polymerization of allenes of the type $X_2C\ C\ CX_2$. Of particular interest in this study was the preparation of tetrafluoroallene and the polymer derived from it. Under autogenous pressure at room temperature tetrafluoroallene polymerizes to a white insoluble solid. An X-ray diffraction study of the polymer indicated that the material was a highly crystalline linear polymer. The polymerization is believed to occur by a free radical mechanism. Chlorotrifluoroallene was obtained from the reaction of 3-bromo-1, 1-dichloro-1, 3, 3-trifluoropropane with powdered potassium hydroxide.

THERMOCHEMICAL INVESTIGATIONS ON METHYL-SUBSTITUTED BENZOIC ACIDS, by M. Colomina, R. Perez Ossorio and others. Final technical rept. for 1 July 58-30 June 59 on Contract DA 91-508-EUC-358. [1959] 41p. 30 refs.
Order from LC mi$3.30, ph$7.80 PB 143 450

The full series of the methylsubstituted benzoic acids-includes three mono-, six di-, six tri- three tetra-, and one pentamethylbenzoic acids. This report contains the thermochemical data for the first nine members of this series: the three toluic acids and the six dimethylbenzoic acids.

Kansas U., Lawrence.
ANODIC REDUCTIONS. V. THE REDUCTION OF DIKETONES BY UNIPOSITIVE MAGNESIUM ANODICALLY GENERATED, by William D. Hoffman, William E. McEwen, and Jacob Kleinberg. Technical rept. no. 9, 15 Oct 57-1 Aug 58, on Reduction of Organic Compounds by Lower Valent Species of Active Metals, Contract DA 23-072-ORD-1048. [1958] 21p. 27 refs. AD-203 798.
Order from LC mi$2.70, ph$4.80 PB 138 216

A series of diketones of the general formula $C_6H_5CO(CH_2)_nCOC_6H_5$ has been prepared and subjected to "anodic reduction" in sodium iodide-pyridine solution between magnesium electrodes. In every case hydrolysis of the anolyte following electrolysis yielded a 1, 2-diol as the reduction product, 1, 3-dibenzoylpropane (n = 3) and 1, 4-dibenzoylbutane (n = 4), gave cis-1, 2-diphenylcyclopentane-1, 2-diol and cis-1, 2-diphenylcyclohexane-1, 2-diol, respectively. There is a striking correlation between the initial mean valence number ($\underline{V}_i$) of the magnesium entering solution from the anode and the size of the ring; the lowest $\underline{V}_i$ values were obtained in those instances where the diketones originally in solution gave the most stable cyclic diols. Interpretations are offered for these results and for corrosion phenomena observed. (See also 140 946)

ELECTROPHILIC DISPLACEMENT REACTIONS INVOLVING ORGANOBORON COMPOUNDS, by H. G. Kuivila. Final rept. on Contract Nonr-806(01). 1 Dec 56, 7p. 10 refs.
Order from LC mi$1.80, ph$1.80 PB 130 566

This final report is presented in the form of a summary of the results obtained and conclusions drawn in the course of the research. References to more detailed reports or publications are given. Substantial progress has been made in revealing characteristics of electrophilic aromatic displacements involving organoboron compounds. The existence of linear correlations of the Hammett equation type among aromatic electrophilic displacements is indicated. It is shown that chelating agents play specific roles in catalyzing the reactions of areneboronic acids.

Texas U., Austin.
INTERACTIONS OF ACETYLENE AND AROMATIC HYDROCARBONS, by R. C. Anderson and Rita S. Wallace. Technical note no. 5 on Contract AF 18(603)142. June 59, 15p. 2 refs. AFOSR-TN-59-611; AD-217 398.
Order from LC mi$2.40, ph$3.30 PB 143 298

The earlier experiments of Stehling on thermal reactions of mixtures of acetylene with aromatic hydrocarbons have been extended to styrene-acetylene mixtures at temperatures of 600-800°C. The data are limited because of the high rate of polymerization of styrene, but they do offer a useful comparison with other hydrocarbon systems because styrene is a very reactive aromatic compound. Styrene was found to be quite reactive in polymerization even in gas phase at low pressure; but, like the other aromatic hydrocarbons it showed little decomposition up to 800°. With acetylene present, small amounts of addition products were observed; but the chief effects with all the hydrocarbons tested were enhanced production of decomposition products such as hydrogen and methane. The results indicate that acetylene supplies an activated molecule or diradical which can react so as to open or split the aromatic ring structure.

Washington U. [Seattle].
PREPARATION AND PROPERTIES OF PENTAFLUOROSELENIUM HYPOFLUORITE (F_5SeOF) AND BIS(PENTAFLUOROSELENIUM) PEROXIDE ($F_5SeOOSeF_5$) by Grihapati Mitra and George H. Cady. Technical rept. no. 20 on Contract Nonr-477(16). [1958] 12p. 12 refs.
Order from LC mi$2.40, ph$3.30 PB 143 244

The fluorination of selenium dioxide and of selenium oxychloride has been found to give rather small yields of the new compounds, pentafluoroselenium hypofluorite (F_5SeOF) and bis(pentafluoroselenium) perioxide ($F_5SeOOSeF_5$). The former is highly reactive. It boils at about -29° and melts at about -54°. The latter is relatively inert chemically. It melts at -62.8° and boils at 76.3°.

A STUDY OF THE MICELLAR SIZE OF AN ANIONIC-NONIONIC SURFACTANT COMBINATION, by A. Mankowich and C. F. Pickett. Progress rept. no. 11 on Investigation of Synthetic Detergents, Ordnance Proj. TB4-821E. 11 June 56, 18p. 10 refs. Engineering Labs. rept. no. 46.
Order from LC mi$2.40, ph$3.30 PB 138 948

To investigate by the light scattering technique the micellar size of the anionic-nonionic surfactant combination of sodium dodecylene benzene sulphonate and iso-octyl phenyl nonaethylene glycol ether (SDBS and IOPG, respectively) in aqueous solution. To evaluate the micellar size data from the standpoint of the known detergent synergism of the surfactant combination, as part of the program for developing a scientific method of selection of surfactants for specific detergent applications.

Amherst Coll., Mass.
THERMODYNAMIC PROPERTIES OF THE ELECTRICAL DOUBLE LAYER; SEARCH FOR SPECIFIC ADSORPTION OF CESIUM IONS IN THE ABSENCE OF SPECIFICALLY ADSORBED ANIONS, by F. R. M. Deane, A. E. Higinbotham, and D. C. Grahame. Technical rept. no. 7, second series, on Contract Nonr-2309(01). 14 Nov 58, 32p. 9 refs.
Order from LC mi$3.00, ph$6.30 PB 143 476

Three lines of evidence are presented tending to show that the cesium ion is not specifically adsorbed on mercury in the absence of specifically adsorbed anions. The potential of the e.c. max. in solutions of cesium fluoride is found to be constant at a value of 0.475 ± 0.003 v. relative to a normal calomel electrode. The behavior of the capacity of the double layer is normal in that it can be predicted almost quantitatively by a theory which assumes the absence of specific adsorption of both cations and anions and simple dependence of the capacity of the inner region upon the surface charge density, q, and not upon the concentration of the electrolyte. The slight dependence of the capacity of the inner region of the double layer upon the identity of the associated cation found by Damaskin, Nikolaeva-Fedorovich and Frumkin is confirmed but is explained in a manner which does not require their postulate of specific adsorption of cesium ions on positively charged mercury.

Applied Physics Lab., Johns Hopkins U., Silver Spring, Md.
THE COMBUSTION OF BORON HYDRIDES, by W. G. Berl and W. Renich. Rept. on Contract NOrd-7386. July 58, 60p. 57 refs. CM-942; AD-207 027.
Order from LC mi$3.60, ph$9.30 PB 143 542

This report reviews the currently available information on the combustion of boron hydrides. A number of the more important combustion properties are listed, and the available published information is indicated by references. Although many of the pertinent physical combustion constants (flame speeds, heat release rates, etc.) are now being measured, the understanding of the underlying chemical reactions and mechanisms is still very limited. Likewise, the high temperature equilibria in the B-H-O-C system are far from satisfactorily explored, primarily because of the lack of definitive thermochemical data. In contrast to the C-H-O-N system, many more species (polymers, hydrates) are potentially stable at elevated temperatures and need to be considered.

ADSORPTION KINETICS AND ELECTRODE PROCESSES, by Paul Delahay and Isaac Trachtenberg. Rept. no. 25 (Technical) on [Contract Nonr-300(00)]. Oct 56, 35p. 42 refs.
Order from LC mi$3.00, ph$6.30 PB 130 014

The kinetics of adsorption on electrodes is studied for substances which are not reduced or oxidized at the electrode. Adsorption rates are derived for the plane electrode with control by semi-infinite linear diffusion, the streaming mercury electrode, and electrodes in stirred solution. Adsorption at the dropping mercury electrode is also considered briefly. Implications are discussed for double layer capacity measurements, electrocapillary curves studies, electrochemical kinetics, and polarography. Experimental methods are discussed, and a simple and accurate bridge for differential capacity measurements without insulation transformer is described.

THE EFFECT OF HIGH FREQUENCY HEATING ON THE DIFFUSION PROPERTIES OF ONE METAL INTO ANOTHER, by R. L. Samuel and J. D. Samuel. Annual technical rept. ATR 1, 1 Apr 58-1 Apr 59, on Contract DA 91-508-EUC-310. 10 Apr 59, 35p. AD-214 791.
Order from LC mi$3.00, ph$6.30 PB 143 291

Several methods have been devised for chromising under conditions of H.F. heating. (1) The active chromising agent is chromium fluoride contained in the melted flux. (2) The chromising agent is chro-

mium bromide, generated from chromium powder and ammonium bromide. (3) The test-pieces are electroplated with chromium (0.004") followed by nickel (0.004"). The adherence of the chromium is good, but the nickel, the purpose of which is to protect the chromium, exfoliates badly, and sometimes alloying of nickel and chromium occurs as an alternative to the chromising reaction. Uniform coatings, of normal structure, have an average chromium content of 23 - 27%. Graphs have been constructed from data obtained by the three methods, showing variation of coating thickness with time at various temperatures.

THE CHEMISTRY OF BORON HYDRIDES AND RELATED HYDRIDES, by R. W. Parry, R. C. Taylor and others. Rept. on Contract AF 33(616)3343. May 59, 192p. 140 refs. WADC Technical rept. 59-207.
Order from OTS $3.00 PB 161 080

A microcrystalline form of $B_2H_6 \cdot 2NH_3$ has been obtained and the powder pattern is tabulated for ready compound identification. Relatively strong evidence against the structure $[HB(NH_3)_3](BH_4)_2$ has been accumulated. The so-called "diammoniate of diborane II" which was formerly assigned this structure has been shown to consist chiefly of the regular "diammoniate" with the structure $[H_2B(NH_3)_2]BH_4$. Improved methods for the synthesis of pure salts of the form $[H_2B(NH_3)_2]X$ have been developed. A complete single-crystal X-ray crystallographic study which established the structure of $[H_2B(NH_3)_2]Cl$ has been completed and the data confirm the above structure assignments in every detail. A nuclear magnetic resonance study of $[HB(NH_3)_2]I$ can best be interpreted in terms of the accepted structure of the cation $[H_2B(NH_3)_2]^+$. The "diammoniate of diborane," $[H_2B(NH_3)_2]BH_4$, has been prepared by metathesis, a fact which offers final and complete chemical support for the above structure. (See also PB 133 981)

Naval Radiological Defense Lab., San Francisco, Calif.
AN APPARATUS FOR THE CONTROLLED FLAME COMBUSTION OF FILTER PAPER, by M. Honma and A. E. Greendale. 20 Oct 58, 10p. 2 refs. Research and development rept. USNDRL-TR-285.
Order from LC mi$1.80, ph$1.80 PB 143 894

A new apparatus and technique is described for the controlled flame combustion of filter paper and cloth. The sample is burned in an atmosphere of oxygen at a reduced pressure within a pyrex glass cylinder. A detailed description is given of the operation of the apparatus. The numerous advantages of this system over previous methods are enumerated. The apparatus can be scaled up or down in size and can also be used with gases other than oxygen. Since it is possible to contain completely the sample during the combustion and to collect the products of combustion, it appears to be an extremely efficient system for quantitative determinations and for use with radioactive materials and toxic chemicals.

Northwestern U., Evanston, Ill.
THE STRUCTURE AND ACTIVITY OF CATALYTICALLY ACTIVE SOLIDS, by P. W. Selwood. Final rept. on Contract N7onr-45003. 1 Aug 56, 5p. 26 refs.

Brief summary of work on (1) The structure of supported catalytic oxides as deduced from magnetic susceptibility studies. (2) The use of nuclear magnetic resonance in the study of catalyst surfaces. (3) The mechanism of chemisorption. (See also PB 123 224)

Ohio State U. Research Foundation, Columbus.
ADIABATIC FLAME TEMPERATURES, COMBUSTION GAS COMPOSITIONS, AND EXPANSION RATIOS OF COMBUSTIBLE MIXTURES AT VARIOUS PRESSURES, by William A. Strauss and Rudolph Edse. Rept. on Contract AF 33(616)2833. July 59, 51p. 2 refs. WADC Technical note 59-49.
Order from OTS $1.50 PB 161 077

This paper contains calculations of adiabatic flame temperature, expansion ratio, and combustion gas composition expressed in partial pressures for hydrogen-oxygen, hydrogen-air, hydrogen - nitric oxide, carbon monoxide - oxygen, carbon monoxide - air, methane-oxygen, methane-air, ammonia-oxygen, ammonia-air, hydrogen-bromine, and cyanoaen-air mixtures at pressures from 1 to 90 atmospheres. Flame temperatures and expansion ratios increase at a decreasing rate as the pressure is increased. The oxygen and nitric oxide flames have a high flame temperature and show the largest change as the pressure is raised.

Rensselaer Polytechnic Inst., Troy, N. Y.
A RECORDING BECKMAN THERMOMETER AND DIFFERENTIAL POTENTIOMETER, by C. Solomons and George J. Janz. Technical note no. 3 on Contract AF 49(638)50. Aug 57, 13p. AFOSR TN-57-497; AD-136 487.
Order from LC mi$2.40, ph$3.30 PB 129 942

An apparatus is described by means of which accurate measurements and records of changing electromotive forces can be made. The apparatus is normally used to measure and record changes of temperature of 1 to 5°C. The principle of operation is such that small differences in emf. between a test source such as a thermocouple and a standard source such as a potentiometer is amplified by a means of a stable dc microvolt amplifier. A continuous-balance stripchart potentiometer recorder is used with the device.

Stanford Research Inst., Menlo Park, Calif.
DIFFUSION AND HETEROGENEOUS REACTION. I. THE DYNAMICS OF RADICAL REACTIONS, by Henry Wise and Clarence M. Ablow. Rept. on Project Squid, Contract Nonr-1858(25). Mar 58, 18p. 13 refs. Technical rept. SRI-1-P. AD-156 508.
Order from LC mi$2.40, ph$3.30 PB 139 187

The diffusion and heterogeneous reaction of labile species in a cylinder of finite length are examined. The effects of radial and longitudinal diffusion are included in the mathematical treatment. The results of this analysis are applied to published data of the recombination coefficients of oxygen and hydrogen atoms on the surfaces of various materials.

Sterling Chemistry Lab., Yale U., New Haven, Conn.
NUMERICAL CALCULATION OF THE ONSAGER-KIM THEORY USING AN ELECTRONIC COMPUTER, by Andrew Patterson, Jr. and Harlow Freitag. Technical rept. no. 4 on High Field Conductance Research, Contract Nonr-215(00). 15 May 58, 39p. 5 refs.
Order from LC mi$3.00, ph$6.30 PB 139 063

A program for calculating the Wien Effect for any binary strong electrolyte is given. The program is based on the Onsager-Kim theory of the Wien Effect, and is suitable for use on the IBM 650 data-processing machine. A brief exposition on the use of the machine is given, together with the method of programming used in this paper. A description of how the theory was translated is included, plus a computers' check-list, allowing use of the program without the necessity of previous programming experience.

Texas U., Austin.
CAPACITY OF THE ELECTRICAL DOUBLE LAYER AND ADSORPTION AT POLARIZED PLATINUM ELECTRODES, by Norman Hackerman and Pranjivan V. Popat. Technical rept. on Contract Nonr-375(02). 15 Mar 58, 31p. 25 refs.
Order from LC mi$3.00, ph$6.30 PB 139 197

The differential capacity of the electrical double layer at polarized platinum electrodes has been investigated as a function of the type and concentration of anions.

Vitro Labs., West Orange, N. J.
VAPOR PHASE CARBOTHERMIC REDUCTION OF MAGNESIUM OXIDE IN THE HIGH INTENSITY ARC, by S. Korman, A. Diniak, and C. Sheer. Technical note no. 6 on Contract AF 18(603)03. 22 Aug 58, 15p. 8 refs. KLX-10116; AFOSR-TN-58-498; AD-158 308.
Order from LC mi$2.40, ph$3.30 PB 143 656

A laboratory investigation of the vapor-phase reduction of magnesium oxide has been carried out in the tail flame of a d-c high intensity arc. Thermodynamic considerations were used to predict an approximate temperature-dependence for the homogeneous reaction, $MgO + C \rightarrow Mg + CO$, indicating this reaction goes to completion above 1800°C. Since the lowest recorded temperature in the flame was ~ 2000°C, it was assumed that the flame consisted predominantly of reaction products. This was verified by spectrographic observation. It was concluded that the reaction was a homogeneous one and that the high intensity arc technique offers interesting possibilities in the carbothermic reduction of stable metal oxides.

PROJECT PRAIRIE GRASS, A FIELD PROGRAM IN DIFFUSION, VOLUME III, by Duane A. Haugen. June 59, 686p. 1 ref. Geophysical Research Papers no. 59; AFCRC-TR-58-235(III); AD-217 076.
Order from OTS $8.00 PB 161 101

Project Prairie Grass was a field program designed to provide experimental data on the diffusion of a tracer gas over a range of 800 meters. This, the third volume of the report on the project, contains descriptions of the fast-response instrumentation utilized for the measurement of wind fluctuations. The data reduction and analysis techniques are also presented along with tabulations of the results of the computations. (See also PB 151 424)

Allied Research Associates, Inc., Boston, Mass.
MODIFICATION OF FOG AND CLOUD PARTICLES IN THE ATMOSPHERE, by Robert B. Smith, Raymond Wexler, and Arnold H. Glaser. Final rept. Pt. 2, on Research Directed toward Contrail Elimination, Contract AF 19(604)3492. 31 Mar 59, 56p. 7 refs. AFCRC-TR-59-228, Pt. 2; AD-212 553.
Order from LC mi$3.60, ph$9.30 PB 143 200

Part II of the report deals with aspects of artificial fog and cloud modification. A number of studies and experiments on dry-ice crushing and disseminating equipment led to a suggested improved design. The possibility of the reduction or suppression of fogs by the use of hexadecanol to prevent evaporation from nearby free water surfaces is discussed. Evaporation of some fog and small clouds through the absorption of sunlight by pollutants added to the cloud seems possible on the basis of calculations of the effect of carbon black seeding, as well as more general theoretical considerations. (See also PB 143 201)

RESEARCH IN RADAR METEOROLOGY, by Roland J. Boucher and Raymond Wexler. Final rept., Pt. 3, 1 May-31 Nov 58, on Contrail Elimination, Contract AF 19(604)3492. 20 Mar 59, 15p. 3 refs. AFCRC-TR-59-228, Pt. 3; [AD-220 568].
Order from LC mi$2.40, ph$3.30 PB 143 543

A comparatively new technique for displaying precipitation echoes on radar, the Constant Altitude Plan Position Indicator display (CAPPI), is critically reviewed as to its possibilities as a research tool and as a means of presenting radar information for synoptic diagnosis and forecasting. Radar echo patterns along the vertical which indicate rapid changes in the wind profile aloft may be of significant use in forecasting weather conditions up to 12 hours. Radar detection of echoes associated with the sea breeze at Round Hill reveals some interesting micrometeorological aspects of the sea breeze. Research on the melting of hail indicates that along the 20°C wet adiabat hail of about 1 cm diameter at the 4 km level will completely melt by the time it reaches the surface.

A TEST OF THE FEASIBILITY OF THE USE OF JET ENGINE EXHAUST HEAT FOR FOG DISSIPATION, by Robert B. Smith and Raymond Wexler. Final rept. Pt. 1 on Research Directed toward Contrail Elimination, Contract AF 19(604)3492. 31 Mar 59, 27p. 4 refs. AFCRC-TR-59-228 Pt. 1; AD-212 553.
Order from LC mi$2.70, ph$4.80 PB 143 201

Measurements of temperature and wind speed in the exhaust plume of a jet aircraft operating on the ground were made to investigate the feasibility of the use of jet engine exhaust heat to dissipate fog from airport runways. A field test in a calm showed that temperature rises of 2°F above ambient reached 200 ft above the runway over a width of 200 ft at distances of 300-600 ft behind the tail pipe. Maximum induced wind speeds in this region were about 20 mph. Based on the results of this experiment a fog dissipation technique for airport runways using jet exhaust heat seems feasible for fogs warmer than about 30°F.

FORECAST OF IONOSPHERIC STORMS AND RADIO COMMUNICATIONS 1959 - 1962, by Luther C. Kelley. June 58, 20p. Proj. no. 636.
Order from LC mi$2.40, ph$3.30 PB 143 137

This brochure is designed to forewarn supervisory and operating personnel of the Army Command and Administrative Network of increased radio circuit outage during the downward trend of the current sunspot cycle. Long-range predictions indicate that severe disruptions of radio service will result from ionospheric storms during this period. Data of actual circuit performance illustrate the curtailment of radio communication with rising geomagnetic activity. Long-term forecasts are based on the correlation of geomagnetic activity with sunspot number observed for many years. Recommendations for the reduction of outage are included.

AN INVESTIGATION OF THE COMBINED INFLUENCES OF LARGE-SCALE DIFFERENTIAL HEATING AND OROGRAPHIC OBSTACLES IN CREATING QUASI-PERMANENT FORCED PERTURBATIONS OF THE CIRCUMPOLAR WESTERLIES, by Charoen Vadhanapanich. Technical rept. no. 10 on Contract Nonr-1600(00). 15 Mar 58, 71p. 23 refs.
Order from LC mi$4.50, ph$12.30 PB 139 195

The present results suggest that the statistical mean perturbations are only partially a result of steady forcing influences, and must also be, in part, a result of "preferred" behavior, i.e. development and movement, of individual day-to-day perturbations, which in turn is related to the fixed forcing effects. Further work on the problem should abandon the steady state approach in favor of a time dependent model which incorporates both factors.

Free U. of Berlin (Germany).
SHORT-RANGE WEATHER PREDICTION TECHNIQUES BY SPECIFICATIONS OF THE WEATHER ACCORDING TO THE FORECASTED PRESSURE DISTRIBUTION, RESEARCH ON, by D. Just, K. Sieland and G. Polster. Final technical rept. on Contract AF 61(514)946. 30 Nov 57, 186p. AFCRC TR-58-227; AD-152 508.
Order from LC mi$8.40, ph$28.80 PB 138 882

In the present research the relationship of the occurrence of fair, cloudy and overcast sky, of fog, precipitation and cloud height $h \leq 3$ to the surface- and 500-mb. pressure pattern is investigated. For the period 1950 - 1957 daily synoptic data, the respective pressure distribution, wind direction and pressure change were entered into key punched cards for three German, three English, and three Russian stations. Evaluating these punched cards, the frequency of the occurrence of the above-mentioned classes of sky and weather condition in connexion with different parameters of the pressure distribution was determined and summarized in the form of tables. For each class the mean value of occurrence, expressed as percentage, was computed, while for each combination with the different parameters the departure from the mean occurrence was calculated. As a means to assess the capability of individual parameters to exercise an influence on the occurrence of a certain class, a so-called departure factor ΔM was introduced. The best results were obtained for the occurrence of precipitation and of fair skies. As to the parameters, the pressure distribution gives better results than the pressure change and the wind direction. Especially good values were obtained for isobar curvature, high, low and trough at the surface, for high in 500 mb., wind speed = 50 knots in 850 and 500 mb., as well as for larger amounts of 3- and 24-hr. pressure changes. It can be definitely stated that in general the pressure distribution and pressure change at the surface exercise a stronger influence on sky and weather conditions than does the 500-mb. level.

MEAN TEMPERATURE FROM 1000 MB TO 500 MB AS A PREDICTOR OF PRECIPITATION TYPE, by A. James Wagner. Scientific rept. no. 2 on Contract AF 19(604)1305. May 57, 20p. 2 refs. AFCRC-TN-57-288; AD-117 176.
Order from LC mi$2.40, ph$3.30 PB 128 332

The frequency of occurrence of frozen precipitation forms relative to the frequency of occurrence of non-frozen forms is determined as a function of geographical location and of the mean temperature (or thickness) of the layer from 1000 mb to 500 mb. The results are derived from the data for a large number of stations in the United States during two winter seasons. A map of the thickness values for equal probability of occurrence of frozen and non-frozen forms illustrates the effects of altitude and continentality. It is found that the form of the precipitation can be specified with a confidence of 75% or more when the thickness value at a station is 100 feet or more from its "equal probability" value. Some refinements of the technique are discussed.

PROBABILISTIC DYNAMICS, by Max A. Woodbury. Rept. on Contract AF 19(604(3490. 30 Apr 59, 9p. AFCRC-TR-59-247; AD-216 319.
Order from LC mi$1.80, ph$1.80 PB 143 787

The model of the atmosphere provided by the Navier-Stokes equations of motions was greatly altered in application to weather forecasting by numerical means. The changes come about, partly at least, to remove from the model features of atmospheric motion which are irrelevant to the information available to the forecaster. Sound waves and other atmospheric motions which are small compared with the spacing between points at which data is available are eliminated from consideration. An avenue of approach is investigated which allows a unified viewpoint based on probabilistic notions rather than on a theory of approximation. A probabilistic dynamic system is characterized by a fairly rich structure compared with a dynamic system without probability elements, but much simpler in essence than many man-machine systems.

ARCTIC WEATHER STUDIES: SUMMER SEASON, by Richard J. Reed and Ronald K. Surface. Scientific rept. no. 5 on Contract AF 19(604)3063. June 59, 53p. 5 refs. AFCRC-TN-59-278, AD-214 889.
Order from LC mi$3.60, ph$9.30 PB 143 508

Aircraft reconnaissance reports and 3-hourly surface observations are used to study the relationship between various weather phenomena and features of the arctic circulation during a three-week period in July 1956. The reconnaissance reports were entered at appropriate positions on a large model containing surface fronts, 500-mb low center and 500-mb jet axis, and composites were drawn of average number of cloud layers, average total cloudiness, average cloudiness in the layers 0-5,000 feet, 5-10,000 feet, 10-15,000 feet, 15-20,000 feet and above 20,000 feet, and average winds and temperatures at 700 mb and 500 mb. The frequency of occurrence of turbulence and icing was also derived. The individual flight sections were studied in order to determine whether the middle and upper cloud masses were related to the frontal surfaces in the classical fashion. Turbulence was found to be very infrequent despite the above normal weather activity during the selected period. All reports of turbulence were made in or very near cloud layers. Icing was encountered in about one half of the cloud masses both at 700 mb and 500 mb. The frontal characteristics, as judged from the 3-hourly surface observations, were highly variable, and little attempt was made to generalize. (See also PB 139 559)

Washington U., Seattle.
AN ATTEMPT TO MEASURE THE WATER VAPOR DIVERGENCE OVER GREENLAND BY DIRECT APPLICATION OF RADIOSONDE DATA, by Richard Keith Wilson. Scientific rept. no. 3 on Contract AF 19(604)3063. May 59, 39p. 17 refs. AFCRC-TN-59-238; AD-211 111.
Order from LC mi$3.00, ph$6.30 PB 143 464

A resume of Greenland's geographical, topographical, and hydrological features is made to help evaluate the results of the computations of water vapor divergence. An equation suitable for the direct application of radiosonde data is developed from the equation of continuity and the divergence theorem. Six months of data were used in the computation of water vapor divergence. The months studied were: June, 1957; July, 1957; August, 1957; December, 1957; January, 1958; and February, 1958. The computations of water vapor divergence for Greenland through the direct application of radiosonde data are found to be unreliable. An investigation of the procedure used brings out three major factors which contribute to the unreliable values as mentioned above. These errors are: missing data, the condition known as motorboating, and the line integration technique which involves the assumption of linear variation of mean water vapor flux between stations. It was decided to prepare a series of daily 700-mb charts for December, 1957, to compare the water vapor divergence computations obtained by analyzed data to those obtained by the direct application of radiosonde data. The result suggests that meaningful information on the water vapor divergence of Greenland can be obtained from measurements taken from analyzed charts.

RESULTS OF A SERIES OF DYNAMICAL PREDICTIONS FOR THE ARCTIC: SUMMER SEASON, by Richard J. Reed. Scientific rept. no. 4 on Contract AF 19(604)3063. Apr 59, 55p. 7 refs. Meteorology and Climatology Occasional rept. no. 12; AFCRC-TN-59-

246; AD-211 493.
Order from LC mi$3.60, ph$9.30 PB 143 509

Forecasts of 1000-mb and 500-mb heights were prepared for the arctic for a 20-day period in July, 1956. The forecasts were based on a two-level baroclinic model; solutions were obtained by both graphical and combined graphical and numerical integrations. The day-to-day performance of the method, as revealed by correlations between predicted and observed heights and root-mean square-errors, was slightly better than for a similar arctic series reported on by Estoque and somewhat worse than for comparable forecasts at middle latitudes. From the geographical distribution of correlations and errors, little evidence of important topographical influence was found. In general, the performance was best in regions where the synoptic activity was most pronounced. Generally speaking, the results confirm Estoque's conclusion that reasonably successful predictions should be possible in the arctic by dynamical methods once the data network is improved. Even with the present network, useful results are obtained on a considerable number of occasions.

SNOW REMOVAL. 1 Oct 53, 60p. 7 refs. Technical pub. NAVDOCKS TP-Pw-29.
Order from OTS $1.50 PB 161 060

This publication has been prepared by the Bureau of Yards and Docks as a guide for naval and civilian personnel concerned with snow removal and snowdrift control operations. Presented herein are technical criteria and operational procedures to be used as a guide for snow and ice removal, and for snowdrift control operations to keep roads, airfields, and other areas open to traffic. Lists and illustrations of equipment are included, as well as detailed instructions concerning usage. Specific types of equipment best adapted for different snowfall areas are described.

North Pacific Div., Corps of Engineers, Portland, Oreg.
LYSIMETER STUDIES OF SNOW MELT. Research note no. 25 on Snow Investigations. 1 Mar 55, 61p. 16 refs.
Order from LC mi$3.90, ph$10.80 PB 128 397

Runoff from an unforested 600-square-foot snow-lysimeter area is used as a measure of snow-melt quantities. The component melts due to radiation, convection, and condensation are computed from measured meteorological parameters and compared with the gaged runoff. Radiation and condensation melts are independently determined, the former from radiometer measurements and the latter from special moisture-exchange experiments.

SHORAN PHOTOGRAMMETRIC MAPPING INSTRUCTIONS, by Archer M. Wilson. 15 May 50, declassified 5 Nov 53. 153p. Rept. 1168; supersedes rept. 1055.
Order from LC mi$7.50, ph$24.30 PB 127 704

This report is designed to provide a set of tentative operating instructions for use by Corps of Engineers personnel who may be required to employ Shoran-controlled photography in fulfilling current mapping assignments. The wording and layout have been written in the general form of a training manual so as to facilitate its later publication.

Rome Air Development Center, Griffiss AFB, N. Y.
ELECTRONIC COMPUTERS FOR RECONNAISSANCE FIELD UNITS, by Anthony A. Garra and Mary B. Erskine. June 59, 32p. RADC-TR-59-71; AD-215 440.
Order from LC mi$3.00, ph$6.30 PB 143 268

For several years the Air Force has been attempting to introduce automatic computational techniques and equipment to reconnaissance field units to speed up mathematical operations and reduce manpower requirements. This report describes the RADC development program to obtain a small reconnaissance computer to meet field requirements. The interim equipment procured and assigned to field units is described in detail. The equipment purchased to study programming techniques is also described. The experimental equipment designed specifically for field requirements is presented in detail and typical problems to be computed on the equipment are discussed. The effort to satisfy the operational requirement is about 80 percent complete. Several improvements to the computational equipment are recommended as a means of satisfying the existing requirement.

Stanford Research Inst., Menlo Park, Calif.
THE DETERMINATION OF THE EARTH'S POTENTIAL FIELD BY OBSERVATIONS OF SATELLITE ORBITS, WITH SPECIAL REFERENCE TO THE DETERMINATION OF THE THIRD HARMONIC, by J. L. Brenner, R. Fulton, and N. Sherman. Rept. on Contract AF 29(600)1773. 1 July 59, 39p. 4 refs. 2587-ITR-3; AFMDC-TR-59-29.
Order from LC mi$3.00, ph$6.30 PB 143 518

A theoretical analysis of the differential equations of motion of a near-earth satellite about a model earth having mass distribution which is symmetric with respect to its polar axis and its equatorial plane reveals that the satellite's orbit undergoes long-period changes not previously reported. Numerical integration of the equations of motion verifies this result. These changes are minute and definitely observable only if many observations are made during each revolution. On the other hand, a bias in the handling of the observations can override these changes, and introduce spurious secular (long-term) variations. The magnitudes and periods of typical spurious variations have been evaluated. The variation of the eccentricity agrees with that reported from the Vanguard computing center; hence its use in verifying the existence of a third harmonic in the earth's gravitational potential field is not justified.

Wharton School of Finance and Commerce, U. of Pennsylvania, Philadelphia.
ANALYSIS OF STEAD DISTRIBUTION BY THE D-LINE METHOD, by Arthur F. Loeben. Technical rept. no. 6 on Contract Nonr-551(01). 1 Oct 58, 39p. 14 refs.
Order from LC mi$3.00, ph$6.30 PB 143 798

In this paper, interest and effort has been placed on developing a method of finding and generalizing such patterns. An attempt is made to define a useful unit of enumeration and to generalize its distribution. The concept of the stead is used as the basic unit, and the concept of a nucleated area as the first level of generalization. Beyond this, further generalization and development of patterns is accomplished by using the D-line method of agglomeration. Some aspects of scale and theoretical distributions are examined and used. The end product of the research is presented as three levels of generalization of the same data with the resulting differences in their patterns.

Wharton School of Finance and Commerce, U. of Pennsylvania, Philadelphia.
DESCRIPTION OF A LAND-USE MAP OF PENNSYLVANIA, SCALE 1:250,000, by Lester E. Klimm. Technical rept. no. 2 on Contract Nonr-551(01). 1 Oct 58, 10p.

Wharton School of Finance and Commerce, U. of Pennsylvania, Philadelphia.
THE DISTANCE RELATIONS AND SOME OTHER CHARACTERISTICS OF CROPLAND AREAS IN PENNSYLVANIA, by James P. Latham. Technical rept. no. 4 on Contract Nonr-551(01). 1 Oct 58, 274p. 53 refs.
Order from LC mi$11.10, ph$42.60 PB 143 800

The conclusions of this study fall into two general classes. The first class results from the general finding that it is possible by the D-line method of analysis to regionalize an areal dispersant of extreme complexity, e.g., cropland, according to distance relations and to derive regions that are objectively located and bounded. The second class develops from the measurement of uninterrupted surface distances (intercepts) along rotated parallel traverses. Such measurement provides quantitative data for describing characteristics of regions and of the areal dispersants within the regions.

Wharton School of Finance and Commerce, U. of Pennsylvania, Philadelphia.
MULTI-CATEGORY D-LINE ANALYSIS OF A DISTRIBUTION, by Lester E. Klimm. Technical rept. no. 5 on Contract Nonr-551(01). 1 Oct 58, 19p. 2 refs.
Order from LC mi$2.40, ph$3.30 PB 143 799

In previous papers the basic nature of the D-line method has been described and analyzed. There it was considered only as applied to the relations between patches of a single category of distribution--"islands," cropland areas, or "steads." Here it is proposed to examine its application to the analysis of the relations of two or more phenomena occurring within a complex landscape. For this purpose the section of The Land-Use Map of Pennsylvania showing the greatest complexity within a limited area was chosen. Its great complexity arises from the fact that it has small units of mining and urban use scattered through an area where the larger units of landscape are agricultural or in forest.

Wharton School of Finance and Commerce, U. of Pennsylvania, Philadelphia.
SOME CONTRIBUTIONS TO PRINCIPLES AND METHODS OF DESCRIPTIVE GENERALIZATION IN GEOGRAPHY, by Lester E. Klimm. Final rept. on Contract Nonr-551(01). 1 Oct 58, 18p. 9 refs.

QUANTITATIVE GEOMORPHOLOGY OF SMALL DRAINAGE BASINS OF SOUTHERN INDIANA, by Donald R. Coates. Technical rept. no. 10 on Contract N6onr-271, T. O. 30. 1958, 65p. 18 refs. AD-206 780.
Order from LC mi$3.90, ph$10.80 PB 143 654

Morphometric analysis of six small areas in the unglaciated part of southern Indiana provided data for determination of influence of lithology, per cent of unconsumed upland (stage of cycle), and regional relief upon scale and form properties of third-order drainage basins measured in the field and from topographic maps and air photos. Ten drainage basins in each of six different localities were compared with respect to length dimensions of area, perimeter, overland flow, stream lengths, drainage density, and local relief, and with respect to dimensionless form properties of valley-side slopes, stream gradients, hypsometric curve forms and integrals, bifurcation ratios, length ratios, circularity, and azimuth relations of slope and

channels. Differences between areas were tested for significance by the analysis of variance.

Sacramento State Coll., Calif.
GEOGRAPHY OF INDIAN COASTS, by David E. Sopher. Annual summary rept. for 1957 on Contract Nonr-2329(00). [1958] 24p. AD-153 106.
Order from LC mi$2.70, ph$4.80 PB 137 992

A cultural geographic reconnaissance of the east coast of India was made during the summer of 1957. The itinerary included a traverse of the coast between the Bengal-Orissa boundary, northeast of Balasora, and Cape Gomorin. A short tract on the west coast north of the Cape to Trivandrum, an extension of the Tamil language area on the Malabar side, was included in the survey. Because relevant cultural variations were found to occur within relatively short distances along the coast, the number of coastal sites visited was large and the time spent at each necessarily brief. The cultural aspects of maritime traffic are described in terms of the use of Tuticorin dhoni and Kakinada nava country craft, trade in the country craft, conditions affecting country craft traffic, ports, and seafaring as a way of life. The use and distribution of the various types of Catamaran and other types of sea fishing craft are presented; a few notes were gathered on fishing gear and marine fish resource. Consumer habits and marketing of fish and other sea food are outlined. Sea fishing and seafaring is exclusively the province of a small number of castes, some of whom, while retaining their caste identity are Moslem or Christian rather than Hindu. A varying degree of cultural unconformity is noted and shown to exist between the strand fishing population and the rest of the coastal populations. An aspect of the marked social separation of the strand population from the much more numerous agricultural and urban population of the coastal plain is the existence of important Hindu shrines, some of great antiquity, on the shores of the Bay of Bengal.

Oceanography

MARINE BORERS AND FOULING ORGANISMS IN 56 IMPORTANT HARBORS [AND] TABULAR SUMMARIES OF MARINE BORER DATA FROM 160 WIDESPREAD LOCATIONS. Apr 51, 324p. 26 refs. NAVDOCKS TP-Re-1.
Order from OTS $3.50 PB 161 061

PART A of this report comprises a narrative analysis of the data from each of the 56 harbors. These locations are widely distributed along our Atlantic and Gulf coasts; in Canada and Alaska; in various Caribbean islands; in Brazil, North Africa, Sicily, and Italy; and in the Pacific as far as Australia and New Zealand. Each analysis identifies the marine borers which attacked the test boards at a given station, summarizes the intensity of borer attack, and describes the kind and number of fouling organisms present. The depth of the test board and various hydrographic data also are reported. Additional data for 1948 and 1949, where available, are summarized under the heading "Recent Addenda." PART B is a tabular summary of test board data recorded during 1934-1942 at several hundred locations. The majority of these locations are in the Middle Atlantic harbors; the others are scattered along the South Atlantic and Gulf ports in the Caribbean islands; in Venezuela and Brazil; in Italy; along the Pacific coast southerly from Adak, Alaska; and in the Hawaiian and other Pacific islands, Australia, and New Zealand.

Florida State U., Tallahassee.
A SIMPLIFIED THEORY OF LONG WAVES ON A BAROCLINIC WESTERLY CURRENT, by Seymour L. Hess. Technical rept. no. 11 on Contract Nonr-1600(00). 1 May 58, 24p. 6 refs.
Order from LC mi$2.70, ph$4.80 PB 138 818

A simplified, quasi-geostrophic, baroclinic theory of long waves is presented. By elimination of the geopotential from the divergence equation it is possible to relate the three velocity components by three independent equations. No more are needed. Simple solutions are obtained at the price of losing instability of the waves. The vertical motion ties the waves together vertically. The relationship of vertical motion to the profile of the zonal wind is examined. Possible extensions to long-range forecasting are discussed.

Johnson, J. W., and Wiegel, R. L., Berkeley, Calif.
WAVES AT SUBIC BAY, PHILIPPINE ISLANDS, by J. W. Johnson and R. L. Wiegel. Rept. on Study to Determine Effect of Grande Island Breakwater upon Destructive Wave Action during Normal Storms in Subic Bay, P. I., Contract NOy-79349. 1 Dec 55, 96p. 9 refs.
Order from LC mi$5.40, ph$15.30 PB 130 022

A critical examination of all available wave data shows that both the monsoons and the typhoons in the South China Sea are responsible for high wave conditions at the entrance of Subic Bay. To aid in future planning operations and designing structures that are affected by wave action the complete analysis of wave conditions at Subic Bay, as determined by hindcasts from past weather charts of the South China Sea, is attached to this report as an Appendix.

Nebraska U., Lincoln.
CALCIFICATION IN MARINE MOLLUSKS, by Louise H. Jodrey and Joseph L. McDonald. Annual progress rept. for 1 June-31 Aug 56 on Contract Nonr-1801(00). 9 Dec 57, 3p. AD-150 634.
Order from LC mi$1.80, ph$1.80 PB 138 648

Certain aspects of respiratory metabolism of the shell-forming tissue of mollusks was one objective of this study. Other objectives included (1) the study of dependence of the shell-forming process on respiratory processes; (2) the action of phosphatase; (3) further studies on the participation of carbonic anhydrase in the deposition of shell; (4) the evaluation of bicarbonate and decarboxylations as alternative sources of shell carbonate; and (5) studies of the chemical reactions, including the site of carbonic anhydrase intervention, concerned in the final deposition of $CaCO_3$. The finding that diethyldithiocarbamate (D inhibited respiration of the mantle was confirmed. The decrease of O consumption was measured at 3 different concentrations of I, and salicylaldoxime. Tyrosine was used as a substrate for the suspected Cu-containing enzyme. The increase in O at pH of 9.5 was measured. At low concentrations where autoxidation was negligible, catechol enhanced the oxidation of tyrosine. Attempts to use ascorbic acid to enchance O consumption were unsuccessful. DOPA was oxidized by mantle homogenates without a Cu complexing agent.

Washington U., Seattle.
MIDWATER TRAWLING STUDIES IN THE NORTH PACIFIC OCEAN [AND] DESCRIPTIONS OF A NEW SPECIES OF STOMIATID AND AN UNIDENTIFIED LEPTOCEPHALUS, by William Aron and Peter McCrery. Technical rept. no. 58 on Contract Nonr-477(10). Feb 58, 71p. 12 refs. Reference 58-3.
Order from LC mi$4.50, ph$12.30 PB 139 194

A modified version of the Isaacs-Kidd midwater trawl was used for sampling in the North Pacific. Data from catches of each of 143 hauls are presented to show corrected plankton volumes; depth of fishing; dominant plankton; identity, size range, and number of fish and fish larvae; and date, time, and location of haul. There was a wide difference between day and night catches. Findings supported previous observations that the trawl results were consistent and that plankton patchiness plays a minor role in the trawl results. Limited work with the invertebrate portion of the catches shows the possibility of commerically exploitable shrimp populations near Kodiak.

SINGLE STATION AND SYNOPTIC ANALYSIS OF IONOSPHERIC DATA FOR THE ARCTIC, by G. Hill and R. Penndorf. Scientific rept. no. 3 on Research Concerning Forecasting Anomalous Propagation at High Altitudes, Contract AF 19(604)4092. May 58, 121p. 12 refs. Technical rept. RAD-TR-59-19; AFCRC-TN-59-365; AD-217 316.
Order from LC mi$6.30, ph$19.80 PB 143 206

Anomalous effects in the Arctic Ionosphere were examined from two approaches. First, the time dependance of sporadic E, spread F, E, and F2 critical frequency data were studied for individual stations. The E layer, as expected, was found to be very regular. The F2 layer showed strong seasonal, diurnal, and geographical variations. Near the pole during the winter erratic variations in the F2 critical frequency were found. Sometimes the foF2 changed as much as 10 mc/s within a few hours. These changes are related to certain spread F forms. The occurrence of sporadic E was found to be more intense and more frequent at night in the auroral belt than further north. The statistics for Es $\geq$10 mc/s also followed this pattern. The number of Es occurrences was grouped into frequency bands 2 mc/s wide. It was found that they decrease from one band to the next higher one by a factor of about three.

Deutscher Wetterdienst, Aachen (West Germany).
RESEARCH ON AIR-EARTH-CURRENT IN HIGH MOUNTAINS (A CONTRIBUTION TO THE INTERPRETATION OF ATMOSPHERIC-ELECTRICAL REGISTRATIONS IN THE ALPS) by A. Kunkis. Technical note no. 8 on Contract AF 61(514)640. 15 Apr 56, 70p. 25 refs. AFCRC-TN-57-213; AD-133 680.
Order from LC mi$3.90, ph$10.80 PB 143 652

In order to fulfill the task an easily transportable measuring apparatus for the measurement of the atmospheric electrical current was developed. The apparatus has proved true under diverse unfavourable conditions (in snow and at high air moisture). Controls of the apparatus which can be easily and quickly carried out permit to keep errors with regard to the measuring values within narrow limits ($\pm$3%) and this also under unfavorable conditions. For the measuring values of the potential gradient and the air-earth-current obtained at the stations reduction factors were determined. These reduction values permit to convert the relative values measured at the stations into absolute values. All measurements are carried out with one measuring apparatus and after one measuring method at measuring places at heights from 0, 2 to 4 km and at selected atmospheric electrically undisturbed weather conditions. The measuring values reveal a variation of the conductivity with height. The conductivity increases with height after a simple exponential function.

THE DOUBLE FIELD MILL, by J. A. Chalmers and M. Smiddy. Technical note no. 1, 15 Oct 55-14 Oct 56, on Measurement of Space Charge in the Lower Atmosphere, Contract AF 61(514)891. [1956] 18p. 5 refs. AFCRC-TN-56-885; AD-110 251.
Order from LC mi$2.40, ph$3.30 PB 130 761

In order to measure the potential gradient at a point in the atmosphere a few metres above ground level, a double field mill has been constructed. The theory of the instrument and the results of tests are described.

Massachusetts Inst. of Tech., Cambridge.
STATIC STABILITY AND ATMOSPHERIC ENERGY, by Edward N. Lorenz. Scientific rept. no. 9 on General Circulation Project, Contract AF 19(604)1000. 30 Apr 57, 44p. 19 refs. AFCRC-TN-57-298; AD-117 187.
Order from LC mi$3.30, ph$7.80 PB 128 119

The process primarily responsible for the release of kinetic energy in the atmosphere, a rising of warmer air and a simultaneous sinking of colder air, also increases static stability. Gross static stability, a weighted integral of static stability, may be defined in such a way that reversible adiabatic processes have equal effects upon kinetic energy and gross static stability. Simplified dynamic equations are developed, which properly describe the relations between total potential energy, kinetic energy, available potential energy, and gross static stability. These include three dimensional systems with the equation of balance or the geostrophic equation, and n-layer models. The two-layer model may be the simplest possible system with variable static stability. The simplified equations appear to be especially suitable for theoretical studies of the general circulation and similar circulations.

Army Engineer Research and Development Labs., Fort Belvoir, Va.
AIRFIELD ICE REMOVAL EQUIPMENT DEVELOPMENT, by Edward C. Kinker and John L. Terry. 10 Oct 58, 28p. Technical rept. 1547-TR; AD-207 024.
Order from LC mi$2.70, ph$4.80 PB 143 265

This report contains a history of the development, tests, and evaluation of airfield ice removal equipment. Several methods of ice removal were investigated such as pavement-type heaters; blow-torch-type heater to melt scarified ice; radiation heat from hot fluids in a tubular-type landing mat; radiant-type heating system embodying electrical conductors imbedded in concrete; and de-icing chemicals. Two machines are covered in this report: one, a rotary brush as a scarifier with a trailer-mounted heater to reduce the residue to water; the other, a drag-type ice removal unit. The report concludes that: (a) The rotary ice removal machine does not meet the requirements of the project but investigation should continue if some runway scarification can be tolerated; (b) the ice drag units do not meet the requirements of the project nor can they remove hard ice firmly bonded to the surface; therefore, no further tests are warranted; (c) radiant heat should be considered for new airport construction only; (d) the Bergquist device should be investigated; (e) research should be conducted on chemicals and an investigation should be conducted on metallic paint to provide an agent to break the bond between ice and pavement.

Material Lab., New York Naval Shipyard, Brooklyn.
RESEARCH AND DEVELOPMENT OF THE STUDY OF BRITTLE FRACTURE OF SHIP PLATE STEEL BY ELECTRON MICROSCOPY, by E. C. Haas. Final rept. on Lab. Proj. 5507. 7 Jan 58, 11p. 4 refs. AD-156 658.
Order from LC mi$2.40, ph$3.30 PB 143 255

An investigation was made of the applicability of electron microscopy in determining the relationship of the microstructure of ship plate steel to its brittle fracture transistion temperature. Replication techniques were developed for imaging fractured surfaces. The electron micrographs of fractured surfaces failed to reveal physical features which were characteristic or correlatable with the transition temperature of the metal specimen, but the use of polished and etched specimens extended the usefulness of standard metallographic techniques at lower magnifications. Electron microscope studies were continued on mechanically polished and nital-etched specimens, and a large group of photographs were taken of areas considered characteristic of the specimens so that an experienced operator could match photographs with specimens. Selected electron photomicrographs are presented of several specimens of ship plate steel chosen to cover a wide range of temperature of transition from predominantly ductile to predominantly brittle fracture. The significant difference in the structures of these specimens is the spacing of the cementite lamellae, with the specimens of higher transition temperature showing a greater spacing of these lamellae.

AIRCRAFT BREATHING OXYGEN REGULATOR TEST STAND CALIBRATION PROCEDURES, by James E. P. Davis. Rept. on In Service Test Apparatus. July 59, 22p. WADC Technical note 58-28.
Order from OTS $0.75 PB 161 075

This report gives a step by step description of the procedure for calibrating an oxygen regulator test stand. Included also are sample data sheets and a discussion of good calibrating procedures which should be used to obtain best results.

Air Force Personnel and Training Research Center, Lackland AFB, Tex.
SIMULATION OF EXTRA-COCKPIT VISUAL CUES IN CONTACT FLIGHT TRANSITION TRAINERS, by William A. Lybrand, M. Dean Havron and others. Feb 58, 346p. 211 refs. AFPTRC-TR-58-11; AD-152 123.
Order from LC mi$11.10, ph$53.10 PB 143 136

A comprehensive survey and analysis of research and operational evidence pertaining to visual cues utilized by pilots in performing the specified flight tasks was accomplished. This material was supplemented by: an analysis of the operational tasks involved and intensive interviews with pilots in transition training, instructor pilots, and test pilots; consultation with subject-matter experts in training, visual perception, and engineering areas; and inspection of existing trainers and simulators having visual capabilities.

Arnold Engineering Development Center [Tullahoma, Tenn.]
CRITICAL DISCUSSION OF EXPERIMENTS ON SUPPORT INTERFERENCE AT SUPERSONIC SPEEDS, by Jack D. Whitfield. Rept. on ARO, Inc. Contract AF 40(600)700 S/A 13(59-1). Aug 58, 51p. 14 refs. AEDC-TN-58-30; AD-201 108.
Order from LC mi$3.60, ph$9.30 PB 143 275

An experimental investigation of the effect of the sting support length on the drag of slender ogive-cylinder models, with and without afterbody boattailing, has been conducted. These tests were made at Mach numbers 3.00 and 3.98 over a unit Reynolds number range from 10^5 to 10^6 per inch. The critical sting length as well as the base pressure is shown to be strongly dependent on the transition location and the length Reynolds number. The often quoted rule-of-thumb geometry ratio of three base diameters for an allowable sting length was inadequate for this investigation. The range of critical sting lengths encountered during this study was from approximately 5.5 for $Re_L = 1 \times 10^6$ and $M = 4.0$ to approximately 1.0 for $Re_L = 7 \times 10^6$ and $M = 3.0$.

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
EFFECTS OF BREAKOUT FORCE ON LONGITUDINAL HANDLING QUALITIES, by Fred Newell. Rept. on Contract AF 33(616)3990. Dec 57, 43p. 4 refs. WADC Technical rept. 57-155; AD-142 306.
Order from LC mi$3.30, ph$7.80 PB 138 670

The airplane used in the study was a JTB-26B equipped with variable longitudinal control and stability. The results of this evaluation indicate that control friction is an important factor in pilot's opinions of aircraft handling characteristics and that the effects of friction vary with aircraft dynamics and control force gradients. Also, the type of mission simulated affects the pilot's attitude and desires and hence, his opinions of the effects of breakout force.

Cornell Aeronautical Lab., Inc. [Buffalo, N. Y.]
AN EXPERIMENTAL INVESTIGATION OF THE H-5 VARIABLE STIFFNESS BLADE PROGRAM. PART 1. HARMONIC REDUCTION OF MEASURED BLADE BEAM BENDING-MOMENT DATA, by Harold Hirsch and James Kline. Rept. on Contract W33-038-ac-14248. Dec 51, 271p. 2 refs. AF Technical rept. no. 6329, Pt. 1; AD-8445.
Order from LC mi$11.10, ph$42.60 PB 143 767

A helicopter research program was conducted with the objective of determining the bending stresses and motions experienced, in flight, by articulated rotor blades; and, thereby, to explore possible causes of a number of unexplained rotor blade fatigue failures. Measurements made with a family of blades, similar in all respects except flapwise bending stiffness, disclosed, under certain flight conditions, a hitherto unsuspected phenomenon of large amplitude resonant bending in the higher modes. Based on an analysis of these results, the necessity of, and proposed procedures for, investigating higher mode bending effects in both the design and flight evaluation phases of blade development programs are discussed. The results of the program are reported in six volumes. In this, the first volume, blade beam bending moments, measured with three sets of C.A.L. rotor blades, possessing approximately 1/2, 1, and 2 times the bending stiffness of standard H-5 blades, are presented. The data cover a wide range of stabilized flight conditions; obtained by systematically varying advance ratio, helicopter center of gravity, and rotor speed.

Cornell Aeronautical Lab., Inc. [Buffalo, N. Y.]
AN EXPERIMENTAL INVESTIGATION OF THE H-5 VARIABLE STIFFNESS BLADE PROGRAM. PART 2. BLADE BEAM BENDING-MOMENT ENVELOPES, by Harold Hirsch and James Kline. Rept. on Contract W33-038-ac-14248. Jan 52, 78p. 2 refs. AF Technical rept. no. 6329, Pt. 2; AD-8444.
Order from LC mi$4.50, ph$12.30 PB 143 766

Blade beam bending moment envelopes obtained from flight test measurements made with three sets of C. A. L. fiber glass blades possessing approximately 1/2, 1, and 2 times the bending stiffness of standard H-5 blades are presented. The results cover a wide range of stabilized test conditions, obtained by systematically varying advance ratio, helicopter center of gravity, and rotor speed. Spanwise blade beam bending moment envelopes including (1) the sum of the first two and (2) the sum of the first ten terms of the harmonic representation of the measured bending moments, obtained from Part 1 of the report, are presented. The spanwise distribution of steady bending moment is also shown. (See also PB 143 767)

Cornell Aeronautical Lab., Inc., [Buffalo, N. Y.]
AN EXPERIMENTAL INVESTIGATION OF THE H-5 VARIABLE STIFFNESS BLADE PROGRAM. PART 3. EVALUATION OF ROTOR RESONANT BONDING EFFECTS, by Harold Hirsch and James Kline. Rept. on Contract W33-038-ac-14248. Jan 52, 88p. 13 refs. AF Technical rept. no. 6329, Pt. 3; AD-6265.
Order from LC mi$4.50, ph$13.80 PB 143 765

The bending moments and motions experienced in flight by articulated rotor blades were studied in an attempt to determine the causes of unexplained rotor blade fatigue failures. Blades with differing degrees of stiffness were instrumented so as to measure bending at 9 spanwise stations on each blade. A ground run-up made with medium-stiffness blades indicated that an 8/rotor revolution oscillation periodically occurred. Study of the blade deflection pattern identified the source of the oscillation to be in the third bending mode. Calculations were made which predicted that at least 1 particular combination of blade stiffness, mode shape, and rotor speed might produce a resonant condition corresponding to each harmonic order between 2 and 9. Experimental results verified the predictions. Methods suggested for avoiding one or another of the resonant points included the addition of concentrated masses to the blade to give the necessary frequency shifts, or modification of the blade stiffness. (See also PB 143 766)

Cornell Aeronautical Lab., Inc., [Buffalo, N. Y.]
AN EXPERIMENTAL INVESTIGATION OF THE H-5 VARIABLE STIFFNESS BLADE PROGRAM. PART 4.

HARMONIC REDUCTION OF MEASURED BLADE-MOTION AND CONTROL-FORCE DATA, by James Kline. Rept. on Contract W33-038-ac-14248. Apr 52, 147p. 2 refs. AF Technical rept. no. 6329, Pt. 4; AD-6161.
Order from LC mi$7.20, ph$22.80 PB 143 764

The blade motions and control forces measured with the three sets of C.A.L. test blades, possessing approximately 1/2, 1, and 2 times the bending stiffness of standard H-5 blades, are presented. The blade motions and control force data, measured simultaneously with the blade beam bending moments of Parts 1, 2, and 3, are presented in the form of harmonic components of the Fourier expansion derived from the cycles analyzed. The most informative cyclic harmonic motions and loads are presented as curves plotted versus tip speed ratio. As in the first three volumes, the data cover a range of stabilized flight conditions; obtained by systematically varying advance ratio, helicopter center of gravity and rotor speed. (See also PB 143 765)

Cornell Aeronautical Lab., Inc., [Buffalo, N. Y.]
AN EXPERIMENTAL INVESTIGATION OF THE H-5 VARIABLE STIFFNESS BLADE PROGRAM. PART 5. EVALUATION OF BLADE BEAM BENDING DATA MEASURED BY THREE HELICOPTER MANUFACTURERS, by James Kline. Rept. on Contract W33-038-ac-14248. June 52, 83p. 3 refs. AF Technical rept. no. 6329, Pt. 5; AD-6794.
Order from LC mi$4.80, ph$13.80 PB 143 763

The results of analysis of beam bending flight test data measured on three different blade designs are presented to substantiate that the resonance phenomenon disclosed with the C. A. L. fiber glass blades was not an isolated occurrence. These data which were supplied by three manufacturers cover a range of flight conditions at various advance ratios and rotor speeds. The results are presented in the form of harmonic components of the Fourier expansion in order to establish the occurrence of resonance in the higher modes and enable correlation with the variable stiffness blade beam bending results, as presented in Parts 1 and 3 respectively of this report. (See also PB 143 764)

Cornell Aeronautical Lab., Inc., [Buffalo, N. Y.]
AN EXPERIMENTAL INVESTIGATION OF THE H-5 VARIABLE STIFFNESS BLADE PROGRAM. PART 6. A TENTATIVE EMPIRICAL CRITERION FOR THE DESIGN OF ROTOR BLADES FOR HIGHER MODE RESONANCE, by Howard Doughaday and James Kline. Rept. on Contract W33-038-ac-14248. Nov 52, 87p. 10 refs. AF Technical rept. no. 6329, Pt. 6; AD-8443.
Order from LC mi$4.80, ph$13.80 PB 143 762

A possible empirical approach to the problem of predicting higher order bending moments is presented. Since the tentative procedure is based on test results, it would increase in reliability as more data on different types of blades becomes available. The measured blade bending moments have been harmonically analyzed previously, so that the vibration amplitude for each order of rotor excitation is known for each test condition. Knowing this amplitude, the component of the total aerodynamic force or the generalized force necessary to produce the observed response is then calculated for the given order and a particular vibration mode. These generalized forces are plotted against advance ratio and order of excitation. From the generalized forces, a dimensionless generalized force coefficient computed which can be used to predict loads on other blades. The generalized force approach was adopted because if offers the most rational means that could be found for applying the higher harmonic data obtained in the program to the design of other helicopter blades. (See also PB 143 763)

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
IMPROVEMENT OF FERRYING RANGE OF ARMY HELICOPTERS, by A. C. Adler, H. S. Holm and S. A. Harrington. Final rept. on Proj. 9-38-01-000 ST801, Contract DA 44-177-tc-441. July 59, 103p. 16 refs. Rept. no. BB-1187-H-2.
Order from LC mi$5.70, ph$16.80 PB 143 573

This investigation is an extension of previous studies of maximum ferry range for single rotor helicopters. The configurations evaluated include: tandem helicopters, single rotor and tandem helicopters with auxiliary wings (compound helicopters), single rotor helicopters with auxiliary wings and propulsion (gyrodynes) and towed systems (helicopter towing tanker-glider, airplane towing helicopter). Lift-to-drag ratios for these configurations were obtained over a wide range of parameters on an IBM-704 computer. Ferrying ranges were calculated for the more promising configurations. It was found that careful attention had to be given to programming the cruise altitude with the consumption of fuel and to the compromises between power plant and airframe performance. The most promising modification appears to be the single rotor compound helicopter with a range approximately double that of the unmodified helicopter. Although an equivalent gyrodyne attains a 10% increase in range over the compound helicopter at 30% higher cruise speeds, the increased complexity, weight, and cost weigh heavily against the gyrodyne for a "one-shot" ferrying mission. Towed configurations do not appear to offer any real promise.

Curtiss-Wright Corp., Santa Barbara, Calif.
FLIGHT TEST INSULATION STUDIES, by Allen G. Norem. Rept. on Aircraft Structural Research, Contract AF 33(616)5152. Feb 59, 71p. 6 refs. WADC Technical rept. 59-9; AD-208 326.
Order from OTS $2.00 PB 161 079

Model structures insulated by Refrasil B-100, phenolic CT-304 spray coated alumina, and Teflon were flight tested on a recoverable Materials Test Vehicle. The thermal response of the insulated model structures was recorded on a miniature tape recorder. It was demonstrated that the test vehicle and instrumentation used provided a suitable system for the gathering of flight test data on the effect of insulating and subliming materials in restricting heat flow into the base structure. It was also demonstrated that the simple methods of analysis presented in Reference 1 are adequate for the prediction of the thermal response of insulated structures.

Definition of orthogonally stiffened structures; Equations of equilibrium and motion; Stress-strain relations for orthogonally stiffened plates and shells; Shear deformation and rotatory inertia; Boundary conditions; and Strains and stresses.

Princeton U., N. J.
AN INVESTIGATION OF THE FUNDAMENTAL PARAMETERS WHICH GOVERN THE AERODYNAMICS OF VARIOUS WING-PROPELLER COMBINATIONS AS RELATED TO VECTORED SLIPSTREAM AIRCRAFT, by Norman R. Augustine. Rept. on Contract Nonr-1858(14). Oct 58, 218p. 20 refs. Aeronautical Engineering Dept. rept. no. 437.
Order from LC mi$9.60, ph$33.30 PB 143 245

Experimental investigation of propeller slipstream interaction on a heavily flapped wing. Aspect ratio, propeller diameter, solidity, thrust axis position, and propeller plane are varied to investigate the fundamental parameters which govern the wing-propeller combination. A method for analytically determining the lift and drag of a wing propeller combination is also presented.

Chemical Engineering

American Potash and Chemical Corp., Henderson, Nev.
INDUSTRIAL PREPAREDNESS STUDY ON SYNTHETIC BATTERY GRADE MANGANESE DIOXIDE, by Jerome T. Muench. Quarterly progress rept. no. 4, 29 Mar-29 June 57, on Contract DA 36-039-sc-72715. [1957] 27p.
Order from LC mi$2.70, ph$4.80 PB 130 743

Manganese dioxide was produced in two semi-pilot plant runs by the chemical oxidation of manganous sulfate. The manganous sulfate was purified by the removal of potassium by two separate methods. The first run utilized manganous sulfate purified by the manganous sulfate purified by the manganous carbonate purification method. The second run was made from manganous sulfate that had the potassium content decreased by the precipitation of potassium perchlorate. The method of preparation of the manganous sulfate as well as the chemical analysis, physical properties and battery activity tests on the manganese dioxide produced are reported. Rho manganese dioxide was produced in both runs. (See also PB 129 661)

[Army] Chemical Corps Engineering Command, Army Chemical Center, Md.
A SIMPLIFIED PASSIVATION METHOD FOR THE E24 HEATER FOR SHORT TERM SERVICE, by Oscar I. Lessig. Sep 56, 10p. Engineering Command rept. no. 13.
Order from LC mi$1.80, ph$1.80 PB 143 261

The object of the work described in this report is the investigation of a simplified method of passivation of the inner surfaces of the E24 heater tank, a component of the E24 heater. The tests described include the exposure of metal surfaces to solutions of various acids and alkalies in different concentrations, for varying periods of time. It is concluded that the use of a nitric acid solution provides the simplest and most economical method of passivation. Degreasing and exposing the inner surfaces of the E24 heater tank assembly in a 15-percent solution of nitric acid for 15 minutes adequately met the user-service requirements for this item.

Army Chemical Warfare Labs., Army Chemical Center, Md.
EFFECTS OF METABOLIC LEVEL ON PENETRABILITY OF GB THROUGH THE SKIN OF PIGS, by Francis N. Marzulli and John F. Callahan. Technical rept. for Apr 55-Nov 56 on Toxicological Action of CW Agents. Aug 58, 13p. 7 refs. CWLR 2240.
Order from LC mi$2.40, ph$3.30 PB 139 140

Swine were exposed to GB by two routes, (1) skin application and (2) subcutaneous injection. The study was predicted on metabolic activity (as induced by seasonal changes) and its relation to GB susceptibility. No effect due to raised metabolic level was found regardless of the route of administration of GB. The inhibition of red blood cell cholinesterase from a small subcutaneous dosage of GB had no predictive value regarding susceptibility to lethal effects from a larger successive dosage for any one individual animal; this may be of some value for larger groups.

Franklin Inst. Labs. for Research and Development, Philadelphia, Pa.
PRODUCING PERMANENTLY HYDROPHYLIC SURFACES ON PLASTIC FILMS FOR SOLAR STILLS, by Robert A. Erb. Final rept. for 14 Nov 58-31 Aug 59 on OSW Contract 14-01-001-168. Sep 59, 29p. Research and Development progress rept. no. 29.
Order from OTS $0.75 PB 161 064

Two principal means of producing permanent, transparent hydrophilic surfaces on a variety of plastic films for solar still condensing surfaces were investigated on this project. One involves the vacuum deposition of silicon monoxide on the surfaces; the other involves the chemical deposition of titanium dioxide on the surface via the hydrolysis of tetraalkyl orthortitanates. Both have proved to be technically feasible for producing hydrophilic permanent surfaces over the plastic substrates. However, the titanium dioxide process is the present process of choice for large scale film treatment because of lower cost (both for capital equipment and operation) and ready adaptability to a large scale operation.

INVESTIGATION OF FREEZING AS A MEANS OF OBTAINING FRESH WATER FROM SALT WATER, by Emory N. Kemler, Millard H. LaJoy and others. Progress rept. no. 1 on Contract NOy-73248. 15 July 54, 19p.
Order from LC mi$2.40, ph$3.30 PB 139 168

The tests described in this progress report were designed to give general information on the conditions which exist during the freezing of salt water.

Institute of Tech., U. of Minnesota, Minneapolis.
INVESTIGATION OF FREEZING AS A MEANS OF OBTAINING FRESH WATER FROM SALT WATER, by Emory N. Kemler, Millard H. LaJoy and others. Progress rept. no. 2 on Contract NOy-73248. 15 Sep 54, 41p.
Order from LC mi$3.30, ph$7.80 PB 139 167

This report describes the experimental results of tests on salt content of ice formed from sodium chloride solutions by freezing on a flat surface. An analytical study of rate of ice formation with experimental verification is also included. The tests showed that the salt content of ice frozen on a flat surface from a saline bath was significantly lower than the concentration of the brine solution. (See also PB 139 168)

Electrical and Electronic Engineering

Air Force Armament Center, Eglin AFB, Fla.
AFAC NAVIGATION SYSTEMS FLIGHT TEST RANGES. Armament Test note. Sep 57, 47p. AFAC-TN-57-53; AD-135 965.
Order from LC mi$3.30, ph$7.80 PB 142 903

The AFAC Navigation Systems Flight Test Ranges, formerly known as the AFAC Inertial Guidance Systems Flight Test Ranges, were established to fulfill a requirement for the testing of long-range navigation systems. The three ranges extend over a variety of topographical features and constitute a flexible all-weather, long-range test facility. These ranges are available to any agency engaged in the testing of navigation systems and require only that the test aircraft be capable of taking vertical aerial photographs and/or radar-scope photographs. Range No. 1, which is approximately 1030 nautical mi in length, extends from Eglin AFB, Fla., L. G. Hanscom Field, Bedford, Mass. Range No. 2, extending from Ramey AFB, Puerto Rico, to Mountain Home AFB, Idaho, is approximately 2865 naut mi in length. Range No. 3 extends from Eglin AFB, Fla., to Holloman AFB, New Mexico and is approximately 1010 naut mi long. The course center line, or axis of strength, of each range is a geodesic computed on the Clarke Spheroid of 1866 as referenced to the 1927 North American Datum. Bands of checkpoints, both visual and radar, located 35 to 70 mi apart and extending 25 mi to either side of the range center line, are used to obtain positional information along the ranges. Reduction of the photographic position data is facilitated by the use of a Laborde Grid overlay on each range whereby any position on the range corridor can be located by a set of X and Y coordinates as well as by latitude and longitude. A discussion of geodesy with particular emphasis on computational techniques and on error study are available as a supplement.

Air Force Cambridge Research Center, Bedford, Mass.
EXPERIMENTAL STUDY OF A DIFFRACTION REFLECTOR, by Joseph H. Provencher. Apr 59, 33p. 3 refs. AFCRC TR-59-126; AD-212 926.
Order from LC mi$3.00, ph$6.30 PB 142 998

A microwave antenna has been designed and constructed on the principles of parageometric optics formulated by Toraldo di Francia and on principles similar to those of Fresnel rings and the diffraction grating. Its surfaces are all zones of cones and simple to construct. The chosen design parameters were incorporated in two K-band ($\lambda = 1.24$ cm; $\lambda = 1.22$ cm) models. Experimental results show good agreement with theory. Scanning characteristics are superior to those of the paraboloidal or spherical reflector, and spherical aberration and coma are minimized, and the effects of astigmatism are minimized by using a "compromise focus."

American Electro Metal Div., Firth Sterling, Inc., Yonkers, N. Y.
RESEARCH ON THERMIONIC EMISSION OF BORIDES, by R. Steinitz. Final rept. on Contract AF 18(600)1504. 1 May 57, 36p. 27 refs. AFOSR-TN-57-312; AD-132 383.
Order from LC mi$3.00, ph$6.30 PB 143 513

Thermionic emission measurements were performed on most of the transition metal diborides, gadolinium hexaboride, and dense and porous tungsten cathodes. With the exception of the dense tungsten, which was used to standardize the test equipment, all samples were prepared by powder metallurgical techniques. The necessary vacuum system and electrical circuits were constructed to fit the requirements. The emission constant and work function for each of the above metals has been calculated from the emission data. However, in view of the above discussion, the reliability of the data is questionable. A simple solution to most of these problems has been planned for the future.

Antenna Lab., Ohio State U. Research Foundation, Columbus.
POLARIZATION DEPENDENCE OF RADAR ECHOES, by J. N. Hines, and J. A. McEntee. Rept. on Echo Area of Acute-Angle Dihedral Corner Reflectors, Contract AF 30(635)2811. 31 Oct 56, 23p. 2 refs. Rept. 612-13; AD-114 242.
Order from LC mi$2.70, ph$4.80 PB 138 993

To add to the available information on corner reflectors, patterns of acute-angle dihedral corner reflectors were recorded, for different included angles, as a function of the azimuth angle. The responses to both linear polarizations, and also to circular polarizations, are presented.

Armco Steel Corp., Middletown, Ohio.
DEVELOPMENT OF MAGNETIC MATERIALS. Final rept. for 1 July 47-30 June 51 on Contract NOas-8944. 31 July 51, 26p.
Order from LC mi$2.70, ph$4.90 PB 143 865

Improved core material for 400-cycle airborne power transformers; Vicalloy; Orthonik; Hiperco; Ultra thin magnetic material; Alperm.

Armour Research Foundation, Chicago, Ill.
DESIGN DATA FOR CRYSTAL OSCILLATOR CIRCUITS, by Harold E. Gruen and Alan O. Platt. Rept. on Contract DA 36-029-sc-64609. Aug 57, 160p. 1 ref. AD-151 454.
Order from LC mi$7.50, ph$24.30 PB 143 562

This manual provides the information necessary to select a crystal oscillator design for operation at frequencies throughout the 0.8 to 150 mc range, and indicates methods of predicting the performance characteristics of these circuits under wide variations in operating conditions. In general, output voltage predictions are within 20 per cent of the values indicated for specific oscillator circuit designs. Crystal drive prediction accuracy is within 30 per cent. This latter figure is based on measurements of crystal voltage and assumed resistive operation of the crystal.

Army Engineer Research and Development Labs., Fort Belvoir, Va.
WEATHER RESISTANCE OF RUBBER SHEETS AND RUBBER COVERED CABLES, by Philip Mitton and Frank E. Rupert. 10 July 58, 41p. Technical rept. 1535-TR; AD-204 008.
Order from LC mi$3.30, ph$7.80 PB 143 266

This report covers an investigation to determine the weather-resistant properties of commercial and military cables in order to provide performance standards for use in future procurement. Samples of rubber sheets were tested for physical properties (tensile strength, ultimate elongation, tensile strength at 200 percent elongation) and low temperature properties (torsional stiffness ratio, tension recovery, and brittleness). Comparison of materials after tests revealed that physical characteristics indicated by weatherometer exposures differ markedly from physical characteristics after exposure in the ozone chamber and outdoors. The discussion of test results includes comment on the effect of exposure on test materials.

Army Signal Missile Support Agency, White Sands Missile Range, N. Mex.
INVESTIGATION OF GABRIEL AT-781/U ANTENNA, by Kenneth L. White, Charles R. Wise, and Harvey G. Lassiter. 29 July 59, 146p. AFC rept. # ANT-29-7-59.
Order from LC mi$7.20, ph$22.80 PB 143 416

Results are presented on an investigation of the Gabriel Company, AT-781/U Antenna. The electromagnetic reception characteristics of the antenna for linearly polarized signals, i.e., horizontal, vertical, and $\pm 45^{o}$, were determined in the azimuth plane for effective elevation angles of 0, 30, 60, 75 and 90^{o}; elevation patterns were also made. The reception characteristics of the antenna were tested and patterns made at 409, 417, 440, 515 and 540 MCS. The VSWR of the antenna was less than 1.66 throughout the frequency range of 400 - 550 MCS.

Army Signal Missile Support Agency, White Sands Missile Range, N. Mex.
LABORATORY INVESTIGATION OF GILFILLAN BROS., INC., MODEL IIA TELEMETRY TRANSMITTER, by Virgilio Cisneros, William Castilo, and Mervin Olson. 27 July 59, 48p. AFC rept. # TM-27-7-59-T.
Order from LC mi$3.30, ph$7.80 PB 143 417

Results of a Laboratory Investigation, concerning the Gilfillan Bros., FM Telemetry Transmitter Model IIA, are given. Operational characteristics, such as frequency stability, power output, and modulation sensitivity were examined against the parameters of voltage variation, operating time and simulated altitude. Interference characteristics (spurious emissions, both antenna conducted and case radiated) were also examined. Frequency stability was $\pm$ 0.007% (within the required 0.01% as per WSMR Reg Nr 600-3-58) for all tests except prolonged exposure to simulated altitude(s) in which the case temperatures were below 0^{o} C; for normal missile and rocket applications (15 minutes or less in duration) this situation would not arise. Spurious emissions (antenna conducted) met the above regulation requirement(s) however, it is expected that careful alignment and a rigid quality control system will be necessary to assure that proudction items also meet this requirement.

[Army Signal] Radio Propagation Agency, Fort Monmouth, N. J.
RADIATION FROM ANTENNAS IN THE 2 TO 30 MEGACYCLE BAND. Revised May 58, 323p. 20 refs. Technical rept. no. 2.
Order from LC mi$11.10, ph$50.10 PB 143 147

This report shows graphically the sky-wave and ground-wave radiation in the 2 to 30 megacycle frequency band from the following antennas: Ground-Based Vertical, Ground-Based Inverted "L", Horizontal Half-Wave, and Horizontal Rhombic. The curves of this report are based mainly on theoretical calculations for assumed current distributions on thin wires. The ground system and antenna heat losses are accounted for by efficiency factors ob-

tained from field measurements. The calculations consider the effects of the type of ground over which the antenna is erected in the ground reflection factors and antenna radiation resistances. It is assumed that the transmission lines are properly matched and that the antenna reactances are tuned out.

[Army Signal] Radio Propagation Agency, Fort Monmouth, N. J.
GROUND WAVE FIELD INTENSITIES INCLUDING GROUND WAVE FIELD INTENSITIES WITHIN THE LINE OF SIGHT. Rev. June 49, Second printing Apr 56, 234p. 13 refs. Technical rept. no. 3.
Order from LC mi$10.20, ph$36.30. PB 143 148

This report was prepared to show in a graphical form the expected ground-wave field intensities for vertical polarization for frequencies from .1 to 300 megacycles per second. The field intensities for elevated antennas within certain distance limitations are obtained by multiplying values obtained for antennas located at the ground by height gain factors. These ground-wave field intensities are based mainly on theoretical calculations for transmission over smooth spherical earth. The curves of this report are applicable over a wide range of distances for frequencies from .1 to 300 megacycles, provided the antenna heights are not too great. Ground-wave field intensities are given within the line of sight for antennas of low electrical heights. The ground-wave curves of this report are drawn for average atmospheric conditions. The curves are based on standard atmosphere in which the index of refraction decreases linearly with height at a rate of $.039 \times 10^{-6}$ per meter.

Army Signal Research and Development Lab., Fort Monmouth, N. J.
CALIBRATION PROCEDURE FOR 254 JAN DROP TESTER, by Royce D. Loveland. 15 May 58, 24p. USASRDL Technical rept. 1969.
Order from LC mi$2.70, ph$4.80 PB 138 636

The 254 JAN Drop Tester is a shock machine designed to subject small electronic components to shock impacts up to 1500 g for a time duration of approximately one millisecond. Included in this manual are drawings for the construction of a 254 JAN Drop Tester and information regarding maintenance procedures and techniques used for the calibration of the Drop Tester.

Army Signal Research and Development Lab., Fort Monmouth, N. J.
400-MEGACYCLE SUPERREGENERATIVE CIRCUITRY, by Robert W. Callinan. 1 Oct 58, 26p. USASRDL Technical rept. 1985.
Order from LC mi$2.70, ph$4.80 PB 139 077

An investigation was conducted to devise 400-mc superregenerative circuitry capable of detecting modulations which have comparatively high-frequency components. The detection of one to two microsecond pulses and also 80 kilocycle sine waves was of particular interest. Numerous forms of detectors were devised and tested. Performance was evaluated where possible at different operational modes. Of the circuits tested, a plate-quenched, logarithmic-mode type appears best for most applications. Two megacycles appears to be the highest practical quench frequency for operation at 400 megacylces. This limits sine wave detection to a maximum frequency of 200 kilocycles and the efficient detection of pulses to those with a duration of at least five microseconds.

Army Signal [Research and Development Lab.] Fort Monmouth, N. J.
RADIO SET AN/VRC-24(XC-2) by Michael Kaluzienski. Jan 58, 191p. Engineering rept. no. E-1228 AD-201 812.
Order from LC mi$8.70, ph$3.30 PB 142 673

Radio Set AN/VRC-24(XC-2) is an amplitude modulated receiver transmitter designed to operate in the frequency range of 225.0 to 399.9 mcs providing 1750 crystal controlled channels with a spacing of 100 kc. The selection of any of 19 preset channels may be made from the front panel of the radio set or from a remote control position. Any one of the total number of channels available may be directly set up by manual tuning at the front panel. The same basic receiver transmitter unit is designed for vehicular, semi-fixed and fixed station applications.

Assistant Secretary of Defense, Research and Development, Washington, D. C.
SYMPOSIUM ON ELECTRONICS MAINTENANCE [NO. 2]: DESIGN FOR EASE OF MAINTENANCE. 8-11 May 56, 208p. 28 refs. PPT 202/5.
Order from OTS $3.50 PB 161 107

Contents:
Session 1. What role do you see for human engineering in improving the maintenance problem now?
Session 2. Looking ahead to an era of miniaturization, unitization and automation, what future do you see for human engineering?
Session 3. What engineering techniques and practices are available in designing equipment to reduce the maintenance job?
Session 4. Logistics has become an integral part of the maintenance problem; what do you see as the engineer's problem? the human engineer's problem?
Session 5. How can engineers and human engineers together improve the design for equipment maintenance?

The symposium covers ways and means of ensuring that electronic equipment is designed initially so that the functions of trouble shooting, maintenance records, calibration, replacement and repair are simplified and geared to the military personnel and training subsystem. In the area of designing for maintenance, much progress has been made in recent years, but still greater progress is required. This report will serve to stimulate further research and application in this vital field.

Ateliers de Construction Electriques de Charleroi (Belgium).
THEORETICAL CALCULATIONS OF CAPACITIES AND INDUCTANCES OF PRINTED CIRCUITS, by Ph. Passau and A. Lion. Rept. on Contract AF 61(514)921. 14 Feb 58, 355p. 17 refs. AFCRC TR-58-136; AD-152 389.
Order from LC mi$11.10, ph$54.60 PB 142 952

Contents:
Capacity of printed capacitors
Losses in printed capacitors
Susceptance or printed inductors
Losses in printed inductors
Experimental confirmation of the theoretical results

Avion Div. [American Car and Foundry Co.] Alexandria, Va.
ELECTROPHOTOGRAPHIC VIEWER AN/GSQ-14-14-(XW-1), SHAPE DETECTION PHASE, by Horace M. Joseph and Donald L. Feller. Final engineering rept. for 19 Dec 57-13 June 58 on Contract AF 30(602)1499. 23 June 58, 86p. RADC-TR-58-103; AD-148 832.
Order from LC mi$4.80, ph$13.80 PB 143 497

The program of investigation and study to determine the feasibility of automatic "photo-reading" was continued. Basic and Automation experimentation was performed which verified the soundness of the conceptual methods of shape finding and comparison. Additional conceptual designs for shape comparison and analog methods for the mathematical computations derived from curve following information are presented. The development of a complete shape detection system including contrast processing for utilizing any source of two-dimensional input information is recommended.

Bureau of Yards and Docks, Washington, D. C.
RADIO COMMUNICATION FACILITIES (SHORE-BASED). 1 May 53, 58p. Technical pub. NAVDOCKS TP-Pw-20.
Order from OTS $1.50 PB 161 059

This publication provides guidance for Bureau personnel concerned with the planning, site selection, design, construction, and maintenance of buildings, together with related services and installed facilities and/or radio towers, for shore-based radio communications at naval shore activities. Part A presents the authority and responsibilities of this Bureau for providing the public works and public utilities that form the nonelectronic part of the Navy's shore-based radio communications, and defines related terms. Part B covers general and specific site planning for the various types of radio communication stations. Part C deals with radio receiver buildings, Part D with radio transmitter buildings, and Part E with radio communication centers and terminal equipment buildings. Part F covers radio direction finder facilities, Part G control link facilities, and Part H antenna and ground systems.

California Inst. of Tech. [Pasadena].
EXPERIMENTS IN VERY LOW-FREQUENCY RADIO PROPAGATION, by Roger M. Golden. Technical rept. no. 5 on Contract AF 18(600)1552. 26 June 59, 129p. 37 refs. AFOSR TN-58-583; AD-217 030.
Order from LC mi$6.30, ph$19.80 PB 142 987

Propagation in the presence of the ionosphere is considered in the theoretical form of propagation in a homogeneous gyroelectric medium. The results of this analysis are tabulated in graphical form so that the dispersive qualities of the medium can be readily examined. With the aid of these results, an examination of the natural phenomena of whistlers is presented in order to determine the feasibility of generating gyroelectric-echoes. Reflection and transmission coefficients are presented for vertical incidence in order to ascertain the order of magnitude of such an echo. Experiments thus far performed have not yielded echoes but with modifications in the transmitting and receiving equipment, echoes may be detected. A complete description of the experimental equipment used is given along with a proposal for a more sophisticated receiving system.

Chicago Midway Labs., U. of Chicago, Ill.
SEMICONDUCTORS AND PHYSICAL ELECTRONICS. Final rept. for 1 Jan 56-30 June 58 on Contract AF 18(603)09. 30 June 58, 19p. 18 refs. CML-TR-P108-18; AFOSR TR-58-137; AD-204 556.
Order from LC mi$2.40, ph$3.30 PB 138 623

Abstracts of papers published elsewhere by the authors on preparation of large InSb and InAs crystals, secondary electron emission, an image amplifier, a thermal image tube, and infrared detectors. Growth of large single crystals by pulling from the melt has been on a routine basis. The purity of pulled crystals is always below that of the zone-refined material from which they are made. Distribution coefficients of four common impurities -- cadmium, zinc, selenium, and tellurium -- in single crystals of InSb pulled from the melt have been determined by electrical measurements.

Columbia U. School of Electrical Engineering, New York.
PULSE WIDTH CONTROL OF SAMPLED DATA SYSTEMS, by Winston L. Nelson. Technical rept. T-35/B on Contract AF 18(600)677. 6 July 59, 157p. 25 refs. CU-55-59-AF-677-EE; AFOSR-TN-59-609; AD-217 396.
Order from LC mi$7.50, ph$24.30 PB 143 175

The use of pulse width control for the on-off regulation of systems subject to sampled data is investigated in this paper. The pulse width controller is considered to effect control of a linear n^{th} order plant by applying to the plant during each sampling period an input signal, selected from the restricted class of pulse width control signals, and based on the state of the plant at the sampling instant. The basic capabilities of this type of control are investigated in relation to simple on-off, or relay, control and in relation to pulse amplitude control. General methods for achieving both stable and optimal control are developed and practical design applications are considered. Examples and experimental evaluation of the design methods are also given.

David Sarnoff Research Center, Princeton, N. J.
STUDY OF PHOTOEMISSIVE SURFACES, by A. H. Sommer and W. E. Spicer. Final rept. for 1 July 55-31 Dec 57 on Contract DA 44-009-eng-2515. [1957] 29p. 1 ref. AD-203 475.
Order from LC mi$2.70, ph$4.80 PB 143 325

Heretofore the silver-oxygen-cesium (Ag-O-Cs) cathode has been the only known photoemitter with appreciable response to infrared radiation. During the last 25 years much work was done to improve infrared sensitivity as well as to understand the mechanism of electron emission of this material, but in both directions only minor results were obtained.

Diamond Ordnance Fuze Labs., Washington, D. C.
FREQUENCY-MODULATED ACOUSTIC FLOWMETER AND METHODS OF MAKING IT FEASIBLE, by James C. McDade. 15 Dec 58, 11p. 3 refs. Technical rept. TR-660.
Order from LC mi$2.40, ph$3.30 PB 139 145

The existing acoustic flowmeter is frequency modulated to eliminate the effect of leakage in thick-walled steel pipes. A delay line which presents a time delay equal to that in the sound path is used in conjunction with the sound path to cancel the effects of the FM at the phasemeter. A method was devised for eliminating the need for the delay line. This method consists in choosing the modulation frequency such that the two signals arrive at the phasemeter in phase(except for the effects of flow) because the sound signal is delayed by a time equal to the modulation period.

Diamond Ordnance Fuze Labs., Washington, D. C.
MICROELECTRONICS: AN INTRODUCTION AND A STATUS REPORT, by T. A. Prugh. 1 Nov 57, 11p. 3 refs. TR-536.
Order from LC mi$2.40, ph$3.30 PB 143 566

Two techniques have been developed for constructing small electronic transistorized modules. The first uses etched wiring boards and standard subminiature components. The second technique gives a greater than ten to one volume reduction over the first by incorporating an uncased transistor directly into a printed circuit ceramic plate. The degree of reduction is such that optical aids must be used in constructing and inspecting the circuitry; a new term, microelectronics, has been selected to embrace the latter technique and related efforts in system design, power supplies.

Diamond Ordnance Fuze Labs., Washington, D. C.
MICROPHONISM IN MICROWAVE CRYSTAL MIXERS, by William K. Saunders. 10 July 56, 13p. Technical rept. no. TR-363.
Order from LC mi$2.40, ph$3.30 PB 127 980

The microphonic effects noted in a microwave crystal mixer subjected to vibration are investigated. The experimental procedures and results are presented in detail. The conclusion is that the catwhisker of the type 1N23 crystal is mechanically resonant at some frequencies of vibration; another type of crystal is found to perform satisfactorily under the same conditions.

Electrical Engineering Research Lab., U. of Illinois, Urbana.
ACTIVE NETWORK SYNTHESIS BY LATTICE REDUCTION, by R. E. Thomas. Technical note no. 8 on Contract AF 49(638)63. 15 May 59, 100p. 25 refs. AFOSR-TN-59-584; AD-217 031.
Order from LC mi$5.40, ph$15.30 PB 143 515

The standard lattice synthesis technique is extended to active networks in which the available network elements are positive and negative resistors and capacitors. The designation of the immittances of the arms of the active lattice as "single NIC realizable" is shown to be useful and to lead to a variety of lattice realizations including the constant-resistance lattice. The general method described for synthesizing the active lattice requires the introduction of a surplus factor with real, simple and negative zeros. Several procedures are given for reducing the active lattice to an unbalanced equivalent two port made up of resistors, capacitors and negative impedance converters. Both reciprocal and non-reciprocal reductions are obtained. NIC biasing provisions and termination conditions are met by inserting appropriate immittances into the lattice at an appropriate stage of the reduction process.

Electrochemical Research Lab., Western Reserve U., Cleveland, Ohio.
A REVIEW OF THE STATE OF THE ART AND FUTURE TRENDS IN FUEL CELL SYSTEMS, by Ernest Yeager. Technical rept. no. 10 on Contract Nonr-2391(00). 1 Dec 58, 57p. 30 refs.
Order from LC mi$3.60, ph$9.30 PB 143 567

This report summarizes the present status of various fuel cell systems including the low and high temperature hydrogen-oxygen cells, hydrocarbon consuming cells, and the alkali metal amalgam continuous feed cell. The specific features of these systems are considered in terms of small and large scale power generation. Cells of the fuel cell type also offer promise as components of closed cycle systems in which the cell reactants are regenerated from the cell products by such means as photochemical, radiochemical, electrolytic, and thermal dissociation.

Electronic Defense Lab., Sylvania Electric Products, Inc., Mountain View, Calif.
AN EXTENSION OF STOKES' EQUATIONS AND ITS APPLICATION TO THE REFRACTIVITY OF THIN FILMS, by Arthur Wickersham. Rept. on Contract DA 36-039-sc-73170. 4 Oct 57, 25p. 12 refs. Technical memo. rept. no. EDL-M118; AD-148 175.
Order from LC mi$2.70, ph$4.80 PB 138 564

A point of view is developed in which the refractivity of periodic structures is ascribed to a mechanism related to surface waves. The results of such development are compared with data taken at microwave frequencies.

Electronics Research Lab., Stanford U., Calif.
A CIRCUIT FOR SELECTING AND AMPLIFYING WITHOUT TUNING ADJUSTMENT A REDUCED CARRIER IN THE PRESENCE OF VOICE SIDEBANDS AND NOISE, by Robert C. Morwood. Technical rept. no. 10 on Contract W28-099-ac-131. 31 Aug 53, declassified 22 Sep 54, 29p. AD-22 022.
Order from LC mi$2.70, ph$4.80 PB 143 757

A circuit for selecting and amplifying without tuning adjustment. A reduced carrier in the presence of voice sidebands and noise.

Electronics Research Lab., U. of California, Berkeley.
LINEAR ANALYSIS OF CONTROL SYSTEMS WITH MAGNETIC AMPLIFIERS, by T. T. Kadota. 11 Nov 58, 68p. 18 refs. Series no. 60, issue no. 216.
Order from LC mi$3.90, ph$10.80 PB 139 062

Dyanmic representation of a control system, which includes a magnetic amplifier as its component, is essentially a problem of incorporating a discrete system (the magnetic amplifier) with a continuous system (the remainder of the control system). The intrinsic difficulty of the problem lies in the fact that the magnetic amplifier is a pulse-width modulating system, which makes unfeasible direct application of the modified z-transform and the P-transform methods. By appling the technique of "multipole expansion" in electromagnetic theory with proper treatment of Dirac delta-function, however, we can obtain both a general dynamic representation of such a control system and its linear approximation in terms of the modified z-transform. Since in practice the condition for the linear approximation is usually met and the modified z-transform method is readily available, the latter is immediately applicable for the analysis and synthesis of mixed systems which include pulse-width modulators such as the magnetic amplifier. The general representation, on the other hand, is primarily of theoretical value in that it not only gives explicitly the criterion for validity of (or the error involved in) the linear approximation but also sets the z-transform theory on a more rigorous mathematical basis. This report presents the detailed derivation of these representations and illustrates their theoretical and practical applications.

Georgetown Coll. Observatory, Washington, D. C.
A TIME SIGNAL FILTER AND AMPLIFIER FOR RECORDING WWV, by F. J. Heyden and Leland LeFevre. Technical rept. no. 5 on Contract AF 19(604)2229. May 58, 5p. Georgetown Observatory Mono. no. 10; AFCRC TN-58-420; AD-152 587.
Order from LC mi$1.80, ph$1.80 PB 138 713

The National Bureau of Standards Radio Station, WWV, broadcast standard time signals. This signal consists of five cycles of a one-thousand cycle sine wave occurring on the second, with the fifty-ninth second of each minute being omitted. Also present are standard musical notes, voice frequencies and C. W. Code. To utilize accurately the time signals, all interfering signals must be eliminated. An electronic filter has been designed for that purpose.

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
ESTIMATION OF THE FREQUENCY OF A PERIODIC SIGNAL CONTAINING NUISANCE PARAMETERS IN THE PRESENCE OF NOISE, by John H. MacKay. Final technical rept. on Contract Nonr-991(04). 15 May 58, 46p. 39 refs.
Order from LC mi$3.30, ph$7.80 PB 138 815

For a stationary Gaussian process superimposed on a single trigonometric term, the main problem considered is that of estimating the frequency of the periodic component. Estimates consistent for all values of the nuisance parameters are obtained. Crude upper bounds are given for the sample sizes (observation periods) necessary in order that the estimates be close to the true value with high probability. Various estimation schemes which have been proposed are discussed and objections to them are recorded. No completely satisfactory (theoretical) solution to the problem is yet available; some of the reasons for this situation are outlined. Criteria for choosing good estimates are discussed and some properties of a priori distributions and bayes solutions outlined. Methods of attack which might lead to additional information about the problem are given.

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATIONS OF PRECISION FREQUENCY CONTROL TECHNIQUES, by Samuel E. Meek and Samuel N. Witt, Jr. Quarterly rept. no. 3, 1 Oct-31 Dec 55, on Contract DA 36-039-sc-64597. [1955] 43p. 2 refs.
Order from LC mi$2.30, ph$7.80 PB 139 088

The individual elements of the short-term frequency measuring system are described and the complete system is evaluated theoretically. Under certain assumptions, a sensitivity of 0.0637 mv/cycle of frequency change is indicated. This represents the available i-f voltage input to the i-f amplifier where a maximum additional gain of 140 db is available. Data are presented on the long-term performance of an invar cavity-controlled oscillator immersed in a temperature regulated oven. Constructional details of this oscillator are illustrated. Results of measuring the temperature-frequency characteristics of silver-plated Stupalith cavities are given.

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
STUDY OF THE EFFECTS OF PROCESSING TECHNIQUES AND MATERIALS ON AGING OF QUARTZ CRYSTAL UNITS, by Richard B. Belser and Walter H. Hicklin. Quarterly rept. no. 6, 15 Aug-15 Nov 56, on Contract DA 36-039-sc-64613. [1956] 179p.
Order from LC mi$8.40, ph$27.80 PB 138 824

A new frequency measuring technique, based on the balanced-bridge circuit has been adapted to use on this project provided accurate and rapid frequency measurement.

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
STUDY OF THE EFFECTS OF PROCESSING TECHNIQUES AND MATERIALS ON AGING OF QUARTZ CRYSTAL UNITS, by Richard B. Belser. Quarterly rept. no. 7, 15 Nov 56-15 Feb 57, on Contract DA 36-039-sc-64613. [1957] 128p. AD-131 436.
Order from LC mi$6.30, ph$19.80 PB 138 823

Frequency measurements of 91 gold-plated resonators have been continued. The number of units and the types of containers were as follows: 16 units in nickel-silver HC-6/U cans, double-electrocleaned; 19 units in nickel-silver HC-6/U cans, hydrogen-fired; 15 units in copper HC-6/U cans, double-electrocleaned; 5 units in copper HC-6/U cans, hydrogen-fired; 19 units in copper HC-6/U cans, enamel-lined; 12 units in glass containers, evacuated; and 5 units in glass containers, argon filled. Of the 91 units, 76 were stable and drifted less than 0.00005 percent in the last 60 day period of test; only 15 were unstable. Ten of these latter were in the hydrogen-fired groups. All units mounted in glass were stable. However, exceptionally stable frequencies were observed for the majority of units in each type of container. Unstable units gave frequency measurements typical of leakers. The incidence of failure was greater in hydrogen fired containers, and the number of failures appeared to be related to sealing difficulties encountered with containers receiving the hydrogen firing treatment. Fabrication and measurement techniques by the new balanced bridge method have been greatly improved as demonstrated by the data presented. A major problem still remaining to be studied is the aging effect introduced by overcoating resonators to frequency. (See also PB 138 824)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
TRANSISTOR OSCILLATORS OF EXTENDED FREQUENCY RANGE, by B. J. Dasher, D. L. Finn and others. Quarterly rept. no. 1 on Contract DA 36-039-sc-42712. 30 Sep 53, 34p. 7 refs.
Order from LC mi$3.00, ph$6.30 PB 138 196

Some basic factors that determine the frequency stability of series-mode oscillators are reviewed. It is shown that frequency stability with respect to an unstable impedance, Z_2, depends on the ratio $(\partial X_1/\partial Z_2)/(\partial X_0/\partial Z_2)$, in which X_0 is the reactance of the resonator and X_1 is the reactance of the circuit external to the resonator. First-order effects of nonlinearity are investigated, and attention is called to the fact that L/C is fundamentally more important than Q as a figure of merit of the resonator in this type of oscillator.

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
TRANSISTOR OSCILLATORS OF EXTENDED-FREQUENCY RANGE, by B. J. Dasher, D. L. Finn and W. B. Jones, Jr. Quarterly rept. no. 2 on Contract DA 36-039-sc-42712. 31 Dec 53, 43p. 10 refs.
Order from LC mi$3.30, ph$7.80 PB 138 197

The operation of series-mode oscillators of the negative-resistance type is discussed in detail. The relation between amplitude stability and distortion is considered, and it is shown that distortion is necessary to amplitude stability in this kind of oscillator. Frequency "pulling" due to distortion can be computed by means of Groszkowski s equation. Tests on simple transistor oscillators at 1,000 cps show a fairly good agreement between computed and measured frequency. Frequency stability is also considered from the point of view of linear circuit theory. (See also PB 138 196)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
TRANSISTOR OSCILLATORS OF EXTENDED FREQUENCY RANGE, by B. J. Dasher, W. B. Jones, Jr. and S. N. Witt, Jr. Quarterly rept. no. 3 on Contract DA 36-039-sc-42712. 31 Mar 54, 30p. 11 refs.
Order from LC mi$2.40, ph$3.30 PB 138 198

The results of a series of experiments performed for the purpose of finding out whether Groszkowski's equation gives sufficiently accurate results to be useful in computing the frequency pulling due to distortion in transistor oscillators are described. These tests were made on series-mode oscillators at 1,000 cps. When the pulling is of the order of 0.5 per cent, the theory accounts for about four-fifths of it. The cause of the remaining discrepancy has not been determined. Evaluation tests on several transistor-oscillator circuits have been made. (See also PB 138 197)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
TRANSISTOR OSCILLATORS OF EXTENDED FREQUENCY RANGE, by B. J. Dasher and S. N. Witt, Jr. Quarterly rept. no. 4 on Contract DA 36-039-sc-42712. 30 June 54, 32p. 11 refs.
Order from LC mi$3.00, ph$6.30 PB 138 199

An analytical treatment of two-terminal oscillators is begun in this report. The analysis is based on a Fourier series representation in which the nonlinear negative resistance characteristic is approximated by means of straight-line segments. Instead of assuming the characteristics to be nearly linear the oscillation is assumed to be nearly sinusoidal. In the case of a series-mode oscillator this assumption implies a sinusoidal current which permits the voltage to be expressed as a Fourier series. The ratio of the fundamental component of voltage to the fundamental component of current is the effective input resistance which, when considered as a function of the current amplitude, permits the amplitude of oscillation to be determined for a specified external circuit. (See also PB 138 198)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
TRANSISTOR OSCILLATORS OF EXTENDED FREQUENCY RANGE, by B. J. Dasher, D. L. Finn and others. Quarterly rept. no. 5 on Contract DA 36-039-sc-42712. 30 Sep 54, 53p.
Order from LC mi$3.60, ph$9.30 PB 138 200

The analysis of two-terminal oscillators begun in Quarterly Report No. 4 is continued. Curves relating the pulling factor, P^2, and the resistance ratio, $-R_1/R_0$, have been computed for more general types of negative-resistance characteristics. The theory has been applied to the design of a parallel-mode oscillator at 1000 cps. By actual performance tests the theory predicted the frequency stability with respect to supply voltage variations to within a factor of about three and the amplitude stability to within a factor of less than two. Since the measured frequency stability was approximately 15 parts in 10^7 for one per cent change in supply voltage and the analysis involves several approximations, these results are considered to be very good. (See also PB 138 199)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
TRANSISTOR OSCILLATORS OF EXTENDED FREQUENCY RANGE, by B. J. Dasher, D. L. Finn and others. Quarterly rept. no. 6 on Contract DA 36-039-sc-42712. 30 Dec 54, 32p. 15 refs.
Order from LC mi$3.00, ph$6.30 PB 138 201

A laboratory-constructed temperature test chamber is described, and some data on temperature stability of transistor oscillators, obtained by making use of the test chamber, are presented herein. The best temperature stability obtained is 4 parts in 10^8 for 1°C temperature change, with an oscillator having a voltage stability of 1 part in 10^8 for a 1 per cent voltage change. This oscillator makes use of a point-contact transistor. Circuit schematics are presented for junction-transistor oscillators having similar orders of stability. (See also PB 138 200)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
TRANSISTOR OSCILLATORS OF EXTENDED FREQUENCY RANGE, by B. J. Dasher, S. N. Witt, Jr. and W. B. Warren, Jr. Quarterly rept. no. 7 on Contract DA 36-039-sc-42712. 31 Mar 55, 43p. 16 refs.
Order from LC mi$3.30, ph$7.80 PB 138 202

In order to facilitate comparisons among oscillator circuits, the term stability has been defined as a numerical quantity which increases as a circuit is made more stable. Stability may be expressed as a function of any variable parameter, such as voltage or temperature. The use of impedance inversion to obtain crystal control of point-contact oscillators has been found to be impractical in most cases. A transistorized Meacham bridge oscillator has been developed which has performance comparable to a similar oscillator using vacuum tubes. The best stability obtained was approximately 2 parts in 10^9 frequency variation for one per cent voltage change. A design procedure is described which provides a method for obtaining best stability for most feedback-type oscillators. Data are given on a novel method of stabilization of junction-transistor oscillators using distortion control. The problems involved in measuring frequency stability are discussed. (See also PB 138 201)

Goodrich, B. F., Co., Brecksville, Ohio.
NEW POLYMERIC INSULATING MATERIALS, by J. E. Jansen, C. S. Schollenberger and others. Annual summary rept. for 1 Oct 54-30 Sep 55 on Contract DA 36-039-sc-64534. 30 Sep 55, 73p. 8 refs.
Order from LC mi$4.50, ph$12.30 PB 139 008

The present WD-1 twisted pair infantry field wire is fabricated of several strands of wire insulated electrically with polyethylene and covered with an outer jacket of nylon. It is desirable to provide other sources of insulating or jacketing materials equivalent to or superior to the present composition. The purpose of this work is to examine likely polymers as replacements and to investigate the field of polyurethanes in particular. Polyurethane VC-1A, a tough, rubbery, thermoplastic polyesterurethane is under intensive investigation as a candidate.

Hoffman Labs., Inc., Los Angeles, Calif.
TRANSISTORIZED MODIFICATION, AN/PRC-14. Final engineering rept. for 1 Mar 56-28 Feb 57 on Contract AF 30(602)1477. [1957] 93p. 8 refs. RADC-TR-58-35; AD-148 646.
Order from LC mi$5.40, ph$15.30 PB 143 514

The feasibility of replacing certain vacuum tube circuits in the AN/PRC-14 with transistor circuits has been proven. Virtually 100 percent compatibility of circuitry was achieved (except for the AGC circuit compromise). System gain, audio response, power output, bandwidth and shape factor were equal to or better than those of the original equipment employing all vacuum tubes. Some conservation of space was achieved, and a 16 percent reduction in battery power was experienced. Maximum utilization of printed circuitry techniques made possible a unique i-f stage package. Operation at elevated temperatures was satisfactory. A high degree of reliability was demonstrated by the fact that no failures of transistors occurred under normal operating conditions during the program. All factors considered indicate the desirability of transistors in the portable equipment applications, where weight, space and supply power must be restricted to a minimum. Continuing developments in the transistor field indicate that many more functions in equipment such as the AN/PRC-14 (XW-2) may be performed by transistors.

Hughes Aircraft Co., Culver City, Calif.
STUDY OF ATOMIC AND MOLECULAR RESONANCES FOR MICROWAVE GENERATION AND AMPLIFICATION, by R. Hellwarth, R. Hoskins and R. Pastor. Quarterly progress rept. no. 2, 15 Mar-15 June 58, on Contract DA 36-039-sc-74967. [1958] 12p. 4 refs.
Order from LC mi$2.40, ph$3.30 PB 139 226

By use of the ordered operator formalism for analyzing solutions to Shroedinger's equation, a quantum theory of linear dissipative networks is outlined. An operator functional describing a network is defined, and certain of its properties are noted. In tuning the zero-field splitting of a paramagnetic ion by chemical means, a basis for the choice of the complex and host lattice is given. The present activity is centered on Cr^{+3} in two host lattices, viz., the double metal nitrates and the hexacyano complexes. It is found that Cr^{+3} can be substitutionally incorporated in the double metal nitrates with a partition coefficient about an order of magnitude poorer than that for Gd^{+3}. The latter is known to have a partition coefficient which is at least an order of magnitude different from unity. Preparative procedures that have been tried in the

synthesis of the hexacyano complexes are given, and their advantages and disadvantages are discussed. Experimental work has been initiated on the inversion of electron spin populations by pulse methods in order to gain information on relaxation times and saturation behavior.

Hycon Eastern, Inc., Cambridge, Mass.
FREQUENCY TRANSLATOR WITHOUT SYNTHESIZER, by Richard L. Smith. Monthly progress rept. no. 1, 15 Mar-15 Apr 57, on Contract DA 36-039-sc-73191. 30 Apr 57, 14p.
Order from LC mi$2.40, ph$3.30 PB 139 096

Work to date has been limited and largely related to general system design consideration. Conclusions indicate soundness of the basic design as proposed. Procurement has been started on some long delivery components.

Hycon Eastern, Inc., Cambridge, Mass.
FREQUENCY TRANSLATOR WITHOUT SYNTHESIZER, by Richard L. Smith. Monthly progress rept. no. 2, 15 Apr-15 May 57, on Contract DA 36-039-sc-73191. 30 May 57, 13p.
Order from LC mi$2.40, ph$3.30 PB 139 097

Results of study to optimize system parameters on a squelched phase-locked klystron for use in the translator are reported. Progress on construction and test of system components is reported. (See also PB 139 096)

Hycon Eastern, Inc., Cambridge, Mass.
FREQUENCY TRANSLATOR WITHOUT SYNTHESIZER, by Richard L. Smith. Monthly progress rept. no. 3, 15 May-15 June 57, on Contract DA 36-039-sc-73191. 30 June 57, 10p.
Order from LC mi$1.80, ph$1.80 PB 139 098

Progress is reported on construction and test of the squelched phase-locked klystron, frequency multipliers, intermediate frequency amplifier, and crystal discriminator. (See also PB 139 097)

Hycon Eastern, Inc., Cambridge, Mass.
FREQUENCY TRANSLATOR WITHOUT SYNTHESIZER, by Richard L. Smith. Monthly progress rept. no. 4, 15 July 57, on Contract DA 36-039-sc-73191. 31 July 57, 10p.
Order from LC mi$1.80, ph$1.80 PB 139 099

Results of a study on the use of a squelched phase-locked klystron as local oscillator in the translator and progress on other system components is reported. (See also PB 139 098)

Hycon Eastern, Inc., Cambridge, Mass.
FREQUENCY TRANSLATOR WITHOUT SYNTHESIZER, by Richard L. Smith. Monthly progress rept. no. 5, 15 July-15 Aug 57, on Contract DA 36-039-sc-73191. 31 Aug 57, 8p.
Order from LC mi$1.80, ph$1.80 PB 139 100

Progress is reported on circuit development and test of this frequency multiplier, servo amplifier, and the 5 Mc/s crystal oscillator for use in the translator. (See also PB 139 099)

Hycon Eastern, Inc., Cambridge, Mass.
FREQUENCY TRANSLATOR WITHOUT SYNTHESIZER, by Richard L. Smith. Monthly progress rept. no. 6, 15 Aug-15 Sep 57 on Contract DA 36-039-sc-73191. 30 Sep 57, 9p.
Order from LC mi$1.80, ph$1.80 PB 139 105

Progress is reported on the development of a revised system for the Translator which eliminates the necessity for a synchronized local oscillator klystron. (See also PB 139 100)

Hycon Eastern, Inc., Cambridge, Mass.
FREQUENCY TRANSLATOR WITHOUT SYNTHESIZER, by Richard L. Smith. Monthly progress rept. no. 7, 15 Sep-15 Oct 57, on Contract DA 36-039-sc-73191. 31 Oct 57, 11p.
Order from LC mi$2.40, ph$3.30 PB 139 094

A final design-approach proposal for the translator is presented and progress on breadboarding of system components is reported. (See also PB 139 105)

International Resistance Co., Philadelphia, Pa.
RESISTORS, FIXED, HIGH STABILITY, INSULATED, by Sidney J. Stein, John J. Bohrer and others. Quarterly progress rept. no. 2, 15 July-15 Oct 55, on Contract DA 36-039-sc-64665. [1955] 41p.
Order from LC mi$3.30, ph$7.80 PB 129 892

The investigation of materials and methods believed to be capable of leading to low cost, insulated, fixed resistors of high stability was continued. Resistors of the "semi-precision" type having resistance values exceeding the contract requirements in both the high and the low ranges have been made as a result of work conducted to increase the range span of resistance values attainable. Preliminary performance testing results of resistors in the extreme ranges show indication of meeting or exceeding the contract requirements in most respects. In the "precision" phase, work has continued on improved protective coating, insulating molding materials, and termination systems. Contact effects have been reduced to an insignificant level enabling the attainment of stable resistors of lower ranges than were previously made. Temperature coefficients of less than 50 PPM were obtained for units of less than 200 ohms. (See also PB 129 894)

Lavoie Labs., Inc., Morganville, N. J.
THE DEVELOPMENT OF THE FREQUENCY METER AN/URM-80. Final rept. for 29 Feb 52-Jan 54 on Contract DA 36-039-sc-36527. [1954] 44p.
Order from LC mi$3.30, ph$7.80 PB 139 087

The report covers the development of a frequency meter covering from 10 to 100 megacycles, with an accuracy of 0.001%. During the development period,

new components were developed and techniques for calibration and temperature control established. A relatively new system of frequency measurement was applied to a single-unit instrument which resulted in a reduction of ambiguity to the vanishing point. By the use of individual subchassis, each comprising a major system element, manufacture and test of the instrument was simplified, and production lead time was reduced. The large number of calibration points required that standard mechanical calibration methods be discarded and a high speed continuous film strip calibrator be developed.

Lincoln Lab., Mass. Inst. of Tech., Lexington.
STRAIGHT TAPERS IN RECTANGULAR WAVEGUIDES. A COMPARISON OF PRINCIPAL-MODE AND NONUNIFORM TRANSMISSION-LINE THEORIES, by T. J. Rey. Rept. on Contract AF 19(122)458. 10 Feb 58, 13p. 15 refs. Technical rept. no. 174. AD-110 041.
Order from LC mi$2.40, ph$3.30 PB 138 606

Straight tapers of the E-plane, H-plane and pyramidal types in rectangular waveguides are analyzed in terms of principal modes. Comparison with nonuniform transmission-line theory shows considerable agreement. Expressions suitable for numerical computation are presented.

Lincoln Lab., Mass. Inst. of Tech., Lexington.
TRANSISTORIZED MATCHED FILTER FOR PULSED SINUSOIDS, by P. L. Fleck, Jr. Rept. on Contract AF 19(122)458. 12 Apr 57, 27p. 14 refs. Technical rept. no. 156; AD-147 492.
Order from LC mi$2.70, ph$4.80 PB 138 607

A matched filter for pulsed sinusoidal symbols has been designed and constructed in which transistors are used as the active elements. The filter has a gain variation of less than one db as a result of variation of component parameters, temperature, age, and supply voltages. The filter has a useful dynamic range of at least 80 db.

Litton Industries, College Park, Md.
SURFACE WAVE ANTENNA STUDY, by W. P. Hooper and E. A. Wolff. Final rept. on Contract AF 19(604)3457. 28 May 59, 29p. 2 refs. AFCRC TR-59-159; AD-217 074.
Order from LC mi$2.70, ph$4.80 PB 143 355

The purposes of the project were to study methods of increasing the efficiency of the dielectric image line antenna and the development of a method of launching the image transmission line mode with a flush launcher. Investigations were made to determine the efficiency of the antenna and ways of improving the efficiency. Also, methods of launching the transmission line mode with a flush launcher, which would eliminate the horn launcher, were investigated. A number of patterns for the flush launcher are included.

Mallory Battery Co., North Tarrytown, N. Y.
HEATING AND INSULATION OF ALKALINE DRY BATTERIES FOR LOW TEMPERATURE OPERATION, by Michael Firshein and Herman Schiebler. Final rept. pt. 1, 10 May 56-10 Feb 58, on Contract DA 36-039-sc-72372. [1958]. 71p.
Order from LC mi$4.50, ph$12.30 PB 139 060

The contract for the manufacture of alkaline dry batteries embodying the principles of heating and insulation for low temperature operation comprises six tasks. Task A, calls for a replacement for Battery BB-401/U. Task B calls for the manufacture of Battery Type 6 (Crash Locator Beacon). This Final Report #1 is limited to Tasks A and B.

Mallory, P. R., and Co., Inc., Indianapolis, Ind.
RESISTORS, FIXED, ULTRA-HIGH TEMPERATURE, RADIATION RESISTANT, by David R. Sivertsen. Rept. on Improved Electronic Components, Contract AF 33(616)3643. July 59, 47p. 3 refs. WADC Technical rept. 59-270; AD-215 857.
Order from OTS $1.25 PB 161 081

This report covers the development of a suitable design for a one watt resistor capable of operation at temperatures from -65°C to +500°C in nuclear radiation environments for extended periods of time. The work was devoted to refining the electrical properties and design of the resistor. It was demonstrated that high alumina ceramics were necessary to minimize large non-uniform resistance changes occuring over uniform temperature increments to +500°C. A number of terminal material compositions were examined for applicability in ultra-high temperature operation. Investigation of various metal oxide films revealed that a 7.5% Sb_2O_3: 92.5% SnO_2 composition possessed a near zero temperature coefficient of resistance over broad temperature range and the most desirable electrical characteristics. A suitable insulating coating, composed of flame deposited aluminum oxide, was utilized in this application without undesirable effects on resistor properties. Radiation tests were made on a variety of modified tin oxide resistors at +500°C for 1500 hours under high intensity nuclear radiation.

Michigan U. [Research Inst.] Ann Arbor.
PACKAGED ELECTRIC TUNED 35-200 MC PANORAMIC RECEIVER, by T. W. Butler, Jr. Technical rept. no. 71 on Contract DA 36-039-sc-63203. July 57, 81p. 12 refs. AD-141 657.
Order from LC mi$4.80, ph$13.80 PB 142 696

A method of utilizing the voltage tuning characteristics of ferroelectric capacitors in a packaged, wide-range, superheterodyne, electric-tuned, panoramic receiver is described. This receiver employs titanate ceramic capacitors as tuning elements in the tank circuits of the RF, mixer, and local oscillator stages. The capacity of the tuning elements is varied by changing the electric field applied to the capacitors. The receiver is designed for use in monitoring communication signals in the frequency range 35-200 Mc. This Packaged Electric Tuned Receiver PANoramic (Petr Pan) is the result of a development program designed to indicate the direction engineers can take in developing and packaging a dielectric tuned receiver suitable for operational use.

Michigan U. Research Inst., Ann Arbor.
STUDY OF CIRCUIT APPLICATIONS OF SOLID STATE DEVICES TO ECM EQUIPMENT, by T. W. Butler, Jr., H. Diamond and others. Progress rept. no 18, 1 July 56-1 Jan 57, on Contract DA 36-039-sc-63203. Feb 57, 32p. 5 refs. 2262-142-P; AD-135 755.
Order from LC mi$3.00, ph$6.30 PB 143 643

New ceramic compositions have been developed by the Solid State Devices Laboratory which have much higher Q's and better voltage breakdown characteristics than previously used compositions. Methods of prestressing or "polarizing" ferroelectric samples have been investigated.

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
COUPLED LEAKY WAVEGUIDES I: TWO PARALLEL SLITS IN A PLANE, by S. Nishida. Rept. on Contract AF 19(604)2031. 14 May 59, 25p. 2 refs. Research rept. R-732-59; PIB-660; AFCRC TN-59-375; AD-217 855.
Order from LC mi$2.70, ph$4.80 PB 143 024

The longitudinally slitted rectangular waveguide, with radiation characterized by leaky waves, has already been investigated by employing a transverse network representation and a perturbation procedure to solve the resulting network resonance problem. The above investigation has been carried out for a single (isolated) leaky waveguide. In this paper, two coupled leaky waveguides carrying the H_{10} leaky wave are treated for the case where they are arranged in a plane and in parallel with each other.

Minneapolis-Honeywell Regulator Co., Minn.
POWER TRANSISTOR CIRCUITRY, by John T. Lingle. Final rept. for 15 Feb-15 May 57 on Contract DA 36-039-sc-71161. [1957] 124p. Serial no. 12355; AD-156 177.
Order from LC mi$6.30, ph$19.80 PB 143 304

Power transformers utilizing various core materials and cross-sectional areas were tested. Two identical transformers fabricated from 1-mil Deltamix failed to oscillate in the converter. Rapid switching was obtained with transformers fabricated from 2 toroidal core materials, grain-oriented silicon steel, and Ferramic H. Experimental results showed that the addition of secondary leakage inductance can improve the oscillator switching characteristics when the proper filter configuration is used. A large amount of secondary leakage inductance must be incorporated in the transformer for good switching characteristics. Some transformer core materials require a greater amount of secondary leakage inductance than others to obtain the desired short switching time. The effects were studied of leakage inductance in producing forward and inverse collector currents during switching. Initial current surges in the switching on transistor could occur when both transistors were conducting at the same instant. Capacitor input load filters produced better switching characteristics than did choke inputs. Determination of transistor output characteristic curves by a pulsing method revealed that the thermal irregularities found in previously determined characteristic curves were reduced by the pulsing method of testing.

Motorola, Inc., Phoenix, Ariz.
INDUSTRIAL PREPAREDNESS STUDY ON DIFFUSED SEMICONDUCTOR DEVICES. Final feasibility rept. on Contract DA 36-039-sc-72694. 6 June 57, 47p. AD-155 228.
Order from LC mi$3.30, ph$7.80 PB 128 771

Diffusion techniques were used in fabricating semiconductor devices for some specific applications. Diffused base-jet plated emitter and collector junction transistors were developed for meeting the requirements for a Ge transistor 12.5-mc amplifier and a Ge transistor video amplifier having a bandwidth of 6 mc. An analysis was made of the electrical characteristics of each transistor device. The units made by the diffused base-jet-etch process will meet the requirements. (See also PB 137 163)

Naval Civil Engineering Lab., Port Hueneme, Calif.
DEVELOPMENT OF A BRUSHLESS REGULATED AC GENERATOR OF RADIO-INTERFERENCE-FREE DESIGN, by A. Mason Brown. Final rept. 7 Sep 59, 58p. 3 refs. Technical rept. 032; AD-209 529.
Order from OTS $1.50 PB 161 104

This report describes the development of a generator of radio-interference-free design which produces a conventional voltage-regulated output without requiring brushes, commutator, or slip rings. There are no sliding or arcing contracts to initiate radio-interference. The unique feature developed is the manner in which regulated excitation is supplied to the rotating field. Acceptance tests showed that the generator compiled with Navy voltage regulation specifications. NCEL tests showed that it was radio-interference-free to MIL-I-16910 standards. Total running time to date logged on the generator is 1600 hours. It is concluded that brushless generators with standard performance characteristics can be built with all sliding, current-carrying surfaces eliminated. Such machines have inherent in their design prospects for a degree of highly reliable operation unattainable in conventional generators.

Naval Ordnance Lab., White Oak, Md.
BEHAVIOUR OF POWDERED AND FLAKE MAGNETIC CORES AT TEMPERATURES UP TO 500°C, by John F. Haben and Edmond Adams. 17 Oct 57, 22p. 5 refs. NAVORD rept. 5752; AD-149 999.
Order from LC mi$2.70, ph$4.80 PB 138 614

The magnetic characteristics of seven high permeability (55-300) powdered and flake core materials were measured at 50°C temperature intervals up to 500°C. None of the cores tested were stable for operation at elevated temperatures. The copper conductor material and its insulation appears to be the limiting factor for continuous 500°C operation.

Naval Ordnance Lab., White Oak, Md.
AN EXPERIMENTAL STUDY OF UNDERWATER ELECTRIC ANTENNA IMPEDANCES, by A. Silverstein and F. G. Salton. 16 Sep 58, 18p. 2 refs. NAVORD rept. 6064.
Order from LC mi$2.40, ph$4.40 PB 143 338

The input impedance of a variety of underwater electric antennas was measured in Chesapeake Bay and in a high conductivity salt pool over a frequency range of 5 - 70 KC. The results were compared with input impedances calculated from a theory based upon the transmission line approach. The deviation of the measured input impedances from the theoretical values is considerable, particularly for short antennas. A qualitative explanation is given for the failure of the transmission line theory. Recommendations are made for communication at increased depth.

Naval Research Lab., Washington, D. C.
A DIRECT-READING SIX-DECADE PRECISION FREQUENCY GENERATOR, by J. E. McGeogh and G. K. Jensen. Interim rept. 25 Nov 58, 12p. 7 refs. Rept. 5224.
Order from OTS $0.50 PB 151 158

The development of a direct-reading six-decade frequency generator to be used in conjunction with a previously reported direct-reading frequency meter has been satisfactorily completed. This new frequency generator has been made with unitized construction to overall dimensions of 12-3/4 x 14-1/2 x 5-3/4 in., or 0.615 cu ft, and utilizes miniature tubes, but the size could be reduced appreciably in a subsequent model. Each of 6 plug-in decade chassis has 3 tubes, for a total of 18 tubes, and the reference-frequency section, composed of 11 small plug-in chassis, has a total of 29 tubes. In the next model the number of tubes could be reduced to 6 and 20, respectively. All decades have identical schematic diagrams, but different tuning is necessary to operate in the three required frequency ranges. The mechanical construction is identical in all decades. The decade frequency generator is accurate to within about one part in 100 million when an external reference frequency of the same accuracy is available, or to one part per million when the reference frequency is internally generated by a temperature-controlled crystal oscillator with one part per million accuracy. The reduction in size from previous models of decade generators is accompanied by a reduction in weight and also by an appreciable reduction in power requirements, which further reduces the size and weight of the power supply. As a result of this development, the entire frequency meter, consisting of the direct-reading six-decade frequency generator, frequency multipliers, and comparison circuits and filters, may be contained in a unit of one cubic foot.

Navy Electronics Lab., San Diego, Calif.
DEVELOPMENT OF A 36-FOOT FOLDED PILLBOX INTERROGATOR ANTENNA FOR THE AIRWAYS MODERNIZATION BOARD, by B. T. Birkett. 5 Nov 58, 23p. 4 refs. Research and development rept. 878.
Order from LC mi$2.70, ph$4.80 PB 139 081

A folded pillbox antenna has been designed, built, tested, and sent to the CAA Technical Development Center, Indianapolis, Indiana, for further testing with other components of the Airways Modernization Board beacon system. The antenna is 36 feet wide, 3 feet high, and 10 feet deep. It weighs approximately 1000 pounds. The azimuth beamwidth is 2 1/4°, the wide-angle side lobes are below 29 db, and the gain is 26 db.

New York U. Coll. of Engineering, N. Y.
SEALING TECHNIQUES FOR WAVEGUIDE AND COAXIAL ROTARY JOINTS, by Milton M. Backman, Michael B. Maccarone and Fred H. Posser. Rept. no. 10 (Final) for 1 Aug 54-31 Mar 57 on Contract DA 36-039-sc-64476. [1957] 170p. 52 refs. AD-156 901.
Order from LC mi$7.80, ph$25.80 PB 143 303

This report contains information regarding all phases of the experimental work undertaken in the determination of a design criteria for development and application of sealing techniques to be applied to waveguide and coaxial rotary joints. The first part of this report is devoted to the results of experimental and development work performed in producing the final design and construction of sealed RG-52 waveguide rotary joints. The second portion of the report contains five Appendices. The first is devoted to the experimental work on the magnetic fluid and the magnetic mechanical seals. The second appendix is a history with recorded data of the experimental work performed in the development of the final design. Reference is made to the work with the first experimental mechanical seal and continues through to the final development results. The third appendix refers to publications, reports, lectures, and conferences associated with this study. In order to coordinate the design information obtained in this study the fourth appendix of this report presents the developed design criteria with a procedure for designing additional rotary seals with similar requirements to the RG-52 Sealed Rotary Joint developed in this study. The fifth and last appendix presents a major portion of the test data recorded during the final testing of the development models indicating various tests performed with the models including those required by the technical requirements.

RESEARCH AND EXPERIMENTAL WORK ON MICROWAVE TRANSISTORS, by R. L. Goldman, G. P. Oppo and others. Quarterly progress rept. no. 2, 15 Apr-15 July 58, on Theoretical and Experimental Investigation of New Semiconductor Devices for Operation in the 2 to 10 Kilomegacycle Range, Contract DA 36-039-sc-74988. [1958] 30p. 9 refs. Philco no. 2153-2.
Order from LC mi$2.70, ph$4.80 PB 139 065

Wafer-type depletion layer devices have been fabricated in order to investigate injection into the depletion layer. A theoretical analysis of both high- and low-frequency operation has been initiated to determine the feasibility of a depletion layer transistor as a high-frequency device. Results indicate that the fabrication problems will be the principal barrier to the development of a feasible device. The results of a study concerning the fabrication and evaluation of bar-type, wafer-channel, and surface-barrier analog devices indicate that the surface-barrier device has the most favorable and reproducible characteristics, and is the easiest to fabricate. A theoretical analysis has also been initiated to determine the feasibility of the analog transistor for high-frequency application. Early results indicate that the field-effect unipolar device is extremely flexible.

Puerto Rico U., Mayaguez.
CHARACTERISTICS OF A PECULIAR BACK-SCATTER ECHO OBSERVED AT A FREQUENCY OF 21.6 mc. p.s., by B. Dueno. Research rept. no. 1 on Contract AF 49(638)172. [1958] 27p. 2 refs. AFOSR TN-59-40; AD-209 212.
Order from LC mi$2.70, ph$4.80 PB 139 212

Inspection of records of a backscatter experiment performed at the University of Puerto Rico at Mayaguez has revealed a very interesting echo which as yet has not been observed at back-scatter stations located on higher latitude sites. This echo takes the form of a narrow thin line reflection extending in all directions with its slant range practically independent of its azimutal bearing. The bottom edge of the line is believed to be due to a focussing effect of the minimal time delay type proposed by A. M. Peterson in 1951 while the upper edge is due to a focussing effect between the skip distance rays and rays at greater angles of incidence having the same time delays as the skip distance rays. At the frequency of operation, 21.6 mc. it is observed by itself at times when the attenuation of the radio waves is at its highest. The range assumes values between 1000 and 2000 kilometers depending on time of the day and season.

Radio Corp. of America, Lancaster, Pa.
DEVELOPMENT OF A RUGGEDIZED VIDICON AND DEFLECTION COMPONENTS, by F. D. Marschka. Rept. on Electronic Tubes and Transistors, Contract AF 33(600)32346, July 59, 31p. WADC Technical rept. 59-329.
Order from OTS $1.00 PB 161 082

Extensive operational vibration and temperature-altitude tests along with non-operational impact shock and temperature-humidity tests led to the design and development of the RCA C73453D vidicon and RCA XD3010A deflection assembly. Results of these tests indicated compliance with the environmental requirements of the contract.

Research Lab. of Physical Electronics, Tufts [U] Medford, Mass.
STUDIES ON PIEZOELECTRIC RESONATORS, by C. R. Mingins, R. W. Perry and others. Quarterly rept. no. 2, 15 July-15 Oct 54, on Contract DA 36-039-sc-56764. 15 Nov 54, 23p. 3 refs.
Order from LC mi$2.70, ph$4.80 PB 138 694

Spectra of thickness-shear and flexural modes and the spectra predicted by an approximate theory. Methods of adjusting the experimental results to a basis comparable with the theoretical presentation.

Research Lab. of Physical Electronics, Tufts U., Medford, Mass.
STUDIES ON PIEZOELECTRIC RESONATORS, by C. R. Mingins, R. W. Perry and others. Final rept. on Contract DA 36-039-sc-56764. 1 Nov 55, 35p. 8 refs.
Order from LC mi$3.00, ph$6.30 PB 138 825

Explorations in frequency and dimension to obtain the experimental curves of flexural and thickness-shear modes of vibration in a piezoid having the form of a rectangular parallelepiped with very small tolerances, in order to establish the empirical functions against which theory must be checked.

Rome Air Development Center, Griffiss AFB, N. Y.
FEASIBILITY STUDY OF MONOLITHIC FOAM-IN-PLACE RADOME, by Joseph Schramp and Robert Curtis. Oct 58, 24p. 4 refs. RADC-TN-58-253; AD-202 094.
Order from LC mi$2.70, ph$4.80 PB 138 620

Equipment and procedures used in the erection at RADC of a monolithic foam-in-place radome are presented; problem areas are outlined and feasible solutions suggested. In the Appendix the results of a structural analysis of the monolithic foam shell are summarized.

Rome Air Development Center, Griffiss AFB, N. Y.
AN INTEGRATED APPROACH TO THE DESIGN OF MOBILE TACTICAL ELECTRONIC SYSTEMS, by Robert N. Skalwold and Maurice N. Scheiderich. Oct 58, 45p. RADC-TN-58-260; AD-148 917.
Order from LC mi$3.30, ph$7.80 PB 138 619

This report compares the complete conventional system weight of the lightest radar the state of the art has produced with the weight of a completely integrated system. The results show that the integrated system will weigh approximately one-third the weight of the conventional system. Recommendations for application to tactical ground electronics sub-systems are included.

Rome Air Development Center, Griffiss AFB, N. Y.
RADAR VISUAL INTERFERENCE TESTS, by Sheldon Kustin. Aug 57, 18p. 2 refs. RADC-TN-57-251; AD-131 173.
Order from LC mi$2.40, ph$3.30 PB 129 888

Presented in this report are various types of radar-to-radar visual interference, a description of tests performed, and some recommended solutions to the problem of visual interference.

Rome Air Development Center, Griffiss AFB, N. Y.
SEMI-AUTOMATIC SWITCHING FOR FLEXO-WRITER MACHINES, by James F. Greenly. Nov 58, 14p. RADC-TN-58-289; AD-148 957.
Order from LC mi$2.40, ph$3.30 PB 138 618

The equipment described in this report fulfills the requirement for switching multiple Flexowriter machines in a local network. Adequate circuits are provided to allow simultaneous communication between machines in a variety of switched combinations. Design considerations, power requirements, and operational features are discussed. Operation of line selection circuits is described in detail.

Scintilla Div., Bendix Aviation Corp., Sidney, N. Y.
IMPROVED CONNECTOR DESIGN: SERVICES, FACILITIES, AND MATERIALS TOGETHER WITH CONNECTOR SAMPLES, by L. J. Elliott. Final rept. for 15 Oct 50-15 May 54 on Contract DA 36-039-sc-42542. 15 June 54, 310p. 35 refs.
Order from LC mi$11.10, ph$37.10 PB 142 954

Exhaustive investigation of connectors designs incorporating the latest concepts in quick connect-disconnect features, positive contact action, miniaturization, watertightness, insert materials, aluminum finishes, and other factors which would augment their reliability in military service. Sufficient design criteria were to be established to replace the present AN connectors.

Speech Research Lab., U. of Michigan, Ann Arbor.
SEGMENTATION TECHNIQUES IN SPEECH SYNTHESIS (PART I) [AND] SEGMENT INVENTORY FOR SPEECH SYNTHESIS (PART II) by William S-Y. Wang, Gordon E. Peterson, and Eva Sivertsen. Rept. no. 1 on Contract Nonr-1224(22). May 58, 31p. 6 refs.
Order from LC mi$3.00, ph$6.30 PB 138 816

A basic method of speech synthesis is described in which discrete segments of recorded utterances are joined together to produce continuous speech. The method of synthesis described includes not only articulatory phones, but also intonation, stress, and duration. Various techniques of obtaining segments for speech synthesis are discussed. The inventory of segments required to synthesize an idiolect of American speech from recorded utterances has been partially investigated. A total of 43 phonetic units, including a unit of silence, is found essential. These units represent some of the major allophones of the phonemes of the idiolect. To obtain the segments, utterances are constructed with the desired sequence of the two phonetic units and with the proper intonation and stress environment. The utterances are recorded on magnetic tape, and the desired boundaries of the segments are determined by means of a technique employing a sound spectrograph. An attempt is made to match harmonics, formants, and amplitude envelopes between adjacent segments. To synthesize the idiolect it is estimated that an inventory of about 8,000 segments is required. A sentence synthesized from over 40 such segments is demonstrated.

Stanford Electronics Labs., Stanford U., Calif.
FREQUENCY MIXING IN MICROWAVE BEAM-TYPE DEVICES, by R. W. Degrasse. Rept. on Contract AF 19(604)1847. 28 July 58, 188p. 34 refs. Technical rept. no. 386-2.
Order from LC mi$8.40, ph$28.80 PB 139 124

This report is primarily concerned with the frequency mixing effects which occur in microwave electron-beam type devices. The theoretical portion of the study is devoted to obtaining a better understanding of the nature of the non-linear effects which can be introduced into or are already present in velocity-modulated electron beams.

Stanford Electronics Labs., Stanford U., Calif.
MULTI-STAGE, NARROW-BAND AMPLIFIERS EMPLOYING NON-UNILATERAL ELECTRON DEVICES, by M. Lim. Technical rept. no. 27 on Contract Nonr-225(24). 11 Feb 58, 121p.
Order from LC mi$6.30, ph$19.80 PB 138 708

This paper presents a method for the design of multi-stage, narrow-band amplifiers employing general active two-port devices as amplifying elements. The stability of the amplifier is controlled by means of its input and output conductance levels, rather than by neutralization. The main characteristic of this paper is a theoretical exposition of the functional dependence of the transducer gain of a multi-stage, narrow-band, iterative amplifier upon its interstage network, and upon the input and output terminations. A complete analysis of the transducer gain of the amplifier is presented.

Stanford Electronics Labs., Stanford U., Calif.
TWO WIDEBAND VIDEO TECHNIQUES FOR MICROWAVE DETECTORS, by J. C. de Broekert. Rept. on Contract DA 36-039-sc-73151. 27 Nov 57, 19p. Technical rept. no. 152-2; AD-149 509.
Order from LC mi$2.40, ph$3.30 PB 143 306

This report describes two techniques for achieving a wide video bandwidth in a microwave crystal detector and associated input video amplifier. In each case, forward current bias is used to reduce the crystal video resistance to a reasonably low value. The techniques differ in the manner in which a low effective interstage capacitance is achieved. In the guard-electrode mount, the interstage video capacitance is split into a three-capacitor delta configuration by modification of the detector mount. The additional node thus formed is driven with a near-unity-gain amplifier. Measurements of VSWR, video voltage, tangential signal sensitivity and bandwidth are presented for this mount before and after modification. The capacitance-

neutralized input circuit may be used with any crystal mount. A feedback amplifier is used to place an effective negative capacitance in parallel with the existing interstage capacitance. One secondary-emission tube is used in the feedback amplifier.

Stanford Research Inst., Menlo Park, Calif.
DESIGN DATA FOR ANTENNA-MULTICOUPLER SYSTEMS, by J. F. Cline. Scientific rept. 3 on Contract AF 19(604)2247. Sep 58, 24p. 5 refs. AFCRC-TN-58-139; AD-146 900.
Order from LC mi$2.70, ph$4.80 PB 138 601

This is the third in a series of reports on the design of antenna-multicoupler systems for use where several transmitters and receivers are operated simultaneously with a single antenna system. The design formulas for the two- and three-resonator, tunable, narrow-band, symmetrical, minimum-loss, capacitively coupled filters developed in the two previous reports are adapted to the design of inductively coupled filters in the present report. With either type of coupling, the way in which the filter element values must vary with frequency is shown to depend upon the method of tuning employed in the resonators. Three resonator tuning methods are considered, in which either C, L, or the ratio C/L is taken as a parameter. Tables of filter design formulas are given which apply when any of the three resonator tuning methods is used. Shorter, approximate filter design formulas are given which are reasonably accurate for minimum center-frequency insertion-loss values up to about 1 db.

Sylvania Electric Products, Inc., Bayside, N. Y.
HEATER-CATHODE LEAKAGE INVESTIGATION, by Julius Cohen and J. V. Florio. Final rept. on Contract AF 19(604)1734. 15 May 58, 163p. 33 refs. Rept. no. YD 57-5-8; AFCRC-TR-58-163; AD-152 448.
Order from LC mi$7.80, ph$25.80 PB 138 799

Syracuse U. Research Inst., N. Y.
EFFECT OF SURFACE REFLECTIONS ON RAIN CANCELLATION OF CIRCULARLY-POLARIZED RADARS, by Richard McFee and Thomas M. Maher. Task rept. no. 2 on Contract AF 30(602)1640. 5 Nov 57, 15p. 1 ref. SURI rept. no. EE492-4711T2; RADC-TN-58-51; AD-148 601.
Order from LC mi$2.40, ph$3.30 PB 143 488

Theoretical estimates of the reduction in cancellation are presented using acutal reflection coefficients of sea water at 500 and 3000 mc. Cancellation of rain returns of circularly-polarized ground-based radars did not exceed 15 to 18 db, with the 3-db point of the antenna pattern on the horizon and a 6^{o} vertical beam width, because of surface reflections. Cross-linear polarization cancellation is not disturbed by these reflections and offers these advantages: (1) the use of a power divider or a phase shifter is not required, (2) the radar duplexer may work at lower peak currents, (3) the means for switching from cross-linear to normal radar operation are easier, and (4) loss of target cross section is about 3 db less than that for circular polarization. The following techniques can help suppress return from rain: (1) narrower beamwidth, (2) shorter pulses, (3) lower RF, (4) velocity filtering of low speed returns, and (5) sensitivity time control.

Syracuse U. Research Inst., N. Y.
A STUDY OF MARKER INSERTION TECHNIQUES FOR PLAN POSITION INDICATORS, by G. M. Glasford, H. Hellerman and others. Final rept. on Contract AF 30(602)300. 1 Aug 54, 294p. 2 refs. RADC-TR-55-357; AD-71 405.
Order from LC mi$11.10, ph$45.60 PB 143 490

A detailed study of the problem of marker insertion in PPI displays has been carried out with particular emphasis on the long range system operating at low PRF and large sweep duty cycles. A basic analysis and comparison of PPI types is first made and the more conventional range and azimuth measuring techniques discussed. These techniques refer primarily to the electronic range strobe in combination with either electronic or mechanical azimuth cursors. Errors involved in both range and azimuth determination are analyzed. Techniques of sweep-time sharing for video and marker information are discussed and related both to the range strobe-azimuth cursor presentation and the presentation of single markers of circular or other shape. Problems of accuracy in the single marker type are analyzed. The flashing cursor and its limitations are discussed. Consideration is given to the use of the between-sweep interval for the insertion of markers of various types. Electronic switching arrangements for multiple markers were developed.

Syracuse U. Research Inst., N. Y.
STUDY OF PHASE-ERROR AND TOLERANCE EFFECTS IN MICROWAVE ANTENNAS, by David K. Cheng and Richard E. Gildersleeve. Final rept. for 10 Dec 53-31 Dec 55 on Contract AF 30(602)924. 31 Jan 56, 128p. 18 refs. SURI rept. no. EE276-564F; RADC-TR-58-50, AD-148 677.
Order from LC mi$6.30, ph$19.80 PB 143 496

The effects of different types of phase errors in the aperture plane on the characteristics of the radiation pattern are determined, and the geometrical deviations of the reflector are correlated with the phase errors. The general effects of aperture phase errors are to raise the side-lobe level, to widen the main-lobe beamwidth, and to reduce the antenna gain. A formula is presented for the maximum fractional reduction in gain when the peak phase error is known, but the exact amplitude or phase distribution function in the aperture is unknown. Another formula expresses the maximum change in beamwidth for rectangular and circular apertures when the exact phase distribution function is unknown and the peak phase error is known. The rise in the side-lobe level depends upon both the amplitude illumination function and the type of phase error. For the $\cos^{2}(0.375\pi x)$ tapered amplitude function, the rise in the side-lobe level for the rectangular aperture case is more than that for the circular aperture case for the same types of phase errors, although the first side lobes for the former case (25.90 db down) are higher than those for the latter case (28.00 db down) when there is no phase error.

Syracuse U. Research Inst., N. Y.
A STUDY OF TRANSISTOR LINEAR TIME DELAY CIRCUITS, by R. P. Nanavati. Final rept. on Transistor Circuit Applications, Contract AF 30(602)1626. Dec 57, 68p. 5 refs. SURI rept. EE 466-5712F; RADC-TR-58-70; AD-148 738.
Order from LC mi$3.90, ph$10.80 PB 143 526

This report concerns itself with the study of a transistor emitter-coupled monostable multivibrator the duration of whose output pulse can be controlled linearly by the setting of the potentiometer at the input. This circuit can be used as a linear delay circuit or as a gate in its own right. It can also serve as an important "building block" for linear time base circuits.

Syracuse U. Research Inst., N. Y.
TRANSISTOR VIDEO AMPLIFIERS, by Carl R. Zimmer. Final rept. on Transistor Circuit Applications, Contract AF 30(602)1026. Nov 57, 209p. 28 refs. SURI rept. EE466-5711F; RADC-TR-58-99; AD-148 816.
Order from LC mi$9.30, ph$31.80 PB 143 495

Basic low pass amplifier theory: Vacuum tube amplifiers, and 2- and 4- terminal interstage networks. Theoretical equivalent circuits: Fused-junction transistor, effect of the base spreading resistance, transistor parameters in the grounded-emitter connection, approximations for transistor parameters, relations among design and circuit parameters, fabrication of fused- and grown-junction transistors, and modified junction transistor designs. Measurement of transistor parameters: Simplified equipment for h-parameter measurements, measurement of transistor parameters using bridge techniques, and experimental results for the fused- and grown-junction transistors. Single stage amplifier: Simplified equivalent circuit, amplifier stage with resistive terminations, input circuit compensation (series peaking), effect of load capacitance, output circuit equalization, and compensation using local RC feedback. Multistage amplifiers: Shunt resistance interstage, shunt peaking (simple RL network), 4-terminal networks and all-pole transfer functions, and ultimate limitations of interstage compensating network. Large signal operation: Effect of the transistor output impedance, output circuit equalization, addition of feedback equalization, and experimental results using feedback equalization. Appendixes: Approximations for transistor parameters, measurement of circuit parameters for surface barrier transistors, and maximally flat transfer functions.

POWER GENERATION AND DISTRIBUTION. CHAPTER 2. MOBILE EMERGENCY POWER PLANTS. 15 May 54, 70p. Technical pub. NAVDOCKS TP-Pu-3.
Order from OTS $1.75 PB 161 056

This Technical Publication gives technical criteria for mobile emergency power plants, including the maintenance and operation of these plants, emergency electric generator equipment, steam railway power plants, and mobile as well as portable diesel-electric generating plants.

Bureau of Yards and Docks, Washington, D. C.
POWER GENERATION AND DISTRIBUTION. CHAPTER 3. FUELS. 3 June 59, 140p. 17 refs. Technical pub. NAVDOCKS TP-Pu-3; BUDOCKSINST 11310.16.
Order from OTS $2.75 PB 161 058

This Technical Publication is divided into three parts, namely, solid, liquid, and gaseous fuels. These are treated as they are utilized in the Shore Establishment and as existing and development policy influences their selection. Purely technical and detailed information is avoided, except in policy matters. (See also PB 161 054)

Bureau of Yards and Docks, Washington, D. C.
POWER GENERATION AND DISTRIBUTION. CHAPTER 4. POWER PLANT WATER CONDITIONING. 15 Dec 53, 112p. 2 refs. Technical pub. NAVDOCKS TP-Pu-3; BUDOCKSINST 11310.4 CH1.
Order from OTS $2.50 PB 161 055

This Technical Publication covers the design, construction, operation, and maintenance of power plant water conditioning systems. The design and construction part covers in detail chemical analysis, feedwater treatment, treatment plants, secondary internal treatment, and laboratory and testing equipment. The operation and maintenance part includes external treatment plants, secondary treatment, chemical testing procedures, care of idle boilers, prevention of return-condensate corrosion, safety precautions, and records and reports. (See also PB 161 058)

Bureau of Yards and Docks, Washington, D. C.
POWER GENERATION AND DISTRIBUTION. CHAPTER 9. DISTRIBUTION OF STEAM, HIGH-TEMPERATURE WATER, AND COMPRESSED AIR. 1 June 54, 33p. 9 refs. Technical pub. NAVDOCKS TP-Pu-3.
Order from OTS $1.00 PB 161 057

This Technical Publication covers the design, construction, operation, and maintenance of steam, high-temperature water, and compressed air distribution systems. The design and construction of each system are analyzed in separate parts of the chapter. Specific types of overhead and underground systems are discussed. Applicable load assemblies, routes, and pressures are presented. The discussion on maintenance and operation is primarily concerned with overhead and underground distribution systems, and with the traps, valves, fittings, and piping that make up these systems. Inspection and safety precautions are discussed as applicable. (See also PB 161 055)

Utah U. Coll. of Engineering, Salt Lake City.
A STUDY OF THICK-WALLED CYLINDERS AS TENSILE MEMBERS FOR HIGH PRESSURE VESSELS, WITH PARTICULAR ATTENTION TO STEELS AND THEIR HEAT TREATMENT FOR MAXIMUM PERFORMANCE, by William A. Boyd and S. S. Kistler.

Technical rept. 3 on Contract Nonr-1288(02). Mar 58, 109p. 24 refs.
Order from LC mi$5.70, ph$16.80 PB 139 183

Contents:
Experimental procedure
Steels used
Calculation of internal pressure from force on the arbor, arbor angle and coefficient of friction
Experimental results with 1-inch rings
Tests of thick rings

Ordnance, Missiles, and Satellite Vehicles

Air Force Missile Test Center, Patrick AFB, Fla.
IN-FLIGHT IMPACT AND APOGEE COMPUTATIONS FOR VANGUARD, by Hallett H. Germond. Rept. on Missile Test Project, Contract AF 08(606)1156. 25 May 59, 99p. 15 refs. RCA Data Processing Technical rept. no. 49; AFMTC-TR-9; AD-216 293.
Order from LC mi$5.40, ph$15.30 PB 143 020

The range, azimuth, and elevation of a Vanguard vehicle, as determined every 0.1 sec by one or another of 2 radars, are used as input to a computer. Every tenth of a second during the powered first and second stages of flight a prediction is made as to where the vehicle would impact if the thrust were to be terminated. This information is displayed continuously on a plotting board. After burnout or cutoff of the second stage, computations are made (every tenth of a second) of the time remaining before the vehicle should reach apogee. This and other information pertinent to the initiation of the third stage is displayed on a console.

Army Signal Research and Development Lab., Fort Monmouth, N. J.
DRAG-CORD ANEMOMETER, by Raymond Bellucci. 15 Sep 58, 39p. 5 refs. USASRDL Technical rept. 1979.
Order from LC mi$3.00, ph$6.30 PB 139 076

An anemometer has been developed which provides a weighted integrated wind over a path. This development was necessitated by the requirement for a weighted, integrated wind measurement over the initial sensitive portion of a rocket trajectory. Two components of the wind force on a long length of stainless steel wire are obtained by measuring the displacement of the wire at one end while the other is held fixed. The wire is placed in a line parallel to the rocket trajectory. By this means the two components of the wind that are determined are the same two components that affect the rocket flight. The equipment has been tested by fixing it vertically at the Oakhurst tower where wind measurements were compared to those from a set of conventional anemometers.

Army White Sands Signal Agency, White Sands [Missile Range] N. Mex.
LABORATORY INVESTIGATION OF DOVAP TRANSPONDER T7-3-8 MISSILE UNIT (36.94 - 73.88 MCS), by Merwin A. Olson and Harvey G. Lassiter. 29 July 57, 31p. AFC rept. no. DOVAP-29-7-57-RT; AD-149 067.
Order from LC mi$3.00, ph$6.30 PB 138 629

Results are presented of a laboratory investigation of a Dovap transponder T7-3-8 missile unit. Special attention is given to the interference to the Dovap system from operations on 36.5 mc. The T7-3-8 is contained in a cylindrical metal case 3 1/4 in. in diameter and 12 1/4 in. long. It operates from a 6-v dc self-contained or external supply. Signals on 36.94 mc are received by the unit and amplified in 2 stages, then fed to a doubler stage which doubles the frequency to 73.88 mc. A driver and an output stage completes the line-up. The power output of about 0.7 w is realized from the unit for input signal levels of -60 dbm or higher. The ground equipment in the system compares the frequency of the signal received from the transponder with the double of the frequency sent to the unit; any difference is due to the Doppler effect and can be used to calculate the component of velocity normal to the ground station. Results indicate that if the interference signal could be reduced sufficiently before the signals reach a nonlinear circuit (where mixing action could occur), this effect might be eliminated. The recommendations suggest operation of the first 2 stages as near linear as possible with the current high enough to prevent nonlinear operation caused by limiting action. Possibly more tuned circuits should be employed in the first stages to reduce the interference signals as much as possible before they reach the double stage.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
CHRONOGRAPH ERROR IN DRAG MEASUREMENTS, by G. D. Kahl and F. D. Bennett. Aug 58, 13p. 2 refs. Memo. rept. no. 1161.
Order from LC mi$2.40, ph$3.30 PB 138 616

The precision of the least squares method of fitting time-distance data from an observed trajectory is considered for the case where time is assumed to be a polynomial in distance. A relation between the variances of time and distance errors, assumed in a previous work, is derived. With this relation and a model of digital chronographs, the variance of the timing error is found for selected chronograph arrangements; in a favorable arrangement, this variance is only one-twelfth as large as the squared counter resolving time. A comparison of time and distance errors is made.

Cryogenic Engineering Lab., National Bureau of Standards, Boulder, Colo.
CRYOGENIC MATERIALS DATA HANDBOOK. Quarterly rept. no. 1 on Contract AF 04(647)59-3. [Jan 60] 22p.
Order from OTS $0.75 PB 161 093

This handbook of data on solid materials at low temperatures deals with physical properties of certain metals and non-metals over the temperature range minus 423°F to plus 500°F. The materials selected for inclusion in the handbook are limited to aluminum, cobalt, copper, iron, nickel, titanium, carbides, nonmetals, and miscellaneous metals and alloys. The materials are mostly those in current use for missile applications at cryogenic temperatures, but a few have been included because of their potential for such uses. This compilation of some of the mechanical properties of materials should assist the designer by making available in one publication reliable data which have appeared in the literature or which have not yet been published.

Defense Research Lab., U. of Texas, Austin.
A CRITIQUE OF ACOUSTIC MINE DETECTION METHODS, by Joseph F. Mifsud. Rept. on Contract DA 44-009-eng-2073. 27 Oct 55, declassified 13 Mar 58, 24p. 12 refs. DRL-A-95.
Order from LC mi$2.70, ph$4.80 PB 143 729

The purpose of this paper is to summarize the work accomplished in acoustic mine detection and to suggest some of the areas of research that need yet to be explored in order that a more efficient acoustic detector of land mines can be designed.

Defense Research Lab., U. of Texas, Austin.
A SUMMARY OF THE MINUTES OF THE PANEL ON ACOUSTIC DETECTION OF BURIED LAND MINES [MEETING NO. 1] 27-28 OCTOBER 1955, AUSTIN, TEXAS. Rept. on Contract DA 44-009-eng-2073. 21 Dec 55, declassified 3 Mar 58, 22p. DRL Acoustic rept. no. 98.
Order from LC mi$2.70, ph$4.80 PB 143 728

Defense Research Lab., U. of Texas, Austin.
A SUMMARY OF THE MINUTES OF THE PANEL ON ACOUSTIC DETECTION OF BURIED LAND MINES [MEETING NO. 2] 29 APRIL 1956, WASHINGTON, D. C. Rept. on Contract DA 44-009-eng-2073. 11 July 56, declassified 12 Mar 58, 18p. DRL Acoustical rept. no. 107.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
ANALYSIS OF HMX/RDX MIXTURES BY ISOTOPE DILUTION AND SPECTROPHOTOMETRIC PROCEDURES, by Frederick S. Holahan, Ruth N. Shelley and others. July 59, 15p. 15 refs. Technical rept. 2625; AD-215 863.
Order from LC mi$2.40, ph$3.30 PB 143 286

This report describes two methods for the quantitative assay of HMX in mixtures of HMX and RDX: (a) an extension of the Holston Ordnance Works' method (which is based on a colorimetric reaction specific for RDX and a determination of HMX content by difference) by which mixtures containing more than 95% HMX can be analyzed; and (b) an isotope dilution technique in which a known amount of pure carbon-14 labeled HMX is added to the mixture and the radioactivity of a fraction of pure HMX isolated from the mixture is determined. The HMX content is calculated from the reduction, or dilution, of the radioactivity of the isolated HMX. The method is considered absolute since the HMX is determined directly and there is no interference from impurities.

[Feltman Research and Engineering Labs.] Picatinny Arsenal, Dover, N. J.
AN EMISSION SPECTROGRAPHIC METHOD FOR THE ANALYSIS OF ZINC-BASE DIE CASTINGS, by Seymour Lader. June 58, 18p. 11 refs. Technical rept. 2528.
Order from OTS $0.75 PB 151 175

An accurate spectrographic method of analysis has been developed for the determination of the following elements in zinc-base die castings: aluminum 0.4-4.3%, copper 0.04-1.30%, cadmium 0.002-0.01%, magnesium 0.015-0.08%, tin 0.002-0.01%, lead 0.002-0.01%, iron 0.015-0.10%. These specified ranges are appropriate for the analysis of zinc-base die castings meeting the requirements of Specification QQ-Z-363, Compositions A and B.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
INVESTIGATION OF THE MAXIMUM ALLOWABLE TORQUE FOR ROTARY SELECTOR KNOBS, by Peter F. Worms and C. Thomas Goldsmith. Nov 58, 15p. 3 refs. Technical rept. 2551; AD-201 105.
Order from LC mi$2.40, ph$3.30 PB 138 638

When rotary selector knobs are used on missiles, their setting may be altered by in-flight vibrations. The probability of a setting being changed is reduced as torque on the selector shaft is increased. It was the purpose of this study to determine the maximum torque which can be used with varying sized knobs. A previously recommended resistance for rotary selector knobs was 48 ounces. This study evaluated resistances well above this figure.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
PREPARATION AND PHYSICAL PROPERTIES OF DI-AND TRINITROTOLUENE ISOMERS, by Cornelius Conklin and Frank Pristera. July 58, 26p. Technical rept. 2525.
Order from LC mi$2.70, ph$4.80 PB 138 925

This report includes detailed methods for the preparation of all commercially unavailable isomers of DNT and TNT. In addition it includes the melting points, infrared spectrograms, X-ray diffraction data, and some solubility data on the TNT and DNT isomers.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
PROPOSED SHELL LOADING STANDARDS BASED ON A STATISTICAL STUDY OF SETBACK SENSITIVITIES, by Samuel D. Stein and Martin J. Margolin. Nov 58, 61p. 16 refs. Technical rept. 2563; AD-202 576.
Order from LC mi$3.90, ph$10.80 PB 138 637

A statistically designed test program was conducted using a laboratory-scale device which simulates the setback pressures developed when shell are fired from guns. The following conditions increase the probability of premature initiation when HE-loaded shell are fired under the present normal setback pressures: (1) Grit at the interface of the explosive charge and the base of the shell; (2) A separation of more than 1/16 inch between the explosive and the base of the shell; (3) A cavity at the base of the explosive charge; and (4) A gouge on the interior surface of the base of the shell. On the basis of these and other results, it was possible to propose relaxed and simplified requirements as revisions to Specification MIL-L-20336A. In general, the relaxed cavitation requirements should vastly facilitate the mass production loading of high explosive shell.

Flight Control Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
SOME FLIGHT CONTROL PROBLEMS OF A CIRCUMNAVIGATING LUNAR VEHICLE, by George Xenakis. Mar 58, 34p. 12 refs. WADC Technical note 58-82; AD-151 111.
Order from LC mi$3.00, ph$6.30 PB 138 851

Some problems of flight control for a vehicle required to pass around the moon and return to a braking ellipse in the earth's atmosphere are investigated. It is shown that reliability will be an extreme problem for this mission. The need for velocity vector control for the mission is established and a method for accomplishing it is presented. In addition, velocity vector tolerances for successful recapture are investigated along with some brief considerations of landing at a preselected earth site and of flight in non-terrestrial atmospheres.

Naval Ordnance Lab., White Oak, Md.
EFFECTS OF ELEVATED TEMPERATURES ON ELECTRICAL INITIATORS AND COMPONENT PARTS, by H. S. Leopold. 1 Apr 59, 69p. 4 refs. NAVORD rept. 6267.
Order from LC mi$3.90, ph$10.80 PB 143 335

A study has been made of the effects of elevated temperatures on the XE-16A Actuator, XE-54B Primer, XE-57A Primer, XE-69A Primer, Mk 115 Mod O Primer, and the Mk 121 Mod O Primer, and on their inert component parts. It has been found that graphite bridges and bridges attached to bakelite initiator plugs by the spray metal method have poor thermal resistance. Ceramic initiator plugs with the bridge wire swaged into welded nickel tabs, and glass kovar initiator plugs with the bridge wire soldered with lead (m.p. 621°F) have good thermal resistance.

Naval Ordnance Test Station, China Lake, Calif.
AXIAL DECELERATION AT OBLIQUE WATER ENTRY OF 2-INCH-DIAMETER MODELS WITH HEMISPHERE AND DISK-CYLINDER NOSES, by G. G. Mosteller. 12 Feb 57, 48p. 7 refs. NOTS-1687; NAVORD rept. 5424; AD-140 642.
Order from LC mi$3.30, ph$7.80 PB 143 256

Axial deceleration-time records have been made in the NOTS Variable-Angle Variable-Pressure Launching Tank at trajectory angles of 15, 30, 45, 60, and 75 degrees for hemisphere and disk-cylinder noses, at 90 degrees for the hemisphere nose, and at entry velocities of 25, 50, and 75 fps. Methods for using these data for the prediction of axial acceleration-time function of other missiles are given. These records are compared with theory and results of other experiments.

Naval Propellant Plant, Indian Head, Md.
A RAMP-TYPE TESTING CIRCUIT FOR ELECTRIC EXPLOSIVE DEVICES, by A. H. Klein and T. D. Phillips. 3 Nov 58, 18p. Memo. rept. no. 155.
Order from LC mi$2.40, ph$3.30 PB 139 157

A circuit has been designed for the determination of the relative sensitivity to electrical initiation of a squib or ignition element in comparison to similar squibs or ignition elements. In this circuit, the squib or other electric explosive device is fired by sending through its bridge wire a current which increases with time along an established curve. The position on the current-time curve at which firing occurs is the datum observed. The circuit is particularly useful in experimental work in which the items to be tested cannot be produced in sufficient quantity to supply a test of the "fire-or-fail" type.

Picatinny Arsenal, Dover, N. J.
METHOD OF CALCULATION OF INTERIOR BALLISTIC PROPERTIES OF PROPELLANTS FROM CLOSED BOMB DATA, by Arnold O. Pallingston and Murray Weinstein. June 54, 52p. 10 refs. Technical rept. 2005.
Order from LC mi$3.60, ph$9.30 PB 139 185

This report covers the methods of calculation of relative force, relative quickness and linear burning rate for artillery propellants. It describes devices which have been developed to simplify and make more accurate the information which can be obtained from oscillograms of closed bomb tests giving dP/dt vs P. It gives the methods by which linear burning rates of propellants are derived. The methods described are essentially for use with experimental propellants and are not intended for production or quality control.

Picatinny Arsenal, Dover, N. J.
UTILIZATION OF BY-PRODUCT ISO-TRIOIL RESULTING FROM NITRIC ACID PURIFICATION OF CRUDE TNT, by J. A. Cussen. Jan 59, 9p. Technical rept. DB-TR:15-58.
Order from LC mi$1.80, ph$1.80 PB 139 082

This report covers studies conducted relative to establishment of Ordnance uses for Iso-Trioil, a by-product resulting from the purification of crude TNT by recrystallization from nitric acid.

Pitman-Dunn Labs. Group, Frankford Arsenal, Philadelphia, Pa.
DEVELOPMENT OF DISINTEGRATING WATER PROJECTILES FOR RECOILLESS RIFLES, by A. Levine. June 58, 23p. 6 refs. Memo. rept. MR-675.
Order from LC mi$2.70, ph$4.80 PB 139 080

Disintegrating water projectiles, consisting of water-filled cylindrical cardboard containers, were developed to simulate the interior ballistics produced in recoilless rifles by firing standard projectiles.

Pitman-Dunn Labs. Group, Frankford Arsenal, Philadelphia, Pa.
SEALING STUDIES ON CARTRIDGE ACTUATED DEVICES, by J. F. Clark. Sep 58, 33p. Rept. no. R-1469.
Order from LC mi$3.00, ph$6.30 PB 138 726

Investigations were conducted using quad rings, O-rings, silicone rubber washers, and Teflon rings as sealing media. Each of these products was found to be effective in specific applications; however, the O-ring was particularly adaptable to existing cartridge actuated devices and was used almost exclusively in the modifications made under this program.

Pitman-Dunn Labs. Group, Frankford Arsenal, Philadelphia, Pa.
SIMPLIFIED EXTERIOR BALLISTIC EQUATIONS, by R. R. Rhodes. May 58, 13p. Memo. rept. MR-672.
Order from LC mi$2.40, ph$3.30 PB 139 146

The principal problem in accuracy firings is the determination of the angle of elevation necessary to hit the target at a given range, with a given projectile, launched at a given velocity. A simple method for calculating this parameter for angles less than five degrees and other data useful in test firing are presented. The formulae developed are tabulated in the appendix and a nomogram was contructed to permit their graphic solution. By these means, the probability of first round hit for any accuracy study is greatly increased.

Radio Corp. of America, Moorestown, N. J.
MINSTREL: A STUDY OF THE OPTIMUM SYSTEM FOR MISSILE INSTRUMENTATION BY ELECTRONIC MEANS, by N. N. Alperin, K. E. Andrews and others. Task rept. no. 1 on Contract DA 36-039-sc-74853. 24 Jan 58, 103p. 26 refs. AD-155 240.
Order from LC mi$5.70, ph$16.80 PB 143 305

This report discusses various coordinate systems which can be applied to the data acquisition and range safety problems at White Sands Proving Grounds. The distortions and assumptions that characterize each are also discussed. For safety purposes, the data output and displays must be on a real time basis. The Transverse Mercator map presently in use at the White Sands Proving Ground is satisfactory for the present range. However, for a 1500-mile range, the problems of display warrent the use of a different system. Stereographic projection is recommended for the following reasons: (1) It is conformal, (2) Its distortion is low, (3) The angle between two lines on earth are carried to the plane of the map as an equal angle, (4) It requires little scale factoring. The coordinate conversions required for the two systems above are presented.

Rock Island Arsenal Lab., Ill.
CHARACTERISTICS OF VIC MATERIALS WHEN APPLIED AS PACKAGING MEDIA, by F. H. Wayne. 18 Feb 59, 15p. Rept. no. 59-464; AD-216 699.
Order from LC mi$2.40, ph$3.30 PB 143 440

This report covers results observed during the examination of Cal. .30 M1 carbines. These weapons had been in unheated warehouse storage for four years, plus a two year period in open exposure (tarpaulin covered). These carbines were packaged with four different types of volatile corrosion inhibitors used as the preservative medium. The four different types of inhibitors furnished adequate protection to the carbines and component parts during the exposure period. There was no visible evidence of rust on any of the metallic surfaces of the carbines, slings, magazines or the oilers. The gummy substance did not cause any damage to the wood stock.

Rock Island Arsenal Lab., Ill.
TEFLON PACKINGS WITHOUT CUP RINGS FOR 105 MM HOWITZER RECOIL MECHANISMS, by L. R. Raisbeck. 11 May 59, 25p. 2 refs. Rept. no. 59-1270; AD-215 627.
Order from LC mi$2.70, ph$4.80 PB 143 427

Four types of experimental Teflon packings without supporting cup rings were evaluated on the basis of their efficiency in transmitting axial load supplied by the Belleville springs to radial pressure against the cylinder walls. Evaluations were made with packings for the 105 MM Howitzer Recoil Mechanism Floating Piston at sub-zero, normal and elevated temperatures using a conventional floating piston and a special radial pressure transducer. Results of tests indicated that the axial loads were not as efficiently transmitted to radial pressure at sub-zero temperatures as at normal and elevated temperatures by any of the packings. Results also showed that a hysteresis loop existed in the radial pressure curves of all packings. The radial pressures obtained when decreasing the axial loads were greater than when increasing the axial loads. The best axial load vs. radial pressure characteristics at all temperatures were obtained with a packing which had a shroud consisting of three wedge shaped Teflon rings.

Stanford Research Inst., Menlo Park, Calif.
DEVELOPMENT OF PROCEDURES AND TECHNIQUES FOR PREPARING BONDED DOUBLE LAYER TANTALUM-COPPER COMPOSITE PLATES, by R. C. Bertossa and S. Rau. Rept. on Atlas Materials, Contract AF 33(616) 5215. Nov 58, 114p. 5 refs. WADC Technical rept. 58-396; AD-203 901.
Order from LC mi$6.00, ph$18.30 PB 143 623

A process for bonding tantalum sheet to OFHC copper was successfully accomplished both by casting molten copper directly into an annealed tantalum cone under controlled vacuum-inert gas atmospheres, and by using intermediate brazing alloys to produce high integrity,

vacuum bonded joints between OFHC copper and annealed tantalum. Metallurgical and microhardness evaluations reveal that sound, continuous bonds can be effected, with ductile interfaces. Elevated temperature tests on copper-tantalum clad nose-cones exhibited the ability of selected brazing alloys to maintain intimate contact between the copper and tantalum at temperatures up to the melting point of copper.

Stanford Research Inst., Menlo Park, Calif.
A NEW COORDINATE SYSTEM FOR SATELLITE ORBIT STUDY, by J. L. Brenner, G. E. Latta and M. Weisfeld. Interim technical rept. no. 2 on Contract AF 29(600)1773. 15 June 59, 90p. 5 refs. AFMDC-TR-59-27; AD-216 455.
Order from LC mi$4.80, ph$13.80 PB 143 517

This report gives an accurate prediction of the orbit of a near-earth satellite, neglecting drag. A special coordinate system suggested by D. G. King-Hele has been so refined that the predictions can be made to within a few seconds of arc at all points in the orbit of a typical satellite, with apogee and perigee distances of (say) 400 and 3000 statute miles respectively. King-Hele and other authors have proposed similar but somewhat less exact equations; further, the validity of these equations ($e \leq 0.05$) was restricted to small eccentricities. No such restriction is made in the present theory. Formulas in this report give Ω, I, $U = 1/Lr$, M as functions of the time t. A completely rigorous proof of the accuracy of these formulas is available only in special cases. The order of approximation of the formulas is discussed by the use of arguments based on the energy integral. Their accuracy has been verified also by independent numerical integration of the differential equations.

Sanitation and Safety Engineering

Aeronautical Accessories Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
FACTORS INVOLVED IN DETERMINING THE EFFICIENCY OF FIRE EXTINGUISHING AGENTS, by Ralph L. Hough. Apr 59, 75p. 6 refs. WADC Technical note 58-281; AD-203 398.
Order from LC mi$4.50, ph$12.30 PB 143 541

Results of the agent concentrationstudies indicate that currently available agents may act as "super agents" through more efficient application. "Critical saturation values" are proposed for the agents, bromochloromethane (CB) and bromotrifluoromethane (BT or Freon 13B1). These values represent minimum volumetric concentrations necessary when extinguishing 100 octane aviation fuel diffusion flames and when utilizing the agent at 100 per cent efficiency. An efficiency equation is proposed for use with the "critical saturation value." A test procedure is outlined for applying the equation to a particular system. The equation may be used as a tool in evaluating extinguishing systems.

Bureau of Yards and Docks, Washington, D. C.
REFUSE DISPOSAL. 1 Sep 52, 30p. 5 refs. Technical pub. NAVDOCKS TP-Pu-1.
Order from OTS $0.75 PB 161 054

The purpose of this publication is to provide detailed information to serve as a guide in organizing an efficient collection, segregation, and disposal system at a naval establishment. The procedures described herein are applicable to all solid forms of waste resulting from human activities, except the following specialized forms of waste: dehydrated sewage sludge, industrial process wastes such as oil sludge and sandblast refuse, excavated earth, wreckage from buildings, and discarded explosives. Suggested methods for disposing of some types of oil sludge are given. The disposal of sandblast refuse resulting from the docking of ships, and other specialized wastes, is to be covered in other publications.

Naval Research Lab., Washington, D. C.
VISIBILITY AND SUGGESTED MILITARY USES AT NIGHT OF SELF-LUMINOUS MARKERS EXCITED BY STRONTIUM-90, by G. T. Hicks, C. M. Whitfield, Jr. and L. H. Dawson. 23 June 53, declassified 15 Dec 53. 14p. 2 refs. NRL rept. 4192.
Order from LC mi$2.40, ph$3.30 PB 143 866

Self-luminous markers excited by the radioisotopes strontium-90 are available to the armed services. Visibility tests have been made on these markers at night under different sky conditions. It was found that the maximum visible distance increased in direct proportion to an increase in marker radius for a given brightness. It was found that on a clear moonless night, a radioactive green marker 1-3/4 inches in diameter with brightness greater than 60 effective microlamberts could be seen approximately 1000 feet when viewed extrafoveally.

New York U. Coll. of Engineering, N. Y.
THE ENGINEERING BIOTECHNOLOGY OF HANDLING WASTES RESULTING FROM A CLOSED ECOLOGICAL SYSTEM, by William T. Ingram. Rept. on Contract AF 18(603)71. Feb 58, 221p. 174 refs. AFOSR-TR-58-148; AD-162 277.
Order from LC mi$9.90, ph$34.80 PB 143 122

This report is directed to an examination of the status of existing information and the areas of research requiring attention in connection with the handling of wastes resulting from human occupancy of a closed ecological system. Probable wastes to be handled are classified. The problems related to handling and treatment and to cycling and reuse of treated end products in liquid, solid, and gaseous form are discussed. Five detailed reports discussing the present status of knowledge of wastes handling in closed systems are included as appendices. Areas of research and development are suggested with respect to skin excretions, algae, culture, carbon dioxide conversion to oxygen, the handling of closed space air, and the handling of bodily and other wastes. A master file of 174 annotated references and an alphabetical author index to those references are included.

FOOD, HANDLING, AND PACKAGING EQUIPMENT

Food

Pennsylvania State U., University Park.
ODOR AND FLAVOR PROBLEMS IN RADIATION STERILIZATION OF FOODS, by D. V. Josephson. Rept. no. 9 (Final) for 3 May 55-3 Dec 56 on Contract DA 19-129-qm-375. [1956] 32p. 12 refs. File no. S-534; AD-122 143.
Order from LC mi$3.00, ph$6.30 PB 143 781

The following are considered to be major accomplishments of the investigation: (1) Methodology was developed which should be useful in application to any flavor identification problem. This consisted of a distillation technique to collect volatiles, gas chromatography to fractionate the volatiles and mass spectrometry to identify the individual compounds. (2) It was shown that a group of disagreeable smelling sulfur compounds are responsible for the radiation induced off-flavor and odor in skim milk and sodium caseinate sols. (3) Two off-flavor preventive mechanisms of interest were noted. (a) Radiated skim milk exhibited considerably less off-flavor and off-odor than did radiated milk protein preparations. This difference was found to be due in substantial part to the presence of lactose. The possibility that lactose, a relatively unsweet carbohydrate, may be used as an additive to foods to prevent radiation induced off-flavors seems worthy of consideration. (b) According to evaluations by the taste panel, skim milks which were preheated to 180° F. for 10 minutes had more acceptable flavor than skim milks which had only been pasteurized or which had received no preheating treatment at all prior to radiation. These observations suggest the feasibility of combining heat treatment and radiation in the preservation of milk.

United States Testing Co., Inc., Hoboken, N. J.
MEAT ANALYSIS, by Dean Foster. Rept. no. 8 (Final) for 25 Apr 55-24 Apr 57 on Contract DA 19-129-qm-346. [1957] 12p. QFCIAF File no. A-319.
Order from LC mi$2.40, ph$3.30 PB 143 666

An attempt was made to determine how and to what extent it is possible to differentiate between comparable canned and fresh foods.

Packaging

Forest Products Lab., Madison, Wis.
PRESERVATION OF THE EXTERIOR SURFACES OF WOODEN SHIPPING CONTAINERS TO RETAIN IDENTIFICATION SYMBOLS IN LONG-TERM OUTDOOR STORAGE: FOURTH PROGRESS REPORT ON FIELD TESTS, by V. P. Miniutti, E. A. Mraz, and D. F. Laughnan. 17 June 58, 31p. 5 refs. Rept. no. 58-1.
Order from LC mi$3.00, ph$6.30 PB 143 057

This report summarized the procedures used in preparing, stenciling, and placing wood shipping containers in outdoor storage at Madison, Wis.; Panama Canal Zone; Fort Churchill, Canada; and Yuma, Ariz., and gives the results of inspections of steel bindings and stencils on the boxes after 3 years of outdoor storage.

Forest Products Lab., Madison, Wis.
PRESERVATION OF THE EXTERIOR SURFACES OF WOODEN SHIPPING CONTAINERS TO RETAIN IDENTIFICATION SYMBOLS IN LONG-TERM OUTDOOR STORAGE: FIFTH PROGRESS REPORT ON FIELD TESTS, by V. P. Miniutti, E. A. Mraz and D. F. Laughnan. 2 June 59, 33p. 6 refs. Rept. no. 59-1.
Order from LC mi$3.00, ph$6.30 PB 143 062

Wood shipping containers were stenciled, bound with steel bindings, and placed in outdoor exposure at Madison, Wis., Panama Canal Zone, Fort Churchill, Canada, and Yuma, Ariz. Four marking materials were used with seven combinations of two undercoat and four topcoat treatments on boxes made of red oak, Douglas-fir, and southern yellow pine. The best legibility after 4 years of exposure was found on the backs (north exposure) of the test boxes for 9 of the 12 combinations of species and sites, and on the fronts (south exposure) for the other 3 combinations. For boxes pretreated with material A, a water-repellent preservative, there was no combination of side, species, and site for which all stencils made with 12 combinations of marking material and undercoat-topcoat treatment were legible after 4 years of exposure. Stencils made with four of these combinations were legible after 4 years of exposure on the backs of the boxes of all three species from all of the test sites. A comparison of the southern yellow pine boxes with and without pretreatment with material A indicated that material A had a detrimental effect on the performance of the stencils at three of the sites.

MACHINERY, FABRICATION, AND ACCESSORY EQUIPMENT

Franklin Inst. Labs. for Research and Development, Philadelphia, Pa.
A STUDY OF THE STABILITY OF EXTERNALLY PRESSURIZED GAS BEARINGS, by Lazar Licht and Harold Elrod. Interim rept. on Contract Nonr-2342(00). Nov 58, 48p. 6 refs. I-A2049-4.
Order from LC mi$3.30, ph$7.80 PB 143 477

The subject of this paper is the stability of externally pressurized gas bearings. The pertinent equations are linearized and the stability criteria stated in considering small deviations from the equilibrium point. The flow in the bearing clearance is treated on a distributed rather than on a lumped parameter basis. Results thus obtained, when compared with those previously arrived

at by means of a simplified analysis, show a marked divergence in the limiting values of parameters which influence the stability of the bearing. Differences in predictions of the simplified and present analyses with regard to the permissible compression volume in the bearing interspace and the effect of varying the mass of the bearing are emphasized and discussed.

Engines and Propulsion Systems

Ballistic Research Lab., Aberdeen Proving Ground, Md.
EXPERIMENTAL STUDY OF COMBUSTION INSTABILITY IN SOLID ROCKET PROPELLANTS: PART I, by Leland Watermeier, Trexler Satkowski, and Thomas Mifflin. Oct 58, 65p. 2 refs. Memo. rept. no. 1172; AD-206 469.
Order from LC mi$3.90, ph$10.80 PB 143 263

Slabs of double-base and composite rocket propellants were burned in a transparent-walled vessel which was vented to the atmosphere. The propellants were ignited at ambient pressures of 200-300 psi with the chamber pressure reaching approximately 350-475 psi during the burning process. A new method was developed for the determination of burning rates of solid propellants. The apparatus and procedure used in the investigation are presented together with selected photographs of the burning propellant surfaces.

Battelle Memorial Inst., Columbus, Ohio.
RESEARCH STUDIES ON THE COOLING AND CLEANING OF EXHAUST GASES CONTAINING BORON COMBUSTION PRODUCTS, by G. M. Hein, A. R. Orban, and R. B. Engdahl. Final technical rept. on Contract AF 40(600)711. July 58, 71p. 11 refs. AEDC-TR-58-9; AD-161 031.
Order from LC mi$4.50, ph$12.30 PB 138 609

All possible methods which might be practicable for the removal of boron oxide particles from high-temperature exhaust gases have been considered in this project. A literature survey led to the conclusion that wet scrubbers would be most adaptable for this application.

Hiller Aircraft Corp., Palo Alto, Calif.
A DESIGN STUDY OF HELICOPTERS POWERED BY ROTOR TIP MOUNTED TURBOJET ENGINES, by C. W. Messinger, W. Gevarter and others. Summary rept. on Contract Nonr-1814(00). Oct 58, 148p. 28 refs. Rept. no. 58-139.
Order from LC mi$7.20, ph$22.80 PB 143 247

A design study of tip-turbojet powered helicopters of several gross weights to demonstrate practicality of the concept and to establish performance capabilities for comparison with helicopters using other methods of propulsion.

Jet Propulsion Center, Purdue U., Lafayette, Ind.
AN EXPERIMENTAL AND THEORETICAL INVESTIGATION OF FILM COOLING IN ROCKET MOTORS, by A. R. Graham. Final rept. on Contract N7onr-394(18). Oct 57, 274p. 34 refs. Rept. no. F 57-3; AD-200 878.
Order from LC mi$11.10, ph$42.60 PB 138 745

Experiments on film cooling were conducted with a rocket motor burning WFNA (white fuming nitric acid) and JP-4 (jet engine fuel) at a combustion pressure of 500 psia and at a thrust level of 500 pounds. The flow rates of film coolant required for film cooling different length cylindrical sections with WFNA and JP-4 were determined, and those results were compared to the experimental results previously obtained by Sellers (9) for the case of film cooling with water. An analytical method for calculating the required film coolant flow rate for cooling a given length cylindrical section was devised.

Propulsion Research Corp., Santa Monica, Calif.
ESCHER WYSS CLOSED CYCLE AIRCRAFT POWERPLANT STUDY. PART II, by Rolf D. Buhler. Interim summary rpt. on Study of the Military Applications Potential of Closed Cycle Gas Turbines, Contract AF 18(603)27. 10 May 57, 48p. 5 refs. Rept. no. R-259; AFOSR TR-57-37; AD-126 570.
Order from LC mi$3.30, ph$7.80 PB 129 887

A portion of a study on closed cycle gas turbines for aircraft has been summarized and evaluated. This study dealt with closed cycle turbine - ducted fan powerplants suitable for a gas-cooled reactor heat source. The reactor - gas turbine loop would use helium, at a turbine inlet condition of about 70 atm and 1800°F. Cycle calculations with and without a regenerator show a potential heat consumption at sea level static conditions of 7.5 - 12.2 x 10^3 Btu/hr-lb thrust (equivalent to an sfc of .42 - .68 for hydrocarbon fuels), and an air specific impulse of about 30 (#-sec/lb) with a 1.6:1 pressure ratio fan. The regenerator would be extremely compact, about 1.6 cu. ft/hp, the cooler rather bulky, about 30 cu. ft/hp, but not excessively heavy. The cooler and regenerator together would weigh about .13 lb/hp. The closed cycle turbomachinery would be extremely small, favoring the design of large power units (above 15,000 hp).

Propulsion Research Corp., Santa Monica, Calif.
EXPERIMENTAL INVESTIGATION OF A THREE DIMENSIONAL ALL SUPERSONIC DIFFUSING CASCADE, by T. Iura and E. Beder. Rept. on Contract AF 18(600)1143. May 58, 185p. 18 refs. Rept. no. R-288; AFOSR TR-58-132; AD-203 712.
Order from LC mi$8.40, ph$28.80 PB 142 912

A three-dimensional all-supersonic diffusing cascade was designed by the stream surface characteristics method and tested in a wind tunnel over the Mach number range 2.2 to 3.0. Stable supersonic flow was established over a wide range of incidence angles. Chordwise blade-surface static pressures, exit-plane pitot surveys, and Schlieren photographs were obtained.

Manufacturing Equipment and Processes

American Car and Foundry Co., New York.
WELDABILITY OF RARE-EARTH-TREATED HOMOGENEOUS ARMOR STEEL PLATE, by George Reed. Rept. on Contract DA 36-034-ORD-1423. 31 July 57, 31p. Major rept. no. 207B; WAL-642/218-2.
Order from LC mi$3.00, ph$6.30 PB 139 164

The rare-earth-oxide-treated heat had the best weldability and the production armor heat the poorest. The rare-earth-oxide-treated heat also possessed the lowest hardenability, and better inherent weldability. It was indicated, that the rare-earth-metal addition significantly reduced the sulfur content of the steel and improved the impact resistance. The rare-earth-oxide addition, appeared to have no significant effects on either sulfur content or impact resistance.

Army Chemical Corps Engineering Command, Army Chemical Center, Md.
ANNUAL STANDARIZATION SYMPOSIUM NO. 2, 18-19 MAY 59, by Kenneth P. Moseley. 12 June 59, 94p.
Order from LC mi$5.40, ph$15.30 PB 143 288

Chemical Corps Progress, Standardization and Small Business, Effect of Department of Defense Standardization on Research and Development, Standardization - A Vital Link to Government-Industry Cooperation, Engineering Standardization - The Bridge Between Research and Development in Production, Engineering Standards, The Standards Engineers Society (SES) and the Defense Standardization Program, The Importance of Standard Testing Methods as They Relate to Military Standards, the ASTM and Industrial Chemicals, Product Acceptance and Inspection, Legal Aspects of Standardization, Conservation of Manpower and Materials, Department of Defense Standardization, Panel Discussions.

Titanium Metals Corp. of America [Henderson, Nev].
TITANIUM SHEET ROLLING PROGRAM FOR Ti-6Al-4V AND Ti-4Al-3Mo-1V. FINAL REPORT, PART I: Ti-4Al-3Mo-1V. Final rept. on Contract NOas-56-993-C. 15 May 59, 119p.
Order from LC mi$6.00, ph$13.30 PB 143 770

Development and production of Ti-4Al-3Mo-1V sheet under the Department of Defense Titanium Sheet Rolling Program. Development of manufacturing methods and selection of a sponge hardness level for the alloy and production of heat treated aircraft quality sheet for evaluation by various aircraft companies. Essentially all sheets developed strengths above the original target of 147,000 psi minimum yield strength after solution treating and aging. Ductility in the solution treated and aged condition varied with the gage.

Titanium Metals Corp. of America [Henderson, Nev.]
TITANIUM SHEET ROLLING PROGRAM FOR Ti-6Al-4V AND Ti-4Al-3Mo-1V. Final rept., Pt. 2, on Ti-6Al-4V, Contract NOas-56-993-C. 1 July 59, 53p.
Order from LC mi$3.60, ph$9.30 PB 143 628

Annealed Ti-6Al-4V sheet in various aircraft gages on a commercial basis. Information on production procedures, chemical uniformity, and mechanical properties of the sheets produced are presented. Sheets were also solution treated on the resistance heating, spray quench apparatus to demonstrate heat treat capability.

Westinghouse Research Labs., Pittsburgh, Pa.
JOINING OF MOLYBDENUM, by William N. Platte. Rept. for 15 Feb 56-14 Apr 57 on CFPS Materials, Contract AF 33(616)3524. Aug 57, 165p. 38 refs. WADC Technical rept. 57-309; AD-149 847.
Order from LC mi$7.80, ph$25.80 PB 143 644

Available metallurgical data on molybdenum base alloys indicated that additions of aluminum, titanium, carbon, and zirconium should provide good welding properties. Aluminum additions in the range of 0.18 to 0.22% gave welds that could be deflected 120° at room temperature. Welds in 0.5% Ti with 0.05% C produced the best results. Carbon in molybdenum-carbon alloys was shown to improve the weld metal ductility by reducing the oxygen content of the base material and by a protective deoxidization action during welding. Moldbdenum with 0.06% carbon showed the best bend ductility within the carbon range examined. Post-welding residual stresses could be eliminated by a vacuum heat treatment at 1832°F.

Transport, Traction and Hoist Facilities

Detroit Arsenal, Center Line, Mich.
TEST OF THE DUAL PURPOSE HEATER KIT INSTALLED ON THE MORTAR CARRIER, M84, AT LOW AMBIENT TEMPERATURES, by Simon J. Grabowski. 10 Nov 58, 42p. Rept. no. 4330 (Final).
Order from LC mi$3.30, ph$7.80 PB 139 144

To evaluate the effectiveness of a dual purpose heater kit on the Mortar Carrier, M84, tests at 0 F, minus 25 F, minus 45 F, and minus 65 F were conducted at the Detroit Arsenal. Excessive heating time of the power plant compartments was experienced during tests at low ambient temperatures. However, the personnel heating system achieved the minimum Continental Army Command temperature recommendations. A recommendation is made that the kit be modified to lower excessive heating time of the power plant compartments.

Mansfield Tire and Rubber Co., Ohio.
THE DESIGN, DEVELOPMENT, AND TESTING OF AN IMPROVED TYPE "COMBAT" TIRE. Final rept. for 4 June 54-30 June 57 on Contract DA 20-089-ORD-37142. [1957] 149p. 49 refs. AD-143 293.
Order from LC mi$7.20, ph$22.80 PB 138 660

An improved combat tire was constructed with regular 11.00-20 NDCC military tire molds, except for specially profiled mold base rings which allowed for maximum bead widths of 2 3/4 inches. A conventional type drum with a 1/4-in. rubber-and fabric-pad was used. A relatively large power drilling awl was used to vent the uncured tires. A specially designed new mold was made for curing the air bags. All materials used in the tires were standard natural-rubber compounds with regular nylon cord and cotton square woven fabrics, except for the tread stock which was the regular cold-rubber antiozonant compound. The double nylon-cord flippers were applied on the drum at the specified positions and stitched down to bead areas before the bead cables were applied. Each assembly unit was thoroughly stitched and awled to remove all possible air during the tire building. Two relatively wide breaker strips were applied as a band. The tires were shaped and bagged in conventional vacuum boxes with the inflated air bag capped to hold the pressure. The tires were cured on the tight side to avoid hot fracture after release of the internal pressure. The tires did not conform to the dimensions of regular military tires cured in the military NDCC molds. Endurance-wheel and limited road tests followed by plunger-energy tests were made on the same tire; results were satisfactory. Relatively dissatisfactory road tests for vehicle handling and tire action were run. Successful flotation, traction, and drawbar pull tests were made. Internal examination showed no major defects.

Massachusetts Inst. of Tech., Cambridge.
THE TRANSPORTATION PROBLEM WITH RANDOM DEMANDS, by James R. McCord, III. Master's thesis. Interim technical rept. no. 12 on Fundamental Investigations in Methods of Operations Research, Contract DA 19-020-ORD-2684. June 59, 100p. 3 refs. AD-216 900.
Order from LC mi$5.40, ph$15.30 PB 143 321

This report is an analytical exploration of the dependence of the classical transportation problem on variable and random parameters. Some well-known characteristics of the classical problem are first summarized. This facilitates the subsequent detailed investigation of the general 2 x n (two supplies and n demands) problem as a function of variable supplies, demands, and unit costs. The results are interpreted in terms of a two-dimensional geometrical visualization; in a certain sense, this type of picture may be viewed as a model of the class of all 2 x n problems. An interesting by-product of this analysis is a very simple method for solving classical 2 x n and m x 2 transportation problems. Some indications of possible generalizations to larger problems are also presented.

Coating and Chemical Lab., Aberdeen Proving Ground, Md.
LOW SURFACTANT CONTENT AMPHOTERIC CLEANERS, by A. Mankowich. 13 Aug 58, 13p. 3 refs. Rept. no. 62.
Order from OTS $0.50 PB 151 172

Low surfactant content alkaline cleaners have been developed suitable for use with missile component parts of magnesium, aluminum, zinc, etc. These compounds possess excellent detersive, heat stability and cleaning capacity characteristics and economy. They contain only 3.0 percent of a specific quaternary imidazolium hydroxide amphoteric surfactant plus 1.5 percent isooctylphenyl nonaethylene glycol ether (IOPNG). The amphoteric agent is the dicarboxylic analogue of the coconut oil derivative. Nonionics of the alkyl polyethylene glycol ether or alkyl polyethylene glycol thioether types may be substituted for IOPNG. The developed compounds permit a saving of about 16 percent over present-type Specification P-C-436a products.

Institute of Rubber Research, U. of Akron, Ohio.
STRESS RELAXATION AND STRUCTURE OF HIGH TEMPERATURE ELASTOMERS, by Maurice Morton, V. R. Allen, and R. D. Gates. Technical rept. no. 2, 1 Sep-31 Nov 58, on Contract Nonr-2573(00). [1958] 23p. 3 refs.
Order from LC mi$2.70, ph$4.80 PB 143 458

A further theoretical treatment has been applied to the relationship between sol formation and network degradation of elastomers, taking into consideration the possibility of "recombination" processes which may form new network chains. Some estimates have been made of the extent to which such a process may decrease the amount of sol obtained for a given degree of network degradation. The actual results obtained on the degradation of a swollen sulfur vulcanizate of natural rubber indicate that the main occurrence is actually a random chain scission, with some degree of "recombination" of the degraded chains. In other words, a crosslinking process appears to accompany the scission process. Natural rubber, vulcanized with sulfur to varying degrees, appears to show the sol-gel relation for crosslink scission, as would be expected. However, the situation is complicated to some extent by the probable occurrence of simultaneous random chain scission during vulcanization. (See also PB 140 880)

Ceramics and Refractories

Armour Research Foundation, Chicago, Ill.
THE MECHANICAL PROTECTION OF THE W/Ir THERMOCOUPLE, by Gary Steven and Walter C. Troy. 16 Jan 50, 10p. 4 refs. NEPA 1280-ARM-26; Rept. no. 25; AD-204 948.
Order from LC mi$1.80, ph$1.80 PB 138 317

Equipment was designed and constructed for use in subsequent tests. Beryllia tube protection of the W/Ir thermocouple was found to be unsatisfactory because of the porosity of the available crucibles. A literature survey on rhenium is appended.

Illinois U., Urbana.
FATIGUE AND INTERNAL STRESS ANALYSIS OF CERAMIC COATED METAL COMPOSITES, by J. H. Lauchner and D. G. Bennett. Rept. on Contract AF 18(603)28. Sep 58, 37p. 23 refs. Dept. of Ceramic Engineering rept. no. 83; AFOSR TR-58-129; AD-203 494.
Order from LC mi$3.00, ph$6.30 PB 138 624

Ceramic coated metal composites were studied under mechanically and thermally induced stresses. Coating metal interfacial structure considerations indicate a saturation of the glassy phase by oxides of the base metal accompanied by the presence of residual strain gradients essentially within the interfacial zone. The maximum induced strain (thermal or mechanical) which cobalt bearing ceramic coatings could withstand without fracture was found to be a function of residual stress.

Illinois U., Urbana.
METAL BONDED TITANIUM DIBORIDE, by James A. Nelson, Tracy A. Willmore and Dwight G. Bennett. Rept. on Ceramic Components for Aircraft Power Plants, Contract W33-038-ac-14520. Mar 52, 36p. 8 refs. Dept. of Ceramic Engineering rept. no. 61; WADC Technical rept. 52-111; ATI-158 806.
Order from LC mi$3.00, ph$6.30 PB 143 651

Titanium diboride in a finely divided state was combined with thirty percent of either powdered iron, cobalt, nickel, chromium, or zirconium and pressed into compacts which were fired in an argon atmosphere at temperatures exceeding the melting point of the added metal. The sintering characteristics of the compacts and the phases present after firing was described. Tests were made for oxidation resistance at 2000°F.

Illinois U., Urbana.
SOME STRUCTURE AND PROPERTY STUDIES OF RADIATION REFLECTIVE CERAMIC COATINGS, by Elwin Johnson, Henry G. Lefort and Dwight G. Bennett. Rept. on Contract AF 18(603)28. Sep 58, 52p. 4 refs. Dept. of Ceramic Engineering rept. no. 84; AFOSR TN-58-138; AD-204 555.
Order from LC mi$3.60, ph$9.30 PB 139 172

The behavior of crystalline CeO_2 in two types of matrix glass, one alkali and alumina rich and the other alkali and alumina free, plus a limited study of the chemical behavior of stabilized zirconia in matrix glasses of simple barium-boro-silicate type. The alkali and alumina bearing matrix glass showed a greater devitrification tendency than the alumina and alkali free glass.

Kennametal, Inc., Latrobe, Pa.
AN INVESTIGATION OF PHYSICAL PROPERTIES OF CEMENTED TITANIUM CARBIDE COMPOSITIONS, by J. C. Redmond, J. W. Graham and J. R. McVeigh. Final rept. on Ceramics, Components, Power Plant Aircraft, Contract AF 33(038)27732. Aug 52, 70p. WADC Technical rept. 52-235; AD-1116.
Order from LC mi$3.90, ph$10.80 PB 143 649

Stress-to-rupture tests were made on 15 TiC-base cermets at 1600° and 1800°F to determine their suitability as blading for aircraft gas turbines. Turbine-bucket-root configurations were designed and tested. Ni-bonded TiC was at least equal to currently used alloys in stress-to-rupture properties at present engine temperatures, and was superior at 1800°F. An Ni-Mo alloy doubled the stress-to-rupture strength of the TiC-base compositions. Fe-Si-alloy-bonded TiC was equivalent to Ni-bonded TiC in stress-to-rupture strength. The best bucket root designs, characterized by large radii and 1 or 2 serrations, showed strengths up to 5 times as great as those obtained with conventional fastenings.

Kennametal, Inc., Latrobe, Pa.
PRELIMINARY INVESTIGATION OF ULTRASONIC EXAMINATION OF CERMET TURBINE BUCKETS, by John C. Redmond and Alden M. Burchardt. Rept. on Contract AF 33(600)23285. Jan 56, 28p. WADC Technical rept. 56-89; AD-97 540.
Order from LC mi$2.70, ph$4.80 PB 130 366

Investigation of ultrasonic testing for detection of internal discontinuities in titanium carbide base cermet buckets or differences between buckets of the same composition. Development of methods for measuring sound velocities longitudinally in roots and for the detection of flaws within airfoil. Correlation between the results of ultrasonic examination, between metallurgical properties and also performance.

Minerals Research Lab., U. of California, Berkeley.
PREDICTING THE THERMODYNAMIC STABILITIES AND OXIDATION RESISTANCES OF SILICIDE CERMETS, by Alan W. Searcy. Technical rept. no. 5 on Contract Nonr-222(32). Sep 56, 17p. 8 refs. Series no. 84, issue no. 5.

Burke Research Co., Warren, Mich.
RESEARCH ON VINYLIC FILLER LUBRICANTS AND GREASES, by U. F. Nager, M. T. Johnston and P. Davis. Technical rept. no. 19T, for 1 Oct-31 Dec 57 on Contract Nonr-2146(00). [1957] 16p. 5 refs.
AD-157 360.
Order fromLC mi$2.40, ph$3.30 PB 138 627

The preparation of fluorinated oils by telomerization was continued. Several possible new routes to prepare fluorocarbon dinitriles were proposed for investigation. The following reactions were investigated: (1) vapor phase reaction of fluorohalogenocarbons with cyanides, (2) reactions of fluorohalogenocarbons with cyanides in solvents, (3) vapor phase pyrolysis of ammonium perfluoroglutarate in the presence of NH_3, and (4) reaction of perfluoroalkyl Li with cyanogen. (See also PB 138 884)

California Research Corp. [La Habra]
DEVELOPMENT OF HIGH-TEMPERATURE AIRCRAFT HYDRAULIC FLUIDS, by Neil W. Furby. Rept. on Hydraulic Fluids, Lubricants and Related Materials, Contract AF 33(038)9831. Nov 51, declassified. 111p. AF Technical rept. no. 6685; ATI-188 471.
Order from LC mi$6.00, ph$18.30 PB 143 267

The requirements for a nonflammable hydraulic fluid possessing favorable viscosity, volatility, and lubricity characteristics led to the investigation of the organo-silicates as possible new base materials to meet this demand. The studies conducted by the California Research Corporation have resulted in the synthesis of a number of siloxanes, disiloxanes, and organo-phosphorus compounds in an effort to develop a fluid that would meet the requirements as outlined in the three phases of their program. Data presented on mechanical test evaluation, viscosity-volatility relationships, viscosity-temperature characteristics, and fluid stability, indicate the potentiality of the organo-silicates as possible aircraft hydraulic fluids.

California Research Corp. [La Habra]
DEVELOPMENT OF HIGH-TEMPERATURE AIRCRAFT HYDRAULIC FLUIDS, by Neil W. Furby. Rept. on Hydraulic Fluids, Lubricants and Related Materials, Contract AF 33(038)9831, Oct 52, declassified 19 Oct 55. 62p. AF Technical rept. no. 6685, sup. 1; ATI 184 796.
Order from LC mi$3.90, ph$10.80 PB 143 267S1

A high temperature silicate base hydraulic fluid capable of operating from -65°F to over 400°F was formulated from a mixed monomer orthosilicate base stock, a silicone viscosity index improver, and a basic amine inhibitor to retard oxidation and hydrolysis. Various additives were evaluated for their effect on oxidation, viscosity, hydrolysis, lubricity, and flammability properties of silicate formulations. Further synthesis work was done on silicate and phosphonate esters as new base materials. Bench-scale wear tests and gear and piston type hydraulic pump tests were carried out on experimental hydraulic fluids. (See also PB 143 267)

California Research Corp. [La Habra]
DEVELOPMENT OF HIGH-TEMPERATURE AIRCRAFT HYDRAULIC FLUIDS, by Neil W. Furby. Rept. on Hydraulic Fluids and Lubricants MX 1576, Contract AF 33(038)9831. Sep 53, declassified 19 Oct 55. 85p. AF Technical rept. no. 6685, sup. 2; AD-22 067.
Order from LC mi$4.80, ph$13.80 PB 143 267S2

Progress for the year 1952 in the development of a high temperature aircraft hydraulic fluid for operation from -65°F to 400°F is described. Compounds synthesized for investigation as base materials included silicates, trisiloxanes, silicon-phosphorus compounds, phosphonates, and miscellaneous compounds. Diethyl and methylphenyl silicones as well as polymethacrylates were investigated as V. I. improvers for silicate base fluids. Additives were evaluated for effects on high temperature stability, hydrolytic stability, and antiwear properties. Four-ball wear tests and 3000 psi Vickers and New York Airbrake piston pump tests were conducted on several experimental fluids to determine lubricating properties. (See also PB 143 267S1)

Frankford Arsenal, Philadelphia, Pa.
MOLYBDENUM DISULFIDE DRY LUBRICANT STUDY, by B. Hawthorn. 31 Dec 57, 10p. Rept. no. MIC-68A; AD-147 783.
Order from LC mi$1.80, ph$1.80 PB 138 600

An evaluation was made of the performance of a particular brand of molybdenum disulfide suspension as a tool lubricant in small arms ammunition manufacturing operations, both with and without supplemental lubrication. No significant gain was reported.

Instituto Nacional de Tecnica Aeronautica Esteban Terradas (Spain).
AN EXPERIMENTAL INVESTIGATION ON THE COMBUSTION OF MONOPROPELLANT DROPLETS, by P. Pérez del Notario and C. Sánchez Tarifa. Rept. on Contract AF 61(514)997. 20 Jan 59, 26p. 4 refs. AFOSR-TN-59-628; AD-217 813.
Order from LC mi$2.70, ph$4.80 PB 143 171

In the present work the results of an experimental investigation with the object of obtaining the velocities of combustion of monopropellant droplets within an inert atmosphere are shown. This investigation was performed to check the theoretical results previously obtained.

Instituto Nacional de Tecnica Aeronautica "Esteban Terradas" (Spain).
FINAL REPORT, by G. Millan. Rept. on Contract AF 61(514)997. 25 Feb 59, 10p. 12 refs. AFOSR-TR-59-68; AD-217 815.
Order from LC mi$1.80, ph$1.80 PB 143 152

With regard to homogeneous combustion, the general objectives of the program of work were to contribute to the theoretical study of the characteristics of the laminar flames, taking the existing semianalytical methods as the starting point and including some non-steady cases, such as ignition of a combustible and homogeneous gaseous mixture, as well as others of flames with heat losses. As regards heterogenous combustion, the theoretical and experimental study of the combustion of monopropellant droplets, and of fuel sprays, was included in the program.

Midwest Research Inst. [Kansas City, Mo.]
A RADIOACTIVE TRACER INVESTIGATION OF THE MECHANISM OF MoS_2 AND WS_2 LUBRICATION, by. M. T. Lavik and S. L. Levy. Rept. on Contract AF 49(638)157. June 58, 8p. 2 refs. AFOSR TR-59-10; AD-209 493.
Order from LC mi$1.80, ph$1.80 PB 139 232

This project was designed to test Johnson's hypothesis describing lubrication by molybdenum disulphide.

Leather and Textiles

Harris Research Labs. [Washington, D. C.]
A SURVEY OF 18-OUNCE BLENDED SERGE FABRICS: LABORATORY EVALUATION, by John Menkart. Rept. on Air Force Textile Materials, Contracts DA 19-129-qm--1122; AF 33(616)-(54-172; 55-82; 57-20). May 59, 50p. 21 refs. WADC Technical rept. 58-602; AD-214 699.
Order from OTS $1.25 PB 151 920

The development of alternates for the 18 oz. wool serge was the object of the investigation. Twenty experimental fabrics were made and their properties were evaluated, in comparision with those of the standard serge, at Quartermaster Research and Engineering Center, Natick, Mass. On the basis of the laboratory data, tentative recommendations are made for the selection of alternates, resulting in a conservation of wool, with the least change in functional properties. Of the fabrics studied, a ternary blend of 70% wool, 20% viscose, and 10% nylon is indicated as providing the closest approach to the wool serge.

Institute of Polymer Research, Polytechnic Inst. of Brooklyn, N. Y.
IMPROVEMENT OF THERMAL STABILITY OF TEXTILE FIBERS, by I. Saad. Progress rept. no. 8 (Annual summary) for 1 July 57-30 June 58 on Contract N140(132)57745B. [1958] 32p.
Order from LC mi$3.00, ph$6.30 PB 143 086

Within the limits of the work one arrives at the conclusion that substantial coatings by the method of embedding catalyst in the fiber surface are feasible, and that the amount of deposited polymer may be increased and its uniformity improved by the application of larger concentrations of catalyst and by shortening the coating treatment. (See also PB 132 855)

Owens-Corning Fiberglas Corp., Newark, Ohio.
PROPERTIES OF GLASS FIBERS AT ELEVATED TEMPERATURES, by W. H. Otto. Quarterly rept. no. 4, 16 Mar-15 June 59, on Contract NOas-58-841-c. 25 June 59, 20p.
Order from LC mi$2.40, ph$3.30 PB 143 669

Single fiber tensile strength measurements were made on silica monofilament at temperatures from 75°F to 2000°F. Static fatigue measurements on silica fibers were made at temperatures up to 1830°F. The effects of standard 630 textile size on high temperature strength and fatigue were studied on E-glass and X-37B glass.
(See also PB 140 701)

Aberdeen Proving Ground, Md.
DEVELOPMENT OF A ONE-COAT FINISH FOR SPRAY APPLICATION TO TIN AND TERNE PLATE, by C. U. Van Duyne and C. F. Pickett. Rept. no. 6 on Finishing Coats Systems, Ordnance Proj. no. TB4-771D. 29 July 55, 28p. Engineering Labs. rept. no. 4.
Order from LC mi$2.70, ph$4.80 PB 138 949

The object of this project is to develop a quick drying one-coat finish for spray application on tin and terne plate containers which will be sufficiently dry after a one-minute bake at 300°F to permit handling and packaging of the containers. A two-coat finishing system for spray painting tin and terne plate containers as recommended by this installation was deemed too lengthy an operation by various can manufacturers. After materials covered by existing specifications were evaluated and found to be unsatisfactory a new product was developed meeting the specific requirements of the problem.

Bureau of Aeronautics, Dept. of the Navy, Washington, D. C.
MINUTES OF COLLOQUIUM ON AIRCRAFT ORGANIC PROTECTIVE COATINGS PROBLEMS OF THE BUREAU OF AERONAUTICS, FEBRUARY 27-28, 1947. 125p.
Order from LC mi$6.30, ph$19.80 PB 143 089

A series of papers are covered as well as some of the discussion.

Coating and Chemical Lab., Aberdeen Proving Ground, Md.
DETERMINATION OF CHLORENDIC ACID IN FIRE RETARDANT PAINT, by G. G. Esposito. 14 Aug 59, 7p. Rept. no. CCL-80.
Order from LC mi$1.80, ph$1.80 PB 143 564

A new test method is presented for determining chloredic (hexachloroendomethylenetetrahydrophthalic) acid in chlorinated alkyd resins used in fire retardant paints. The new procedure employs isopropyl alcohol

in the saponification medium to separate the acid as the dipotassium salt. The acid is extracted from water with ethyl ether and titrated in a nonaqueous medium.

THE APPLICATION OF DIAZO TYPE MATERIALS TO INDUSTRIAL PLANNING AND ENGINEERING, by George F. Sztuk. Oct 58, 15p. RADC-TN-58-250; AD-202 097.
Order from LC mi$2.40, ph$3.30 PB 138 622

The Maintenance Engineering Plant Layout Standardization Program requires the use of Diazo type color materials for the production in Diazo machines of colored overlay plant layouts and their blue line reproductions. RADC has conducted tests to establish specifications for the Diazo color foils to be supplied by two commercial firms and has assisted in revising plant equipment color classifications. The general results of these tests and consequent recommendations are given in this report.

WEATHERING TESTS OF PLASTICS AND DESIGN OF SUSPENDED ENVELOPE SOLAR STILLS. Rept. on OSW Contract 14-01-001-91. Sep 59, 46p. 3 refs. Office of Saline Water Research and Development progress rept. no. 30.
Order from OTS $1.50 PB 161 095

A program for investigation of the resistance of plastic film materials to solar radiation and weathering under distillation conditions was carried on through the use of accelerated laboratory tests as well as outdoor exposure tests. Sample containers affording protection of the film specimens while subjecting them to distillation conditions were developed, and an accelerated testing device constructed which appears suitable for rapid screening of materials, though direct correlation with outdoor exposure can not be established as yet. The program was subsequently extended to include preliminary design, construction, and initial testing of suspended envelope stills in modular unit form. A design was developed which utilizes commercially available structural elements requiring a minimum amount of fabrication into still modules. Available plastic materials having superior resistance to exposure presented extensive problems in effective sealing.

MOLECULAR WEIGHT DISTRIBUTION BY STRESS RELAXATION, by A. V. Tobolsky, A. Mercurio and K. Murakami. Rept. on Contract Nonr-1858(07). 26 Feb 58, 3p. 3 refs. ONR Technical rept. RLT-23.
Order from LC mi$1.80, ph$1.80 PB 139 054

The stress relaxation properties of linear amorphous polymers in the region of rubbery flow have been shown to be dependent on molecular weight and molecular weight distribution.

Wood and Paper

College of Forestry, Syracuse, N. Y.
MECHANISM OF SOLUTION OF HEMICELLULOSE IN ALKALI, by Igor Sobolev (Doctoral thesis) and Conrad Schuerch. Technical rept. no. 2, May-July 58, on Contract DA 30-115-ORD-923. [1958] 25p. 19 refs. AD-137 112.
Order from OTS $0.75 PB 151 177

When wood is pulped with sodium hydroxide and the liquors are simultaneously hydrogenated in the presence of nickel catalyst, the process resembles soda pulping very closely in the species usable, the optimum conditions, alkali consumption and pulp yield and analysis. However, the lignin is a relatively simple mixture of distillable phenols and thermoplastic resins, and the pulp appears somewhat lighter in color than comparable soda pulp. The process can be carried out effectively on wood meal or chips and with the catalyst separate from the wood. Hydrogen pressure need only be about 600 p. s. i. Lignin hydrogenated in this fashion appears to be a more attractive material than that produced from the hydrogenation of pulping liquors or commercial lignins. A number of experimental pulps are described. (See also PB 142 747)

STUDIES ON THE HEARTWOOD CONSTITUENTS OF CONIFERS, Final technical rept. no. 1 for 1 Feb 58-31 Mar 59 on Contract DA 91-508-euc-288. 25 Apr 59, 48p. 6 refs. AD-217 432.
Order from LC mi$3.30, ph$7.80 PB 143 051

Three South African and one South American species of the genus Podocarpus were examined but no interesting substances were found. The South American Saxegothea conspicua was also investigated without yielding any results of interest. Investigation of the heartwood constituents of the Chilean Austrocedrus (Libocedrus) chilensis was made. The heartwood of the Tasmanian Arthrotaxis selaginoides was investigated for the first time. The old problem of the structure of shonanic acid from the Formosan conifer Libocedrus formosana has been solved. The heartwood of the Moroccan Tetraclinis articulata has been reinvestigated. There is no clear-cut relationship to the South African genus Widdringtonia nor does Tetraclinis exhibit any relationship to Callitris, an Australian genus to which Tetraclinis articulata was once supposed to belong. There is, however, some affinity to the northern genera of Cupressaceae and chemically perhaps it is related most closely to the Californian incense cedar, Libocedrus decurrens. Tetraclinis should be very carefully investigated. It appears to be a rich source of chemotaxonomically interesting compounds. The heartwoods of the Californian Cupressus macrocarpa and the Himalayan C. torulosa were subjected to preliminary investigation.

A METHOD FOR NUMERICAL EVALUATION OF THE COEFFICIENTS OF FOURIER SERIES, by Kurt H. Haase. June 59, 38p. 8 refs. AFCRC-TR-153; AD-216 366.
Order from LC mi$3.00, ph$6.30 PB 143 492

Programmed computation of these periodic Fourier coefficients in connection with the tabulation of $C_n(m)$ yields any desired number of Fourier coefficients. This new method is thus superior to other computational methods and schemes that a priori limit the number of obtainable coefficients. Fourier coefficients of specially selected orders can be obtained in a few steps, without the necessity of computing the entire sequence of coefficients. The method can be programmed for desk calculating machines as well as for computers.

COINCIDENT PROPERTIES OF BIRTH AND DEATH PROCESSES, by Samuel Karlin and James McGregor. Technical rept. no. 9 on Contract Nonr-225(28). 18 Nov 58, 51p. 9 refs.
Order from LC mi$3.60, ph$9.30 PB 143 478

In this paper we investigate certain aspects of the structure of the Markov process describing the transitions of n particles conditioned that no coincidence takes place. We refer to this process as the compound birth and death process of order n. Frequently, when no ambiguities arise the terms "birth and death" and "order n " will be suppressed. The basis of the subsequent analysis is principally an integral representation for $P\begin{pmatrix} t; & i_1, i_2, \ldots, i_n \\ & j_1, j_2, \ldots, j_n \end{pmatrix}$ which is derived from a corresponding integral formula for $P_{ij}(t)$.

CONTINUOUS SAMPLING PROCEDURES WITHOUT CONTROL, by C. Derman, M. V. Johns, Jr., and G. J. Lieberman. Technical rept. no. 39 on Contract N6onr-25126. 10 Oct 58, 32p. 4 refs.
Order from LC mi$3.00, ph$6.30 PB 143 248

Several modifications of the Dodge CSP-1 procedure are presented. Changes are made in the rule of action when a defective item is observed while on sampling. The Average Outgoing Quality Limit (AOQL) for these new procedures are derived without the assumption of control. These results are compared with the AOQL assuming control. Further, the AOQL for the CSP-1 procedure using probability sampling (looking at every item with probability 1/k when on sampling) is derived without the assumption of control.

Order from LC mi$3.90, ph$10.80 PB 138 632

The equations of a relatively new variant of the difference-equation method of approximately solving problems in partial differential equations are investigated, the discussion being restricted to partial differential equations involving the Laplace operator. The variant consists, for the two dimensional case, in replacing one of the partial derivatives by a central difference and the other partial derivative by an ordinary derivative, thus obtaining a system of ordinary differential equations to be solved in such a way as to satisfy certain boundary conditions. It is shown that the equations of this variant are equivalent to a variational principle, the analogue of the maximum principle holds, and an operational calculus is developed. Also included are a Green's function and Green's identities, applications to the estimation of eigenvalues, and explicit solutions in rectangular regions. Generalizations to higher dimensions are indicated.

The results of this study may be summarized as follows: (1) All statistics under study are fairly sensitive to non-normality. (2) The sensitivity increases with increasing sample size. (3) There was no evidence to indicate that one statistic or a group of statistics is any less sensitive to non-normality than any other.

A BOUNDARY VALUE PROBLEM FOR A SYSTEM OF ORDINARY LINEAR DIFFERENTIAL EQUATIONS INVOLVING POWERS OF A PARAMETER, by William A. Harris, Jr. Technical rept. no. 3, 16 Mar-15 June 57, on Contract DA 11-022-ORD-2042. 20 Mar 58, 141p. 9 refs. AD-156 723.
Order from LC mi$7.20, ph$22.80 PB 143 258

This paper is concerned with the existence and nature of eigenvectors which are solutions of a vector differential equation of the form

$$\frac{d}{dx}\,\bar{y}(x,\lambda) = A(x,\lambda)\,\bar{y}(x,\lambda) + \bar{g}(x,\lambda),\quad q \le x \le b,$$

with the boundary conditions

$$W_a(\lambda)\,\bar{y}(q,\lambda) + W_b(\lambda)\,y(b,\lambda) = 0.$$

The $A(x,\lambda)$, $W_a(\lambda)$ and $W_b(\lambda)$ are n x n matrices which possess convergent representations of the form

$$A(x,\lambda) = \lambda^h \sum_{j=0}^{\infty} A_j(x)\,\lambda^{-j}$$

$$W_a(\lambda) = \lambda^{h'} \sum_{j=0}^{\infty} W_{aj}\,\lambda^{-j}$$

$$W_b(\lambda) = \lambda^{h'} \sum_{j=0}^{\infty} W_{bj}\,\lambda^{-j}$$

when the complex parameter λ is sufficiently large; h is a positive integer and h' is a non-negative integer.

Institute of Tech., U. of Minnesota, Minneapolis.
SIMPLIFICATIONS OF SYSTEMS OF LINEAR DIFFERENTIAL EQUATIONS INVOLVING A TURNING POINT, by H. L. Turrittin and W. A. Harris, Jr. Technical rept. no. 2, 15 Sep 57-15 Sep 58, on Contract DA 11-022-ORD-2042. 13 Dec 57, 39p. 42 refs. AD-156 171.
Order from LC mi$3.00, ph$6.30 PB 143 257

It is found that an asymptotic reduction in the order of the matrix equation

(1) $\epsilon^h \frac{dX}{dt} = \{A_0(t) + \epsilon A_1(t) + \epsilon^2 A_2(t) + \ldots\} X$, where h is a positive integer, ϵ a small parameter, and the A's are square matrices with holomorphic elements near t = 0, is always possible if the characteristic roots $\lambda_i(t)$ of the lead matrix $A_0(t)$ can be separated into two distinct sets, so that no root of the first set coincides with any root of the second set at or near t = 0. Also all turning point problems for equations of type (1), where the A's are 2 by 2 matrices, have been classified and reduced to one of three possible canonical forms.

Rational function representations of the function E are presented as defined by a differential equation of a standard form. Closed form expressions for the error are derived and used to appraise the error in a convenient manner. Rational approximations to the transcendents defined by the differential equation are derived by the τ method. Numerical examples are worked out and the true error is compared with that predicted.

MATRIX INVERSION, ITS INTEREST AND APPLICATION IN ANALYSIS OF DATA, by B. G. Greenberg and A. E. Sarhan. Technical rept. no. 5 on Estimation of Parameters by Order Statistics, Contract DA 36-034-ORD-2184. 15 May 58, 21p. 7 refs.
Order from LC mi$2.70, ph$4.80 PB 143 561

Matrix inversion is used in the least squares analysis of data to estimate parameters and their variances and covariances. When the data come from the analysis of variance, analysis of covariance, order statistics, or the fitting of response-surfaces, the matrix to be inverted usually falls into a structured pattern that simplified its inversion.

COMMUTATORS AND ABSOLUTELY CONTINUOUS OPERATORS, by C. R. Putnam. Technical note no. 1 on Commutators on a Hilbert Space, Contract AF 18(603)139. July 57, 17p. 10 refs. AFOSR-TN-56-457; AD-97 073.
Order from LC mi$2.40, ph$3.30 PB 128 628

A discussion is presented of commutators and absolutely continuous operators. Five general theorems on commutators and certain associated sets are given, and applications of some of the results are made to prove 8 theorems dealing with Toeplitz, Hankel, and Jacobi matrices. All operators are bounded linear transformations on a Hilbert space consisting of elements x. The results obtained depend on the methods of C. R. Putnam (Proc. Amer. Math. Soc., 7:1026-1030, 1956), and are similar to those results except for the second and third commutators.

DEGENERACY IN LINEAR PROGRAMMING: WHERE IS THE PROBLEM? by Harvey M. Wagner. Technical rept. no. 49 on Contract N6onr-25133. 3 Mar 58, 12p. 9 refs.
Order from LC mi$2.40, ph$3.30 PB 139 160

The degeneracy problem, which may or may not arise when the degeneracy condition exists, is of two sorts. The first type concerns the rigorous demonstration that the simplex method unequivocally leads to an optimal solution. The second type concerns the amount of computational effort which should be expended to avoid a theoretically possible but empirically rare occurrence. Nelson's resolution of the problem neither solves the first aspect completely nor the second aspect adequately. The common occurrence of the degeneracy conditions, for reasons explained by Nelson, in contrast to the infrequent occurrence of cycling, has led practitioners to be less exacting in the requirements of their computational scheme than the mathematicians have been in the details of their logical proofs.

TELEMAG - A SYSTEM FOR PROCESSING TEST DATA RECORDED ON MAGNETIC TAPE, by James L. Blilie. June 59, 77p. APGC-TN-59-21; AD-214 632.
Order from LC mi$4.50, ph$12.30 PB 143 290

This report describes Telemag, a system which is used to process test data which may have been recorded on magnetic tape in the test vehicle, telemetered to a ground station or the Telemag and recorded, or telemetered and fed directly to Telemag. The report also presents a brief review of some telemetry and magnetic tape data recording techniques. The last two chapters deal respectively with the actions to be taken by people to best utilize Telemag and plans for expanding the facilities and functions of Telemag.

LEPRECHAUN: A SOLID-STATE DIGITAL COMPUTER, by J. A. Githens and M. J. Gilmartin. Supplement to Summary engineering rept. for 1 May 57-1 Aug 58 on Tradic Computer Research (Second Stage), Contract AF 33(600)34977. 1 Dec 58, 460p. AD-208 622.
Order from LC mi$11.10, ph$69.60 PB 143 648S

The TRADIC second feasibility computer, better known as LEPRECHAUN, is a high-speed solid-state digital computer capable of solving complex weapons guidance control problems in real-time. The computer was designed and built to meet several definite objectives. Firstly, the computer was built to demonstrate the feasibility of direct-coupled transistor logic (DCTL) used in a system involving thousands of transistors. The machine also provides for the test and evaluation of a moderately large magnetic-core memory driven by transistors. It serves as a vehicle for the continuing study and evaluation of the operating characteristics and reliability of transistors in these techniques. Secondly, LEPRECHAUN was designed for use in programming and logical design research in the use of digital computers for military real-time control applications. To meet this last objective, the computer incorporates some novel features which permit extreme flexibility in the logical interconnections. This supplement gives complete details of the design and construction of the LEPRECHAUN computer. (See also PB 143 648)

TRADIC COMPUTER RESEARCH (SECOND STAGE) by J. A. Githens and M. J. Gilmartin. Summary engineering rept. for 1 May 57-1 Aug 58 on Contract AF 33(600)34977. 1 Dec 58, 398p. 62 refs. AD-208 621.
Order from LC mi$11.10, ph$60.60 PB 143 648

This report summarizes the program for the development of solid-state technology for airborne weapons-control computers. Among the major items covered are: encoding and decoding techniques; two forms of non-destructive program storage; a wide temperature range magnetic core memory system; silicon direct coupled transistor logic; organization of a computer as an aid in trouble location; and programming techniques for the protection of stored constants and error correction in the weapons-control computer.

DIGIT DETECTOR. Technical rept. no. 20 [on Contract AF 30(602)1566] 14 Nov 57, 41p. RADC-TN-58-10; AD-148 543.
Order from LC mi$3.30, ph$7.80 PB 143 282

Information is recorded on the glass disc as opaque or transparent marks in a photographic emulsion. The disc is rotated past a small scanning spot of light. The information is read by a photomultiplier tube (PMT) which catches the beam from the spot after passage through the emulsion. A transparent ("white") mark gives a high current and an opaque ("black") mark gives a low current. The Digit Detector accepts the sequence of high and low currents from the PMT and announces to the search-logic electronics what information the spot is seeing. The information is stored in the memory, as photographic opaque or transparent marks, essentially in a binary code. Hence the output of the Digit Detector will be a sequence of impulses representing the two binary characters 0 or 1. The search logic groups these into lots of six and identifies them as characters or other graphical symbols.

AN INTRODUCTION TO LINEAR PROGRAMMING WITH APPLICATIONS TO DATA REDUCTION PROBLEMS, by Frank Reed. Dec 57, 42p. 8 refs. NOTS-1932; NAVORD rept. 5838.
Order from LC mi$3.30, ph$7.80 PB 143 341

This paper presents an introduction to the mathematical theory of linear programming. The material covered is sufficient to enable the applied mathematician to solve a great number of practical problems. As illustrations of the usefulness of the technique, two problems related to the field of data reduction are solved.

ORTHOGONAL FUNCTIONS AS SIGNAL ELEMENTS, by Alfred Kobos. Jan 59, 17p. 5 refs. RADC-TN-58-363; AD-206 256.
Order from LC mi$2.40, ph$3.30 PB 139 089

The use of orthogonal elements for transmitting digital data with a coherent-type system is illustrated, using a set of Gaussian pulses as an example. This technique is shown to be theoretically capable of providing a great increase in signaling speed. The necessary requirements of such a system are discussed, outlining future work which must be accomplished.

MECHANICS

Brown U. Div of Applied Mathematics, Providence, R. I.
THE BURSTING SPEED OF A ROTATING PLASTIC DISC OF VARIABLE THICKNESS, by Marie Madden Smith. Technical rept. no. 35 on Contract Nonr-562(10). Apr 58, 25p. 10 refs. C11-35.
Order from LC mi$2.70, ph$4.80 PB 139 258

This paper presents a method for determining the bursting speed of a thin rotating disc of varying thickness made of a strain-hardening material. The method is based on Tresca's yield condition and flow law and neglects all elastic strains.

Brown U. Div. of Applied Mathematics, Providence, R. I.
LIMIT ANALYSIS OF CYLINDRICAL SHELLS USING APPROXIMATE YIELD CONDITIONS, by H. Cohen and R. T. Shield. Technical rept. no. 2 for Mar 58 on Basic Research in Analysis and Design of Shells, Contract DA 19-020-ORD-4564. Apr 58, 32p. 10 refs. Rept. DA-4564/2; AD-137 082.
Order from LC mi$3.00, ph$6.30 PB 143 868

The theorems of limit analysis are used to obtain close bounds for the limit loading in some problems of symmetrically loaded cylindrical shells. It is shown that a parabolic prism approximation to the exact yield surface is a more useful approximation than the sandwich shell polyhedron surface when appreciable axial force is present.

Fritz Engineering Lab., Lehigh U., Bethlehem, Pa.
BUCKLING OF UNIFORMLY COMPRESSED STEEL PLATES IN THE STRAIN-HARDENING RANGE, by Geerhard Haaijer. Progress rept. no. 20 on Welded Continuous Frames and Their Components, Contract [N7onr]-39303. Aug 56, 66p. 20 refs. Fritz Lab. rept. no. 205E.7.
Order from LC mi$3.90, ph$10.80 PB 130 015

The problem of buckling of steel plates compressed beyond the yield strain is treated. General expressions for the buckling strength are derived assuming the material to have become orthogonally anisotropic.

Institute of Flight Structures, Columbia U., New York.
ON VIBRATIONS OF CYLINDRICAL SHELLS OF ELLIPTIC CROSS-SECTION, by G. Herrmann and I. Mirsky. Technical note no. 5 on Contract AF 18(600)1247. Dec 57, 24p. 3 refs. CU-17-57-AF-1247-CE; AFOSR-TN-57-734; AD-136 721.
Order from LC mi$2.70, ph$4.80 PB 138 602

Frequencies of free vibration of thin elastic cylindrical shells of constant thickness and elliptic cross-section are determined for several modes of motion. It is shown that purely longitudinal motions, for small ellipticities, are governed by a Mathieu equation and that the square of the frequency of a slightly elliptic shell with semi-axes a and b is the arithmetic mean of the squares of the frequencies of 2 circular shells with radii a and b, respectively. Purely torsional motion appears to be uneffected by ellipticity, while purely transverse motion (breathing mode) does not exist in elliptic cylinders. Flexural motions are studied by energy methods. It is found that in the absence of nodal lines parallel to the generator, the ellipticity increases the frequency considerably for shells of like cross-sectional area. If cylindrical shells of like circumference, that is of like mass, are compared with one another, the influence of ellipticity is stronger.

Michigan U. [Research Inst.] Ann Arbor.
ON THE INFINITE ELASTIC, PERFECTLY PLASTIC WEDGE UNDER UNIFORM SURFACE TRACTIONS, by S. A. Murch and P. M. Naghdi. Technical rept. no. 11 on Contract Nonr-1224(01). Jan 58, 23p. 9 refs. 2150-11-T; AD-161 937.
Order from LC mi$2.70, ph$4.80 PB 138 250

This paper is concerned with both plane strain and plane stress solutions of the infinite elastic, perfectly plastic wedge (of included angle $0 < \beta < 2$) under uniform surface tractions, where Tresca's yield condition and its associated flow rules are employed. Following a detailed examination of the character of the initial yield, attention is confined to the class of problems where yielding occurs externally on one or both boundaries. Specifically, complete solutions are obtained for a wedge under uniform shear on one face in both states of plane strain and plane stress, in the light of which the symmetry of the stress tensor is also discussed.

Minnesota U., Minneapolis.
FATIGUE CRACK DETECTION METHODS. PART 2: REVIEW OF EXPERIMENTAL DATA ON THE INITIATION AND PROPAGATION OF FATIGUE CRACKS IN TEST SPECIMENS, by L. J. Demer. Rept. for Jan-Mar 55 on Materials Analysis and Evaluation Techniques, Contract AF 33(038)20840. June 55, 77p. 45 refs. WADC-TR-55-86, pt. 2; AD-75 478.
Order from LC mi$4.50, ph$12.30 PB 143 877

Current fatigue literature contains numerous references to a few recent studies in which fatigue cracks have been detected very early in the specimen life. This paper attempts to clarify such isolated observations by making a detailed review of the available experimental data in relation to crack initiation and growth in laboratory fatigue test specimens. The data are analyzed considering the nature of the test material, the character of the specimen, the stress level of the test, and the manner of testing.

Missouri U. Engineering Experiment Station, Columbia.
BASIC RESEARCH IN FORCE RELAXATION METHODS, by Adrian Pauw. Final technical rept. on Contracts DA 23-072-ORD-(818, 1050). June 58, 173p. 5 refs. AD-200 756.
Order from LC mi$8.10, ph$27.30 PB 143 259

Part 1. Solution of linear simultaneous equations by pivotal and stepped group-operator relaxation
Part 2. Solution of hinged space frames by the method of bar-force relaxation
Part 3. The use of pivotal and stepped-block relaxation patterns in the solution of difference and partial-difference equations
Part 4. Solution of polynomial equations

Polytechnic Inst. of Brooklyn, N. Y.
APPLICATIONS OF A CONSISTENT THEORY FOR STRAIN HARDENING PLASTIC SOLIDS, by Nicholas Perrone and P. G. Hodge, Jr. Rept. on Contract Nonr-839(11). Oct 57, 120p. 19 refs. PIBAL rept. 403.
Order from LC mi$6.00, ph$18.30 PB 138 857

A critical analysis of a kinematic model for hardening first suggested by Prager is given. Specific applications to the flexure of non-symmetric sandwich beams, the bending of circular and annular plates, and the axisymmetric loading of circular cylindrical shells are made.

Aerodynamics and Pneumatics

Arnold Engineering Development Center [Tullahoma, Tenn.]
A SMALL-SCALE FORCED-OSCILLATION DYNAMIC BALANCE SYSTEM, by C. J. Welsh and P. L. Clemens. Rept. on ARO, Inc. Contract AF 40(600)700 Sup. 6(58-1). June 58, 17p. 6 refs. AEDC-TN-58-12; AD-157 143.
Order from LC mi$2.40, ph$3.30 PB 143 274

A small-scale, forced-oscillation dynamic balance for measuring damping derivatives of models with one degree of freedom is described. Results of measurements of $C_{m_q} + C_{m_{\dot{\alpha}}}$ for a clipped-delta-wing-body configuration over a range of Mach numbers of 2.0 to 5.0 are given. The measurements are shown to be consistent and to follow the trend with Mach number as predicted by theory.

Cornell Aeronatuical Lab., Inc., Buffalo, N. Y.
RESEARCH ON ROTATING STALL IN AXIAL FLOW COMPRESSORS. PART II. ON THE SEPARATION OF THE UNSTEADY LAMINAR BOUNDARY LAYER, by R. A. Hartunian and F. K. Moore. Rept. on Contract AF 33(616)3558. Jan 59, 33p. 14 refs. WADC Technical rept. 59-75, Pt. 2; AD-216 302.
Order from OTS $1.00 PB 161 072

A theoretical study is made of the unsteady but nearly quasi-steady laminar incompressible boundary layer near separation. It is shown that near separation on an airfoil, say, the general problem divides into (1) a problem of unsteady perturbation with a separation point which, in the quasi-steady approximation, is fixed with respect to the wall and (2) a steady problem related to that of a moving wall. The singularity near separation is analyzed for the unsteady and moving-wall cases. It is concluded that in the former case, the separation criterion of vanishing wall shear applies, and in the latter case (and in general) separation occurs whenever shear and velocity simultaneously vanish. The Falkner-Skan analysis is extended to apply to the two fundamental problems. In the unsteady case a shift of separation point is calculated. In the moving-wall case, the point of zero shear, the point of maximum adverse pressure gradient, and the point of simultaneously zero velocity and shear are noted. The implications of the results of this study regarding the complete generality of the separation criterion cited above, as well as the potentialities of application of the results in the formulation of an approximate method for unsteady boundary-layer calculation, are discussed. (See also PB 151 948)

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
INVESTIGATION OF TRANSITION CAUSED BY THE STOPPING OF A FLAT PLATE, by John C. Hegarty. Rept. on Contract AF 18(600)1014. June 58, 38p. 8 refs. Technical note BN-141; AFOSR TN-58-627; AD-162 157.
Order from LC mi$3.00, ph$6.30 PB 138 871

The present paper investigates the amplification of the small perturbation due to boundary-layer instability into discrete vortex lines and their subsequent distortion into a three-dimensional pattern. The intensification of the vortices and the three-dimensional distortion is believed to be a necessary step of the phenomena of transition from laminar to turbulent flow. The investigation was initiated because of criticism against the use of a trip wire as a means of promoting the process of amplification of the small perturbation. The results in many respects are in accord with those obtained from the trip wire.

Massachusetts Inst. of Tech., Cambridge, Mass.
INTRODUCTORY STUDY OF FLUTTER OF LOW-ASPECT-RATIO WINGS AT SUBSONIC SPEEDS, by Herbert M. Voss and Hermann J. Hassig. Rept. on Aero-Elastic and Structures Research, Contract NOas-51-109-c. 1 May 52, 103p. 36 refs. AD-144 729.
Order from LC mi$5.70, ph$16.80 PB 143 568

Acceleration potential methods and their application to the circular wing are reviewed. The flutter analysis and forced vibration of wings with circular and elliptical plan forms are outlined, pointed toward the design of an experimental model. An improved theory for low-aspect-ratio rectangular wings is given as well as an extension of low-aspect theory to include unsteady flow. The compressibility correction in subsonic flow is also considered.

Massachusetts Inst. of Tech., Cambridge.
ON SIMPLE WAVES IN PERFECT AND DISSOCIATING GASES: THEORY AND APPLICATIONS, by Haim Kennet. Rept. on Contract AF 18(600)961. Feb 58, 62p. 16 refs. Fluid Dynamics Research Group rept. 58-1; OSR Technical note no. 58-302; AD-154 212.
Order from LC mi$3.90, ph$10.80 PB 143 511

A theoretical method is developed for estimating aerodynamic loads on oscillating airfoils in dissociating flow, when the flow is in dissociative equilibrium. This procedure is based on a method of solution originally prepared by Lighthill for the case of a perfect fluid.

Michigan U. Research Inst., Ann Arbor.
THE DIFFRACTION OF SHOCK WAVES THROUGH OBSTACLES WITH VARIOUS OPENINGS IN THEIR FRONT AND BACK SURFACES, by Russell E. Duff and Robert N. Hollyer, Jr. Rept. on Contract N6onr-232, T. O. 4. 7 Nov 50, 57p. 3 refs. Rept. 50-3; ATI-94 435.
Order from LC mi$3.60, ph$9.30 PB 143 646

This report presents the results of a photographic investigation of shock-wave diffraction through models with various openings in their front and back surfaces. Also included is a discussion of a method for determining the strength of shock waves by measurements of limiting Mach configurations.

National Research Labs., Ottawa (Canada).
ORGANIZATION OF A LARGE COMPUTATION IN AIRCRAFT STRESS ANALYSIS, by A. L. M. Grzedzielski. July 59, 49p. 16 refs. Aeronautical rept. LR-257.
Order from LC mi$3.30, ph$7.80 PB 143 577

Theoretical and organizational aspects of a large scale numerical stress analysis covering effects of applied loads and uneven temperature are discussed, using the example of a swept multi-spar model box for which experimental data are available. A large scale computation, actually performed during the design of a prototype aircraft, is described.

Naval Ordnance Lab., White Oak, Md.
TIME LAGS DUE TO COMPRESSIBLE-POISEUILLE FLOW RESISTANCE IN PRESSURE-MEASURING SYSTEMS, by J. M. Kendall. 2 May 50, 38p. 16 refs. Memo. no. 10677.
Order from LC mi$3.00, ph$6.30 PB 143 867

In the development of the aerodynamic features of a missile in the supersonic wind tunnel, many pressure measurements must be made. It is frequently found that the response time of the pressure-measuring systems is too great, especially when the measurements are made in an intermittent supersonic wind tunnel. The time response of pressure-measuring systems is basically analyzed in this report for the case where compressibility and viscosity are predominating factors.

Naval Supersonic Lab., Mass. Inst. of Tech., Cambridge.
A SUMMARY OF EXPERIMENTS WITH SLOTTED TRANSONIC INSERTS IN THE NAVAL SUPERSONIC WIND TUNNEL, by Eugene E. Covert. Apr 58, 77p 25 refs. Technical rept. 207.
Order from LC mi$4.50, ph$12.30 PB 143 871

The calibration of the transonic nozzle blocks for the Naval Supersonic Laboratory Wind Tunnel indicates that the useful Mach number range is between 0.5 and 1.30 and that the distribution is relatively uniform. These results were obtained with a calibration pole and are expected to hold for all bodies of revolution of length twelve inches or less and winged bodies whose span is eight inches or less. The measurements indicate that for bodies with a blocking area up to one and one half percent of the tunnel area, the slots deblock as expected by the theory. Further, models with a length of two-thirds of the tunnel height or less, and whose span is forty-five percent of the tunnel height or less, may be tested on a development basis, provided a suitable correction is made for a flow inclination. Some auxiliary results are given which help explain the phenomena encountered in slotted tunnels.

Ohio State U. Research Foundation, Columbus.
CRITICAL PERFORMANCE PARAMETERS OF AN INTERMITTENT HIGH-PRESSURE FREE-JET SUPERSONIC WIND TUNNEL, by J. D. Lee and G. L. Von Eschen. Final rept. on Contract W33-038-ac-21683. 31 July 54, 117p. 12 refs. AD-46 137.
Order from LC mi$6.00, ph$18.30 PB 143 498

The flows from the nozzles of the free-jet, supersonic wind tunnel were calibrated. The performance of the wind tunnel while operating with long free jets was satisfactory. The internal growth of the viscous boundary was not excessive at any Mach number so that a core of usable size is available for testing with a second test region. No difficulty was experienced in starting the tunnel with free jets of the maximum length. The operation of the tunnel was theoretically analyzed by a 1-dimensional injector theory, and the results compared favorably with experimental measurements. The use of an adjustable diffuser resulted in very small changes in the operating efficiency of the tunnel. The optimum diffuser shape was deduced to be a constant-area duct followed by a diverging (subsonic) diffuser section. The only useful function of the adjustable diffuser appeared to be that of controlling the ratio of the test chamber pressure to the nozzle exit pressure. The components of the air supply and control system were judged to be satisfactory. Oscillograph records show that the control system allows the stagnation pressure to be held generally within less than 1% of a preselected value over the period of the test.

Polytechnic Inst. of Brooklyn, N. Y.
SOME HEAT TRANSFER PROBLEMS IN HYPERSONIC FLOW, by Antonio Ferri. Rept. on Contract AF 49(638)445. July 59, 61p. 13 refs. PIBAL rept. no. 473; AFOSR-TN-59-806.
Order from LC mi$3.90, ph$10.80 PB 143 600

The curved shock waves associated with blunt bodies at hypersonic velocity produce large entropy gradients and therefore large shear flows which interact with the boundary layer. In this paper the effects of this shear flow are discussed for the case of axially symmetric and two-dimensional flow fields and for low and high Reynolds number of flight. Approximate methods of heat transfer analysis are presented for the case of laminar boundary layer in the presence of a shear flow with a cold wall and in the case of zero pressure gradient. Results of an experimental investigation on the effects of interaction between external flow and laminar turbulent heat transfer and/or the effect of shear flow on transition are also presented. The experimental results show that these are large effects and important for practical applications.

Polytechnic Inst. of Brooklyn, N. Y.
THE THREE-DIMENSIONAL COMPRESSIBLE LAMINAR BOUNDARY LAYER, by Melvin Epstein. Rept. on Contract AF 49(638)217. Oct 58, 84p. 30 refs. PIBAL rept. no. 455; AFOSR-TN-58-894; AD-204 135.
Order from LC mi$4.80, ph$13.80 PB 143 510

A method is presented for determining approximate solutions to the three-dimensional compressible laminar boundary layer equations. The proposed method resembles the classical integral method in certain respects. It is designed, however, to overcome one of the principal difficulties associated with integral method, namely the problem of choosing appropriate analytical representations of the boundary layer profiles. This difficulty is magnified in the three-dimensional problem where an additional profile must be specified. In such cases it is desirable that a means of automatically choosing a set of profiles, which are appropriate to the problem at hand, be available. This is accomplished, in the present method, by means of an iteration procedure wherein improved approximations to the boundary layer profiles are generated from a set of simple initial profiles.

Technische Hochschule, Munich (West Germany).
THE NUMERICAL SOLUTION OF BOUNDARY-VALUE PROBLEMS FOR CERTAIN HYPERBOLIC LINEAR DIFFERENTIAL EQUATIONS, by Hans J. Stetter. Technical note no. 7 on Contract AF 61(514)1080. 24 Apr 59, 38p. 10 refs. AFOSR-TN-59-673; AD-218 385.
Order from LC mi$3.00, ph$6.30 PB 143 164

A detailed investigation is given of procedures yielding a numerical solution of certain boundary-value problems of a linear partial differential equation related to the wave equation. After the statement of the problem and the presentation of some analytic results the characteristic system of the equation is transcribed into a system of difference equations in a characteristic grid, using an ADAMS-interpolation difference scheme. It is shown how these difference equations may be conveniently solved in each point of the grid. A method is presented to take care of discontinuities in the boundary data. The numerical procedures necessary to get the computations on the difference equations started are also described.

MOTION OF RIGID AND FLUID SPHERES IN STATIONARY AND MOVING LIQUIDS INSIDE CYLINDRICAL TUBES, by W. L. Haberman and R. M. Sayre. Oct 58, 68p. 30 refs. Rept. no. 1143.
Order from LC mi$3.90, ph$10.80 PB 138 641

This report considers the problem of steady, axial translation of rigid and fluid spheres in stationary and moving viscous, incompressible fluids bounded by an infinitely long cylinder. The investigation is based on Stokes' approximation for the hydrodynamic equations for slow flow. An exact and an approximate solution for the motion of rigid spheres are obtained. For fluid spheres (consisting of a fluid of different physical property than the external medium and having internal motion) an approximate solution is obtained. In general, the results show that the wall effect for fluid spheres is less than for corresponding rigid spheres. Streamlines and velocity distributions for several cases where the diameter ratio is 0.5 are compared with those in an infinite medium.

Battelle Memorial Inst., Columbus, Ohio.
THE DEVELOPMENT OF CHROMIUM-BASE HEAT-RESISTANT ALLOYS, by J. M. Blocher, Jr., I. E. Campbell and others. Rept. on Contract AF 33(616)48. Jan 54, 170p. 30 refs. WADC Technical rept. 53-470; AD-31 248.
Order from LC mi$7.80, ph$25.80 PB 143 650

A study was made of the mechanical properties of high-purity Cr prepared by the thermal decomposition of CrI_2. Modification of the iodide-decomposition process led to the preparation of Cr containing less than 150 ppm of total impurities. A rough correlation of as-deposited iodide Cr hardness with total metallic-impurity content was obtained which shows a minimum hardness in the range of 500 to 1000 ppm. Chromium sheet, suitable for testing in bending, was made by arc melting iodide Cr and rolling the resultant ingots at 700°C. Rolling in air without sheathing or other special precautions produced sheet free of cracks. Many samples showed bend ductility at -25°C, although brittle failure occurred in all room-temperature tensile tests. Additions of controlled amounts of impurities were made to determine the compositional factors affecting the room-temperature ductility of Cr. The elements most detrimental were Ni (above 0.2%), and C and S (each in quantities over 0.015%). Fe and Si were not especially harmful up to about 0.2%. Variations in O content from about 60 to 3000 ppm had no effect on the bend ductility. Sheet for bend testing with less than 60 ppm of O could not be obtained without additions of C. It is possible that a sharp increase in ductility occurs at a lower O concentration, as is the case for Mo. Ni had little effect on the bend ductility in quantities above the lowest attained (10 ppm).

Fansteel Metallurgical Corp., North Chicago, Ill.
INFORMAL MONTHLY PROGRESS REPORT TO NEPA PROJECT [FOR OCTOBER 21-NOVEMBER 20, 1948] by Ralph Wehrmann. 23 Nov 48, 10p. NEPA 831-FAN-17; AD-203 994.
Order from LC mi$1,80, ph$1.80 PB 138 318

(See also PB 138 315)

Massachusetts Inst. of Tech., Cambridge.
PERIODIC STATUS REPORT NO. 25, by L. Rubin, M. Yim and others. Rept. for 1 Aug-31 Oct 58 on Contract Nonr-1841(28). [1958] 3p.
Order from LC mi$1.80, ph$1.80 PB 143 222

Contents:
Solid solution strengthening
Ductility-and-creep-rupture properties of nickel
Resistivity changes during creep of aluminum alloy
An investigation of high temperature behavior of austenitic stainless steels
(See also PB 140 626)

Naval Ordnance Plant, Indianapolis, Ind.
IMPROVING VANASIL HIGH SILICON ALUMINUM ALLOY BY PHOSPHOR COPPER MODIFICATION, by J. C. Wagner. 16 Feb 55, 24p. 10 refs. Materials rept. no. 40.
Order from LC mi$2.70, ph$4.80 PB 143 893

The addition of a small amount of dilute phosphor copper to Vanasil exerts a powerful influence in reducing silicon particle size and segregation. Modification by phosphor copper offers several advantages as contrasted to modification by sodium or sodium salts. The advantages are: reliability and ease of control, ability to be effective throughout the duration of a melt held molten at least two and one half hours, and ability to be effective when the alloy is remelted.

Research Inst., Temple U., Philadelphia, Pa.
HIGH TEMPERATURE PROJECT, by A. V. Grosse and J. B. Conway. Progress rept. no. 6, 1 Jan-1 July 52, on Contract N9onr-87301. 1 July 52, 16p. 1 ref. AD-135 203.
Order from LC mi$2.40, ph$3.30 PB 143 758

The studies concerned with the operation of powdered metal-oxygen torches, have been extended to various other powdered metals and alloys as follows: Aluminum, Magnesium, Manganese, Silicon, Calcium Carbide, Silicon Carbide, Calcium-Silicon, Zirconium-Silicon and Aluminum-Silicon. (See also PB 132 012)

Watertown Arsenal Labs., Mass.
HOT HARDNESS AND TENSILE PROPERTIES OF STAINLESS STEEL TYPE 304, TITANIUM ALLOY Ti-150A, AND SAE 4140 STEEL AT 300° AND 600°F, by Anthony K. Wong and George Gazza. July 59, 36p. 19 refs. Technical rept. no. WAL TR 116/2.
Order from LC mi$3.00, ph$6.30 PB 142 893

Hardness tests were made in modified Rockwell and Brinell machines equipped with a resistance-heated furnace. Tensile tests were conducted at strain rates of 0.1 and 0.5 inch per second. Tensile specimens were rapidly heated by an induction coil and held at temperature for one minute prior to application of load.

Watertown Arsenal Labs., Mass.
HOT-PRESSED AND ROLL-REDUCED COMPACTS OF ALLOY Ti-6%Al-4%V POWDER RECOVERED FROM WROUGHT METAL SCRAP, by S. V. Arnold. June 59, 25p. WAL TR-405.7/1; AD-217 828.
Order from LC mi$2.70, ph$4.80 PB 143 665

Massive scrap of alloy Ti-6%Al-4%V was embrittled with hydrogen and comminuted to powder of metallurgical quality. Compacts of this powder, hot-pressed to theoretical density approximated the original composition but showed equivalent strength and somewhat lower ductility. Compacts hot-roll-reduced developed higher strengths and ductility than the commercial mill-annealed wrought metal.

Ferrous Metals

Douglas Aircraft Co., Inc. [El Segundo, Calif.]
THE INFLUENCE OF EXTRANEOUS ELEMENTS IN D. C. ARC SPECTRA OF FERROUS ALLOYS, by Darwin P. Jensen and J. F. Young. Rept. on Emission Spectroanalytical Procedures, Contract AF 33(038) AF 33(038)23304. July 52, 42p. 15 refs. WADC Technical rept. 52-168; ATI-173 043.
Order from LC mi$3.30, ph$7.80 PB 139 068

The influence of one alloying element upon the spectral line intensity of any other alloying element was subjected to investigation in the D. C. Arc. The study was carried out by making homogeneous metallic alloys in an induction furnace. Manganese, silicon, nickel, chromium, molybdenum, vanadium, aluminum and copper were used as the alloying elements in an iron matrix, with percentage magnitudes commonly found in low alloy steels.

Illinois U., Urbana.
INVESTIGATION OF THE CRYSTALLOGRAPHY OF DIFFUSIONLESS PHASE CHANGES IN STEEL, by C. M. Wayman. Summary rept. on Contract AF 18(600)1311. 31 Aug 58, 10p. 13 refs. Rept. 20-AF; AFOSR [TR]-58-121; AD-202 922.
Order from LC mi$1.80, ph$1.80 PB 138 654

A summary of previous publications by technical societies by the authors on martensitic types of phase transformations in metals.

Metals Research Lab., Case Inst. of Tech., Cleveland, Ohio.
INVESTIGATION OF SIGNIFICANT PROPERTIES AND CHARACTERISTICS OF COLD WORKED STEEL. Technical rept. no. 2 on Contract W33-019-ORD-6339. 31 Aug 48, 46p. 29 refs. WAL rept. no. 310/90-8.
Order from LC mi$3.30, ph$7.80 PB 143 760

The change in the mechanical properties upon cold working forms a general curve for all steels. The rate of change is high from 0 to 20 per cent reduction, levels off for reductions from 20 to 60 per cent and increases again for reductions above 60 per cent. The variables such as carbon content and heat treatment before cold working seem to have little affect upon the rate of change of properties. The effect of these variables is merely to displace the properties after cold working by an amount which is consistant with the changes before cold working.

Metals Research Lab., Case Inst. of Tech., Cleveland, Ohio.
INVESTIGATION OF SIGNIFICANT PROPERTIES AND CHARACTERISTICS OF COLD WORKED STEEL: A COMPARISON OF THE MECHANICAL PROPERTIES OF COLD DRAWN STEEL BARS WITH A HEAT TREATED 4410 STEEL BAR. Technical rept. no. 23 on Contract DA 33-019-ORD-585. Jan 53, 17p. WAL rept. no. 310/90-80.
Order from LC mi$2.40, ph$3.30 PB 143 759

The 4140 steel heat treated to a tensile strength of 132,000 psi showed very high ductility, high impact energy, low transition temperature, was notch insensitive and was only slightly anisotropic. As compared to the cold worked steels, the heat treated steel showed higher mechanical properties in all the tests made in this investigation (i.e., longitudinal and transverse tensile, V-notched Charpy impact, and notched tensile tests). (See also PB 143 760)

Naval Weapons Plant, Washington, D. C.
INVESTIGATION OF THE EFFECT OF HYDROGEN EMBRITTLEMENT AND ITS RELIEF IN PHOSPHATE COATED AISI 4340 AND 1095 STEELS, by

P. H. Austin, S. V. Chek and Wm. Lurie.
12 Aug 59, 33p. 5 refs. NWPW-T-20-59; NAVORD rept. no. 6509.
Order from LC mi$3.00, ph$6.30 PB 143 424

The effect of hydrogen embrittlement resulting from the phosphate coating of AISI 4340 and 1095 steels, at various hardness levels, was investigated by the use of sustained load (ring) tests made at 80% of the uncoated notch breaking strength of the steels for corresponding hardnesses.

Nonferrous (except light) Metals

Armour Research Foundation, Chicago, Ill.
MEASUREMENT OF THE HEAT CAPACITY AND DENSITY OF LIQUID COPPER, by J. I. Lang. Rept. for 1 July 56-30 June 57 on Contract AF 33(616)3795. Nov 57, 23p. 1 ref. WADC Technical rept. 57-488; AD-142 138.
Order from LC mi$2.70, ph$4.80 PB 143 647

The density and specific heat of molten electrolytic tough-pitch copper meeting Federal Specification QQ-C-576 was determined for the temperature range 2000 to 4000°F.

Illinois Inst. of Tech., Chicago.
A STUDY OF ORDER IN Au_3Cu, by Francois d'Heurle (Doctoral thesis) and Paul Gordon. Technical rept. no. 2 on Contract Nonr-1406(03). Oct 58, 104p. 53 refs.
Order from LC mi$5.70, ph$16.80 PB 143 246

Isothermal jacket microcalorimeters have been built to study the evolution of small quantities of heat occurring over long periods of time at low temperature. The calorimeters have been used for the study of the order-disorder transformation of Au_3Cu. The critical temperature is 209-2°C. The total enthalpy change between a completely ordered and a completely disordered sample is estimated to be 375 calories per mole. At 100°C, in a quenched sample the rates of ordering can be more than a thousand times greater than would be calculated on the basis of the rates observed at 190°C.

New York U., N. Y.
RADIOTRACER STUDIES OF METAL - METAL ION EXCHANGE. I. CADMIUM, by Cecil V. King and Robert Skomorski. Technical rept. no. 1 on Contract DA 30-069-ORD-1682. Feb 58, 31p. 21 refs. AD-154 799.
Order from LC mi$3.00, ph$6.30 PB 143 453

The rate and extent of exchange between cadmium and its own ions in solutions of cadmium perchlorate has been studied by using radioactive Cd^{115} as a tracer. It was not found possible to measure the "exchange current" i_0, which would represent the actual rate of exchange at the metal surface. Instead, surface equilibrium appears to be reached within a few minutes, and the continuing pickup of activity to be controlled by grain-boundary diffusion within the metal. By comparison with lattice diffusion coefficients in the literature by the method of Fisher, grain boundary diffusion coefficients have been estimated from experiments at room temperature and at 98°C.

Structural Metallurgy and Corrosion

Armour Research Foundation, Chicago, Ill.
A STUDY OF HIGH TENSILE BRASSES. Final rept. for 20 Apr 56-28 Feb 58 on Contract NObs-72136. 31 Mar 58, 89p. 13 refs. AD-162 371.
Order from LC mi$4.80, ph$15.30 PB 143 937

Effects of composition, constitution, and past history on the fracture characteristics (particularly stress-corrosion susceptibility) of two high tensile brasses (manganese bronzes). Stress-corrosion and stress-rupture tests in 3% salt water were run. In the base wrought alloy (46B15e) the only cases where stress corrosion susceptibility was observed were those where only β phase was present. The casting alloy (SAE 430B) and its compositional modifications were sensitive to stress-corrosion cracking. This susceptibility is enhanced as the zinc content is increased or as the processing temperature is raised.

Bureau of Ships, Washington, D. C.
STATISTICAL PLAN FOR THE EXPERIMENT ON CORROSION BY H_2O AND O_2 IN ISOPROPYL BIPHENYL, by A. Lieberman. 16 Oct 56, 8p. 3 refs. Rept. no. 310B-28R1; AD-144 980.
Order from LC mi$1.80, ph$1.80 PB 138 630

To determine if corrosion of fuel cladding materials is accelerated by H_2O and O_2 in isopropyl biphenyl.

Columbia U., New York.
EFFECTS OF GASEOUS AND LIQUID ENVIRONMENTS ON THE BRITTLE FRACTURE OF ZINC SINGLE CRYSTALS, by L. C. Weiner. Rept. on Contract AF 18(600)898. 29 Aug 57, 7p. 20 refs. AFOSR-TN-57-553; AD-136 537.
Order from LC mi$1.80, ph$1.80 PB 130 241

The effects were studied of solid environments on the brittle fracture of Zn single crystals. Results are given of gaseous and liquid environments on cleavage strength. N, H, He, and CO_2 did not react with the Zn crystals to produce a surface coating and did not effect σ_F, the normal fracture stress. HCl and H_2S reacted to form a uniform, adherent surface layer of $ZnCl_2$ and ZnS, respectively. The films were of sufficient thickness to cause an increase in σ_F of the same order of magnitude as that of initially coated specimens. An O atmosphere increased σ_F similar to that noted with coated crystals, but no coating was visible. However, specimens treated in an O atmosphere and subsequently etched in dilute HNO_3 gave a value of σ_{FM} (mean value) of 2475 psi. A ZNO surface film of sufficient thickness was formed to cause this large increase in σ_F. A gaseous or liquid environment will only increase the cleavage strength of initially clean Zn single crystals, when the medium reacts to form an adherent surface film of a thickness greater than a few hundred angstroms.

Container Labs., Inc., Washington, D. C.
EVALUATION OF VOLATILE CORROSION INHIBITORS FOR PRESERVATION AND PACKAGING. PART I. LITERATURE SURVEY AND PRELIMINARY INVESTIGATION, by Gordon S. Mustin. Rept. on Contract DA 18-108-CML-6424. 20 Jan 58, 87p. 216 refs. Rept. no. 9927.
Order from LC mi$4.80, ph$13.80 PB 143 295

The objective of this Part I study is to assemble, review, and evaluate published literature and military agency reports, as well as current work in progress, as available, with a view to determining additional investigations required to evaluate specific applications to Chemical Corps equipment.

Defense Metals Information Center, Battelle Memorial Information Center, Columbus, Ohio.
TITANIUM ALLOYS FOR HIGH-TEMPERATURE USE STRENGTHENED BY FIBERS OR DISPERSED PARTICLES, by J. W. Holladay. Rept. on Contract AF 18(600)1375. 31 Aug 59, 79p. 20 refs. Rept. 117.
Order from OTS $2.00 PB 151 073

Available data are reviewed on heterogeneous structures of titanium in which the titanium matrix is reinforced by a dispersion of metal fibers or particles. Fiber reinforcement offers promise for improving the shorttime strength and modulus of elasticity in the temperature range of 1000 to 1400 F. It has been demonstrated that titanium can be strengthened by dispersion hardening and by fiber reinforcement, although the best conditions have not yet been fully established.

Franklin Inst. Labs. for Research and Development, Philadelphia, Pa.
ETCH PATTERNS IN ZINC, by Victor V. Damiano and Marvin Herman. Interim rept. on Contract AF 18(600)1581. July 59, 24p. 4 refs. Rept. no. I-A1878-3; AFOSR-TN-59-133; AD-210 861.
Order from LC mi$2.70, ph$4.80 PB 143 674

Loops and spiral etch patterns were observed on surfaces parallel or nearly parallel to the basal plane of zinc. These observations have been tentatively interpreted as the dissolution of a step in the surface with the end of the steps pinned.

Michigan U. [Research Inst.] Ann Arbor.
DEVELOPMENT OF APPARATUS AND METHODS FOR MEASUREMENT OF CREEP AT TEMPERATURES TO 3500°F, by M. J. Sinnott. Progress rept. no. 4. Nov 1948, 8p. NEPA 846-MIC-4; AD-204 942.
Order from LC mi$1.80, ph$1.80 PB 138 947

Portions of this report are illegible.

Naval Engineering Experiment Station, Annapolis, Md.
EVALUATION OF CORROSION RESISTANCE OF CHROMIUM BASE ALLOYS TO HIGH TEMPERATURE GASES FROM RESIDUAL FUELS, by Henry W. Schab and Frank R. Gessner, Jr. 11 Feb 57, 42p. 1 ref. Research and development rept. 070312D.
Order from LC mi$3.30, ph$7.80 PB 143 873

The corrosion resistance of several chromium alloys to high temperature gases was determined by burning residual type fuels in small atmospheric combustors and full-scale pressurized gas turbine type combustors. Tests show that the corrosion attack on these alloys, by combustion products of the residual fuels burned to produce temperatures of 1600° and 1700°F, was less than that suffered by the base line material, AISI 310 (25% Cr - 20% Ni) alloy.

Naval Engineering Experiment Station, Annapolis, Md.
OIL-ASH CORROSION RESISTANCE OF THREE CHROMIUM-ALUMINUM-IRON ALLOYS, by W. B. Ennis. 9 Dec 57, 10p. 3 refs. Letter rept. no. 070312E.
Order from LC mi$1.80, ph$1.80 PB 143 874

The three alloys tested in the microburner rigs indicated good corrosion resistance to oil-ash products, when compared to the 310 alloy.

Naval Ordnance Lab., White Oak, Md.
TENSILE PROPERTIES OF MICROSHRINKAGE-GRADED AZ-63 MAGNESIUM ALLOY, by I. J. Feinberg and J. D. Grimslev. 11 Mar 58, 37p. 3 refs. NAVORD rept. 6074.
Order from LC mi$3.00, ph$6.30 PB 143 761

A determination of tensile properties related to the degree of the defect obtained in radiographic classification is described. Expected minimum properties for AZ-63 casting material containing six degrees of microshrinkage are presented.

Powder Metallurgy Lab., Rensselaer Polytechnic Inst., Troy, N. Y
CEMENTED CARBIDE COMPOSITION CONTAINING NON-STRATEGIC METALS AS BINDERS, by F. V. Lenel and M. F. Hoffman. Final rept. on Contract NObs-55219. June 54, 120p. 11 refs.
Order from LC mi$6.00, ph$18.30 PB 143 645

Cemented carbides of the compositions 90 WC - 10 Co, 90 WC - 10 Ni and 90 WC - 10 Fe were sintered (a) conventionally without the application of pressure during sintering, (b) by passing an electric current through the samples and simultaneously applying pressure. Cemented carbides of the compositions 82 WC - 8 TiC - 10 Co, 82 WC - 8 TiC - 10 Ni and 82 WC - 10 TiC - 10 Fe were resistance sintered under pressure. Cutting tool inserts were prepared from the resistance sintered carbide samples. Among the three compositions, the one with cobalt was superior to the one with iron, which in turn was superior to the one with nickel. The solubility of WC in nickel at 2400°F

appears to be 12% by weight; of WC in cobalt at 2375°F was more than 14 weight percent; of WC in an alloy of 60 percent iron 40% nickel at 2300°F as approximately 5 weight percent.

Rock Island Arsenal Lab., Ill.
THE EFFECT OF PROLONGED AND EXCESSIVE HEATING ON PETROLATUM RUST PREVENTIVES, by R. E. Johnson. Rept. no. 16 on Rust Preventives, Development of New Improved Test Methods. 15 Nov 51, 25p. 2 refs. RIA Lab. no. 51-4542.
Order from LC mi$2.70, ph$4.80 PB 143 869

Apparently prolonged and excessive heating does not have an appreciable effect on the protective properties of the Petrolatum Type Rust Preventives, as panels coated with the materials after heating passed the protection requirements of the specification as well as the original materials. A definite increase in acidity was noted throughout the heating period, however, any deleterious effects this may have had was not evident in the protective ability of the materials as far as accelerated tests were concerned.

Rock Island Arsenal Lab., Ill.
WATER DISPLACING RUST PREVENTIVES. III: WATER STABILITY, DILUTION AND DISPLACEMENT FROM RUSTED SURFACES, by D. Bootzin. Rept. no. 12 on Rust Preventives, Development of Improved Test Methods. 25 Jan 50, 47p. 4 refs. RIA Lab. no. 50-79.
Order from LC mi$3.30, ph$7.80 PB 143 870

A water stability test, employing unrusted panels, combining water displacement and water stability was developed and recommended to replace the current AXS-1759 water displacement test. Dilution of rust preventives proved important in determining the factor of safety provided by manufacturers in insuring water displacement action and as a reflection of the amount of additive used in their product. A dilution test was recommended to be incorporated in the next specification revision. The water displacement test recommended was found to be more selective than one employing rusted surfaces since poor or borderline materials could not be detected on rusted specimens. Water displacing rust preventives apparently displaced water and arrested further rusting dependent on the inherent protective characteristics of the compound.

Rutgers State U. Coll. of Engineering, New Brunswick, N. J.
ON THE MECHANISM OF RECRYSTALLIZATION OF ALUMINUM, by Sigmund Weissmann. Technical rept. no. 10 on Contract Nonr-404(09). Aug 58, 36p. 28 refs.
Order from LC mi$3.00, ph$6.30 PB 143 294

In 99.998% aluminum recrystallized grains were shown to be the product of preferential subgrain growth whereby subgrains subtending large disorientation angles with respect to their neighbors exhibited the highest velocity of growth.

NUCLEAR PHYSICS AND NUCLEAR CHEMISTRY

ON THE LEPTONIC DECAY MODES OF K-MESON, by K. Chadan and S. Oneda. Rept. on Contract AF 49(638)24. Aug 59, 11p. 12 refs. Physics Dept. Technical rept. no. 151; AFOSR-TN-59-877.
Order from LC mi$2.40, ph$3.30 PB 143 639

Michigan U. [Research Inst.] Ann Arbor.
NOTE ON THE PAIS-PICCIONI EXPERIMENT, by K. M. Case. Technical rept. on Contract Nonr-1224(15). Mar 56, 17p. 5 refs. 2457-1-T.
Order from LC mi$2.40, ph$3.30 PB 127 864

Two experiments to check the Gellmann-Pais "particle mixture" suggestion are analyzed, using a detailed, if crude, phenomenological description. A cloud-chamber experiment of the type proposed by Pais and Piccioni is compared to an experiment using a liquid-xenon bubble chamber. It is found that for likely values of the parameters involved, both experiments are considerably more difficult than envisaged by Pais and Piccioni. For intensity reasons, the bubble-chamber experiment seems preferable. However, unless quite accidentally the relevant cross sections have rather special values, it would seem that experiments of this type would have to wait until accelerators are available capable of producing considerably greater intensities than those in operation at present.

Instruments and Installations

Aeronautical Research Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
DESIGN AND CONSTRUCTION OF A GASEOUS XENON PARTICLE DETECTOR, by Raymond H. Kelly. May 59, 17p. 7 refs. WADC Technical note 59-103; AD-216 088.
Order from OTS $0.50 PB 161 069

The techniques for building stable, demountable, gaseous xenon particle detectors are describe. The aspects of design, construction, and use which are most apt to be troublesome are considered in detail.

Spectra obtained with U^{235}, Po^{231}, and Po^{210} alpha sources (from detectors constructed by these techniques) are displayed.

National Bureau of Standards, Washington, D. C.
PHOTOGRAPHIC DOSIMETRY AT TOTAL EXPOSURE LEVELS BELOW 20 mr, by Margarete Ehrlich and William L. McLaughlin. Oct 59, 26p. Technical note 29.
Order from OTS $0.50 PB 151 388

Assemblies of commercial photographic material sandwiched between two plastic scintillators can be used to measure high-energy X- or gamma-ray exposures down to 1 mr and less. The energy dependence of the assemblies' response is much less than that of a conventional photographic dosimeter, in some instances allowing an exposure interpretation with an accuracy of ±25 percent over the energy range from about 0.1 Mev to 1.25 Mev. However, low-intensity reciprocity failure limits the range of applicability of the system. Conventional photographic dosimeters, not incorporating scintillators, are usually preferable for routine personnel dosimetry. By extending the monitoring period, it may be possible to avoid personnel dosimetry below 20 mr entirely. However, by doing this, one introduces additional difficulties because of instabilities in the photographic image. In some instances, an increase in effective emulsion thickness, achieved by using stacks of identical films, may lead to an increase in emulsion sensitivity sufficient to extend the useful range of a film badge well below 20 mr, without the use of a scintillator.

Quartermaster Research and Engineering Center, Natick, Mass.
GROUND ZERO LOCATORS, by J. D. Loconti, H. W. Coles, and C. D. Thron. 1 Nov 56, 16p. 2 refs. Research rept. High Polymer series no. 7.
Order from LC mi$2.40, ph$3.30 PB 139 015

One of the problems of defense in the event of atomic warfare is the accurate pinpointing of ground zero of an atomic explosion. Since atomic explosions cause destruction on such a vast scale in contrast to conventional explosives, it will not be readily apparent where a bomb has been dropped. The types of destruction surrounding zero point will vary with distance, and the type of rescue operations needed will depend upon the nature of the destruction. Thus a rapid determination of zero is critical to a well-planned fire fighting and rescue operation.

Nuclear Engineering and Power

Convair, Fort Worth, Tex.
CALIBRATION OF THE ASTR, by J. C. Nance. Rept. on Contract AF 33(600)32054. 1 Nov 57, 139p. 7 refs. NARF-57-48T; FZK-9-090.
Order from LC mi$6.90, ph$21.30 PB 143 872

The Aircraft Shield Test Reactor (ASTR) is a one megawatt Convair-built reactor designed primarily to provide a radiation source for airborne shielding studies related to the Aircraft Nuclear Propulsion project. This is a summary report on the early experiments performed with the ASTR. The purposes of the experiments were in general: (1) To assemble all reactor components into an operating system (minus fissionable material) and establish the operational integrity of the system prior to the critical experiment. (2) To perform the critical experiment and determine the controllability of the reactor under idealized conditions. (3) To establish (by a series of low power experiments) the important nuclear characteristics of the reactor and shield system. (4) To establish an absolute low power calibration of the reactor and associated instrumentation. (5) To determine (by the thermal calibration method) the linearity of reactor instrumentation at high powers as compared to low power calibration. Results of the above experiments have proven the adequacy of the reactor system from the standpoint of safety, operability, and reliability.

Naval Research Lab., Washington, D. C.
HEAT-TRANSFER STUDIES ON A FORCED CONVECTION LOOP WITH MONOISOPROPYLBIPHENYL, by J. P. Stone, C. T. Ewing and others. Final rept. 21 Nov 58, 16p. 9 refs. Rept. 5225.
Order from OTS $0.50 PB 151 159

Heat-transfer coefficients for monoisopropylbiphenyl, heated in a long horizontal tube under conditions of turbulent flow, are correlated to an average deviation of ±0.99 percent with an equation of the Dittus-Boelter type. Physical properties used in correlation work are presented. The coefficients extended from 463 to 3107 Btu/hr-ft^2-°F for the following ranges of conditions: bulk-fluid temperatures, 240° to 604°F; heat-transfer surface temperatures, 312° to 816°F; heat fluxes, 44,800 to 308,000 Btu/hr-ft^2; Reynolds numbers, 18,500 to 350,000; fluid velocities, 5.7 to 36.4 ft/sec. In fouling experiments, no scaling of the heat-transfer surface of an organic type was observed at the extreme attainable conditions of 850°F heat-transfer surface temperature and 5 ft/sec fluid velocity. The condition of the equipment after 2-1/2 years of service is discussed.

Vitro Corp. of America, New York.
CONCEPTUAL DESIGN OF 20 Mw NUCLEAR HEATING PLANT, by G. Caravella, R. Epstein and others. Rept. on Contract DA 44-009-eng-2861. 1 Nov 56, declassified 1 Oct 57. 209p. 33 refs. KLX-1769.
Order from LC mi$9.30, ph$31.80 PB 138 972

The conceptual design reported herein describes a nuclear power plant whose prime purpose is the indirect generation of steam for space heating and other low temperature applications. A pressurized water reactor with a core consisting of highly enriched uranium (UO_2) embedded in stainless steel has been selected for this application. The fuel plates consist of highly enriched UO_2 embedded in a matrix of stainless steel and clad with stainless steel.

Vitro Corp. of America, New York.
CONCEPTUAL DESIGN OF 20 Mw NUCLEAR HEATING PLANT: ADDENDUM AND ERRATA. Rept. on

OPTIMUM X-RAY YIELDS IN BETA-EXCITED X-RAY SOURCES, by J. G. Kereiakes, O. E. Weir, and A. T. Krebs. Rept. on Biological and Medical Aspects of Ionizing Radiation. 27 July 58, 15p. 24 refs. Rept. no. 349.
Order from LC mi$2.40, ph$3.30 PB 138 677

The K X-ray yield excited by beta-particles in various target materials increased with increasing target thickness up to a maximum, after which the yield decreased because of X-ray absorption by target material.

Boeing Airplane Co., Seattle, Wash.
RADIATION DAMAGE TO TRANSISTORS, by D. A. Hicks, D. V. Keller and others. Rept. on Contract AF 33(600)35030. 1 Dec 58, 124p. 19 refs. Document no. D5-2880.
Order from LC mi$6.30 PB 143 692

Studies of the radiation damage to 23 transistor types; power and frequency ranges for both silicon and germanium. The damage constant (K) for each transistor type was determined. The average values are $(4.2 \pm 0.2) \times 10^{13}$ nvt-μsec for n-base germanium, $(1.8 \pm 0.2) \times 10^{13}$ nvt-μsec for p-base germanium, $(3.1 \pm 0.4) \times 10^{12}$ nvt-μsec for n-base silicon, and $(4.6 \pm 3.3) \times 10^{12}$ nvt-μsec for p-base silicon. Larger K indicates smaller susceptibility to permanent radiation damage.

General Electric Research Lab., Schenectady, N. Y.
SURVEY OF RADIATION DAMAGE THRESHOLDS, by R. M. Walker. Scientific rept. no. 1 on Contract AF 19(604)5557. July 59, 33p. 70 refs. AFCRC-TN-59-552.
Order from LC mi$3.00, ph$6.30 PB 143 403

We will be concerned here only with the process known as direct displacement. It takes energy to force an atom into an interstitial position, and the distinguishing feature of the displacement process is that there is a minimum threshold energy which must be transmitted to the nuclei before damage occurs. The present report is a review of the existing information on threshold energies. The basic theory is reviewed in the first section. The experimental information is summarized in the second section. In the final section the present status of the problem is discussed and suggestions are made for future work.

READABILITY OF NAVCAD SELECTION TESTS, by Robert F. Lockman. 30 Sep 53, 6p. 6 refs. Proj. NM 001 057.16.05.
Order from LC mi$1.80, ph$1.80 PB 143 437

The results of this study demonstrate that the present tests in the NavCad selection battery as well as those under experimental evaluation are at suitable levels of reading difficulty for use with NavCad applicants. Thus, failure on any of these tests by an applicant must be assigned to some variable other than the complexity of the language of the tests. This report should be of interest to individuals in test construction and in selection and classification programs.

SCALAR DIFFRACTION BY AN ELLIPTIC CYLINDER, by N. D. Kazarinoff and R. K. Ritt. Rept. on Contract AF 19(604)4993. June 59, 27p. 7 refs. Rept. no. 2871-2-T; AFCRC-TN-59-394.
Order from LC mi$2.70, ph$4.80 PB 143 196

The method given in Reference 1 is applied to the case of scalar scattering by a perfectly reflecting elliptic cylinder illuminated by waves from a line source parallel to the axis of the cylinder. The surface distribution in the shadow zone is calculated, and the "creeping wave" representation for the scattered field in the shadow zone is derived. It is shown that the results are applicable if and only if $R_0\omega \gg 1$, where R_0 is the smallest radius of curvature on the cylinder and ω is the wave number.

Order from LC mi$3.00, ph$6.30 PB 143 402

Investigation was made of the elementary process of scattering of sound by a vortex and of the dependence of the scattering properties on the characteristic parameters of the problem. Consideration is given to superposition of the effects of elementary scattering in a field of flow in which the vortices are statistically distributed due to an arbitrarily given distribution function controlling direction of the axis, size and circulation of the vortices. This case represents the turbulent motion. Because the distribution function can be chosen arbitrarily one can treat, for instance, isotropic as well as non-isotropic turbulence.

Metals Research Lab., Brown U., Providence, R. I.
SCATTERING OF ELASTIC WAVES IN ISOTROPIC MEDIA BY SPHERICAL OBSTACLES, by Norman G. Einspruch and Rohn Truell. Technical rept. on Contract DA 19-020-ORD-4581. 1 Dec 58, 109p. 27 refs. AD-209 373.
Order from LC mi$5.70, ph$16.80 PB 143 091

The method of Ying and Truell for studying the scattering of compressional elastic waves by simple spherical obstacles has been applied to the analysis of scattering of compressional elastic waves by a fluid filled cavity and by layered obstacles in which the core of the layered scatterer is a (a) cavity, (b) rigid sphere, (c) fluid filled cavity, (d) elastic material of properties different from those of the surrounding medium. A general expression for the scattering cross section offered to a compressional wave has been derived. An analysis of the scattering of transverse elastic waves by spherical obstacles has been performed.

DESIGN AND STUDY OF CORRELATION INSTRUMENTATION FOR SPEECH ANALYSIS AND SYNTHESIS, by D. T. Hoger and F. L. Putzrath. Scientific rept. no. 2 on Contract AF 19(604)4128. 31 July 59, 54p. 1 ref. AFCRC-TN-59-566.
Order from LC mi$3.60, ph$9.30 PB 143 360

This report covers the studies leading to the selection of an optimum analog instrumentation for processing the output signal of a Vocoder for digital transmission over a standard voice channel. The system is based upon the matching of the incoming voice events against a catalog of speech patterns so that only the pattern number, rather than the speech event itself, need be transmitted. In the receiver, the proper speech pattern is retrieved from a similar memory and generates the required voltages for the Vocoder synthesizer. The system that was treated in detail features completely analog processing so that small deviations in the pattern can readily be accommodated. Time sequential, rather than parallel pattern comparison, is employed. A single magnetic drum is used as the storage medium which can serve any number of voice channels. A complete analysis of the system was made and no serious implementation problems were encountered.

MAGNETIC PROPERTIES OF THE MANGANESE CHROMITE-ALUMINATES, by Palmer L. Edwards. 1 May 58, 133p. 34 refs. NAVORD rept. 6099.
Order from LC mi$6.90, ph$21.30 PB 143 339

This paper reports on an experimental study of the magnetic properties of the spinel series $MnCr_2O_4$-$MnAl_2O_4$. This series was chosen for study because $MnCr_2O_4$ has a saturation moment at absolute zero which is inconsistent with the Néel theory and which has been attributed to the existence of Yafet and Kittel angles on the B sites by both Gorter and Lotgering. The $MnCr_2O_4$-$MnAl_2O_4$ series is particularly useful for such a study because there is only one type (approximately) of magnetic ion on each sublattice. The first chapter of this report gives an introduction to the molecular-field theory of magnetism leading up to the Neel theory of ferrimagnetism. The next chapter describes the preparation of the mixed-crystal series and the x-ray study to determine the locations of the magnetic ions on the A and B sublattices. The third chapter describes the experimental apparatus. The fourth chapter presents the Néel and the Yafet and Kittel theories. The fifth chapter presents the experimental data and compares it with the theories.

Westinghouse Electric Corp., East Pittsburgh, Pa.
THE EFFECT OF TEMPERATURE ON THE MAGNETIC PROPERTIES OF SILICON-IRON, COBALT-IRON AND ALUMINUM-IRON ALLOYS, by J. J. Clark and J. F. Fritz. Rept. on Magnetic Phenomena of Matter, Contract AF 33(616)5555. July 59, 57p. 3 refs. WADC Technical note 59-240.
Order from OTS $1.50 PB 161 078

The d-c and a-c magnetic properties of the following materials were measured over the temperature range from -60°C to 500°C: AISI silicon-iron grades M-36, M-22, M-19, M-14, M-6, Armco Oriented T-O-S, Hiperco 27, Hiperco 35, and 2.6% aluminum-iron. The data presented are: normal magnetization curves at various temperatures, normal permeability versus magnetizing force at various temperatures, coercive force and residual induction versus temperature, and total core loss at various inductions versus temperature. It is found that the low field permeability increases with increasing temperature, and the high field permeability decreases with increasing temperature, with a region between these two modes of variation in which the permeability is relatively stable over a limited temperature range. The coercive force, residual induction, and total core loss are all found to decrease with increasing temperature.

PREDICTION OF RADIATION INTENSITIES IN THE FRESNEL AND NEAR-ZONE REGIONS OF MICROWAVE APERTURE ANTENNAS, by Frank B. Harris, Jr. Rept. on Contract AF 30(602)1778. Oct 58, 28p. 4 refs. RADC-TN-58-252; AD-202 095.
Order from LC mi$2.70, ph$4.80 PB 138 621

The theory developed in this report makes possible the grouping together of whole families of theoretical apertures, insofar as certain gross properties of their fields are concerned. The information obtained is sufficient to give an upper limit to the radiation intensity at distances from the aperture between infinity and one or two times the largest semi-diameter. Numerical results have been obtained, and presented in graphical form, for the following cases: (1) circularly symmetrical aperture with illumination tapered in various ways, (2) elliptical aperture with uniform illumination and several different eccentricities, (3) rectangular aperture with illumination function separable in the aperture coordinates and any combination of a number of different tapers on the two axes.

Field Emission Lab., Pennsylvania State U., University Park.
A SEARCH FOR POLARIZATION OF FIELD-EMITTED ELECTRONS, by Walter T. Peria. Technical rept. no. 10 on Study of Metal Surfaces by the Field Emission Microscope. Contract AF [illegible]. 85p. 35 refs. AFOSR-TN-622. AD-217 [illegible].
Order from LC mi$3.90, ph$10.80 PB 141 174

Experiments were performed designed to detect polarization of field-emitted electrons using Mott scattering. Electrons emitted from various crystallographic planes of a clean tungsten surface, from individual quarters of a phthalocyanine quadruplet on a clean tungsten substrate and from single ferromagnetic domains of iron were analyzed in a temperature range from 21°K to 900°K. In no case was any polarization detected. The average least detectable asymmetry factor that could be determined by the apparatus was calculated to be .04 corresponding to a polarization of 10% in a plane normal to the field emitted beam.

EMISSIVITY ESTIMATES FOR HEATED NO, by A. Thomson. Technical rept. no. 6 on Contract AF 18(603)02. Nov 57, 47p. 8 refs. AFOSR-TN-57-782; AD-148 388.
Order from LC mi$3.30, ph$7.80 PB 143 512

The emissivity of the β and γ systems of NO has been calculated between 4000°K and 8000°K for a range of optical densities. Both the positions and intensities of the bands were assumed to be distributed statistically. An approximately uniform average value for the square of the vibrational matrix elements was assigned to all contributing transitions. The emissivity was calculated at low pressure (pure Doppler broadening) and at high pressure (no rotational fine structure). It is found that, for the specified temperature range, the error induced by neglecting the rotational fine structure is less than 40%. The results obtained do not differ by more than about 50% from those described by Kivel, Mayer and Bethe although the analytical procedure is quite different.

Institute of Engineering Research, U. of California, Berkeley.
SPECTRAL REFLECTIVITY OF CERTAIN MINERALS AND SIMILAR INORGANIC MATERIALS, by J. T. Gier and R. V. Dunkle. Rept. on Contract DA 11-190-eng-3. 29 Jan 54, 16p. 5 refs. Series no. 62, issue no. 4.
Order from LC mi$2.40, ph$3.30 PB 128 131

Results were obtained with the heated cavity reflectometer. The spectral reflectivity of certain minerals indicates a nonuniformity of emissivity which would alter the equilibrium temperatures of these materials when exposed to the natural environment.

DESIGN AND DEVELOPMENT OF AN ELECTRON SOURCE WITH VELOCITY SELECTION BEFORE SCATTERING, by Edwin N. Lassettre and Ausma Skerbele. Final rept. on Contract AF 19(604)3078. Feb 59, 39p. 10 refs. Rept. 803-Final; AFCRC-TR-59-237; AD-214 416.
Order from LC mi$3.00, ph$6.30 PB 143 284

The design, construction, and testing of a new electron source is described. This source incorporates an electrostatic analyzer for velocity selection on the electron beam before scattering. Several electron impact spectra are included and discussed.

Ohio State U. Research Foundation, Columbus.
ENERGY MOMENT TREATMENT OF THE QUANTUM MECHANICAL ASYMMETRIC ROTATOR, by Paul M. Parker and L. Carlton Brown. Technical note no. 6 on Contract AF 18(600)772. 1958, 109p. AFOSR TN-58-371; AD-154 277.
Order from LC mi$5.70, ph$16.80 PB 139 010

Quantum mechanical rotators are classified as spherical, symmetric, and asymmetric tops. If the equilibrium values of all three principal moments of inertia of the top are equal it is called a spherical top; if two are equal but different from the third it is called a symmetric top; if all are different it is called an asymmetric top; the special case of a symmetric top whose unique moment is very much smaller than its other two moments is the case of the linear molecule. The present work is principally concerned with deducing certain sum rules relating energies of the asymmetric top to some of the physical constants of the molecule. Augmented by the sum rules already given by Mecke, these rules permit in many cases the computation of the effective values of the principal moments of inertia of the molecule investigated with much less effort than is usually met in either numerical approximation methods or perturbation calculations if the latter are applicable at all.

Results were obtained with the heated cavity reflectometer. The spectral reflectivity of certain minerals indicates a nonuniformity of emissivity which would alter the equilibrium temperatures of these materials when exposed to the natural environment.

DESIGN AND DEVELOPMENT OF AN ELECTRON SOURCE WITH VELOCITY SELECTION BEFORE SCATTERING, by Edwin N. Lassettre and Ausma Skerbele. Final rept. on Contract AF 19(604)3078. Feb 59, 39p. 10 refs. Rept. 803-Final; AFCRC-TR-59-237; AD-214 416.
Order from LC mi$3.00, ph$6.30 PB 143 284

The design, construction, and testing of a new electron source is described. This source incorporates an electrostatic analyzer for velocity selection on the electron beam before scattering. Several electron impact spectra are included and discussed

Ohio State U. Research Foundation, Columbus.
ENERGY MOMENT TREATMENT OF THE QUANTUM MECHANICAL ASYMMETRIC ROTATOR, by Paul M. Parker and L. Carlton Brown. Technical note no. 6 on Contract AF 18(600)772. 1958, 109p. AFOSR TN-58-371; AD-154 277.
Order from LC mi$5.70, ph$16.80 PB 139 010

Quantum mechanical rotators are classified as spherical, symmetric, and asymmetric tops. If the equilibrium values of all three principal moments of inertia of the top are equal it is called a spherical top; if two are equal but different from the third it is called a symmetric top; if all are different it is called an asymmetric top; the special case of a symmetric top whose unique moment is very much smaller than its other two moments is the case of the linear molecule. The present work is principally concerned with deducing certain sum rules relating energies of the asymmetric top to some of the physical constants of the molecule. Augmented by the sum rules already given by Mecke, these rules permit in many cases the computation of the effective values of the principal moments of inertia of the molecule investigated with much less effort than is usually met in either numerical approximation methods or perturbation calculations if the latter are applicable at all.

THE PROOF OF CERTAIN LAWS OF OPTICS USED IN SOLAR FURNACE CALCULATIONS, by Alfred W. Simon. Mar 59, 11p. 3 refs. AFMDC-TN-59-1; AD-209 326.
Order from LC mi$2.40, ph$3.30 PB 138 733

Several laws of optics assumed without proof in a previous report dealing with calculations on the solar furnace are proved in detail. They are (1) that the fractional part of the light reflected at each point of reflection of a plane parallel glass plate is the same, (2) that the fractional part of the light refracted at each point of refraction of a plane parallel glass plate is the same, and (3) that the sum of the fractional part of the light incident on any surface of a plane parallel glass plate reflected therefrom and the fractional part refracted therefrom is equal to unity. Finally the laws of reflection of a metallic surface with a glass superstrate are deduced.

Aviation Medical Acceleration Lab., Naval Air Development Center, Johnsville, Pa.
LENS SYSTEM DESIGNED FOR WATER-TO-AIR VISION IN THE SUBMERGED HUMAN EYE, by T. D. Duane, R. J. Emrich, and Herbert G. Shepler. Rept. no. 3 on Proj. NM 11 03 12.2. 2 Sep 58, 14p. 1 ref. NADC-MA-5810.
Order from LC mi$2.40, ph$3.30 PB 139 147

Since the human eye is primarily adapted to air vision, the requirements demanded in water-to-air vision presents a challenging problem. One method of accomplishing this task is reported in this study. The method reported involves the use of a lens system which is a combination of a plano-convex lens 4.0 cm. in diameter, 12 diopters in strength mounted on the right side of a standard spectacle frame. Superimposed on the fixed lens was a moveable 52 diopter biconvex lens 2.0 cm. in diameter. The smaller lens could be moved farther from the fixed lens resulting in variations extending from 64 to 80 plus diopters.

THE ELECTROMAGNETIC THEORY OF LIGHT. II, by Tai Tsun Wu and S. R. Seshadri. Scientific rept. no. 22 on Contract AF 19(604)786. 10 Nov 58, 25p. 5 refs. AFCRC-TN-58-575; AD-117 050.
Order from LC mi$2.70, ph$4.80 PB 138 613

A systematic procedure is given for the determination of the asymptotic series for the field in the shadow region of a convex cylinder illuminated by a plane wave. The first two terms in the series are explicitly evaluated.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
SUGGESTED METHOD FOR MEASURING LOW-LIGHT-LEVEL LUMINANTS, by Robert Davis and Jesse Tyroler. July 59, 17p. Technical rept. 2619; AD-214 770.
Order from LC mi$2.40, ph$3.30 PB 143 296

Low-level-luminosity measurements have in the past been carried out by a subjective photometric comparative method. Measurements made by this procedure are inherently inaccurate. This report suggests a system for absolute comparison which uses a defined spectral visibility curve for low-level-luminosity (scotopic) measurements. The suggested system does not employ visual observations and consequently its deviations arise only from experimental error. It also has the advantage of enabling the operator to positively observe smaller deviations in luminosity during testing. This system makes it possible for rigid specifications to be drawn by any agency concerned with the measurement of low-level luminosities.

Institute for the Study of Metals, U. of Chicago, Ill.
A METHOD OF PREPARING THIN FILMS OF ALLOYS SUITABLE FOR OPTICAL STUDIES, by L. G. Schulz. Rept. on Contract AF 18(600)1489. Feb 59, 17p. 8 refs. AFOSR TN-59-25; AD-208 755.
Order from LC mi$2.40, ph$3.30 PB 138 702

The components of the desired alloy are evaporated successively and the alloy is then produced by diffusion. This results in a sample of approximately uniform thickness with pure metal components at the ends and with a composition gradient in between.

Navy Underwater Sound Lab., Fort Trumbull, New London, Conn.
OPERATING CHARACTERISTICS OF A LEAD SULFIDE CELL WITH VARYING BACKGROUND BRIGHTNESS, by Paul Brannon. 25 Sep 57. 18p. USL Research rept. no. 363; AD-205 883.
Order from LC mi$2.40, ph$3.30 PB 143 425

An elementary study was made of the operating characteristics of an Eastman Kodak "Ektron" 2 mm x 2 mm, lead sulfide, photo-conductive detector against varying background brightness. The signal from a tungsten lamp, chopped at 1000 cps, was reflected by means of a small plane mirror into a receiver pointed either at the sky or at an artificial background. Measurements of signal-to-noise ratio, detector resistance voltage and current, and brightness of the background were made for varying background and load resistance. The effect of placing an infrared filter in front of the receiver was also determined. It was found that a cell load resistance of about 1 megohm and a cell current of 20 microamperes gave the best operating signal-to-noise ratio over a sky background which varied from 0 to 10,000 foot-lamberts. By placing an infrared filter in front of the receiver, the ratio was increased for background brightness above 30 foot-lamberts and was decreased below this value of brightness.

Visibility Lab., U. of California, San Diego.
CANONICAL FORMS OF THE EQUATION OF TRANSFER, by R. W. Preisendorfer. Rept. on Contract NObs-72092. 1 July 58, 16p. 4 refs. SIO Ref. no. 58-47; AD-201 548.
Order from LC mi$2.40, ph$3.30 PB 143 324

The purpose of this note is to present a reformulation of the equation of transfer which appears to be of help in the task of collating and understanding the experimentally obtained properties of the optical medium. Quite interestingly, this reformulation appears to hold the key to the solution of one of the long-standing theoretical problems of this field, namely the problem of the existence and form of the asymptotic radiance distribution in an arbitrary medium with arbitrary external lighting conditions.

Solid State Physics

Battelle Memorial Inst., Columbus, Ohio.
PROPERTIES OF SOLID OXIDES, by C. G. Harman, L. D. Loch and C. R. Austin. Special rept. June 48, 258p. 459 refs. NEPA-808; BMI-N-16
Order from LC mi$11.10, ep$42.60 PB 143 943

A survey was made of the properties of all known solid oxides, which are described in the literature, and the assembled information is presented in this report for ready reference to facilitate the progress of the NEPA program. In the preparation of this report, particular attention was directed toward presentation of the information in a systematic and useful form. The data are arranged in the order in which the elements appear in the periodic table. Some of the data are very old, and are of limited usefulness, but are included for the sake of completeness. It should be pointed out that, even after inclusion of all published data without regard to reliability, many important gaps exist in the literature on the properties of many of the materials.

Brown U., Providence, R. I.
RESEARCH DIRECTED TOWARD THE INVESTIGATION OF SILICON AND SILICON-CARBIDE SURFACES, by J. A. Dillon, Jr. and R. M. Oman. Scientific rept. no. 3, 1 Apr-30 June 59, on Contract AF 19(604)4568. July 59, 11p. 5 refs. AFCRC-TN-59-384.
Order from LC mi$2.40, ph$3.30 PB 143 632

Investigation of the properties of SiC surfaces following chemical treatments. Differences in etching is presumably due to the asymmetry in atomic species on opposite faces. There appeared to be no correlation between this etching behavior and such gross surface properties as defect density and stepped structure. (See also PB 140 823)

Cornell U., Ithaca, N. Y.
OXIDATION OF MAGNESIUM SINGLE CRYSTALS AND EVAPORATED FILMS, by Richard R. Addiss, Jr. Technical rept. no. 1 on Contract Nonr-401(31). May 58, 95p. 35 refs.
Order from LC mi$5.40, ph$15.30 PB 138 822

Apparatus and techniques were developed for measuring the oxidation of magnesium single crystals at high temperatures, and evaporated magnesium films at room temperature, with a sensitive microbalance capable of operating in an ultra-high vacuum. Single crystals were oxidized at an oxygen pressure of 2.5 mm Hg and temperatures of 400 and 440° C.

Harvard U. Div. of Engineering and Applied Physics, Cambridge, Mass.
THE FORMATION OF SURFACE PITS BY THE CONDENSATION OF VACANCIES, by P. E. Doherty and R. S. Davis. Rept. on Contract Nonr-1866(27). 5 May 58, 13p. 11 refs.
Order from LC mi$2.40, ph$3.30 PB 138 820

The formation of these pits during cooling is attributed to the condensation of vacancies at specific location of the free surface. A definite and constant supersaturation of vacancies is required before condensation begins.

RESEARCH ON OPTICAL AND ELECTRICAL PROPERTIES OF SOLIDS, by David Dutton. Final rept. on Contract AF 18(600)193. Sep 58, 8p. 31 refs. AFOSR TR-58-100; AD-162 214.
Order from LC mi$1.80, ph$1.80 PB 138 653

Abstracts of 16 reports which have been published by Technical societies by the authors on experimental studies of photoconductivity, luminescence, and optical absorption in various materials including the alkali and silver halides, the thallous halides, cadmium sulfide, lead sulfide, and lead selenide.

Materials Research Lab., Watertown Arsenal, Mass.
A REFORMATION OF THE TEMPERATURE DEPENDENCE OF THE DEBYE CHARACTERISTIC TEMPERATURE AND ITS EFFECT ON DEBYE-WALLER THEORY, by Arthur Paskin. Apr 57, 12p. 10 refs. MRL rept. no. 27.
Order from LC mi$2.40, ph$3.30 PB 127 593

Zener and Bilinsky have explained the observed high-temperature deviations from the Debye-Waller theory of the temperature dependence of the intensity of x-ray diffraction spectra in terms of the changes in Θ, the Debye characteristics temperature, as the temperature is raised. Their formulation for the temperature dependence of Θ is in terms of an empirical constant and the lattice enthalpy. We here give an alternative formulation in terms of the Grüneisen constant and the volume. The two formulations of the temperature dependence of Θ are found to yield approximately the same results for NaCl and KCl. The Debye-Waller factor has also been modified so as to yield a relationship linear in a reduced temperature scale that compensates for the change in Θ as the temperature is changed. The x-ray data when appropriately plotted do yield a straight line in agreement with the modified Debye-Waller factor. The slope of the straight line can be used to find the room temperature value of Θ. The values found for NaCl and KCl are in reasonable agreement with values for Θ obtained from specific heat measurements.

Naval Research Lab., Washington, D. C.
SOME STRUCTURAL GUIDES TO THE DEVELOPMENT OF HIGH DIELECTRIC CONSTANT ESTERS FOR CAPACITORS, by J. B. Romans and C. R. Singleterry. 18 Sep 59, 25p. 39 refs. NRL rept. 5350
Order from OTS $1.00 PB 151 797

It has been found possible to use molecular structure as an effective guide to the synthesis of practical liquids of high dielectric constant. For this purpose, dipole moments estimated from molecular structure by the generalizations listed are inserted in the Onsager equation relating dipole moment and dielectric constant. In order to obtain liquids of high dielectric constant, the dipole moment content per unit volume must be at a maximum. This is achieved with fluoroesters through the use of the lower telomeric fluoroalkyl groups containing the $-CF_2H$ terminal group and by increasing the number of ester groups to three. High dielectric constants are also significantly favored by the presence of groups, such as aromatic rings or chlorine substituents, which have high electronic polarizability. The application of these principles has led to the synthesis of five fluoroesters having dielectric constants of 8 or above. A route is indicated for the preparation of stable esters having dielectric constants at least as high as 12.

Pacific Semiconductors, Inc., Culver City, Calif.
SOLID STATE DIFFUSION IN SEMICONDUCTOR MATERIALS, RESEARCH ON, by T. J. LaChapelle. Final technical rept. no. 2, 1 Aug 57-31 July 58, on Contract AF 18(603)117. [1958] 58p. PSI rept. no. 3000:5-10-F.
Order from LC mi$3.60, ph$9.30 PB 137 815

High purity p-type pulled ingots as well as floating zone silicon were used in the studies. Diffusion of phosphorus from the elemental form was carried out at 1039, 1105 and 1155°C. All silicon having surface damage, in spite of careful lapping, produced abnormal impurity distributions which could not be matched to the expected error function complement curves. Diffusion coefficients for the micron-thin runs seemed to be at least a factor of 2 or 3 higher than the current literature, probably mainly because of either surface damage or bulk structural imperfections or both.

Pennsylvania State U. Coll. of Mineral Industries, [University Park].
HYDROTHERMAL CRYSTAL STUDIES, by Rustum Roy, R. C. DeVries and others. Final rept. for 1 Apr-30 June 54 on Contract DA 36-039-sc-5594. 15 July 54, 153p. 8 refs.
Order from LC mi$7.50, ph$24.30 PB 143 126

Phase equilibrium studies of titanate systems and new equilibrium diagrams for several different types of systems involving $BaTiO_3$. Hydrothermal techniques have been used in two main areas of work: determination of trivalent oxide-water systems and a study of the formation, properties and stability of the layer silicates; the chlorites and disilicic micas. (See also PB 140 195)

Pennsylvania State [U.] Mineral Industries Experiment Station] [University Park]
HYDROTHERMAL CRYSTAL STUDIES, by Rustum Roy and E. F. Osborn. Final rept. for 1 July 51-30 June 54 on Contract DA 36-039-sc-5594. [1954] 12p.
Order from LC mi$2.40, ph$3.30 PB 143 124

The entire three-year period is summarized briefly. Seventeen technical reports are listed. Possible utilization or further study of some of the phases of the work is discussed. (See also PB 143 126)

Stanford Research Inst., Menlo Park, Calif.
LUMINESCENCE OF SOLIDS PRODUCED BY SURFACE RECOMBINATION OF ATOMS, by Kenneth M. Sancier, William J. Fredericks and others. Technical rept. no. 1 on Contract AF 49(638)353. 15 June 59, 40p. 17 refs. AFOSR TN-59-716.
Order from LC mi$3.00, ph$6.30 PB 143 297

During the heterogeneous recombination of atoms on surfaces of solid lumophors the energy released in the process may be converted to luminous energy of the lumophor. The purpose of the present investigation is the elucidation of the mechanism and efficiency of energy transfer. Included in this investigation are the effects of atom species, atom concentration, lumophor temperature, and lumophor composition. A model is

presented which describes the processes of chemical reaction and energy transfer associated with luminescence produced by heterogeneous atom recombination.

Technical Research Group, Syosset, N. Y.
DEVELOPMENT OF THE PERIODIC SHOCK WAVE TECHNIQUE AND ITS APPLICATION TO THE PREPARATION OF SEMICONDUCTOR SILICON CARBIDE. Final rept. for 15 Aug 57-14 Aug 58 on Contract AF 19(604)2665. [1958] 65p. 27 refs. AFCRC TR-58-193; AD-160 872.

THE CRYSTAL STRUCTURE OF $SeOCl_2.2C_5H_5N$, by Günther Nahringbauer and Ingvar Lindqvist. Technical note no. 2 on Contract AF 61(052)43. 20 Dec 58, 17p. 19 refs. AFOSR TN-59-64; AD-209 608.
Order from LC mi$2.40, ph$3.30 PB 138 710

The crystal structure of the addition compound $SeOCl_2.2C_5H_5N$ has been determined and refined using three-dimensional X-ray data.

Theoretical Physics

Maryland U., College Park.
UNIQUENESS OF SOLUTIONS TO DISPERSION RELATIONS AND AN ITERATIVE SCHEME, by David Y. Wong. Rept. on Contract AF 49(638)24. July 57, 11p. Physics Dept. Technical rept. no. 85; AFOSR TN-57-468; AD-136 459.
Order from LC mi$2.40, ph$3.30 PB 129 566

For a given set of low energy limits of the S-matrix, the solution of the dispersion relation for the scattering of light is shown to be non-unique even if one fixes all but the s-wave phase shift. Here the unitarity condition is also implied. It is known [D. Y. Wong and J. S. Toll, Annals of Phys. 1, 91 (1957)] that if one further assumes the convergence of the usual perturbation method, then the low energy limits do determine the physical solution uniquely. An alternative iterative scheme is suggested without recourse to the expansion in powers of a coupling parameter. The procedure is illustrated by the example of the scattering by a hard sphere.

Microwave Lab., Stanford U., Calif.
THE LAGRANIAN AND THE ENERGY MOMENTUM TENSORS IN THE PERTURBATION THEORY OF CLASSICAL ELECTRODYNAMICS, by E. L. Chu. Scientific rept. no. 12 on Contract AF 19(604)1930. May 59, 29p. 18 refs. M. L. rept. no. 599; AFCRC TN-59-199; AD-216 104.
Order from LC mi$2.70, ph$4.80 PB 142 983

The theory of infinitesimal transformations is incorporated in the variational principle for the solution of perturbation problems in classical electrodynamics. Every variable quantity is transformed to the unperturbed coordinate system and expanded into a power series of a small perturbation parameter. The Lagrangian of any given order of magnitude in the unperturbed coordinate system characterizes a closed physical system. This is proved by showing that the total energy-momentum tensors of the first and second orders are symmetric. The proof for the higher orders is obtained by deduction.

SPECIAL TOPICS IN THEORETICAL PHYSICS. Final Technical rept. no. 1 for 1 May 58-30 Apr 59 on Contract DA 91-508-EUC-306. [1959] 10p. 4 refs.
Order from LC mi$1.80, ph$1.80 PB 143 111

An account is given, without formal developments - for which reference is made to the Scientific Reports already submitted or in elaboration - of the results obtained thus far in our investigation of the renormalization problem in field theory.

Syracuse U. [Research Inst.] N. Y.
DISTRIBUTION FUNCTIONS FOR NON-COMMUTING OPERATORS, by A. O. Barut. Technical note P-10 on Contract AF 18(600)459. July 57, 19p. AFOSR-TN-57-435; AD-136 425.
Order from LC mi$2.40, ph$3.30 PB 129 563

The properties of a certain class of functions f $(\alpha', \beta', \gamma',)$ of non-commuting observables $\alpha, \beta, \gamma,$ are investigated. They have all the usual properties of distribution functions, except that they are complex. They satisfy simple Markoff-type stochastic equations and permit to find the expectation values unambiguously. Conversely quantum theory can be formulated in terms of such distribution functions having the prescribed properties.

TABLES OF THERMODYNAMIC AND SHOCK FRONT PARAMETERS FOR AIR, by R. E. Shear and B. D. Day. May 59, 29p. 8 refs. Memo rept. no. 1206.
Order from LC mi$2.70, ph$4.80 PB 143 329

From the reports: "Tables of Thermal Properties of Gases," National Bureau of Standards Circular 564 and, "Tables of Argon Free Air up to 15000°K," Arnold Engineering Development Center, TN-56-12, by Hilsenrath et al., tables of the thermodynamic properties of air, such as, density, internal energy, temperature and sound velocity have been obtained as a function of pressure at constant entropy. In addition, shock front parameters, as functions of shock velocity, were calculated. The initial state of the air is taken to be at rest, $u_0^* = 0$, at a pressure of one atmosphere and a temperature of 300°K. The remaining quantities, such as c_0^*, ρ_0^*, are given by the ideal gas relationships. The value of R_0^* is 2.83286 $\frac{\text{atm}\cdot\text{cm}^3}{\text{g}\ ^\circ\text{K}}$.

THE DESIGN OF A HEAT EXCHANGER FOR COOLING GASES WHICH CONTAIN LARGE QUANTITIES OF PARTICULATE MATERIAL, by A. A. Putnam and J. M. Allen. Rept. on Contract AF 40(600)710. Oct 58, 39p. 4 refs. AEDC-TR-58-16; AD-203 562.
Order from LC mi$3.00, ph$6.30 PB 143 277

This report is one of a group of four resulting from research on the deposition of particles from a flowing gas stream. The phenomenon of particular concern herein is the deposition of small boron oxide particles onto heat-exchanger elements. The particles, which are extremely small in size, are generated in large concentrations from the combustion of boron-containing, high-energy fuels.

General Electric Co., Cincinnati, Ohio.
HIGH TEMPERATURE HEAT TRANSFER FROM GASES TO CYLINDERS AND NOZZLES, by I. E. Kanter, F. Martinek and M. L. Ghai. Technical note for 1 Feb 58-28 Feb 59 on Contract AF 49(638)243. [1959] 137p. 29 refs. AFOSR-TN-59-488; AD-215 841.
Order from LC mi$6.90, ph$21.30 PB 143 597

A gas stabilized plasma generator operating with nitrogen gas and water cooled metal electrodes has been successfully operated to supply the hot gas necessary for this study. The required instrumentation has been, or is being, developed to measure the various temperatures, flow velocities, and power consumption rates experienced with the generator and associated equipment. Preliminary temperature traverses and photographic studies have been made to investigate the flow field of the effluent gas. Calculations are presented for the thermodynamic properties of nitrogen gas at high temperatures including the pressure effect. Also included are the general considerations on experimentation and data reduction as pertains to this study.

Massachusetts Inst. of Tech., Cambridge.
FURTHER STUDIES OF THERMAL CONVECTION, by Hsiao-lan Kuo. Scientific rept. no. 7 on General Circulation Project, Contract AF 19(604)1000. 1 Feb 57, 50p. 21 refs. AFCRC-TN-57-267.
Order from LC mi$3.30, ph$7.80 PB 127 915

Part I is concerned with the stability of the thermally driven motions in a rotating fluid. In part II some aspects of fluid motions produced by horizontal differential heating are discussed by applying energy integrals. In part III the mean temperature distribution resulting from the thermal convection produced by uniform heating from below is determined by applying the thermal energy integrals.

Naval Research Lab., U. of Wisconsin, Madison.
THE CONTRIBUTION OF BOUND, METASTABLE, AND FREE MOLECULES TO THE SECOND VIRIAL COEFFICIENT, by Daniel E. Stogryn and Joseph O. Hirschfelder. Rept. on Contract N7onr-28511. rev. 4 Nov 58. 71p. 18 refs. WIS-ONR-32a; AD-207 790.
Order from LC mi$4.50, ph$12.30 PB 143 486

The second virial coefficient for molecules interacting with a spherically symmetric potential is divided into three parts: (1) a contribution B_b, related to the equilibrium constant for the formation of bound double molecules; (2) a contribution B_m, related to the equilibrium constant for the formation of metastably bound double molecules; and (3) a contribution B_f, due to molecules which interact but are free to separate after the interaction. Equations are given for determining each of the three parts of the second virial coefficients. A detailed treatment of these three contributions is presented for the square well, Sutherland, and Lennard-Jones (6-12) potentials.

FUNDAMENTAL STUDY OF SOLID SURFACES, by R. Nelson Smith. Final rept. on Contract N8onr-54700. 31 Dec 57, 10p. 27 refs. AD-151 322.
Order from LC mi$1.80, ph$1.80 PB 138 631

Thermodynamics of adsorption: Adsorption isotherms were determined for various adsorbates on a pure nonporous graphite at different temperatures. Differential net heats of adsorption were calculated by the isosteric method. The results indicated that these net heats decreased rapidly with coverage and persisted through several statistical layers of adsorbate. An equation is proposed for type II multilayer adsorption. A new type isotherm was observed for MeOH on graphite and Graphon. The structure of porous solids: Several arguments are described which were put forth to show that previous BET (Brunauer, Emmett, and Teller) surface areas for porous solids were unrealistically high by a factor of 4 to 20. Hysteresis effects in desorption phenomena are discussed. Studies showed that steam activation enlarges the capillary pores of charcoal instead of creating more pores of the same diameter. The nature of adsorbed films: Consideration is given to the adsorption of benzene and cyclobenzene by nonporous graphite and of H_2O and NO by carbon. Carbon surface complexes: The catalytic oxidation of CO by N_2O on carbon surfaces was studied between 300° and 500°C. The C-O surface complexes did not appear to act as intermediates in the reaction. The nature and mechanism of the reaction between NO and carbon surfaces was investigated above room temperature. The products are substantially N and CO_2.

Wave Propagation

Carnegie Inst. of Mathematics, Pittsburgh, Pa.
DIFFRACTION BY TWO HALF PLANES WITH LINE SOURCE EXCITATION, by Robert C. Gast. Technical rept. no. 25 on Mathematical Analysis of Electrical and Mechanical Systems, Contract DA 36-061-ORD-490. May 56, 46p. 4 refs. CIT-ORD-6D-TR25; AD-95 360.
Order from LC mi$3.30, ph$7.80 PB 130 623

The problem considered is that of a monochromatic, electromagnetic wave being emitted by a line source which is parallel to the edges of two semi-infinite, parallel, perfectly conducting plates of zero thickness. The edges of the plates are infinite straight lines which are parallel to the z-axis of a Cartesian coordinate system and intersect the y-axis at $y = \pm \frac{a}{2}$. The plates are of infinite extent in the positive x-direction.

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
MICROWAVE TRANSHORIZON PROPAGATION. Final rept. on Contract AF 30(602)1408. 1 Dec 56, 10p. Research rept. EE-320; RADC TR-57-47; AD-114 323.
Order from LC mi$1.80, ph$1.80 PB 138 652

The diversity parameters on which techniques are based are space, angle, frequency, and time. Progress has been made during this period with regard to space and angle diversity. This progress is described in detail.

New York U., N. Y.
A STUDY OF THE GENERATION AND DETECTION OF ELECTROMAGNETIC WAVES IN THE MILLIMETER WAVE REGION, by J. H. Rohrbaugh. Scientific rept. no. 2, 1 Dec 57-28 Feb 58, on Millimeter Wave Project, Contract AF 19(604)2673. 1 Mar 58, 17p. AFCRC TN-58-157; AD-152 388.
Order from LC mi$2.40, ph$3.30 PB 138 655

The new experiments on magnetron harmonics are now fully operative. They will involve a study of third harmonic production as the magnetic field distribution at the tube is varied. The new spectrometer has had necessary modifications made to the output optical beam. Its drying tower has been substantially completed while work was going on on its amplifiers and its detecting circuit.

Syracuse U. Research Inst., N. Y.
METHODS OF GENERATION AND CHARACTERISTICS OF CIRCULARLY POLARIZED WAVES, by David K. Cheng, Richard E. Gildersleeve, and Thomas M. Maher. Final rept. for 1 Jan 56-30 Sep 57 on Contract AF 30(602)1463. 31 Oct 57, 138p. 39 refs. SURI rept. no. EE393-5710F; RADC-TR-58-41; AD-148 659.
Order from LC mi$6.90, ph$21.30 PB 143 489

This contract had three major objectives, namely: (1) study of the general properties of elliptically polarized waves; (2) survey of the methods of generating circularly polarized waves and analysis of the more promising methods; and (3) investigation of the effects of distorted reflectors and defocused primary sources on the polarization and radiation characteristics.

Syracuse U. Research Inst., N. Y.
STUDY ON THE SCATTERING OF ELECTROMAGNETIC WAVES BY A PARABOLOID OF REVOLUTION, by Alfred T. Villeneuve. Task rept. no. 3 on Contract AF 30(602)1640. 20 Dec 57, 41p. 13 refs. SURI rept. EE492-5712T3; RADC-TN-58-79; AD-148 642.

NOTE ON ESTIMATING INFORMATION, by Colin R. Blyth. Technical rept. no. 17 on Contract Nonr-225(21) 24 Jan 58, 19p. 4 refs.
Order from LC mi$2.40, ph$3.30 PB 139 170

Estimation of the Shannon-Wiener measure of information. Low bias estimates are obtained, and their bias and variance.

Communication Theory

Air Force Cambridge Research Center, Bedford, Mass.
SIGNAL TO NOISE IMPROVEMENT THROUGH CODING, by John C. Mott-Smith. May 59, 20p. 2 refs. AFCRC-TR-59-143; AD-215 115.
Order from LC mi$2.40, ph$3.30 PB 143 493

The error rate of a binary symmetric memoryless channel is a function of an "effective" signal-to-noise ratio that combines the input signal-to-noise ratio with the time bandwidth product. The capacity of this channel is found for four different error rate expressions corresponding to correlation detection under varying assumptions. The derived capacity is interpreted as the maximum rate achievable through digital encoding while satisfying an arbitrary reliability requirement. The results are presented in terms of the maximum signal-to-noise ratio improvement achievable by such codes as a function of the maximum allowable error rate. The practical limitations of the simple model are briefly discussed. An example illustrates the conclusions to be drawn through this type of analysis.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
SUGGESTIONS ON A DEVICE FOR DIGITAL ENCODING OF RUSSIAN SCIENTIFIC TEXT, by Martin H. Weik. June 58, 22p. Memo rept. no. 1150.
Order from LC mi$2.70, ph$4.80 PB 138 880

Various suggestions are made concerning an encoding device for the digital encoding of Russian Cyrillic scientific text. The device is intended as an input unit for mechanical translation equipment.

New York U. Coll. of Engineering, N. Y.
GENERALIZATION OF SHANNON-FEINSTEIN THEOREM TO COMMUNICATION SYSTEMS WITH FADING AND FEEDBACK, by S. S. L. Chang, B. Harris, and L. S. Schwartz. Scientific rept. no. 7 on Contract AF 19(604)1964. 30 Apr 59, 52p. 10 refs. AFCRC-TN-59-197; AD-215 937.
Order from LC mi$3.60, ph$9.30 PB 143 557

The noisy channel coding theorem is extended to systems having fading and feedback. The communication channel is presumed discrete with finite memory, and the varying channel conditions are described explicitly by a stochastic parameter. Of particular interest is the maximum rate at which information can be sent error-free over the channel. This rate is compared with the stationary and the ergodic capacities of the channel.

Radio Corp. of America, Camden, N. J.
DESIGN AND STUDY OF CORRELATION INSTRUMENTATION FOR SPEECH ANALYSIS AND SYNTHESIS, by G. F. Jacoby, G. J. Duscheck, and F. L. Putzrath. Scientific rept. no. 1 on Contract AF 19(604)4128. 31 Mar 59, 84p. 15 refs. AFCRC-TN-59-173; AD-214 415.
Order from LC mi$4.80, ph$13.80 PB 143 396

This report covers the studies leading to the selection of an optimum analog instrumentation for processing the output signal of a Vocoder for digital transmission over a standard voice channel. The system is based upon the matching of the incoming voice events against a catalog of speech patterns so that only the pattern number, rather than the speech event itself, need be transmitted. In the receiver, the proper speech pattern is retrieved from a similar memory and generates the required voltages for the Vocoder synthesizer. The recommended system features completely analog processing so that small deviations in the patterns can readily be accommodated. To minimize the number of electronic components and thus increase the equipment reliability, time sequential rather than parallel pattern matching is employed. A single magnetic storage drum is used as the pattern catalog. In duplex operation, it can serve simultaneously as part of the analyzer or synthesizer and can handle any desired number of voice channels.

Photographic Equipment

Air Force Missile Development Center, Holloman AFB, N. Mex.
POWER SPECTRAL ANALYSIS OF SLED VIBRATION DATA, by Herbert R. Lotze. Sep 58, 34p. 4 refs. AFMDC TN-58-12; AD-154 106.
Order from LC mi$3.00, ph$6.30 PB 138 861

A description is given of the analysis and processing of vibration data which originated from a sled run on the AFMDC Track. Different procedures of analysis are explained and compared with respect to applicability. Practical results were validated by the fact that the spectral densities obtained from analog and digital analysis show a very similar frequency characteristic.

Consolidated Electrodynamics Corp., Pasadena, Calif.
A MASS SPECTROMETER SYSTEM FOR MATERIALS: RESEARCH SUMMARY REPORT. PHASE I, by Charles F. Robinson, George D. Perkins, and Norton W. Bell. Rept. for 1 Apr 58-Jan 59 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)5571. July 59, 31p. 17 refs. WADC Technical rept. 59-107; AD-216 714.
Order from OTS $1.00 PB 161 073

There are three areas in which mass spectrometry may be expected to contribute importantly to science and technology within the foreseeable future. They are (1) identification and estimation of minor components and trace impurities in solids; (2) structural studies of high-molecular weight materials; (3) identification and estimation of unknown materials by precise measurement of molecular weight. No mass spectrometer useful in all three of these fields has yet been built; however, the requirements on the instrumentation for these fields have sufficient similarity to encourage the belief that a single high-performance mass resolving system, together with a limited number of ion source and ion detector modules, might be adaptable to any of these fields. This discussion is a report of the progress made during the first phase of a three-phase program of research and development on such a system.

Naval Ordnance Lab., Corona, Calif.
FOUNDATIONAL RESEARCH PROJECTS, JANUARY-MARCH 1959. Quarterly rept. June 59, 74p. 16 refs. NOLC rept. 454; NAVORD rept. 5955.

Articles:
The $He^3(\alpha,\gamma)Be^7$ and $H^3(\alpha,\gamma)Li^7$ reactions and their astrophysical importance, by H. D. Holmgren and R. L. Johnston
The dawn sky during the solar eclipse (October 1959), by R. Tousey
Toward a solution of the problem of hydrogen embrittlement of high-strength steels, by B. F. Brown
Scientific Program:
Applications Research: Use of quickening in one coordinate of a two-dimensional tracking system
Astronomy and Astrophysics: Radarfax, a rotary facsimile printout for weather radar
Chemistry: Micellar properties of oil-soluble soaps and their significance in detergency
Mechanics: Mechanical properties of a strain gage alloy (55%Cu-45%Ni) at liquid helium temperature
Metallurgy and Ceramics: Results of nuclear irradiation on some permanent magnets. Steel corrosion mechanisms under conditions pertinent to steam power generation
Nuclear and Atomic Physics: Inelastic neutron scattering in MnF_2. Radiometric behavior of high explosives at reduced pressure
Optics: Stellar magnitude of low-reflectance spherical satellites
Radio: Flight tests of new Transosonde radio equipment. Radar target angular scintillation in tracking and guidance systems based on phase-front distortion. Compact microwave polarization resolver and a modified "twist-turn" waveguide junction. Improved grid-controlled electron multiplier tube has stainless steel envelope. Experimental electrical recording-type storage tube. Study of the use of secondary emission cathodes in magnetrons. Surface potential studies using a television-type display Parasitic spiral array with wire grating operates either as a reflector or lens
Solid State Physics: Color centers in cesium halides. Threshold energy for lattice displacement in α-Al_2O_3
Supporting Techniques: Multiple magnet wire specimen holder reduces test variables

ATOMIC ENERGY COMMISSION REPORTS

Reports may be purchased in accordance with instructions on the inside front cover of the U. S. GOVERNMENT RESEARCH REPORTS. As PB numbers are not indicated, order by series and number. These reports may also be consulted at any AEC Depository Library. A list of these libraries may be obtained from the U. S. Department of Commerce, Office of Technical Services, Washington 25, D. C.

Reproduction in whole or part of any report listed herein is encouraged by the U. S. Atomic Energy Commission, subject to the approval of authors or originating sites. General inquiries from the industrial press about AEC-developed information should be directed to the Industrial Information Branch, Atomic Energy Commission, Washington 25, D. C.

General

Blast and fallout prediction units --operation plumbbob, by J. W. Reed. Sandia Corp., Albuquerque, N. Mex. May 57. Contract AT(29-1)-789. 12p. Order from LC. Mi $2.40, ph $3.30. SCTM-186-57-51

Properties of the environment of underground nuclear detonations at the Nevada Test Site. Rainier event, by S. E. Warner and C. E. Violet. University of California. Lawrence Radiation Laboratory, Livermore, Calif. Apr 59. Contract W-7405-eng-48. 127p. Order from OTS. $2.75. UCRL 5542 REV.

Underground nuclear detonations, by G. W. Johnson, G. H. Higgins, and C. E. Violet. University of California. Lawrence Radiation Laboratory, Livermore, Calif. July 59. Contract W-7405-eng-48. 44p. Order from OTS. $1.25. UCRL 5626

Biology and Medicine

Hanford biology research annual report for 1958, by the Staff of the Biology Operation, H. A. Kornberg, J. J. Davis, and others. Hanford Atomic Products Operation, Richland, Wash. Jan 59. Contract W-31-109-Eng-52. 152p. Order from OTS. $3.00. HW-59500

Metabolism of strontium, cesium and yttrium by animals, by P. B. Pearson. Atomic Energy Commission, Division of Biology and Medicine. June 55. 17p. Order from LC. Mi $2.40, ph $3.30. M-7120

Uptake of fission materials by mammalia, by P. B. Pearson. Atomic Energy Commission, Division of Biology and Medicine. [nd]. 11p. Order from LC. Mi $2.40, ph $3.30. M-7122

Rutnenium (III) and iron uptake by red clover from nutrient solution, by R. G. Menzel and I. C. Brown. Bureau of Plant Industry, Soils, and Agriculture Engineering. Division of Soil and Plant Relationships, Beltsville, Md. [195?] 4p. Order from LC. Mi $1.80, ph $1.80. M-7126

Biology and medicine semiannual report, covering October 1958 through March 1959, by C. Willet Asling and others. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. May 59. Contract W-7405-eng-48. 68p. Order from OTS. $1.75. UCRL-8705

Research in photosynthesis: Part I. Biosynthetic studies on the chlorophylls and carotenoids of algae. Part II. The relation of branched-chain sugar acids to the cyanide inhibition of CO_2 fixation, by J. M. Anderson. University of California, Lawrence Radiation Laboratory, Berkeley, Calif. Sep 59. Contract W-7405-eng-48. 162p. Order from OTS. $3.00. UCRL-8870

The binding of mercury by the yeast cell in relation to changes in permeability, by H. Passow and A. Rothstein. Rochester, N. Y. Univ. Atomic Energy Project. May 59. Contract W-7401-eng-49. 23p. Order from LC. Mi $2.70, ph $4.80. UR-547

Chemistry—General

Organic coolant reclamation. Quarterly progress report no. 2 [for] March 15, 1959 - June 15, 1959, by R. J. Wineman, B. J. Gudzinowicz, D. V. Lopiekes, D. A. Scola, and C. I. Tewksbury. Monsanto Chemical Co., Everett, Mass. June 59. Contract AT 11-1-705. Order from LC. Mi $3.30, ph $7.80. AECU-4268

Solvent extraction concentration of certain rare earths in yttrium, by A. R. Eberle and M. W. Lerner. New Brunswich Lab., Atomic Energy

Commission, N. J. Oct 57. Decl. July 59. 10p. Order from LC. Mi $1.80, ph $1.80. AECD-4286

Oxidation of zirconium and zirconium alloys, by H. A. Porte, J. G. Schnizlein, R. C. Vogel, and D. F. Fischer. Argonne National Laboratory, Chemical Engineering Division, Lemont, Ill. Sep 59. Contract W-31-109-eng-38. 42p. Order from OTS. $1.25. ANL-6046

Analysis of yttrium metal and yttrium oxide. Titanium (no. 2, of a series), by J. O. Hibbits, W. F. Davis, and M. R. Menke. General Electric. Atomic Products Division, Aircraft Nuclear Propulsion Department, Cincinnati, Ohio. Oct 59. Contracts AF 33(600)-38062 and AT (11-1)-171. 15p. Order from OTS. 50 cents. APEX-523

Studies on the preparation, properties, and analysis of high purity yttrium oxide and yttrium metal at the Ames Laboratory, by C. V. Banks, C. N. Carlson, A. H. Daane, V. A. Fassel, R. W. Fisher, E. H. Olson, J. E. Powell and F. H. Spedding. Ames Laboratory at Iowa State University of Science and Technology, Ames, Iowa. July 59. Contract W-7405-eng-82. 241p. Order from OTS. $4.00. IS-1

The colorimetric determination of vanadium in niobium--vanadium alloys, by O. J. Articolo. Knolls Atomic Power Lab., Schenectady, N. Y. June 59. Contract W-31-109-Eng-52. 7p. Order from LC. Mi $1.80, ph $1.80. KAPL-M-OJA-1

Phase equilibria in the systems UF_4-ThF_4 and LiF_4-UF_4--LiF_4, by C. F. Weaver, R. E. Thoma, H. Insley, and H. A. Friedman. Oak Ridge National Lab., Oak Ridge, Tenn. Aug 59. Contract W-7405-eng-26. 50p. Order from LC. Mi $3.30, ph $7.80. ORNL-2719

Mass spectrometric study of the vapor state of silver halides, by H. M. Rosenstock, J. R. Walton, and L. K. Brice, Jr. Oak Ridge National Laboratory, Analytical Chemistry Division, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 11p. Order from OTS. 50 cents. ORNL-2772

Progress report on the analysis of dissolver solutions by controlled-potential coulometric titration, by W. D. Shults, B. B. Hobbs, E. L. Blevins, and P. F. Thomason. Oak Ridge National Laboratory. Analytical Chemistry Division, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 27p. Order from OTS. $1.00. ORNL-2776

Chemistry division annual progress report for period ending June 20, 1959, by E. H. Taylor and M. A. Bredig. Oak Ridge National Laboratory, Oak Ridge, Tenn. 1959. Contract W-7405-eng-26. 99p. Order from OTS. $2.50. ORNL-2782

Volumetric analysis of uranium metal, by J. L. Long. The Dow Chemical Company. Rocky Flats Plant, Denver, Colo. Sep 59. Contract AT(29-1)-1106. 11p. Order from OTS. 50 cents. REP-139

Chemistry Division semiannual report, for December 1958 through May 1959. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. July 59. Contract W-7405-eng-48. 89p. Order from OTS. $2.25. UCRL-8867

Isomerization of stilbenes, by P. Schmid. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Sep 59. Contract W-7405-eng-48. 116p. Order from OTS. $2.50. UCRL-8883

Chemistry—Radiation and Radiochemistry

A Univac program for the analysis of radioactive decay curves, by D. S. Harmer. Brookhaven National Laboratory, Associated Universities, Inc., Upton, N. Y. Mar 59. 11p. Order from OTS. 50 cents. BNL 544 (T-141)

Chemistry—Separation Processes for Plutonium and Uranium

Eurochemic assistance program: Comments by FMPC, dated July 6, 1959, on eurochemic technical documents, by F. L. Cuthbert. Oak Ridge National Laboratory, Oak Ridge, Tenn. July 59. 5p. Order from LC. Mi $1.80, ph $1.80. CF-59-7-25

Effects of dissolved stainless steel components on vapor-liquid equilibria in aqua-regia, by B. E. Paige. Phillips Petroleum Co., Atomic Energy Division, Idaho Operations Office, Idaho Falls, Idaho. Oct 59. Contract AT(10-1)205. 21p. Order from OTS. 75 cents. IDO-14483

Material balance. Technical report no. 50, Chapter 150, by E. Detilleux, E. L. Nicholson, A. Redon, and M. Zifferero. European Company for the Chemical Processing of Irradiated Fuels, Mol, Belgium. [nd]. 17p. Order from LC. Mi $2.40, ph $3.30. NP-7782

Controlled Thermonuclear Processes

Project Matterhorn. Quarterly report covering the period April 1 - June 30, 1959, by Bernstein, Tenney, Kranz and others. Princeton University, Princeton, N. J. Oct 59. Contract AT(30-1)-1238. 39p. Order from OTS. $1.25. MATT-Q-7

Experimental study of plasma Alfvén-wave properties, by J. M. Wilxox, F. I. Beley, and A. W. De Silva. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Aug 59. Contract W-7405-eng-48. 22p. Order from OTS. 75 cents. UCRL-8885

Criticality Studies

Analysis of neutron pulses in a Godiva-type reactor, by C. W. Nestor and M. Tobias. Oak Ridge National Laboratory, Oak Ridge, Tenn. Feb 59. Contract W-7405-eng-26. 16p. Order from LC. Mi $2.40, ph $3.30. CF-59-2-78

Conceptual design of a natural uranium, D_2O-moderated critical facility, by M. Bernstein, R. Hankel, and R. Schamberger. Nuclear Development Corp. of America, White Plains, N. Y. July 59. Contract AT(30-1)-2303. 38p. Order from LC. Mi $3.30, ph $7.80. NDA-84-23(Rev. 1)

Critical mass studies. Part VIII: Aqueous solutions of U^{233}, by J. K. Fox, L. W. Gilley and E. R. Rohrer. Oak Ridge National Laboratory, Neutron Physics Division, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 23p. Order from OTS. $1.00. ORNL-2143

Yankee critical experiments--Measurements on lattices of stainless steel clad slightly enriched uranium dioxide fuel rods in light water, by P. W. Davison, S. S. Berg, W. H. Bergmann, D. F. Hanlen, B. Jennings, R. D. Leamer and J. E. Howard. Westinghouse Electric Corp., Atomic Power Department, Pittsburgh, Pa. Apr 59. Contract AT(30-3)-222. 147p. Order from OTS. $3.00. YAEC-94

Geology and Mineralogy

The Chattanooga shale of Tennessee as a source of uranium. Final report, by P. B. Stockdale and H. J. Klepser. University of Tennessee. Department of Geology and Geography, Knoxville, Tenn. July 59. Contract AT-(40-1)-1337. 260p. Order from OTS. $3.50. ORO-205

Preliminary report on uranium deposits in the Gulf Coastal Plain, Southern Texas, by S. R. Steinhauser and E. P. Beroni. Including a section on: Radiometric airborne survey of parts of Karnes, Atascosa, and Live Oak Counties, Texas, by R. G. Blair. Denver Exploration Branch, Atomic Energy Commission, Division of Raw Materials, Denver, Colo. Nov 55. 44p. Order from OTS. $1.25. RME-1068

Geologic investigations of radioactive deposits. Semiannual progress report for December 1, 1958 to May 31, 1959. U. S. Department of Interior, Geological Survey, Washington, D. C. June 59. 132p. Order from OTS. $2.75. TEI-751

Health and Safety

Environmental radioactivity at Argonne National Laboratory. Report for the Year 1958, by J. Sedlet, C. D. Eldred, K. K. Gallagher, N. W. Golchert, C. M. Green, Jr., and F. S. Iwami. Argonne National Laboratory, Industrial Hygiene and Safety Division, Lemont, Ill. Aug 59. Contract W-31-109-eng-38. 43p. Order from OTS. $1.25. ANL-6047

Symposium on occupational health experience and practices in the uranium industry, held in New York City, October 15 - 17, 1958. Sponsored by U. S. Atomic Energy Commission Division of Biology and Medicine and the Health and Safety Laboratory, New York Operations Office. 1958. 244p. Order from OTS. $4.00. HASL-58

Effects of radiation on human dentition--preliminary report. Progress report of project OA-44, by T. Terasaki and K. Shiota. Atomic Bomb Casualty Commission, Hiroshima. June 53. Changed from OFFICIAL USE ONLY Oct. 11, 56. Contract AT-49-1-GEN-72. 15p. Order from LC. Mi $2.40, ph $3.30. NYO-4464

Operation Hardtack--Phase II: Off-site radiological safety report, Nevada test site, 1958, by O. R. Placak, M. S. Seal, J. R. McBride, R. A. Gilmore, R. L. Elder, and J. S. Silhanek. Off-Site Radiological Safety Activities, Atomic Energy Commission, Nevada Test Organization. 1958. Contract AT(29-2)-162. 236p. Order from OTS. $3.50. OTO-58-6

Micrometeorological variability and fallout pattern errors, by H. W. Church. Sandia Corporation, Albuquerque, N. Mex. Feb 58. Contract AT (29-1)-789. 8p. Order from LC. Mi $1.80, ph $1.80. SCTM-83-58(51)

A slide-rule fallout calculator, by M. Cowan, Jr. Sandia Corporation, Albuquerque, N. Mex. Oct 56. Contract AT(29-1)-789. 35p. Order from LC. Mi $3.00, ph $6.30. SCTM-177-57(51)

Instruments

Information for the application of a contract alpha monitor, by P. E. Brown. General Electric Co., Hanford Atomic Products Operation, Richland, Wash. Mar 57. Decl. June 59. Contract W-31-109-Eng-52. 10p. Order from LC. Mi $1.80, ph $1.80. HW-49447

An improved vernier chronotron, by J. T. Russell. Hanford Atomic Products Operation, Physics and Instruments Research and Development Operation, Richland, Wash. July 59. Contract AT(45-1)-1350.21p. Order from OTS. 75 cents. HW-61163

Interim acceleration recording and control system for 80-foot drop tester, by F. M. McIver. Sandia Corp., Albuquerque, N. Mex. June 56. 8p. Order from LC. Mi $1.80, ph $1.80. SCTM-74-56(51)

Engineering development of telemetering antennas for the Mach 5 test vehicle, A. L. McMullen. Sandia Corp., Albuquerque, N. Mex. May 56. 54p. Order from LC. Mi $3.60, ph $9.30. SCTM-105-56(14)

Metallurgy and Ceramics

Test on models of nuclear reactor elements. III. Head losses in core sub-assemblies, by J. S. McNown, R. A. Yagle, and A. Spengos. Michigan. Univ., Engineering Research Institute, Ann Arbor, Mich. July 57. 22p. Order from LC. Mi $2.70, ph $4.80. AECU-3757 (Pt. III)

Study of factors influencing ductility of iron--aluminum alloys, by F. C. Perkins and J. F. Nachman. Denver. Univ., Denver Research Institute, Denver, Colo. July 59. Contract AT(11-1)-742. 7p. Order from LC. Mi $1.80, ph $1.80. AECU-4252

Slip casting of nuclear fuel elements, by G. J. Comstock, F. H. Clark, E. H. Baron, and E. B. Wilson. Stevens Institute of Technology. Powder Metallurgy Laboratory, Hoboken, N. J. July 59. Contract AT(30-1)-2258. 16p. Order from OTS. 75 cents. AECU-4255

Properties of gallium. Summary of published data on alloys, physical properties and chemistry, by W. D. Wilkinson. Argonne National Laboratory, Lemont, Ill. Feb 48. Contract W-31-109-eng-38. 58p. Order from LC. Mi $3.60, ph $9.30. ANL-4109

The longitudinal distribution of thermal neutron flux in cylindrical fuel specimens during irradiation, by F. R. Taraba and S. H. Paine. Argonne National Laboratory. Metallurgy Division, Lemont, Ill. Aug 59. Contract W-31-109-eng-38. 21p. Order from OTS. 75 cents. ANL-5945

The effect of impurities on iron-chromium -yttrium alloys, by R. W. Endebrock, W. Chubb, E. L. Foster, and R. F. Dickerson. Battelle Memorial Institute, Columbus, Ohio. Apr 59. Contract W-7405-eng-92. 14p. Order from OTS. 50 cents. BMI-1338

An evaluation of the properties and behavior of zirconium-uranium alloys, by A. A. Bauer. Battelle Memorial Institute, Columbus, Ohio. Sep 59. Contract W-7405-eng-92. 119p. Order from OTS. $2.75. BMI-1350

Hydrogen pickup during corrosion of zirconium alloys, by W. E. Berry, D. A. Vaughan and E. L. White. Battelle Memorial Institute, Columbus, Ohio. Sep 59. Contracts W-7405-eng-92 and NObs-65057. 18p. Order from OTS. 75 cents. BMI-1380

Principles of high temperature microscopy, by B. B. Brenden, H. W. Newkirk, Jr., and J. L. Bates. General Electric Company, Hanford Atomic Products Operation, Richland, Wash. June 59. Contract W-31-109-Eng-52. 40p. Order from LC. Mi $2.70, ph $4.80. HW-58303

Evaluation of by-products zircaloy-2 chips used for metal powder production, by R. N. Honeyman and E. O. Porter. General Electric Company, Knolls Atomic Power Laboratory, Schenectady, N. Y. Aug 59. Contract W-31-109-Eng-52. 18p. Order from OTS. 50 cents. KAPL-2056

The creep behavior of zircaloy-2, by J. D. Lubahn. Knolls Atomic Power Laboratory, Schenectady, N. Y. June 59. Contract W-31-109-Eng-52. 13p. Order from LC. Mi $2.40, ph $3.30. KAPL-M-JDL-1

Status of the prediction of activity buildup in inconel systems, by J. W. Bartlett. Knolls Atomic Power Laboratory, Schenectady, N. Y. July 59. Contract [W-31-109-Eng-52]. 40p. Order from LC. Mi $3.30, ph $7.80. KAPL-M-JWB-3

Measurement of phase distributions by intercept fractions, by R. J. Allio and P. A. Oldow. Knolls Atomic Power Laboratory, Schenectady, N. Y. June 59. Contract W-31-109-Eng-52. 27p. Order from LC. Mi $3.00, ph $6.30. KAPL-M-RA-3

An investigation of B_4C-zircaloy-2 size distributions using the cintel flying spot particle resolver, by R. J. Allio, P. A. Oldow, and L. G. Wisnyi. Knolls Atomic Power Lab., Schenectady, N. Y. July 59. Contract W-31-109-Eng-52. 32p. Order from LC. Mi $3.00, ph $6.30. KAPL-M-RA-4

The corrosion behavior of 3.5 w/o natural uranium zirconium base fuel alloy, by E. G. Brush, R. E. Campagnoni, and M. A. Powers. Knolls Atomic Power Laboratory, Schenectady, N. Y. June 59. Contract W-31-109-Eng-52. 44p. Order from LC. Mi $3.30, ph $7.80. KAPL-M-REC-1

SRE experimental fuel program (interim report), by B. R. Hayward and J. H. Walter. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Oct 59. Contract AT(11-1)-GEN-8. 44p. Order from OTS. $1.25. NAA-SR-3456

Precipitation processes in copper-rich copper-iron alloys, by A. Boltax. Nuclear Metals, Inc., Concord, Mass. Aug 59. Contract AT(30-1)-1565. 43p. Order from OTS. $1.25. NMI-1210

Fundamental research and development in metallurgy. Annual report to the Research Division for the period July, 1957 to June, 1958, by S. Isserow K. B. Larson, and others. Sep 59. Contract AT(30-1)-1565. 25p. Order from OTS. 75 cents. NMI-1215

Deformation modes of zirconium at 77°K, 300°K, 575°K, and 1075°K, by E. J. Rapperport and C. S. Hartley. Nuclear Metals, Inc., Concord, Mass. Aug 59. Contract AT(30-1)-1565. 36p. Order from OTS. $1.25. NMI-1221

Applications of ultrasonic energy. Progress report no. 11, covering period from August 1, 1958 to September 30, 1958. Aeroprojects, Inc., West Chester, Penna. Oct 58. Contract AT-(30-1)-1836. 32p. Order from LC. Mi $2.70, ph $4.80. NYO-7932

Beryllium thermal-cycling experiment, by W. H. Kelley, D. L. Platus, and J. R. Tallackson. Oak Ridge National Laboratory, Reactor Projects Division, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 16p. Order from OTS. 75 cents. ORNL-2757

Welding of nickel--molybdenum alloys, by G. M. Slaughter, P. Patriarca, and R. E. Clausing. Oak Ridge National Laboratory, Oak Ridge, Tenn. Aug 59. Contract W-7405-eng-26. 30p. Order from LC. Mi $2.70, ph $4.80. ORNL-2760

Densities of some molten salt mixtures containing nitrates, by G. P. Smith, G. F. Petersen, and W. M. Ewing. Oak Ridge National Laboratory, Oak Ridge, Tenn. Aug 59. Contract W-7405-eng-26. 8p. Order from LC. Mi $1.80, ph $1.80. ORNL-2762

Castability of aluminum alloys, M. M. Karnowsky. Sandia Corporation, Albuquerque, N. Mex. Apr 55. 12p. Order from LC. Mi $1.80. Ph $1.80. SCTM-80-55-16

Fundamentals of sintering - IV. Fourth annual progress report covering period July 1, 1958 through June 30, 1959, by J. Brett, L. S. Castelman, and L. Seigle. Sylvania Research Laboratories, A Division of Sylvania Electric Products, Inc., Bayside, N. Y. June 59. Contract AT(30-1) 2102. 33p. Order from OTS. $1.00. SEP-254

Quarterly metallurgical progress report no. 1, for the period of October 1, 1958 to December 31, 1958, by T. T. Campbell, R. Mussler, G. Robidart, and others. United States Department of the Interior. Bureau of Mines, Northwest Electrodevelopment Experiment Station, Albany, Ore. Oct 59. Contract (AT11-1)599. 38p. Order from OTS. $1.25. USBM-U-550

Quarterly metallurgical progress report no. 4, for the period of July 1, 1959 to September 30,

1959, by P. C. Good and others. United States Department of the Interior. Bureau of Mines, Albany Metallurgy Research Center, Albany, Ore. Sep 59. Contract AT(11-1)-599. 34p. Order from OTS. $1.00. USBM-U-647

Bettis technical review. Reactor metallurgy, by I. Cohen, J. D. Eichenberg and others. Bettis Atomic Power Laboratory, Westinghouse Electric Corporation, Pittsburgh, Pa. Sep 59. Contract AT-11-1-GEN-14. 124p. Order from OTS. $2.75. WAPD-BT-15

Stress variations in a zirconium cylinder caused by thermal cycling, by D. D. Frederick. Westinghouse Electric Corporation, Atomic Power Division, Pittsburgh, Pa. June 59. Contract AT-11-1-GEN-14. 15p. Order from LC. Mi $2.40, ph $3.30. WAPD-EM-16

PWR alternate control rod material program. Monthly report no. 10 for March 15 to April 15, 1957, by I. Cohen. Westinghouse Electric Corporation, Bettis Plant, Pittsburgh, Pa. Apr 57. Changed from OFFICIAL USE ONLY June 59. 44p. Order from LC. Mi $3.30, ph $7.80. WAPD-PWR-PMM-1207

Thermoelectric nuclear fuel element. First quarterly progress report, by A. Biancheria, J. C. Danko, H. M. Ferrari, G. R. Kilp, and G. L. Thomas. Westinghouse Electric Corporation, Atomic Power Department, Pittsburgh, Pa. July 59. Contract AT(30-3)-500. 32p. Order from OTS. $1.00. WCAP-1245

Summary report, 1954-1959. Raw Materials Development Laboratory, Winchester, Massachusetts and Grand Junction, Colorado. National Lead Company, Inc., Winchester, Mass. Sep 59. Contract AT(49-6)-924. 94p. Order from OTS. $2.25. WIN-115

Particle Accelerators and High-Voltage Machines

Ion-source positioner, by R. F. Burton, W. B. Jones, and C. A. Corum. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Apr 59. Contract W-7405-eng-48. 5p. Order from OTS. 50 cents. UCRL-8690

Physics and Mathematics

State properties of liquid and solid xenon: A bibliography, by S. R. Harris and H. S. Stearns. Los Alamos Scientific Laboratory, Los Alamos, N. Mex. Oct 57. Contract W-7405-eng-36. 14p. Order from LC. Mi $2.40, ph $3.30. AECU-4247

Matrices for transforming Legendre polynomial coefficients between laboratory and center of mass systems, by R. O. Lane, W. F. Miller and K. E. Hillstrom. Argonne National Laboratory, Lemont, Ill. Aug 59. Contract W-31-109-eng-38. 71p. Order from OTS. $2.00. ANL-6039

A numerical solution to the angle-integrated Boltzmann equation, by J. H. Bennett, and J. R. Terrall. General Electric. Atomic Products Division, Aircraft Nuclear Propulsion Department, Cincinnati, Ohio. Nov 58. Contracts AF 33 (600)-38062 and AT(11-1)-171. 12p. Order from OTS. 50 cents. APEX-520

Analysis of vane-type air motors, by B. Kaplan. General Electric. Atomic Products Division, Aircraft Nuclear Propulsion Department, Cincinnati, Ohio. Nov 57. Contracts AF 33 (600)-38062 and AT(11-1)-171. 24p. Order from OTS. 75 cents. APEX-522

Collision probabilities and resonance integrals for lattices, by W. Rothenstein. Brookhaven National Laboratory, Associated Universities, Inc., Upton, N. Y. June 59. 18p. Order from OTS. 75 cents. BNL 563 (T-151)

The use of sodium reactor coolant as a source of gamma radiation, by B. Manowitz and D. M. Richman. Brookhaven National Laboratory, Upton, N. Y. Mar 58. 13p. Order from LC. Mi $2.40, ph $3.30. BNL-3703

Slow neutron resonances in Ag, Ta, and Cd, by S. Desjardins. Pupin Cyclotron Laboratory, and George B. Pegram Laboratory, Columbia University, N. Y. May 59. Contract AT(30-1)-Gen-72. 114p. Order from OTS. $2.50. CU-189

Neutron cross sections of tellurium, by C. J. Heindl. Pupin Cyclotron Laboratory and George B. Pegram Laboratory, Columbia University, N. Y. June 1959. Contract AT(30-1)-GEN-72. 75p. Order from OTS. $2.00. CU-192

IBM-650 routine IV: Solution of heat diffusion equation, by R. R. Haefner. E. I. du Pont de Nemours & Co. Explosives Department, Atomic Energy Division, Technical Division, Savannah River Laboratory, Aiken, S. Car. July 59. Contract AT(07-2)-1. 70p. Order from OTS. $2.00. DP-384

The influence of specular reflection on the permability of porous media, by D. N. Lassettre. Oak Ridge Gaseous Diffusion Plant, Oak Ridge, Tenn. Sep 56. Contract W-7405-eng-26. 32p. Order from LC. Mi $3.00, ph $6.30. K-1258

A small magnetic core digital computer for special applications, by E. W. Hagen. Union Carbide Nuclear Company, Division of Union Carbide Corporation, Oak Ridge Gaseous Diffusion Plant, Oak Ridge, Tenn. Oct 59. Contract W-7405-eng-26. 131p. Order from OTS. $2.75. K-1434

Hydraulic instability of reactor parallel-plate fuel assemblies, by E. B. Johansson. Knolls Atomic Power Laboratory, Schenectady, N. Y. July 59. Contract W-31-109-Eng-52. 43p. Order from LC. Mi $3.30, ph $7.80. KAPL-M-EJ-9

Some formulae for average self-shielding factors, J. H. Smith. Knolls Atomic Power Laboratory, Schenectady, N. Y. June 59. Contract W-31-109-Eng-52. 12p. Order from LC. Mi $1.80, ph $1.80. KAPL-M-JHS-6

Numerical stress analysis for thin conical shells with non-uniform wall thickness subjected to axisymmetric loads, by L. Deagle. Knolls Atomic Power Labaratory, Schenectady, N. Y. July 59. Contract W-31-109-Eng-52. 35p. Order from LC. Mi $3.00, ph $6.30. KAPL-M-LD-3

NILT--Numerical inversion of Laplace transforms, by C. R. Mullin and R. A. Pfeiffer. Knolls Atomic Power Laboratory, Schenectady, N. Y. Aug 59. Contract W-31-109-52. 15p. Order from LC. Mi $2.40, ph $3.30. KAPL-M-RAP-1

Hafnium slab rod experiments in the PMA, by T. F. Ruane. Knolls Atomic Power Laboratory, Schenectady, N. Y. July 59. Contract W-31-109-Eng-52. 16p. Order from LC. Mi $2.40, ph $3.30. KAPL-M-TFR-11

Numerical methods for solving linear systems and applications to elliptic difference equations, by C. E. Lee and P. M. Stone. Los Alamos Scientific Laboratory, University of California, Los Alamos, N. Mex. Sep 58. Contract W-7405-ENG-36. 96p. Order from OTS. $2.50. LA-2314

An optical fallout analogue, by G. L. Felt. Los Alamos Scientific Laboratory, N. Mex. Oct 55. Contract W-7405-eng-36. 77p. Order from LC. Mi $4.50, ph $12.30. LAMS-1961

Pressure balance in a toroidal pinch, by B. R. Suydam. Los Alamos Scientific Laboratory, N. Mex. Dec 58. Contract W-7405-eng-36. 17p. Order from LC. Mi $2.40, ph $3.30. LAMS-2282

Floco II manual, by B. G. Carlson, C. S. Kazek, Jr., and C. E. Lee. Los Alamos Scientific Laboratory, University of California, Los Alamos, N. Mex. Aug 59. Contract W-7405-ENG-36. 55p. Order from OTS. $1.50. LAMS-2339

Concerning the $\tau/N \to 1/3$ resonance, V analysis of the equation $\frac{d^2v}{ds^2} + \left(\frac{2\tau}{N}\right)^2 v - \frac{b}{2}(\cos 2s)\, v^2 - \lambda\left(\cos\frac{2s}{3}\right) = 0$, by L. J. Laslett and S. J. Wolfson. Midwestern Universities Research Association, Madison, Wis. Aug 59. Contract AT(11-1)-384. 40p. Order from OTS. $1.00. MURA-497

Theory of the fixed frequency cyclotron, by G. Parzen. Midwestern Universities Research Association, Madison, Wis. Aug 59. Contract AT(11-1)-384. 5p. Order from OTS. 50 cents. MURA-498

Background in the neighborhood of a colliding beam region, by D. B. Lichtenberg and L. W. Jones. Midwestern Universities Research Association, Madison, Wis. Aug 59. Contract AT(11-1)-384. 19p. Order from OTS. 50 cents. MURA-499

Measurement of the SRE and KEWB prompt neutron lifetime using random noise and reactor oscillation techniques, by C. W. Griffin and J. G. Lundholm, Jr. Atomics International. A Division of North American Aviation, Inc. Canoga Park, Calif. Oct 59. Contract AT(11-1)-GEN-8. 32p. Order from OTS. $1.00. NAA-SR-3765

Boundary perturbation theory applied to a bare truncated sphere, by J. J. McClure and P. Inman. Atomics International. A Division of North American Aviation, Inc., Canoga Park,

Calif. Oct 59. Contract AT(11-1)-GEN-8. 16p. Order from OTS. 50 cents. NAA-SR-4039

The power noise transfer function of a reactor, by M. N. Moore. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Oct 59. Contract AT (11-1)-GEN-8. 15p. Order from OTS. 75 cents. NAA-SR-4197

Use of an IBM 650 to calculate cloud chamber events, by R. Bingham, D. Tyoko, and L. McDermott. Columbia University. Nevis Cyclotron Laboratories, Irvington-on-Hudson, N. Y. Nov 57. Contract N6-ori-110, Task No. 1 and AT(30-1)-1932. 27p. Order from LC. Mi $2.70, ph $4.80. NEVIS-59

Quasi-tridiagonal matrices and type-insensitive difference equations, by S. Schechter. New York University. Atomic Energy Commission Computing and Applied Mathematics Center, N. Y. May 59. 25p. Order from LC. Mi $2.70, ph $4.80. NYO-2542

Nuclear characteristics of spherical, homogeneous, two-region, molten-fluoride-salt reactors, by L. G. Alexander, D. A. Carrison, H. G. MacPherson and J. T. Roberts. Oak Ridge National Laboratory, Reactor Projects Division, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 21p. Order from OTS. 75 cents. ORNL-2751

The fast-neutron multiplication effect of beryllium in reactors, by W. Häfele. Oak Ridge National Laboratory, Neutron Physics Division, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 36p. Order from OTS. $1.25. ORNL-2779

Thermoluminescence studies of the gamma-irradiated ferroelectrics Rochelle salt and guanidine aluminum sulfate hexahydrate, by J. W. Gilliland, Jr. Oak Ridge National Laboratory, Health Physics Division, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 51p. Order from OTS. $1.50. ORNL-2783

Preliminary report on measurement of soil stresses caused by an underground explosion, by W. R. Perret. Sandia Corporation, Albuquerque, N. Mex. Mar 52. 16p. Order from OTS. 75 cents. SC-2278(TR)

Sandia dust tube: Development and an experiment, by J. R. Banister and W. T. Parker. Sandia Corporation, Albuquerque, N. Mex. Sep 59. 35p. Order from OTS. $1.25. SC-4333(TR)

Radial eigenfunctions, phase shifts, total elastic, differential elastic, and momentum transfer cross sections for electrons scattered from oxygen and nitrogen atoms, by W. J. Byatt, F. O. Lane, Jr., and L. D. Watkins. Sandia Corporation, Albuquerque, N. Mex. Oct 59. 44p. Order from OTS. $1.25. SC-4363(TR)

Atomospheric turbulence, by H. A. Panofsky. Sandia Corporation, Research Colloquium, Albuquerque, N. Mex. Sep 59. 17p. Order from OTS. 50 cents. SCR-118

Results of a force test of four configurations of the Hi-Lo instrumented and chaff rockets in the Sandia Corporation 12 x 12 inch transonic wind tunnel (program III-46), by J. W. Arnold. Sandia Corporation, Albuquerque, N. Mex. Sep 59. 61p. Order from OTS. $1.50. SCTM 299-59(51)

An analytical and experimental investigation of the steady-state flow in small bore tubing with reduced size straight-through fittings connected at the tubing extremities, by A. L. Ducoffe. Sandia Corporation, Albuquerque, N. Mex. July 59. Contract AT(29-1)-789. 31p. Order from LC. Mi $3.30, ph $7.80. SCTM-222-59(57)

One-dimensional compressible flows of magneto-hydrodynamics. II, by O. G. Owens. Sandia Corporation, Albuquerque, N. Mex. Nov 55. 13p. Order from LC. Mi $2.40, ph $3.30. SCTM-239-55(51)

Volume, weight, center of gravity, and moments of inertia of a solid cone frustum, by G. W. Hughes. Sandia Corporation, Albuquerque, N. Mex. July 59. Contract AT(29-1)-789. 8p. Order from LC. Mi $1.80, ph $1.80. SCTM-224-59(12)

The price of containing radioactivity in digging craters, by B. F. Murphey. Sandia Corporation, Albuquerque, N. Mex. Oct 58. Decl. Apr 59. Contract AT(29-1)-789. 6p. Order from LC. Mi $1.80, ph $1.80. SCTM-384-58-51

The problem of measuring the absolute yield of 14-Mev neutrons by means of an alpha counter, by J. Benveniste, A. C. Mitchell, C. D. Schrader, and J. H. Zenger. University of California, Lawrence Radiation Laboratory, Livermore, Calif. June 59. Contract W-7405-eng-48. 22p. Order from OTS. 75 cents. UCRL-5619

Antiproton interactions in hydrogen and carbon below 200 Mev, by L. E. Agnew, Jr. University of California. Lawrence Radiation Laboratory, Berkeley, California. July 59. Contract W-7405-eng-48. 93p. Order from OTS. $2.50. UCRL-8785

Multiple meson production in nucleon-antinucleon annihilations and polarization effects in cascade showers, by L. F. Cook, Jr. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. July 59. Contract W-7405-eng-48. 72p. Order from OTS. $2.00. UCRL-8841

Inversion of the angular-momentum expansion of meson photoproduction amplitudes, by J. A. Ball. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Aug 59. Contract W-7405-eng-48. 11p. Order from OTS. 50 cents. UCRL-8858

Span-2 - an IBM-704 code to calculate uncollided flux outside a circular cylinder, by P. A. Gillis, T. J. Lawton, and K. W. Brand. Bettis Plant, Westinghouse Electric Corporation, Bettis Atomic Power Division, Pittsburgh, Pa. Aug 59. Contract AT-11-1-GEN-14. 44p. Order from OTS. $1.25. WAPD-TM-176

Progress Reports

Progress report for January, February, March 1959 to the United States Atomic Energy Commission. Pupin Cyclotron Laboratory and George B. Pegram Laboratory, Columbia University, N. Y. Contract AT-30-1-GEN-72. 34p. Order from LC. Mi $3.00, ph $6.30. CU-191

Quarterly status report of the LASL plasma thermocouple development program for period ending September 20, 1959, by S. Glasstone. Los Alamos Scientific Laboratory. University of California, Los Alamos, N. Mex. Oct 59. Contract W-7405-ENG-36. 15p. Order from OTS. 50 cents. LAMS-2364

Applications of ultrasonic energy. Progress report no. 14 covering period from February 1, 1959 to March 31, 1959. Aeroprojects, Inc., West Chester, Penna. Apr 59. Contract AT(30-1)-1836. 45p. Order from LC. Mi $3.30, ph $7.80. NYO-2568

Semiannual progress report for the period ending June 30, 1959. University of California. School of Medicine, Los Angeles, Calif. 1959. Contract AT-04-1-GEN-12. 82p. Order from LC. Mi $4.80, ph $13.80. UCLA-444

A review of the laboratory's activities and program. Progress report for period ending July 31, 1959, by R. S. Stone and others. Radiological Laboratory, University of California, School of Medicine, San Francisco, Calif. Sep 59. Contract AT-11-1-GEN-10. 46p. Order from OTS. $1.50. USCF-19

Radiation Effects on Materials

The radiolysis of prospective organic reactor coolants. Report no. 13, by W. W. West and others. California Research Corporation, Richmond, Calif. Aug 59. Contract AT(11-1)-174. 34p. Order from OTS. $1.00. AECU-4295

Fundamentals of fission damage, by J. A. Brinkman. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Oct 59. Contract AT(11-1)-GEN-8. 34p. Order from OTS. $1.00. NAA-SR-4164

Radioactive Waste

Study of liquid and solid waste disposal requirements, by M. Armando, R. Corcoran and others. Allis-Chalmers Manufacturing Company, Nuclear Power Department, Milwaukee, Wis. July 59. Contract AT(11-1)-589. 75p. Order from OTS. $2.00. ACNP-5916

Corrosion film removal as an indication of decontamination effectiveness, by R. D. Weed. General Electric Co. Hanford Atomic Products Operation, Richland, Wash. Nov 58. Contract AT(45-1)-1350. 20p. Order from LC. Mi $2.40, ph $3.30. HW-58126

Quarterly progress report research and development activities radioactive waste fixation, January - March, 1959, by D. W. Pearce and others. Hanford Atomic Products Operation, Chemical Research and Development Operation, Richland, Wash. Apr 59. Contract W-31-109-Eng-52. 14p. Order from OTS. 50 cents. HW-60584

Reactors—General

Circulating loops for testing organic coolants, by J. G. Carroll. California Research Corporation, Richmond, Calif. June 59. Contract AT(11-1)-

174. 75p. Order from OTS. $2.00.
AECU-4291

Physics analyses of the treat reactor design, by Haig P. Iskenderian. Argonne National Laboratory, Lemont, Ill. Aug 59. Contract W-31-109-eng-38. 48p. Order from OTS. $1.50.
ANL-6025

Calculation of the temperature dependence of Pu^{239}/U^{235} fission ratio for a graphite-U^{235} system, by D. Meneghetti and K. E. Phillips. Argonne National Laboratory, Lemont Ill. Sep 59. Contract W-31-109-eng-38. 13p. Order from OTS. 50 cents.
ANL-6058

Chemical processing methods and economics for various liquid metal fuel reactors, by R. D. Pierce, W. E. Miller, and H. E. Zellnik. The Babcock & Wilcox Company, Atomic Energy Division, Mar 58. Contract AT(30-1)-1940. 94p. Order from OTS. $2.25.
BAW-1048

Liquid metal fuel reactor experiment. Quarterly technical report for July through September 1958. The Babcock & Wilcox Company, Atomic Energy Division. 1958. Contract AT(30-1)-1940. 172p. Order from OTS. $3.00.
BAW-1125

Liquid metal fuel reactor experiment. Annual technical report, March 25, 1959. The Babcock and Wilcox Company, Atomic Energy Division. Contract AT(30-1)-1940. 186p. Order from OTS. $3.00.
BAW-1136

Liquid metal fuel reactor experiment. The effect of slurry inhomogeneity on nuclear stability of liquid metal fuel reactors, January 29, 1959, by H. E. Zellnik, W. E. Miller, and C. E. Thomas. The Babcock & Wilcox Company, Atomic Energy Division. Contract AT(30-1)-1940. 37p. Order from OTS. $1.25.
BAW-1142

Lecture notes on reactor controls, by C. S. Walker. Oak Ridge National Laboratory, Oak Ridge, Tenn. June 54. Contract W-7405-eng-26. 182p. Order from LC. Mi $8.40, ph $28.80.
CF-59-6-90

Investigation of temperature coefficients obtained from pressure test reactor, by G. D. Hickman and J. A. Bistline. Knolls Atomic Power Laboratory, Schenectady, N. Y. July 59. Contract W-31-109-Eng-52. 39p. Order from I C. Mi $3.00, ph $6.30.
KAPL-M-GDH-1

Metal-water reactions: II. An evaluation of severe nuclear excursions in light water reactions, by J. I. Owens. Atomic Power Equipment Department, General Electric Company, San Jose, Calif. June 59. Contract AT(04-3)-189. 35p. Order from OTS. $1.00.
GEAP-3178

Survey of the physics, metallurgy, and engineering aspects of reactor control materials, by Vallecitos Atomic Laboratory and Engineering Section, Atomic Power Equipment Department, San Jose, Calif. June 59. Contract AT(04-3)-189. 398p. Order from OTS. $3.50.
GEAP-3183

Metal-water reactions: III. Fuel element stresses during a nuclear accident, by K. M. Horst. Atomic Power Equipment Department, General Electric Company, San Jose, Calif. July 59. Contract AT(04-3)-189. 27p. Order from OTS. 75 cents.
GEAP-3191

Physics of intermediate reactors. Supplement, by C. B. Mills. Los Alamos Scientific Laboratory, University of California, Los Alamos, N. Mex. Apr 59. Contract W-7405-ENG-36. 79p. Order from OTS. $2.00.
LAMS-2288(Suppl. 1)

Experimental evaluation of a concentric-cylinder, spiral-flow heat exchanger, by J. S. McDonald. Atomics International. Division of North American Aviation, Inc., Canoga Park, Calif. Oct 59. Contract AT(11-1)-GEN-8. 34p. Order from OTS. $1.00.
NAA-SR-3747

A siphon break as a blocking valve, by J. McDonald and W. Marten. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Oct 59. Contract AT(11-1)-GEN-8. 30p. Order from OTS. 75 cents.
NAA-SR-4050

Industrial process and space heat from nuclear reactors. A literature search, by J. M. Jacobs. Atomic Energy Commission, Technical Information Service Extension, Oak Ridge, Tenn. Oct 59. 9p. Order from OTS. 50 cents.
TID-3537

U. S. Papers of the Sixth International Congress and Exhibition of Electronics and Atomic Energy at Rome, Italy. Division of International Affairs United States Atomic Energy Commission, Oak Ridge, Tenn. Oct 59. 83p. Order from OTS. $2.25.
TID-7579

Nuclear materials control system, Phase II. The feasibility of an annular core reactor as a reactor fuels measuring device, by G. E. Putman. Westinghouse Electric Corp., Atomic Power Dept., Pittsburgh, Pa. May 59. Contract AT (30-1)-2176, Task 1. 75p. Order from LC. Mi $4.50, ph $12.30.
WCAP-1192

Nuclear materials control system, Phase II. The feasibility of an annual nuclear core as a reactor fuels measuring facility, by J. A. Vreeland. Westinghouse Electric Corp., Atomic Energy Dept., Pittsburgh, Pa. June 59. Contract AT930-1)-2176, Task 1. 25p. Order from LC. Mi $2.70, ph $4.80.
WCAP-1221

Nuclear materials control system, Phase II. A design for the evaluation of a reactor fuels measurement facility, by W. J. Rusnack. Westinghouse Electric Corp., Atomic Power Dept., Pittsburgh, Pa. June 59. Contract AT(30-1)-2176. 31p. Order from LC. Mi $3.00, ph $6.30.
WCAP-1232

Reactors—Power

Decay heat removal system. Section I. Second performance. First issue. Duquesne Light Co., Shippingport, Pa. May 59. 3p. Order from LC. Mi $1.80, ph $1.80.
AECU-4213

Core I control rod drive mechanisms periodic tests. Section I. Eight performance. First issue. Duquesne Light Co., Shippingport, Pa. May 59. 11p. Order from LC. Mi $2.40, ph $3.30.
AECU-4214

Radiation levels in the vicinity of the purification demineralizers. Section I. Second performance. First issue. Duquesne Light Co., Shippingport, Pa. May 59. 9p. Order from LC. Mi $1.80, ph $1.80.
AECU-4216

Periodic reactor plant container air locks and 48-inch butterfly valves leakage and performance test. Section II. First performance. First issue. Duquesne Light Co., Shippingport, Pa. May 59. 5p. Order from LC. Mi $1.80, ph $1.80.
AECU-4222

Failed element detection and location system (operational) test. Section I. First issue. Duquesne Light Co., Shippingport, Pa. May 59. 9p. Order from LC. Mi $1.80, ph $1.80.
AECU-4223

Fuel defect test - borax - IV, by R. F. S. Robertson and V. C. Hall, Jr. Argonne National Laboratory, Reactor Engineering Division. Oct 59. Contract W-31-109-eng-38. 42p. Order from OTS. $1.25.
ANL-5862

HRT mockup iodine removal and recombiner tests, by P. H. Harley. Oak Ridge National Laboratory, Oak Ridge, Tenn. Jan 58. Contract W-7405-eng-26. 12p. Order from LC. Mi $2.40, ph $3.30.
CF-58-1-138

Summary of HRT run 14, by J. R. Engel, P. N. Haubenreich, J. O. Kolb, and D. M. Richardson. Oak Ridge Natinnal Laboratory, Tenn. June 59. Contract W-7405-eng-26. 79p. Order from LC. Mi $4.50, ph $12.30.
CF-59-6-96

Investigation of mechanical methods of scale removal from HRT heat exchangers, by C. H. Gabbard, D. M. Eissenberg, J. C. Moyers, and I. K. Namba. July 59. Contract W-7405-eng-26. 8p. Order from LC. Mi $1.80, ph $1.80.
CF-59-7-102

Heavy water moderated power reactors. Quarterly progress report for February, March, and April 1959, by D. F. Babcock and L. Isakoff. E. I. du Pont de Nemours & Co. Explosives Department, Atomic Energy Division, Technical Division, Wilmington, Del. July 59. Contract AT(07-2)-1. 115p. Order from OTS. $2.50.
DP-385

Process development pile measurements of lattice parameters of natural uranium in heavy water, by N. P. Baumann and others. E. I. du Pont de Nemours & Co., Explosives Department, Atomic Energy Division, Technical Division, Savannah River Laboratory, Aiken, S. Car. July 59. Contract AT(07-2)-1. 31p. Order from OTS. $1.00.
DP-407

Army gas-cooled reactor systems program. Preliminary hazards summary report for the ML-1 Nuclear Power Plant. Aerojet-General Nucleonics, San Ramon, Calif. Apr 59. Contract AT(10-1) 880. 213p. Order from OTS. $3.50.
IDO-28537

Development of the SRE thimble-type control rods Mark I and II, by A. E. Miller. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Oct 59. Contract AT(11-1)-GEN-8. 62p. Order from OTS. $1.75.
NAA-SR-2011

Fuel programming for sodium graphite reactors, by T. J. Connolly. Atomics International. A Division of North American Aviation, Inc. Canoga Park, Calif. Oct 59. Contract AT(11-1)-GEN-8. 34p. Order from OTS. $1.00.
NAA-SR-4040

Induction heating tests in the hallam nuclear power facility development program, by H. W. Lohman. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Nov 59. Contract AT(11-1)-GEN-8. 31p. Order from OTS. 75 cents. NAA-SR-4206

Aluminum chloride as a thermodynamic working fluid and heat transfer medium, by M. Blander, L. G. Epel, A.P. Fraas, and R. F. Newton. Oak Ridge National Laboratory, Reactor Projects Division, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 29p. Order from OTS. $1.00. ORNL-2677

A preliminary study of a direct-cycle steam-cooled reactor for merchant ship propulsion, by H. L. Falkenberry, R. S. Holcomb, and G. Samuels. Oak Ridge National Laboratory, Reactor Projects Division, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 17p. Order from OTS. 75 cents. ORNL-2759

Small-sized organic moderated reactors (10 - 40 MWE). Atomics International. A Division of North American Aviation, Inc., Canoga park, Calif. Oct 59. 43p. Order from OTS. $1.25. TID-8511

Evaluation of ion exchange resins for use in the Yankee reactor. Westinghouse Electric Corp., Atomic Power Department, Pittsburgh, Pa. July 59. Contract AT(30-3)-222, Subcontract No. 1. 36p. Order from LC. Mi $3.00, ph $6.30. YAEC-115

Yankee Project. Quarterly progress report for the period January 1 to March 31, 1959, by H. E. Walchli. Westinghouse Electric Corp., Atomic Power Department, Pittsburgh, Pa. May 59. Contract AT(30-3)-222. 75p. Order from OTS. $2.25. YAEC-125

Stable Isotope Separation

Thermal diffusion: A bibliography, by G. R. Grove. Monsanto Chemical Company, Mound Laboratory, Research and Engineering Division, Miamisburg, Ohio. June 59. Contract AT-33-1-GEN-53. 58p. Order from OTS. $1.75. MLM-1088

Technology—Feed Materials

Oxide fluorination tower, by L. C. Peoples. Goodyear Atomic Corporation, Technical Division, Chemistry Department, Portsmouth, Ohio. Aug 59. Contract AT(33-2)-1. 24p. Order from OTS. 75 cents. GAT-252

Process development quarterly report, by J. U. Shepardson and J. A. Nelson. Mallinckrodt Chemical Works, Uranium Division, Weldon Spring, Mo. Nov 59. Contract W-14-108-Eng-8. 101p. Order from OTS. $2.50. MCW-1433

De-entrainment of organic extract by electrostatic precipitation, by W. C. Philoon and J. T. Krieg. Mallinckrodt Chemical Works, Uranium Division, Weldon Spring, Mo. Nov 59. Contract W-14-108-Eng-8. 9p. Order from OTS. 50 cents. MCW-1437

Engineering evaluation of semi-works ADU production, by D. J. Loudin. National Lead Company of Ohio, Technical Division, Cincinnati, Ohio. Mar 59. Contract AT(30-1)-1156. 24p. Order from OTS. $1.00. NLCO-786

Induction heating tests in the hallam nuclear power facility development program, by H. W. Lohman. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Nov 59. Contract AT(11-1)-GEN-8. 31p. Order from OTS. 75 cents. NAA-SR-4206

Aluminum chloride as a thermodynamic working fluid and heat transfer medium, by M. Blander, L. G. Epel, A.P. Fraas, and R. F. Newton. Oak Ridge National Laboratory, Reactor Projects Division, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 29p. Order from OTS. $1.00. ORNL-2677

A preliminary study of a direct-cycle steam-cooled reactor for merchant ship propulsion, by H. L. Falkenberry, R. S. Holcomb, and G. Samuels. Oak Ridge National Laboratory, Reactor Projects Division, Oak Ridge, Tenn. [nd]. Contract W-7405-eng-26. 17p. Order from OTS. 75 cents. ORNL-2759

Small-sized organic moderated reactors (10 - 40 MWE). Atomics International. A Division of North American Aviation, Inc., Canoga park, Calif. Oct 59. 43p. Order from OTS. $1.25. TID-8511

Evaluation of ion exchange resins for use in the Yankee reactor. Westinghouse Electric Corp., Atomic Power Department, Pittsburgh, Pa. July 59. Contract AT(30-3)-222, Subcontract No. 1. 36p. Order from LC. Mi $3.00, ph $6.30. YAEC-115

Yankee Project. Quarterly progress report for the period January 1 to March 31, 1959, by H. E. Walchli. Westinghouse Electric Corp., Atomic Power Department, Pittsburgh, Pa. May 59. Contract AT(30-3)-222. 75p. Order from OTS. $2.25. YAEC-125

Stable Isotope Separation

Thermal diffusion: A bibliography, by G. R. Grove. Monsanto Chemical Company, Mound Laboratory, Research and Engineering Division, Miamisburg, Ohio. June 59. Contract AT-33-1-GEN-53. 58p. Order from OTS. $1.75. MLM-1088

Technology—Feed Materials

Oxide fluorination tower, by L. C. Peoples. Goodyear Atomic Corporation, Technical Division, Chemistry Department, Portsmouth, Ohio. Aug 59. Contract AT(33-2)-1. 24p. Order from OTS. 75 cents. GAT-252

Process development quarterly report, by J. U. Shepardson and J. A. Nelson. Mallinckrodt Chemical Works, Uranium Division, Weldon Spring, Mo. Nov 59. Contract W-14-108-Eng-8. 101p. Order from OTS. $2.50. MCW-1433

De-entrainment of organic extract by electrostatic precipitation, by W. C. Philoon and J. T. Krieg. Mallinckrodt Chemical Works, Uranium Division, Weldon Spring, Mo. Nov 59. Contract W-14-108-Eng-8. 9p. Order from OTS. 50 cents. MCW-1437

Engineering evaluation of semi-works ADU production, by D. J. Loudin. National Lead Company of Ohio, Technical Division, Cincinnati, Ohio. Mar 59. Contract AT(30-1)-1156. 24p. Order from OTS. $1.00. NLCO-786

U. S. Government

RESEARCH REPORTS

February 12, 1960
Vol. 33. No. 2

. . . A monthly listing of Government research reports available to industry . . .

UNIVERSITY OF MICHIGAN
FEB 22 1960
ENGINEERING LIBRARY

In this issue:

Evaluation of Electrical-Discharge Machining

Fundamental Investigations of Electrical Power Sources

Reclamation of Diamonds from Machine Wiping Cloths

Evaluation of Alloy Binder Systems in Cemented Carbides

High Energy Rate Metal Forming

Basic Electrical Engineering

Present Status and Future Outlook for All-Metal Sandwich Construction for Air Vehicles

Utilization of Investment Castings for Small Arms Weapon Components

Complete list of printed reports begins on page 111

The PB Reports . . .

announced in this publication have just been released, usually by agencies of the U. S. Government, for dissemination to the public. In most instances they result from Government or Government-sponsored research.

The Office of Technical Services is responsible, under Public Law 776, 81st Congress, for the collection and distribution of these technical reports in the interest of American science and industry.

The more important reports are reprinted for sale to the public by OTS. Many of the reports are so specialized that the demand for them does not warrant reproduction of printed copies; originals of these documents are deposited at the Library of Congress. There they may be inspected in the Annex Reading Room, or copies may be ordered from the Library in either photocopy or microfilm.

PB reports of special interest to smaller businesses are abstracted in OTS's monthly *Technical Reports Newsletter*, available from the Superintendent of Documents, Washington 25, D. C., at $1 a year domestic, $1.50 foreign.

Since 1945 thousands of business firms have used PB reports in their research programs. These reports now constitute one of the world's largest collections of non-confidential technical information, numbering over 250,000 items. OTS has published catalogs of related reports in more than 300 areas of industrial interest. For further information relative to any of its activities, you are invited to write OTS, U. S. Department of Commerce, Washington 25, D. C.

Except to the extent indicated by acknowledgment of authorship, OTS does not edit PB reports, nor does it accept responsibility for the information and conclusions contained in them. If copyrighted material appears, permission for its use should be requested from the copyright owners. Any national security restrictions that may have applied to these reports have been removed. Patents may cover the subject matter of any report, and the reader is advised to make patent searches before developing applications based on the reports.

How To Order

ALWAYS USE COMPLETE TITLE AND PB NUMBER of each report ordered. The letter "s" accompanying some PB numbers means "supplement," "t" means "translation," and "r" means a partial or complete revision. These letters should be included as part of the PB number. Prepayment is required.

TO ORDER FROM LC • Address your order to Library of Congress, Photoduplication Service, Publications Board Project, Washington 25, D. C. Make check or money order payable to Chief, Photoduplication Service, Library of Congress. State whether report is desired in microfilm or photocopy. Microfilm copies are in 35 millimeter film and require special reading equipment; if you do not have such a machine you may be able to use one at a library in your area.

TO ORDER FROM OTS • Address your order to Office of Technical Services, U. S. Department of Commerce, Washington 25, D. C. Make check or money order payable to OTS, Department of Commerce. Reports available from OTS may also be ordered through Department of Commerce field offices.

TO ORDER FROM OTHER SOURCES • When an agency other than OTS or LC is the source, use the full address included in the abstract of the report. Make check or money order payable to that agency.

U.S. GOVERNMENT RESEARCH REPORTS

U.S. DEPARTMENT OF COMMERCE
Frederick H. Mueller, *Secretary*

BUSINESS AND DEFENSE SERVICES ADMINISTRATION
Horace B. McCoy, *Administrator*

Office of Technical Services
John C. Green, *Director*

Issued monthly. Annual subscription $9 ($2.50 additional for foreign mailing). Single copy $1. Make remittance payable to Superintendent of Documents and mail either to a Department of Commerce field office or to Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C. Address changes should be sent to Superintendent of Documents.

Contents may be reprinted freely. Mention of source will be appreciated

Use of funds for printing this publication approved by the Director of the Bureau of the Budget, July 18, 1958

USGRR PRICES INCREASED

U. S. Government Research Reports has more than doubled in size and production costs have increased accordingly since the $6 subscription price was established. Therefore, it is necessary to increase prices for this publication.

Prices will now be: $9 a year in the United States, $2.50 additional for foreign mailing, and $1 per single copy.

The price change is effective immediately for new subscribers and will be effective for old subscribers upon renewal of their subscriptions.

Printed Reports Available from OTS Announced in This Issue

Page

BEHAVIORAL SCIENCES

Effects of different proportions of monitores elements on operator performance in a simulated radar air traffic control system. June 59. 17p. (PB 161 111) 50 cents 116
Integration of personal equipment. Aug 59. 36p. (PB 161 132) $1.00 117

BIOLOGICAL SCIENCES

Transfer function of a biological photoreceptor: One of a series of reports pertaining to cybernetic studies of a biological photoreceptor. Aug 59. 29p. (PB 161 131) 75 cents 124

CHEMISTRY

Cell-vacancy theory of liquids. June 59. 14p. (PB 161 109) 50 cents 135
Constitutive relations in the wetting of low-energy surfaces and the theory of the retraction method of preparing monolayers. Oct 59. 14p. (PB 151 936) 50 cents 134
Metals coated with films of low surface energy as reference electrodes for the measurements of contact potential differences. Oct 59. 15p. (PB 151 994) 50 cents 134
Preparation of transistor grade silicon from silane or analogous compounds. Oct 59. 36p. (PB 161 261) $1.00 129
Surface activity of fluorinated organic compounds at organic-liquid/air interfaces. Part II. Surface tension vs concentration curves, adsorption isotherms and force-area isotherms for partially fluorinated carboxylic esters. Oct 59. 19p. (PB 151 808) 50 cents 130
Surface activity of fluorinated organic-liquid/air interfaces. Part III. Equation of state of adsorbed monolayers and work of adsorption of a fluorocarbon group. Nov 59. 10p. (PB 151 997) 50 cents 134

EARTH SCIENCES

Accuracy of mean monthly geostrophic wind vectors as a function of station network density. June 59. 45p. (PB 161 113) $1.25 136
Bibliography relating to vibratory cutting, penetration and compaction of soils. Jan 58. 41p. (PB 161 123) $1.25 141
Bibliography relating to vibratory cutting, penetration and compaction of soils: Supplement no. 1. Feb 59. 39p. (PB 161 124) $1.00 141
China: Provisional atlas of communist administrative units. 1959. 51p. (PB 161 275) $5.00 140
Numerical experiments in forecasting air and soil temperature profiles. July 59. 68p. (PB 161 151) $1.75 136
Upper atmosphere report no. 35. Ground stations for NRL rocket studies of the ionosphere. Aug 59. 38p. (PB 151 763) $1.00 141

ENGINEERING

Amplitude analyzer. July 59. 21p. (PB 161 110) 75 cents 155
Basic electrical engineering. Chapter 1. Wire communication and signal systems. Sep 55. 116p. (PB 161 253) $2.50 150
Basic electrical engineering. Chapter 2. Lighting and power systems. Chapter 3. Lightning and cathodic protection. Chapter 4. Electromagnetic interference suppression. Rev. June 58. 106p. (PB 161 256) $2.50 151
Determining air reactions on moving vehicles. Part III. Methods of hydrodynamics. July 59. 217p. (PB 161 141) $3.50 167
Determination of factors governing selection and application of materials for ablation cooling of hypervelocity vehicles. July 59. 142p. (PB 161 090) $2.75 144

ENGINEERING (con.)

Page

Dictionary of explosives, ammunition and weapons (German section). July 59. 352p. (PB 161 270) $4.00 ... 168
Dredging. July 53. 50p. (PB 161 254) $1.25 ... 147
Fundamental investigations of electrical sources. Volume II. Batteries. Apr 59. 99p. (PB 161 262) $2.25 ... 159
Gamma radiation of packaging materials. July 59. 19p. (PB 161 097) 50 cents ... 168
Geodetic use of artificial earth satellites. Aug 59. 127p. (PB 161 147) $2.75 ... 168
Geodetic use of artificial earth satellites. Aug 59. 87p. (PB 161 148) $2.25 ... 169
Handbook of methods of cooling air force ground electronic equipment. June 59. 636p. (PB 161 264) $8.00 ... 151
High energy rate metal forming. 1959. 268p. (PB 161 271) $4.00 ... 145
High energy rate metal forming. Sep 58. 54p. (PB 161 272) $1.50 ... 145
High energy rate metal forming. Dec 58. 43p. (PB 161 273) $1.25 ... 145
High energy rate metal forming. 1959. 268p. (PB 161 274) $4.00 ... 146
Magnetic amplifier circuits. Part I. The series circuit with a non-linear inductor. May 59. 101p. (PB 161 142) $2.50 ... 152
Magnetic amplifier circuits. Part II. The full-wave bridge amplifier with two-terminal loads. May 59. 100p. (PB 161 086) $2.25 ... 153
New methods of magnetic pulse generation. Dec 57. 55p. (PB 131 651) $1.50 ... 155
Optical and electromagnetic techniques for prediction of radome boresight errors. Aug 59. 86p. (PB 161 126) $2.25 ... 152
Power generation and distribution. Chapter I. Electric power generation. Sep 54. 194p. (PB 161 252) $3.00 ... 151
Present status of the future outlook for all-metal sandwich construction for air vehicles. Aug 59. 148p. (PB 161 099) $2.75 ... 147
Radio collision avoidance systems for aircraft. Sep 59. 52p. (PB 161 119) $1.50 ... 145

TOXICITY OF BORON-OXYGEN COMPOUNDS TO PLANTS AND SOIL BACTERIA, by A. Shefner and R. Ehrlich. Final rept. on [Contract NOas-52-1024-c]. 30 May 57, 16p. 1 ref. CCC-1024-TR-251.
Order from LC mi$2.40, ph$3.30 PB 143 /12

A determination has been made of the response of various plants to various levels of applied boron compounds, in terms of yields of fresh weight of beans, radishes, lettuce, beets, and oats. The effects of adding boron at different stages of growth and the effectiveness of different methods of application were investigated. Boron adversely affected the growth of the plants tested when applied at levels between 8 and 32 pounds of boron per acre (lb. B/acre). Application of boric acid solutions to a variety of seeds germinating in pure quartz sand resulted in serious reduction in germination frequency. The effect of boron on the growth of three soil microorganisms, Azotobacter chroöcoccum, Streptomyces sp., and Rhizobium meliloti, was also determined.

Centro di Studio per la Fisica Delle Microonde (Italy).
THE DECELERATION OF METEORS DURING THEIR PASSAGE THROUGH THE EARTH'S ATMOSPHERE, by F. Verniani. Technical note no. 2 on Contract AF 61(052)227. June 59. 6p. 3 refs. AFCRC-TN-59-752.
Order from LC mi$1.80, ph$1.80 PB 143 922

The deceleration of meteors is computed theorically as a function of the characteristic quantities of evaporation, in particular, of velocity. It is shown that for over 3/4 of all meteors, the deceleration increases until the end of evaporation, and that, at the point of maximum rate of evaporation, the deceleration, as a first approximation, may be assumed the same for all meteors.

Harvard Coll. Observatory, Cambridge, Mass.
CLASSIFICATION OF SOLAR PROMINENCES-VII-1954, by Donald H. Menzel and F. Shirley Jones. Scientific rept. no. 13 on Contract AF 19(604)1394. [1958] 93p. AFCRC-TN-58-620; AD-206 783.
Order from LC mi$5.40, ph$15.30 PB 137 947

A tabulation and analysis is presented of the behavior classification of prominences observed at the High Altitude Observatory at Climax, Colorado, for the month of January, 1954, and at the Sacramento Peak Observatory, Sunspot, New Mexico, for the period January 23 to December 31, 1954. (See also PB 136 881)

Iowa State U., Iowa City.
OBSERVATIONS OF LOW ENERGY SOLAR COSMIC RAYS FROM THE FLARE OF 22 AUGUST, 1958, by K. A. Anderson, R. Arnoldy, and others (U. of Minnesota). [1959] 49p. 26 refs. SUI-59-9.
Order from LC mi$3.30, ph$7.80 PB 143 068

Observations have been made of protons at balloon altitudes in the energy range 100 to 300 Mev following a solar sequency of optical flare, r-f noise bursts and long enduring noise storm. Other particles are shown to have low upper limits to their abundance. The flare particles continue to be observed for at least 2 days and arguments are given to show that their storage and emission takes place in the solar atmosphere. The differential energy spectrum is derived from ionization versus atmospheric depth data and is found to be E^{-5} dE. Observations by riometer and VHF scatter propagation paths over the polar regions indicate that solar acceleration of protons up to roughly 100 Mev energy is rather frequent.

Maryland U., College Park.
FARADAY ROTATION OF RADIO WAVES WITHIN THE CRAB NEBULA, by Howard Laster and Allen M. Lenchek. Rept. on Contract AF 49(638)530, Feb 59, 5p. 10 refs. AFOSR-TN-59-164; AD-211 143.
Order from LC mi$1.80, ph$1.80 PB 144 029

Minnesota U. School of Physics, Minneapolis.
THE FLUX AND ENERGY SPECTRUM OF COSMIC RAY α-PARTICLES DURING SOLAR MAXIMUM, by P. S. Freier, E. P. Ney, and C. J. Waddington. Technical rept. on Cosmic Ray Program, Contract Nonr-710(19). Dec 58, 39p. 11 refs.
Order from LC mi$3.00, ph$6.30 PB 143 861

The fluxes of primary cosmic ray α-particles over Minnesota and Texas have been measured during the present period of maximum solar activity. A value of 136 ± 9 α-particles/m^2 sec ster was measured over Minnesota and of 68 ± 4 α-particles/m^2 sec ster over Texas. In both cases these values are significantly lower than those observed at solar minimum. The energy spectrum of these particles has been determined between 200 Mev/nucleon and 3.0 Bev/nucleon. It is shown that the slope of the integral spectrum is less than that observed at solar minimum and that a significant number of low energy particles is still present. A possible mechanism for these changes is discussed briefly. The determination of energies of particles from a measurement of their ionization is discussed in detail in an appendix.

Minnesota U. School of Physics, Minneapolis.
THE LITHIUM, BERYLLIUM AND BORON IN THE PRIMARY COSMIC RADIATION, by P. S. Freier, E. P. Ney, and C. J. Waddington. Technical rept. on Cosmic Ray Program, Contract Nonr-710(19). Dec 58, 29p. 13 refs.
Order from LC mi$2.70, ph$4.80 PB 143 932

In order to resolve the controversy concerning the abundance of the light elements ($3 \leq Z \leq 5$) in the primary cosmic radiation a further experiment has been performed. The charge spectrum of the cosmic radiation has been determined on October 19, 1957 in a stack of nuclear emulsions exposed nearer the top of the atmosphere than before. The results of the experiment prove that these light elements make up an appreciable fraction of all those nuclei with $Z \geq 3$ present in primary cosmic radiation.

Rochester U., N. Y.
SOME CONSIDERATIONS ON THE ANALYSIS OF PRIMARY COSMIC RAY INTENSITY EXPERIMENTS, by A. Engler, M. F. Kaplon, and J. Klarmann. Rept. on Contract AF 49(638)303. [1958] 34p. 22 refs.
AFOSR-TN-58-970; AD-205 597.
Order from LC mi$3.00, ph$6.30 PB 144 001

A discussion is given of the procedures employed in the analysis of primary cosmic ray intensity experiments and the assumptions inherent in their use, with particular emphasis on nuclear emulsion as a detector. Explicit formulas for extrapolation of particle intensities for various geometries employed in emulsion work are given. Some discussion of geomagnetic effects is given and data are presented showing that the earth's shadow cone is not appreciably present at a geomagnetic latitude of 40°.

A GUIDE TO COLOR BANDING FOR INDICATORS (METERS), by William Wokoun and Gerald Chaikin. Mar 59, 11p. Technical Memo. 2-59.
Order from LC mi$2.40, ph$3.30 PB 143 130

This report presents a rationale for color-coded banding of meters. The principles set forth are illustrated, and swatches of the four colors which are considered maximally discriminable are given.

Laboratory of Aviation Psychology, Ohio State U. Research Foundation, Columbus.
THE EFFECT OF DIFFERENT PROPORTIONS OF MONITORED ELEMENTS ON OPERATOR PERFORMANCE IN A SIMULATED RADAR AIR TRAFFIC CONTROL SYSTEM, by Robert G. Kinkade and J. S. Kidd. Rept. on Contract AF 33(616)3612. June 59, 17p. 11 refs. WADC Technical rept. 59-169.
Order from OTS $0.50 PB 161 111

A simulated radar approach control system was utilized to evaluate the influence of different levels of monitoring on system performance. Monitoring level was varied by manipulating the proportion of aircraft in the system having airborne position information (API) equipment. The API-equipped aircraft did not require active control of their approach path as did those aircraft without such equipment. Four conditions were compared: (a) 100%, (b) 63%, (c) 37%, and (Behavioral Sciences--Human Engineering, 12 Feb 60) (d) 0% of aircraft with API equipment. Eight laboratory-trained controllers participated. Results indicated an approximately linear increase in system performance as proportion of API-equipped aircraft was increased. Recommendations for future utilization of API in terminal operations were considered.

STUDIES OF NAVY GUIDED MISSILE TEAMS, by David J. Klaus and Robert Glaser. Final rept. for 1 May 51-31 May 58 on Contract N7onr-37008. 31 Dec 58, 26p. 47 refs.
Order from LC mi$2.70, ph$4.80 PB 143 615

This report consists of a brief summary of activities conducted as a research project and includes a digest of project activities, a short administrative history of the project, and an annotated bibliography of reports produced by the project staff.

Applied Psychological Services, Wayne, Pa.
POST-TRAINING PERFORMANCE CRITERION DEVELOPMENT AND APPLICATION: DEVELOPMENT AND APPLICATION OF TBCL CRITERIA TO THE SESR PROGRAM FOR THE AIR CONTROLMAN AND THE PARACHUTE RIGGER RATINGS, by Authur I. Siegel, Milton Richlin, and Philip Federman. Rept. on Contract Nonr-2279(00). Oct 58, 131p. 2 refs.
Order from LC mi$6.90, ph$21.30 PB 143 388

This is the second of a series of reports by Applied Psychological Services on the post-training performance of the enlisted personnel in certain naval aviation ratings. The present research had two general purposes: (1) measurement of the effects of the Selective Emergency Service Rate program (SESR) on the quality of the technical performance of the Air Controlman Tower (ACT) and Parachute Rigger Survival (PRS) ratings. (2) development of a criterion instrument applicable to the on-going measurement of the proficiency level of ACTs and PRSs who are graduates of the respective schools of the Naval Air Technical Training Command. Separate Technical Behavior Check Lists which seem to possess the attributes of analyzability, relevance, comprehensiveness, and correct weighting of elements were prepared for each rating. Adequate reliabilities were demonstrated for the lists. (See also PB 142 120 and 136 699)

Clark, David, Co., Inc., Worcester, Mass.
INTEGRATION OF PERSONAL EQUIPMENT. Rept. on Contract AF 33(616)3329. [Aug 59] 36p. WADC technical rept. 59-382.
Order from OTS $1.00 PB 161 132

This report covers the efforts, methods of approach and solutions to some of the problems of integrating items of aircrew personal equipment. The major problem of integration is the combining of the various individual items which have specific functions with each other without complicating these combinations beyond their effectiveness limits. Practical solutions were achieved in some areas, but additional work is required in others.

Washington U., Seattle.
THE SELECTION OF PREDICTORS FOR SOME EVALUATIONS OF FACULTY PERFORMANCE, by Clifford E. Lunneborg. Rept. on Contract Nonr-477(08) and Public Health Research Grant M-743(C2). Dec 57, 115p. 13 refs.
Order from LC mi$6.00, ph$18.30 PB 138 635

Relationships between some evaluations of faculty effectiveness and a number of items of information extracted from the background records of certain faculty members were investigated. Major emphasis in the study was placed upon the selection of predictors from among the items of background information to provide the best estimations of the faculty evaluations. An iterative predictor selection procedure was employed to select only those predictors which made significant independent contributions to these estimations. A criterion is presented, and was applied, for restricting the number of variates selected to prevent reliance of the obtained predictions on small sample error variance in the criterion measures. The results of these predictor selections are reported. Finally, explanations of certain of the findings and suggestions for extension of the research were offered.

Applied Mathematics and Statistics Lab., Stanford U., Calif.
CHAINS OF INFINITE ORDER AND THEIR APPLICATION TO LEARNING THEORY, by John Lamperti and Patrick Suppes. Technical rept. no. 18 on Contract Nonr-225(17). 15 Oct 58, 29p. 9 refs.
Order from LC mi$2.70, ph$4.80 PB 143 701

The purpose of this paper is to study the asymptotic behavior of a large class of stochastic processes which have been used as models of learning experiments. By applying a theory of chains of infinite order, or "chaînes à liaisons complètes" namely, certain limit theorems for stochastic processes whose transition probabilities depend on the entire past history of the process, but only slightly on the remote past. A self-contained discussion of these and some additional results is the content of Section 2.

Applied Mathematics and Statistics Lab., Stanford U., Calif.
FOUNDATIONS OF STATISTICAL LEARNING THEORY, I. THE LINEAR MODEL FOR SIMPLE LEARNING, by W. K. Estes (Indiana U.) and Patrick Suppes. Technical rept. no. 16 on Contract Nonr-225(17). 20 Nov 57, 101p. 14 refs.
AD-149 728.
Order from LC mi$5.70, ph$16.80 PB 137 998

Primitive notions, the axiomatic structure, and general theorems are presented of a model which formalizes and generalizes models for simple learning; the mathematical foundations of these models are examined. The formulation draws upon the concepts and methods developed by R. R. Bush and F. Mosteller (Stochastic models for learning, New York, 1955) and W. K. Estes and C. J. Burke (Psychol. Rev. 60:276-286, 1953). A study is made of the sample spaces of the stochastic processes involved, and the methods of defining events and probabilities. The theorems are derived by set-theoretical and probabilitic techniques. The discussion is limited to linear models. The level of generality is that of a model broad enough to include as special cases all of the particular linear models which have been applied to learning experiments.

Arctic Aeromedical Lab., Ladd AFB, Alaska.
A PRELIMINARY STUDY OF THE MOTIVATIONAL PROPERTIES OF COLD STRESS, by Robert B. Payne. Apr 59, 13p. 12 refs. Technical rept. 58-9.
Order from LC mi$2.40, ph$3.30 PB 143 345

An experiment was conducted for the purpose of noting (a) whether cold exposure can be regarded as having drive properties sufficient for the motivation of a rote learning process, and (b) whether the drive properties of cold exposure are modified by the factor of cold acclimatization. Five male subjects underwent thermophysiological changes characteristic of cold acclimatization by means of rigorous physical training followed by prolonged field exposure to sub-zero temperatures. The temperature effect was significant at the 5 percent level, but only for the acclimatized subjects. They learned faster under the lower temperature condition on both occasions. The results agree well with those observed in the operant behavior of rats in low temperatures under radiant heat reinforcement, and they lend themselves to the interpretation that cold exposure generates a more effective drive stimulus for acclimatized subjects because acclimatized subjects actually lose more heat under cold stress than do their nonacclimatized controls.

Army Ordnance Human Engineering Lab., Aberdeen Proving Ground, Md.
RELATIONSHIPS OF INTERMITTENT NOISE, INTER-SIGNAL INTERVAL AND SKIN CONDUCTANCE TO VIGILANCE BEHAVIOR, by Joseph F. Dardano and Irving Mower. July 59, 29p. 11 refs. Technical Memo. no. 7-59.
Order from LC mi$2.70, ph$4.80 PB 143 531

Relationships of intermittent, low intensity, ambient, white noise, inter-signal interval variability and basal skin conductance to prolonged observation were investigated. Observers were required to differentiate a total of 180 critical signals which differed from periodically blinking background signal only by a larger amplitude. Performance was measured by reaction time. Monitoring performance did not deteriorate with low variability of inter-signal intervals, 50 to 70 sec. Intermittent noise impaired performance with this schedule by slightly increasing reaction times during the entire session. With a greater variability of inter-signal intervals, performance deteriorated continuously during the vigil and was unaffected by intermittent noise. A minimum interstimulus interval of 30 sec. resulted in an inverse relationship between reaction time and length of interstimulus interval, at least up to the mean interval. Basal skin conductance was negatively correlated with logarithm of reaction time when performance deteriorated under a signal schedule requiring continuous observation.

Bethany Coll., W. Va.
ON THE SPAN OF A SEARCH MECHANISM IN PROBLEM SOLVING, by Wilbert S. Ray. Technical rept. no. 1 on Contract Nonr-2315(00). Dec 58, 9p 2 refs.
Order from LC mi$1.80, ph$1.80 PB 143 927

This paper reports an attempt to manipulate the span of the search mechanism, and the size of the relation to be discovered. The size of the relation is defined as the number of elements among which the relation holds.

Harvard Graduate School of Education, Cambridge, Mass.
STAGES IN THE DEVELOPMENT OF VOCATIONAL SELF CONCEPT IN ADOLESCENCE, by Robert P. O'Hara (Boston College) and David V. Tiedeman. Rept. no. 7 on Harvard Studies in Career Development; Technical rept. no. 3 on Contract Nonr-1866(31). Nov 58, 23p. 23 refs.
Order from LC mi$2.70, ph$4.80 PB 143 461

In an attempt to give an empirical formulation to self concept theory in the realm of vocational development, we have defined self concept as an individual's evaluation of himself. Using this definition we have investigated the areas of aptitude, interest, social class, and values. Previous research has shown that these areas are important in the development of careers. The research reported here not only measures the individual's standing in these four areas but adds a further dimension - a measure of the person's ability to evaluate his standing. Such a dimension is essential to an understanding of the way in which a person solves the occupational choice problem which he is facing. Hence it further illuminates the influence of these factors in occupational choice.

PSYCHOMOTOR PERFORMANCE AS A FUNCTION OF INITIAL LEVEL OF ABILITY, by Bradley Reynolds and Jack A. Adams. Oct 53, 28p. 14 refs. Research bulletin 53-39.
Order from LC mi$2.70, ph$4.80 PB 144 211

The present study was designed to test the hypothesis that the general laws of learning are independent of individual differences in the field of psychomotor learning. The plan of the study reported has involved training a group with massed practice and a group with distributed practice. Upon completion of this study, each group was divided into subgroups on the basis of initial level of ability in the task. The acquisition curves obtained for the ability subgroups were examined for systematic differences in performance. Tables and graphs present the results.

COGNITION, MOTIVATION AND TIME PERCEPTION, by Peter Schönbach. Technical rept. no. 2 on Research Studies on the Relation Between Cognition and Behavior, Contract N8onr-662(16). Nov 58, 20p. 15 refs.
Order from LC mi$2.40, ph$3.30 PB 143 421

An exploratory study by Schachter on social isolation suggested two hypotheses: (1) The force acting on a person in a barrier situation to reach a goal (G) is an increasting function of the person's need for G "times" the relevance of this person's ideation with respect to G. (2) The greater within limits the magnitude of the force acting on a person in a barrier situation to reach a goal, the greater will be this person's estimate of the time spent in that barrier situation.

PREDICTION OF CREATIVITY IN A SAMPLE OF RESEARCH SCIENTISTS, by Cecil J. Mullins. Feb 59, 17p. 6 refs. WADC Technical note 59-36; AD-211 039.
Order from LC mi$2.40, ph$3.30 PB 144 210

In an attempt to identify test predictors of scientific creativity, two criteria of creativity were used: supervisors' ratings and number of publications. An interest questionnaire, a vocabulary test, and nine tests of the Guilford Creativity Battery were administered to 131 research physical scientists. Of 42 test scores derived from the battery, four were significantly related to the rating criterion and seven to the publications criterion. The two criteria were not significantly with both criteria. A composite predictor gave promise of increasing effective prediction of the ratings criterion, but not of the publications criterion.

Washington U., Seattle.
A COMPARISON OF EPPES SCORES OBTAINED FROM THE STANDARD FORCED-CHOICE PROCEDURE AND A RATING-SCALE PROCEDURE, by Chadwick Karr. Rept. on Contract Nonr-477(08) and Public Health Research Grant M-743(C3). Oct 58, 96p. 28 refs.
Order from LC mi$5.40, ph$15.30 PB 143 711

The present investigation is concerned with two separate problems arising from Wright's work. Can one devise a method of scoring responses given to separate EPPS (Edwards Personal Preference Schedule) statements such that the scores for variables will correlate more highly (than Wright's normative-ipsative scores) with conventional EPPS scores for corresponding variables? Wright showed that the factor structure of the matrices of variable scores for the rating scale and the EPPS were not identical. Presumably, one of the major differences lay in the presence of one or more SD factors in the rating-scale score matrix. Can one determine more precisely what reliable systematic variance is present in variable scores from statements rated one at a time which is not present in forced-choice EPPS variable scores, and vice versa?

SOME FAMILIES OF CONTAGIOUS DISTRIBUTIONS, by S. K. Katti and John Gurland. Rept. on Contract AF 49(638)43. [1958] 46p. 10 refs. AFOSR-TN-59-4; AD-208 184.
Order from LC mi$3.30, ph$7.80 PB 143 362

The purpose of the research in this paper includes the consideration of the following questions: To study some families of contagious distributions from the point of view of their derivation. To compare these distributions using characteristics such as skewness, kurtosis, and the ratio of frequencies. To estimate the parameters by various methods in order to gain some empirical evidence about their relative merits. To compare fits using chi-square and to see if any general conclusions can be suggested on an empirical basis regarding the best fit.

TESTS OF MOTOR ABILITY OR GROSS MUSCULAR COORDINATION, by Merrell E. Thompson, Jean P. Thompson, and E. Ralph Dusek (U. of Arkansas). Rept. on Contract AF 33(038)22948. July 53, 39p. 255 refs. Research bulletin 53-25.
Order from LC mi$3.00, ph$6.30 PB 144 212

The descriptive material of the present review is primarily concerned with those tests which are currently being used with males of military age and which appear to measure, primarily, some aspect of gross muscular coordination. In terms of the conventional categories set up by the physical education writers, this has meant, in general, the inclusion of tests of motor educability, motor capacity, motor fitness, motor ability, and strength (where measured by some activity rather than by dynamometers); and the exclusion of endurance tests, specific skill or achievement tests, and cardiovascular tests of fitness. In the interest of completeness, a number of early tests are briefly described and the early testing movement is outlined. Certain tests which have been developed and standardized primarily for use with high school boys, are included in Appendix B. Other tests, less pertinent to the inquiry, have been indicated only in the Bibliography.

Institute of Optics, U. of Rochester, N. Y.
STUDY OF VISUAL STEREOSCOPIC ACUITY, by V. J. Carpenter and N. D. Miller. Final technical rept. for 15 June 56-15 Feb 58 on Contract DA 44-009-eng-2882. 15 Mar 58, 53p. 1 ref.
Order from LC mi$3.60, ph$9.30 PB 143 663

This report presents the analysis of 47,000 of the settings made by thirty of the observers after their training and practice sessions, using seventeen different viewing conditions. The targets used in the comparison of conditions were six miniature tents photographed against a model of hilly terrain and oriented such that their ridges were in the direction of flight. Ten settings were made on each target in random order by each observer for every viewing condition. The standard deviations for the individual targets were computed and averaged to yield an index of the accuracy of measurement for the different conditions.

Iowa State U., Iowa City.
THE TRANSFER OF ENERGY ACROSS THE COCHLEA, by Juergen Tonndorf. Mar 59, 12p. 14 refs. AFSAM rept. 59-49.
Order from LC mi$2.40, ph$3.30 PB 143 370

Two concepts concerning different aspects of cochlear function are in an apparent conflict: the pressure-wave concept (which maintains that the acoustic energy entering the cochlea by the oval window must leave in toto by the round window) and the traveling-wave concept of Bekesy. If the latter would really entail the progression and dissipation of energy in the direction of the helicotrema (according to the common definition of wave travel), this energy would have to be diverted from the pressure wave. The dilemma is solved by consideration of fluid motion in cochlear models. Energy is transferred from the vestibular scala across the partition to the tympanic scala. In this process the partition responds to the velocity of the fluid motion.

The latter fact accounts for the shape of the envelope over the traveling waves. The finding that the amplitude of fluid motion in both scalae decreases in a fenestro-apical direction is accounted for by the Reciprocity Theorem of Helmholtz.

Vision Research Labs., U. of Michigan, Ann Arbor.
APPLICATION OF PROBIT ANALYSIS TO PSYCHOLOGICAL DATA: I. TECHNIQUES FOR DESK COMPUTATION, by W. M. Kincaid and H. R. Blackwell. Rept. on Proj. Michigan, Contract DA 36-039-sc-52654. Sep 58, 24p. 14 ref. Rept. no. 2144-283-T.
Order from LC mi$2.70, ph$4.80 PB 143 415

Psychophysical data collected in studies of visual detection are routinely subjected to probit analysis. This analysis involves fitting a cumulative normal distribution function to the experimental data, in accordance with the principle of maximum likelihood. The application of this principle required the solution of a set of simultaneous equations. An iterative procedure for solving these equations with the aid of desk calculators is described in the present report.

Vision Research Labs., U. of Michigan, Ann Arbor.
APPLICATION OF PROBIT ANALYSIS TO PSYCHOPHYSICAL DATA: II. TECHNIQUES FOR THE MICHIGAN DIGITAL AUTOMATIC COMPUTER (MIDAC), by Anne B. Moldauer and Wilfred M. Kincaid. Rept. on Proj. Michigan, Contract DA 36-039-sc-52654. Jan 59, 16p. 3 refs. Rept. no. 2144-289-T.
Order from LC mi$2.40, ph$3.30 PB 143 443

The Vision Research Laboratories have successfully developed two programs for carrying out probit analyses of visual detection data on high-speed computers. The first procedure, patterned closely on that used with desk computers, proved to have a number of drawbacks; the second procedure, more specifically adapted for automatic computers, proved successful when used on the Michigan Digital Automatic Computer (MIDAC). (See also PB 143 415)

Vision Research Labs., U. of Michigan Ann Arbor.
THE DESIGN AND CALIBRATION OF A SPECTRAL COMPARATOR FOR MEASURING VISUAL LUMINOSITY FUNCTIONS, by B. S. Pritchard. Rept. on Project Michigan, Contract DA 36-039-sc-52654. Nov 58, 19p. 1 ref. Rept. no. 2144-336-T.
Order from LC mi$2.40, ph$3.30 PB 143 445

The Spectral Comparator is an instrument which has been developed for measurement of the luminosity functions of human observers. The optical system is described, and the methods are explained by which the radiances of the two visual fields were measured for various settings of the controls on the instrument. The results of the measurements are presented in tabular and in graphical form for use in studies of the luminosity function to be reported subsequently from these laboratories.

Vision Research Labs., U. of Michigan, Ann Arbor
THE DETECTABILITY OF TARGETS CONTAINING INTERNAL LUMINANCE GRADIENTS, by A. B. Kristofferson and R. H. O'Connell. Rept. on Proj. Michigan, Contract DA 36-039-sc-52654. Sep 58, 17p. 9 refs. Rept. no. 2144-297-T.
Order from LC mi$2.40, ph$3.30 PB 143 414

Detection thresholds were measured for thirteen nonuniform targets consisting of a circular area approximately 60 minutes in diameter, on the center of which a circular luminance increment approximately 4 minutes in diameter was super-imposed. The ratio of center to annular luminance ranged between 1.0 and infinity. Predictions of the luminance of the center area required for the entire target to be at detection threshold were made from the values of threshold luminance of the center and annulus presented singly, on the basis of several variants of the element contribution hypothesis. The prediction which assumes that effective sensory excitation increases with the square of target luminance was favored over the prediction assuming a linear relation.

Air Force Missile Development Center, Holloman AFB, N. Mex.
CENTRIFUGE EXPERIMENTS ON HIGH-G LOADS IN MICE AND THEIR POSSIBLE ALLEVIATION BY MULTIDIRECTIONAL ANTI-G DEVICES, by H. J. von Beckh and Grover J. D. Schock. Aug 58, 18p. 8 refs. AFMDC TN-58-10; AD-154 104.
Order from LC mi$2.40, ph$3.30 PB 138 951

Using the centrifuge, time-tolerance limits on transversely positioned mice were studied and the results compared with longitudinal G-tolerance values reported by other authors. The possibilities of a multidirectional G-protection during escape trajectories and the re-entry phase are discussed.

Arctic, Desert, Tropic Information Center, Air U., Maxwell AFB, Ala.
AFOOT IN THE DESERT: A CONTRIBUTION TO BASIC SURVIVAL, by Alonzo W. Pond. Mar 51, rev. Apr 56, 62p. 17 refs. Publication no. D-100.
Order from LC mi$3.90, ph$10.80 PB 143 817

Recent scientific studies on water and heat exchanges in the human body make the old desert theories about thirst and ancient ideas on desert travel out of date. This report is written to bring men in the Air Force up to date on desert living conditions. It is intended to provide basic information for escape and evasion in desert regions. It makes available the most recent, reliable information concerning survival needs of the human body in the deserts of the world.

Arctic, Desert, Tropic Information Center, Air U., Maxwell AFB, Ala.
DOWN IN THE NORTH: AN ANALYSIS OF SURVIVAL EXPERIENCES IN ARCTIC AREAS, by Richard A. Howard. Apr 53, 55p. Publication no. A-103.
Order from LC mi$3.60, ph$9.30 PB 143 820

This analysis of Arctic survival narratives will be indispensable to all those concerned with Arctic operations. The planners, the instructors, the briefers, and above all those who have the privilege of going into the North will benefit most from the accomplishments and profit best from the mistakes of those who went before.

Arctic, Desert, Tropic Information Center, Air U., Maxwell AFB, Ala.
999 SURVIVED: AN ANALYSIS OF SURVIVAL EXPERIENCES IN THE SOUTHWEST PACIFIC, by Richard A. Howard. 1958, 66p. 36 refs. Pub. no. T-100.
Order from LC mi$3.90, ph$10.80 PB 143 819

This study is an instructive and eminently readable account of survival incidences in the Southwest Pacific and China-Burma-India theatres and an important source of information to all concerned with briefing fliers and passengers for travel in the regions under consideration, and to all instructors of survival techniques; furthermore, it will be a reliable guide in shaping the course programs of survival training schools.

Arctic, Desert, Tropic Information Center, Air U., Maxwell AFB, Ala.
SUN-SAND AND SURVIVAL: AND ANALYSIS OF SURVIVAL EXPERIENCES IN DESERT AREAS, by Richard A. Howard. Jan 53, 50p. 10 refs. Publication no. D-102.
Order from LC mi$3.30, ph$7.80 PB 143 818

Sun, Sand and Survival will contribute materially to the briefing of pilots and crews who operate over desert terrain. It gives firsthand information on what to expect in a great variety of desert areas. It shows definitely that deserts are not all alike. Used in connection with ADTIC Publication D-100 Afoot in the Desert (PB-143 817) and Air Force Manual 64-5 Survival (PB-112 819) it gives the reader a thorough grasp of techniques and procedures of desert survival.

Aviation Medical Acceleration Lab., Naval Air Development Center, Johnsville, Pa.
G TOLERANCE IN PRIMATES: II. OBSERVATIONS IN THE RELATIONSHIP OF CAROTID PRESSURE AND END POINT DURING ACCELERATION, by George H. Kydd, Richard L. Fenichel, and Richard J. Crosbie. Rept. no. 2 on Proj. NM 11 01 12.9. 29 May 59, 18p. 6 refs. NADC-MA-5903.
Order from LC mi$2.40, ph$3.30 PB 143 432

Observations have been made simultaneously of the occurrence of an end point of unconsciousness and carotid pressure in Rhesus monkeys during centrifugation. The data indicate that the carotid pressure is influenced initially by a maneuver which gives rise to a positive wave of pressure that is well coordinated with the onset of tangential G. Following this, there is a phase of pressure drop that can be described by a single time constant which varies with G. The data indicate that the end point occurs at a constant time following this occurrence of the pressure minimum and therefore is related to the slope of the blood pressure curve. The significance of this observation with respect to the blood supply is discussed.

Aviation Medical Acceleration Lab., Naval Air Development Center, Johnsville, Pa.
RELATIONSHIPS BETWEEN SEMICIRCULAR CANAL FUNCTION AND OTOLITH ORGAN FUNCTION, by R. F. Gray. Rept. no. 8 on Proj. NM 17 01 12.1. 8 Sep 59, 17p. 7 refs. NADC-MA-5911.
Order from LC mi$2.40, ph$3.30 PB 143 825

Data are reviewed indicating human response which may be the combined result of stimulation of both the otolith organs and the semicircular canals. Also some responses attributed to semicircular canals are shown to be similar to those attributed to otolith organ stimulation and vice versa.

Illinois U. Coll. of Medicine, Chicago.
CHOLESTEROL METABOLISM, by A. C. Ivy. Final rept. for 15 Aug 57-14 Jan 58 on Contract AF 49(638)242. 1 July 59. 58p. 84 refs. AFOSR-TR-59-79; AD-219 391.
Order from LC mi$3.60, ph$9.30 PB 143 736

Six hundred thirty-eight one-week old chicks were fed for 12 weeks a basal diet (B.D.) containing 23% protein, 3% fat and 0.05% cholesterol. Seventy-seven were fed the B.D. alone. The remainder were divided into groups of 25 or more and given cholesterol (2%), or beef tallow (5%) (m.p. 42° C), or stearic acid (10%), or palmitic acid (20%, 5 wk.); or cholesterol (2%) plus tallow, or soya oil (5%), or safflower oil (5%), or hydrogenated soya oil (5%) (m.p., 33° C); or niacin (1%) plus cholesterol (2%), or niacin (1%) plus cholesterol (2%) plus either tallow, soya oil, or safflower oil. Chemical analyses of the blood serum for cholesterol, and of the liver and arteries for cholesterol and total lipids were made. The arteries were graded for the severity of macroscopic atheromatosis. Like all ordinary food fats, soya and safflower oil and tallow enhanced the hypercholesterolemic and atherogenic effects of cholesterol. Stearic and palmitic acid slightly decreased these effects of cholesterol. When the concentration of cholesterol in the diet is greater than 1% by weight, the concentration of cholesterol in the liver, serum and arteries plateaus, indicating the existence of an intestinal capacity to absorb cholesterol. Our evidence and that in the literature indicates that at a 0.25% (dry weight) level of cholesterol in the diet, cholesterol starts to accumulate in the liver, blood serum and arteries. This is before the intestinal capacity for the absorption of cholesterol in the chicken is reached and without hepatic synthesis being suppressed by dietary cholesterol. The accumulation of cholesterol in the body starts when a 1900 gm cockerel absorbs about 48 mg/day which is twice the average amount of digitonin precipitable sterol excreted daily by the chicken on a sterol-free diet, namely, 24mg. According to this, a normal 150 lb man should show little or no slow accumulation of cholesterol in the body until the daily average dietary intestinal absorption is above 400 or 600 mg and the intake is from 800 to 1000 mg. A good correlation exists between the concentration of cholesterol in the liver and arteries. Niacin (1%) reduced the accumulation of cholesterol in the arteries, liver and serum when cholesterol was fed alone or with soya or safflower oil but not with tallow.

St. Luke's Hospital, New York.
PROTEIN AND AMINO ACID NUTRITION, by Anthony A. Albanese. Annual progress rept. for 1 Jan-31 Dec 58 on Contract Nonr-1167(00). 15 Dec 58, 14p.
Order from LC mi$2.40, ph$3.30 PB 143 860

Although prime concern remains with human needs for proteins and specific amino acids under various pathological and physiological conditions, this report shows that more and more attention is being given (a) to the effects of proteins and amino acids on other body constituents, and (b) to the effects of various agents on the nitrogen needs of man.

New York U., N. Y.
STUDIES OF ENZYME SYSTEMS INVOLVED IN BIOLOGICAL OXIDATIONS AND SYNTHESES, by Severo Ochoa. Terminal rept. for 1957-1958 on Contract Nonr-285(31). [1958] 9p.
Order from LC mi$1.80, ph$1.80 PB 143 851

The problems investigated are: Enzymatic mechanisms of propionic acid oxidation in animal tissues; Enzymatic synthesis of ribonucleic acid, and Protein biosynthesis.

A STABLE CONTINUOUSLY RECORDING ELECTRODE SYSTEM FOR THE DETERMINATION OF OXYGEN DISSOLVED IN PROTEIN SOLUTIONS, by Freeman W. Cope. Rept. no. 7 on Proj. NM 11 01 12.7. 20 July 59, 13p. 4 refs NADC-MA-5912.
Order from LC mi$2.40, ph$3.30 PB 143 431

A system is described that will continuously measure the concentration of oxygen dissolved in a protein solution. The system is stable within 2% for periods of 30 minutes or more. The circuit diagram of a suitable amplifier is given. To attain stability of electrode current it is necessary that the amplitude of vibration of the silver-platinum electrode pair be kept constant by mechanical and electrical methods. The electrodes must be coated with collodion to prevent poisoning by proteins. A coating of silver salt must be deposited on the silver electrode before use.

PRINCIPLES AND PRACTICE OF BW DECONTAMINATION. 4. AN EVALUATION OF THE USE OF MEMBRANE FILTERS IN QUANTITATIVE BACTERIOLOGY, by Dorothy M. Portner, Elizabeth C. Mayo and Saul Kaye. 4 June 53, declassified 25 Jan 54, 50p. 15 refs. Biological Labs. Interim rept. no. 32.
Order from LC mi$3.30, ph$7.80 PB 143 534

The work here reported, which constitutes a necessary preliminary to an investigation of the use of membrane filters for the quantitative evaluation of disinfectants, covers a study of the relative bacterial recoveries obtainable, by several different techniques, with MF's and with pour plates. Bacterial recoveries are compared by statistical analysis of the experimental data. Although essentially the same bacterial recovery is obtained by any of the three MF techniques used ("1 ml direct", "1 ml in 4", and "1 ml in 4 / Rinses"), the "1 ml in 4" MF technique is the most generally satisfactory for the recovery of bacteria exposed to a disinfectant where the use of pour plates is undesirable. This technique involves placing 1 ml of the suspension to be counted in 4 ml of diluent and pouring the whole volume through the MF. The standard "1 ml direct" pour plate technique gives a better estimate of the number of bacteria in the control samples than does the "1 ml in 4" pour plate technique. All three MF techniques give lower bacterial recoveries than the "1 ml direct" pour plate technique and higher recoveries than the "1 ml in 4" pour plate technique. The bacterial recovery obtained differs with the test organism used. The use of "fresh" rather than stored slants of vegetative organisms seems to be advisable when high accuracy is desired. The relative bacterial recoveries of MF's and pour plates are summarized by straight line equations. These equations provide a means whereby, within the experimental range, any MF of pour plate values from tests involving B globigii spores of M pyogenes var aureus may be interconverted, with the degree of dependability represented by the appropriate 95% confidence limits also given.

A PHYSIOLOGICAL END POINT FOR THE STUDY OF THE TOLERANCE OF SMALL MAMMALS TO HIGH ACCELERATION STRESS, by William C. Sipple and B. David Polis. Rept. no. 1 on Proj. NM 11 02 12.15. 17 June 59, 13p. 2 refs. NADC-MA-5906.
Order from LC mi$2.40, ph$3.30 PB 143 430

By means of a transistor amplifier mounted before the slip rings of an animal centrifuge it was possible to obtain recordings of the "EKG" of rats under acceleration stress. With this information a physiological end point for the tolerance of the rat to 20 G (positive acceleration) was defined as the time to reduce the heart rate of the animal from an initial state ranging from seven to nine beats per second to a final moribund state of 2 beats per second. The instrumentation and techniques employed permit the option of recovering the animal alive after approaching the limit of tolerance to acceleration.

FINAL REPORT, by James V. Warren. Rept. on Contracts AF 18(600)1542 and 41(657)208. [1959] 11p. 15 refs. AFOSR-TR-59-102.
Order from LC mi$2.40, ph$3.30 PB 143 505

A comprehensive study of the nature of vasodepressor syncope (the common faint) has been undertaken. A critical review of the available information regarding this phenomenon has been carried out. In addition, experimental studies aimed primarily at the circulatory nature of vasodepressor syncope and, in particular, dealing with the precipitating and predisposing factors, has lead to observations on the effects of various humoral substances such as norepinephrine on the vascular system, as well as the effect of drugs such as atropine and isoproterenol. Additional observations were made on the nature of abnormal heart sounds in a variety of clinical conditions.

Kansas U., Lawrence.
STUDIES ON THE PATHOGENESIS AND IMMUNITY OF TULAREMIA, by Cora M. Downs. Final rept. for 1 July 51-21 Dec 58 on Contract N6onr-26007. [1958] 17p. 18 refs.
Order from LC mi$2.40, ph$3.30 PB 143 616

An extensive study of smooth and non-smooth variants and their antigenicity was undertaken and showed that the non-smooth avirulent variants and the smooth avirulent variants were lacking in immunegenicity and in the ability to incite antibodies. Immune Rabbit serum even with high agglutinative powers was not bactericidal. An extensive test of vaccines prepared from cultures of Bacterium tularense and killed by various chemical and physical means showed that they produced what seemed to be a good degree of immunity provided the mice were challenged with the partially virulent strain 425. If challenged with the virulent Schu(Sm_4) strain no or very little protection was evident. The work reported on heat stable extracts from tissue and cultures indicated that a great part of the antigenic properties of the organism resided in these extracts. An intensive study was made of the culture extracts and mouse tissue extracts. Methanol precipitation was found to be effective in purifying the extracts and since 1956 an intensive study has been made using chemical and physical methods.

Naval School of Aviation Medicine, Pensacola, Fla.
CARDIOVASCULAR PROBLEMS IN AVIATION MEDICINE: EVALUATION OF HEART MURMURS, by John M. Packard and Ashton Graybiel. 24 May 51, 30p. 5 refs. Proj. NM 001 059.06.05.
Order from LC mi$2.70, ph$4.80 PB 143 811

The importance of proper interpretation of a heart murmur by the flight surgeon is emphasized. The elicitation of the physical characteristics of a murmur, and the evaluation of the murmur based on these characteristics, is described in detail. Brief analysis is made of 1090 service personnel seen in consultation at the cardiovascular laboratory at School of Aviation Medicine, Pensacola, Florida. About one fifth (192 cases) were referred for the evaluation of a murmur. These cases may be divided into four groups: one group of 15 cases in which extra cardiac sounds were mistaken for murmurs, a second group of 33 cases in which the murmurs were clearly related to some type of underlying heart disease, a

or mixed-type hearing loss, the remaining 87 percent being perceptive-type hearing loss; that 35 out of 75 individuals in Class B and Class C groups expressed a preference for an ear and of these 35 individuals, 25 chose the better ear correctly.

Radiobiological Lab., U. of Texas, Austin.
ACUTE EFFECTS OF GAMMA RADIATION IN PRIMATES, by Ralph G. Allen, Frank A. Brown and others. Apr 59, 24p. 8 refs. AFSAM rept. 59-41.
Order from LC mi$2.70, ph$4.80 PB 143 740

In an excellent paper on the acute radiation syndrome in man, Gerstner described a dose - survival time curve containing three "plateaus" or dose-independent regions. This curve, reproduced in figure 1, has been estimated for man from clinical data and animal experiments. These "plateau regions" are ascribed to three different pathogenic mechanisms - death being caused in the low-dose region by hematopoietic depression, in the mid-dose region by gastrointestinal denudation, and in the high-dose region by a failure of the central nervous system.

Texas U., Austin.
RELATIVE HEARING LEVELS AND TYPES OF HEARING LOSS AMONG FOUR SELECTED GROUPS OF AIR FORCE PERSONNEL, by Lennart L. Kopra, Duilio T. Pedrini, and Roger W. Fullington. Apr 59, 12p. 9 refs. AFSAM rept. 59-51.
Order from LC mi$2.40, ph$3.30 PB 143 371

Results showed: good agreement between median and mean thresholds at almost all test frequencies; no significant differences between right and left ears within groups; that the Class Ann and A median and mean thresholds were within a few decibels of the American Standard reference normal; that the Class B group deviated from the Class A groups only at 3000, 4000, and 6000 cps; that, with the exception of Class B at 4000 and 6000 cps, the Class C group was significantly different from the other groups at all test frequencies; that approximately 13 percent of Class B and Class C groups had either conductive third group of 12 cases in whom a definite decision could not be reached and a fourth group of 132 cases in whom an innocent murmur was heard. In five persons who were referred for reasons other than the evaluation of a murmur pathological murmurs were heard which had been overlooked by the referring physician. These murmurs were all diastolic in time. A final analysis is made of the systolic murmurs which were heard. The innocence of most pulmonic systolic murmurs is stressed. The disposition of service personnel with a faint apical systolic murmur, which is the most difficult murmur to evaluate, is discussed.

Pharmacology and Toxicology

Army Chemical Warfare Labs., Army Chemical Center, Md.
EXCRETION AND LOCALIZATION IN THE RAT OF C^{14} ADMINISTERED AS 3,4-BIS(p-DIETHYLAMINOETHOXYPHENYL)-3-HEXENE DIMETHIODIDE (879C) by J. Henry Willis and Sarah C. Kalser. Technical rept. for 1 Apr 55-30 Nov 57 on Pharmacology of Toxic Compounds, Sep 58, 21p. 18 refs. CWLR 2243; AD-[illegible]
Order from LC mi$2.70, ph$4.80 PB 139 142

The rat excretes, within a mean of 4.9 hours, a mean of 7.3 per cent of C^{14} injected as 879C. Fecal excretion accounts for probably some 30 per cent of the administered C^{14}. Kidney, liver, small intestine, lung, spleen, heart and adrenal glands are particularly active in taking up C^{14}; low in uptake are the brain and spinal cord. Blood is almost free of C^{14} one and three-fourths hours after the intravenous injection of labeled 879C. Respiratory muscles absorb more C^{14} of 879C than limb muscles. Both liver and kidney may alter the molecule.

Army Chemical [Warfare] Labs., Army Chemical Center, Md.
THE INFLUENCE OF SPONTANEOUS PULMONARY DISEASE IN A TOXICO-PATHOLOGICAL STUDY OF CHRONIC DIBORANE TOXICITY IN RATS, by A. J. McAdams. May 55, 15p. Medical Labs. Research rept. no. 362.
Order from LC mi$2.40, ph$3.30 PB 143 539

Rats at different ages were exposed to diborane at 6 ppm for six weeks. Detailed examination of the lungs of these animals revealed an incidence of chronic murine pneumonia in both the control and exposure groups precluding any conclusion concerning the possible toxicity of diborane to the lung at this concentration. The problem of evaluation of pathological changes of an experimental nature from those of spontaneous origin is emphasized.

Army Chemical Warfare Labs., Army Chemical Center, Md.
THE INTRAVENOUS TOXICITY OF FIVE OXIMES IN DOGS, by James W. Crook and Paul Cresthull. July 59, 20p. 13 refs. CWLR-2284; AD-220 253.
Order from LC mi$2.40, ph$3.30 PB 144 037

The intravenous LD50's of five oximes were determined in dogs. The prominent toxic signs observed in the dogs were staggering, collapse, convulsions, flaccid paralysis, and death. Flaccid paralysis occurred less frequently with 2-PAM than with the other compounds. It is concluded that 2-PAM is the least toxic of the five oximes studied. There is a significant difference between the toxicities of EA 1814 and EA 1813 using 90% confidence limits. EA 1814 is approximately three times more toxic to dogs than 2-PAM while EA 1813 is approximately five times more toxic than 2-PAM. There is no significant difference between the toxicities of EA 1941 and EA 1811 using 95% confidence limits. These two oximes are approximately 9 and 13 times, respectively, more toxic to dogs than 2-PAM.

Army Chemical Warfare Labs., Army Chemical Center, Md.
TOXIC CHEMICAL WARFARE AGENTS: REPORT OF SYMPOSIUM IX, VOLUME I, CONDUCTED BY U. S. ARMY CHEMICAL WARFARE LABS. 25, 26, 27 JUNE 1958. May 59, 71p. 22 refs. CWL Special Pub. 3.
Order from LC mi$4.50, ph$12.30 PB 143 503

The following papers are reported: Structure and chemistry of viruses; Chemical model of drug action; A new approach to the study of neuromuscular transmission; Kinetics of enzyme catalyzed reactions in the presence of inhibitors; Natural asymmetry and optical isomerism; The structure of enzymes; Incapacitation by anesthetic agents; The pharmacology of psychochemical compounds; The psychological effects of psychochemical compounds; Isolation and properties of certain marine toxics; Snake venoms; Bacterial toxins; Mechanisms of incapacitation; and Screening procedures for incapacitating compounds.

[Army Chemical Warfare Labs.] Army Chemical Center, Md.
TOXICITY OF CERTAIN ENGINE OILS, HYDRAULIC FLUIDS, AND BASE OILS FOR THE COMPOUNDING OF BOTH HYDRAULIC FLUIDS AND ENGINE OILS, by Colborn T. Blaisdell. Mar 54, declassified 14 Feb 58. 23p. 5 refs. Medical Labs. Research rept. no. 256.
Order from LC mi$2.70, ph$4.80 PB 144 207

The intrinsic toxicities of these compounds in rabbits and rats are relatively low as manifested by intravenous LD50's between 0.05 cc./kg. and 1.5 cc./kg. The hazard to humans incurred by swallowing these compounds would appear almost negligible. The hazard from an accidental splash in the eye of one of these compounds appears to be slight. The chief hazard involved in the use of these compounds would appear to necessitate continued cutaneous exposure. The worst of them, notably compounds No. 4, 7, 9, 10, and 12, could cause some erythema, and hardening and cracking of the skin on prolonged contact, however, all of these changes appear reversible and will probably disappear if exposure to the compounds is discontinued.

Institute for Experimental Cancer Research, U. of Heidelberg (West Germany)
ACTION OF KINETIN AND OTHER AMINO PURINE DERIVATIVES ON CELLS IN TISSUE CULTURE, by Hans Lettre. Final technical rept. no. 1, 29 Apr 57-9 May 59, on Contract DA 91-508-EUC-188. [1959] 36p. 29 refs.
Order from LC mi$3.00, ph$6.30 PB 143 410

The compounds investigated are listed under the numbers 1 - 83. Though the field of purine derivatives had been studied very intensively in search for chemotherapeutical agents, our observations show that it is still an unexplored field. The compounds are active only in the system of tissue culture. Starting from out present results one can expect to find more compounds with this quality. On the other hand it must be stated that only a small percentage of all compounds has an activity at all and even a smaller percentage has this differential activity. Future work have not been shown to be contributing factors in the etiology of motion-induced emesis.

Radiobiological Lab., U. of Texas, Austin.
A FURTHER STUDY OF THE INTERACTION OF ELECTROCONVULSIVE SHOCK WITH CHLORPROMAZINE AND RESERPINE, by Claude B. Elam, Edward C. Wortz, and W. Lynn Brown. June 59, 7p. 3 refs. AFSAM rept. 58-144.
Order from LC mi$1.80, ph$1.80 PB 143 384

Five dose levels for each of the drugs were examined and compared with appropriate control conditions. These effects were studied with the subjects in an atmosphere of 95 percent O_2 + 5 percent CO_2 as well as under normal atmospheric conditions. A synergic relationship is obtained when electroconvulsive shock is administered in conjunction with either reserpine or chlorpromazine. When an atmosphere of 95 percent O_2 + 5 percent CO_2 is made available to an animal immediately prior to and during electroconvulsive shock procedures, there is a significant reduction in the probability of death.

School of Aviation Medicine, Randolph AFB, Tex.
THE EFFICACY OF TRILAFON IN POTENTIATING BONAMINE MOTION SICKNESS PROPHYLAXIS IN DOGS, by Howard R. Unger and Lawrence J. Milch. June 59, 5p. 15 refs. Rept. 59-78; AD-226 474.
Order from LC mi$1.80, ph$1.80 PB 143 581

Susceptible animals were randomly placed in three treatment groups — namely, placebo, bonamine^R, and the combination of bonamine^R with trilafon^R. Bonamine^R and the combination of bonamine^R with trilafon^R exhibited a protective effect against swing-induced emesis. Trilafon^R, a potent tranquilizer, has no protective effect when used along and in combination with bonamine^R affords a degree of protection which is no greater than the effect shown by bonamine^R alone. It is therefore concluded (a) that the action of trilafon^R does not contribute to the protection afforded by bonamine^R against swing-induced vestibular stimulation and, there, (b) that stimuli arising from those brain centers affected by trilafon^R should be done in the direction of (1) derivatives with a direct substitution of carbon atomes to C-6 of the purine system; (2) derivatives combining two substituted amino groups in the purine system, and (3) ribotides of compounds found to be active. Further the study of the mechanism of the action of these compounds on cells seems to be important. Up to now work in this direction has been done on the morphological basis, but it should be extended to the biochemical events causing the morphological changes.

Radiobiology

Radiobiological Lab., U. of Texas, Austin.
RADIATION-INDUCED CENTRAL NERVOUS SYSTEM DEATH: A STUDY OF THE PATHOLOGIC FINDINGS IN MONKEYS IRRADIATED WITH MASSIVE DOSES OF COBALT-60 (GAMMA) RADIATION, by Stephen G. Wilson, Jr. Apr 59, 19p. 11 refs. AFSAM rept. 59-58.
Order from LC mi$2.40, ph$5.30 PB 143 679

This report presents circumstantial evidence indicating that gastrointestinal damage is also an important part of the syndrome of "radiation-induced central nervous system death." Also, the observed central nervous system changes are compared to those described by other authors. The concept of "leukocyte devitalization" is introduced.

Radiobiological Lab., U. of Texas, Austin.
SOME EFFECTS OF NUCLEAR RADIATION EXPOSURE ON PRELIMINARY WGTA TRAINING PERFORMANCE OF RHESUS MONKEYS, by A. A. McDowell, W. Lynn Brown, and James E. Wicker. May 59, 5p. 13 refs. AFSAM rept. 59-53.
Order from LC mi$1.80, ph$1.80 PB 143 741

Wisconsin General Test Apparatus (WGTA). The investigation, in addition, studies the same animals with respect to simple object-quality discrimination learning unconfounded by previous training of a similar nature.

Oregon State Board of Health, Portland.
A REVIEW OF SOVIET RESEARCH ON THE CENTRAL NERVOUS SYSTEM EFFECTS OF IONIZING RADIATIONS, by Walter R. Stahl. [1958] 49p. 73 refs.
Order from LC mi$3.39, ph$7.80 PB 143 558

Brief reviews are presented of a number of Soviet scientific papers on the CNS effects of radiation, most of which are not available in translation. The Soviets consider the CNS as being highly sensitive to radiation and have reported work implicating it at general levels of a few or tens of roentgens, several hundred r and 500-1000 r. It appears presently impossible to reach a final conclusion on the question of a threshold.

USAF Radiation Lab., U. of Chicago, Ill.
EFFECTS OF BETA-AMINOETHYLISOTHIOUREA (AET) ON ENZYMES OF ANIMAL TISSUES, by Gerald R. Zins, Ann B. Raymund, and Kenneth P. DuBois. Apr 59, 15p. 31 refs. AFSAM rept. 59-34.
Order from LC mi$2.40, ph$3.30 PB 143 380

The effects of the radioprotective compound β-aminoethylisothiourea (AET) on sulfhydryl enzymes of mammalian tissues have been determined, in an effort to obtain information regarding the biologic activity of the drug. A number of enzyme systems involved in oxidative carbohydrate metabolism of rat tissues were inhibited in vitro by concentration of AET within the predicted in vivo range following sublethal doses. The results of this study demonstrate the feasibility of a theory of radioprotective mechanisms involving the formation of radioresistant complexes between the protective agent and important biologic sulfhydryl groups.

Washington U., Seattle. School of Medicine.
THE COMBINED EFFECTS OF IONIZING RADIATION AND HIGH TEMPERATURE ON THE LONGEVITY OF THE WHITE RAT, by L. D. Carlson and B. H. Jackson. Mar 59, 12p. 17 refs. AFSAM rept. 58-156.
Order from LC mi$2.40, ph$3.30 PB 143 744

Male Sprague-Dawley rats, individually caged, were exposed to low level irradiation from a Co^{60} source for 16 hours a day. The animals were selected by weight and growth rate, and divided into eight groups of 22 rats. Four groups were kept at $28^{o} \pm 1^{o}$ C. and were exposed to 0.29, 0.64, 2.60, and 4.18 r/day during the irradiation period, which lasted from 4 to 16 months of age. The other groups were kept at $35^{o} \pm 1^{o}$ C. during the period of irradiation which lasted from 4 to 16 months of age, and were exposed to 0.28, 0.60, 2.57, and 3.96 r/day. At 35° C. the ET_{50} for 0.29 r/day was 310; 0.64 r/day was 490; 2.60 r/day was 540; and 4.18 r/day was 510. At 28° C. the ET_{50} for 0.28 r/day was 493; 0.60 r/day was 510; 2.57 r/day was 810; and 3.96 r/day was 590. With the exception of the relation between 0.60 and 0.28 r/day, the data are statistically significant at the 5 percent level. From a previous experiment at 26° C. the ET_{50} for 0 r/day was 445 and 0.8 r/day was 585. It is suggested that the effects of ionizing irradiation interact with the effects of environment in intluencing longevity.

Army Chemical Warfare Labs., Army Chemical Center, Md.
THE CHEMISTRY OF FISH BLOOD, A BIBLIOGRAPHY, by Joseph B. Hunn. May 59, 20p. 194 refs. CWL Special Pub. 2-22.
Order from LC mi$2.40, ph$3.30 PB 143 536

The present bibliography attempts to bring together most of the important papers on piscine blood chemistry. It is possible that some important material has been omitted. It is hoped that these references will be a help and stimulus to further basic research in fish physiology.

Narragansett Marine Lab., U. of Rhode Island, Kingston.
AN OUTLINE OF SOUNDS PRODUCED BY FISHES IN ATLANTIC COASTAL WATERS, SOUND MEASUREMENTS AND ECOLOGICAL NOTES, by Marie Poland Fish. Technical rept. no. 12 on Biological Oceanography Project, Contract Nonr-396(02). 28 Oct 58, 32p. 1 ref. Reference no. 58-8.
Order from LC mi$3.00, ph$6.30 PB 143 702

Available fishes in representative faunal areas are subjected to a series of carefully controlled situations and stimulations as a means of evaluating their sound-making ability. Positive results are analyzed for amplitude, frequency range and principal frequency components, and the recordings of each species assembled in the form of a reference file. The tables present data on 24 species of North Atlantic coastal fishes investigated at the Narragansett Marine Laboratory and 19 species of typical subtropical Atlantic species auditioned at the Bermuda Government Aquarium and the Bermuda Biological Station for Research. Geographical, seasonal and vertical distribution are included since these data are essential in predicting the occurrence of the sounds of each species. Where available, breeding details are added inasmuch as sound production among many fishes is synchronized with this cycle.

CHEMISTRY

Illinois Inst. of Tech., Chicago.
THE CHEMISTRY OF SILICON AND GERMANIUM HYDRIDES, by Sei Sujishi. Final rept. for 1 Feb 58-31 Aug 59 on Contract AF 49(638)276. 18 Aug 59, 117p. 8 refs. AFOSR-TR-59-137.
Order from LC mi$6.00, ph$18.30 PB 143 572

In order to obtain further data regarding the relative basicities of methyl- and silylamines, the reactions of silyldimethylamine, methyldisilylamine, and trisilylamine were studied with the strong Lewis acids diborane, trimethyl-aluminum, and trimethylgallium. A study of the reactions between trisilylamine, disiloxane, and silyl fluoride with trimethylgallium under comparable conditions indicated that at -78.5° the one to one complex, disiloxane-trimethylgallium, exists. This suggests the relative basicities for these

compounds to be $(SiH_3)_3N < (SiH_3)_2O > SiH_3F$. This order has been interpreted in terms of silicon-nitrogen and silicon-oxygen π bonding.

Metal Hydrides, Inc., Beverly, Mass.
THE PREPARATION OF TRANSISTOR GRADE SILICON FROM SILANE OR ANALOGOUS COMPOUNDS, by Charles H. Lewis, Mario B. Giusto, and Sidney Johnson. Final rept. on Contract AF 19(604)3464. 30 Oct 59, 36p. 10 refs. AFCRC-TR-59-354.
Order from OTS $1.00 PB 161 261

The preparation, purification and thermal decomposition of silane have been investigated for the purpose of preparing transistor grade silicon. Yields of 94 to 100% silicane are obtained by the reduction of silicon tetrachloride with various hydrides. The reactivity of silane with substances proposed as purifying agents has been studied. Variables in the thermal decomposition of silane have been evaluated with particular emphasis on purity of elemental silicon plus efficiency of dissociation and deposition rate. Silane has been dissociated on an inductively heated single crystal substrate, producing silicon deposits large enough for single crystal evaluation and neutron activation analysis. A process has been developed whereby silicon can be made continuously from silane using induction heating.

Wisconsin U., Madison.
THE STUDY OF PYRIDINIUM IODIDE CHARGE-TRANSFER BANDS, by Edward M. Kosower. Rept. on Contract AF 49(638)282. 29 Sep 59, 10p. 20 refs. AFOSR-TN-59-812; AD 226 711
Order from LC mi$1.80, ph$1.80 PB 143 641

The general nature of pyridinium iodide light absorption is discussed. It is pointed out that the high sensitivity of this electronic transition to internal and external influences makes detailed study very rewarding with respect to information on electrical, steric, and solvent effects.

Inorganic Chemistry

Coating and Chemical Lab., Aberdeen Proving Ground, Md.
REVISION OF FEDERAL SPECIFICATION P-S-751 STEAM CLEANING COMPOUND, by A. Mankowich. 9 Sep 59, 8p. 4 refs. Rept. no. CCL-82.
Order from LC mi$1.80, ph$1.80 PB 143 575

Federal Specification P-S-751 was revised to include the latest improvements in technology with the principal changes being in the areas of: (1) Deletion of percentage phosphates requirement. (2) Prohibition of carbonates. (3) Clarification of aluminum corrosion test. (4) Modification of solubility test. (5) Modification of free caustic test. (6) Addition of full scale, caking-storage test. (7) Recommendation of procurement in air-tight metal containers. Other possibilities such as the use of anhydrous salts and borates were explored.

SOME PROPERTIES OF NITRIC ACID, NITROGEN DIOXIDE, NITRIC OXIDE, WATER, AND THEIR MIXTURES, by B. H. Sage. Rept. on Contract DA 04-495-ORD-18. 15 Oct 57, 157p. 104 refs. Rept. no. 20-107; AD-203 044.
Order from LC mi$7.50, ph$24.30 PB 143 889

A number of the properties of nitric acid, the oxides of nitrogen, and their mixtures with water have been reviewed, and a summary account of the results is given in a systematic form, utilizing the units of measurement commonly encountered in industry. Information concerning the volumetric and phase behavior of the components, their binary mixtures, and the nitric acid-nitrogen dioxide-water ternary system is presented for both physical and physicochemical equilibrium, as well as for the approach to physicochemical equilibrium while at physical equilibrium. Data pertaining to the electrical conductance and optical absorbance of some of these systems are set forth, together with transport properties, such as the viscosity of the liquid phase. In addition, information related to the volumetric and phase behavior of the nitrogen dioxide-nitric oxide system and to the behavior of pure nitric oxide has been included.

Central Inst. for Industrial Research (Norway).
THE STRUCTURE OF LINEAR POLYMERS: LOWER n-HYDROCARBONS, by Nico Norman and Hans Mathisen. Final technical rept. no. 1, 1 July 58-30 June 59, on Contract DA 91-508-EUC-377. July 59, 98p. 74 refs.
Order from LC mi$5.40, ph$15.30 PB 143 454

The immediate purpose of the present work is to study and to compare the structure of the lower normal paraffins in the gaseous, liquid, and solid state. As

proper substances are chosen n-pentane, n-hexane; n-heptane, and n-octane. The second and perhaps - most important purpose of the started investigations is to gain experience as to the usefulness of the electron- and different X-ray diffraction techniques for the study of linear polymers. For most high polymers it is impossible to grow good enough crystals for single crystal X-ray diffraction work. It is hoped that a comparison of the results obtained for the relatively simple n-paraffins will give an indication of the structural information one may expect to get from electron and X-ray diffraction studies on these more complicated compounds.

Edinburgh U. (Gt. Brit.)
REACTIONS RELATED TO OXIDATION, by W. E. Falconer, J. H. Knox, and A. F. Trotman-Dickenson. Final technical rept. no. 1, Sep 58-Sep 59, on Contract DA 91-508-EUC-372. 28 Sep 59, 14p. 6 refs.
Order from LC mi$2.40, ph$3.30 PB 143 898

The competitive oxidations of cyclopropane-ethane and methane-ethane mixtures have been studied, and the relative rates of disappearance of reactants have been determined. The experimental technique is described. The oxidation of ethane alone has been studied and the products analyzed for methane and ethylene. Suggestions for future research have been proposed.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
DILUTE SOLUTION PROPERTIES OF POLY-(N-LAURYL METHACRYLATE), by Suresh N. Chinai and Rudolph A. Guzzi. Oct 59, 34p. 12 refs. Technical rept. 2649.
Order from LC mi$3.00, ph$6.30 PB 142 487

Poly-(n-lauryl methacrylate) was prepared by the emulsion technique and fractionally precipitated by using benzene as the solvent and isopropanol as the precipitant to yield nine sharp fractions. The weight-average molecular weight dependence of the intrinsic viscosity $[\eta]$, and the root mean square end-to-end distance in an ideal (poor) solvent (isopropyl acetate at 13°C) and in a nonideal (good) solvent (n-butyl acetate at 23°C) were established. The relationship between the osmotic second virial coefficient A_2 and the weight-average molecular weight M_w in the nonideal solvent (n-butyl acetate at 23°C) was also determined. The effect of the size of the pendent group on the degree of chain extension is evident in the following order of decreasing chain extension:
PLMA > PHMA > POMA > PBMA > PEMA > PMMA.
Huggins constant k' was calculated for poly-(n-lauryl methacrylate) in the ideal and nonideal solvent. The molecular expansion factor α and the Flory universal constant ϕ were calculated for poly-(n-lauryl methacrylate).

Naval Research Lab., Washington, D. C.
SURFACE ACTIVITY OF FLUORINATED ORGANIC COMPOUNDS AT ORGANIC-LIQUID/AIR INTERFACES. PART II. SURFACE TENSION VS CONCENTRATION CURVES, ADSORPTION ISOTHERMS AND FORCE-AREA ISOTHERMS FOR PARTIALLY FLUORINATED CARBOXYLIC ESTERS, by N. L. Jarvis and W. A. Zisman. Interim rept. 8 Oct 59, 19p. 13 refs. NRL rept. 5364.
Order from OTS $0.50 PB 151 808

This investigation was undertaken to study the ability of a series of partially fluorinated carboxylic esters to depress the surface tension of a group of pure organic liquids. The surface activity of these solutes in the different solvents was shown to vary with the hydrocarbon content, fluorocarbon content, and the number and position of associating groups in the solute. The balance between these organophilic and organophobic groups in the solute molecules which gave maximum surface tension depression varied with the surface tension of the solvent and the solubility of the solute in it. In this report surface tension vs concentration curves, adsorption vs concentration isotherms, and graphs of monolayer film pressure vs area per molecule of adsorbed solute are given for each fluorochemical in the various organic solvents. Theoretical calculations from these data give the extent of adsorption and explain the orientation and packing of the molecules adsorbed at the interface of liquid and air. A discussion is given of the effect of the organophobic and organophilic constituents of the solute molecules on the extent of adsorption and on the tendency to associate with the various solvents.

Naval Research Lab., Washington, D. C.
TAUTOMERISM IN PHOSPHORUS CHEMISTRY. PART III. HYDROGEN ISOTOPE EXCHANGE IN PHENYLPHOSPHINIC ACID AND ITS ANION, by R. B. Fox. Final rept. 20 Oct 59, 13p. 22 refs. NRL rept. 5393.
Order from LC mi$2.40, ph$3.30 PB 142 450

A study has been made of prototropy in the P(O)H system as found in phenylphosphinic acid. Hydrogen isotope exchange has been used as a measure of the extent to which prototropy may occur in such phosphorus derivatives. In aqueous solutions, the exchange has been found to be both acid- and base-catalyzed, with a prototropic equilibrium probably governing the rate of the acid-catalyzed reaction. Exchange takes place to only a negligible extent in buffered neutral solutions over periods up to six weeks, which makes unlikely a termolecular attack as a significant factor in the mechanism of the reaction. A comparison of exchange rates with those found in aqueous acetone solutions indicates that the proportions of enol in both systems is of the same order of magnitude. (See also PB 140 391)

THE INTERACTION OF DIBORANE WITH SILYL CYANIDES. Technical rept. no. 3 on Contract Nonr-551(21). 22 Oct 58, 19p. 21 refs.
Order from LC mi$2.40, ph$3.30 PB 143 047

The interaction of diborane with silyl cyanide or trimethylsilyl cyanide results in the formation of the adducts $H_3SiCN.BH_3$ and $(CH_3)_3SiCN.BH_3$, respectively. When these are heated the corresponding silyl hydrides are eliminated and the polymeric compound $(BH_2CN)_x$ is formed.

Pennsylvania U., Philadelphia.
THE INTERACTION OF ALKYL BORINES WITH TRIMETHYLSILYL CYANIDE. Technical rept. no. 5 on Contract Nonr-551(21). 15 Oct 58, 14p. 11 refs.
Order from LC mi$2.40, ph$3.30 PB 143 219

The interaction of $(n\text{-}C_4H_9)_2BCl$ with $(CH_3)_3SiCN$ results in the formation of polymeric $(n\text{-}C_4H_9)_2BCN$, which is a viscous liquid. This substance reacts with sodium in liquid ammonia to produce monomeric $(n\text{-}C_4H_9)_2BNH_2$. $(CH_3)_3B$ and $(CH_3)_3SiCN$ react to produce substances which spontaneously polymerize or condense.

Wisconsin U., Madison.
PYRIDINIUM COMPLEXES. I. THE SIGNIFICANCE OF THE SECOND CHARGE-TRANSFER BAND OF PYRIDINUM IODIDES, by Edward M. Kosower. Rept. on Contract AF 49(638)282. 29 Sep 59, 21p. 28 refs. AFOSR-TN-59-813.
Order from LC mi$2.70, ph$4.80 PB 143 589

In a previous paper, the existence of a second pyridinium iodide charge-transfer absorption band was mentioned. The present paper shows how the existence of the second band is in accord with the current model for pyridinium iodide charge-transfer transitions.

Wisconsin U., Madison.
PYRIDINIUM COMPLEXES. III. CHARGE-TRANSFER BAND OF POLYALKYLPYRIDINIUM IODIDES, by Edward M. Kosower. Rept. on Contract AF 49(638)282. 29 Sep 59, 40p. 59 refs. AFOSR-TN-59-811.
Order from LC mi$3.00, ph$6.30 PB 143 599

A study of the first (long wavelength) charge-transfer band of twenty different alkylpyridinium iodides under carefully standardized conditions has established that (1) increasing the number of methyl groups raises the transition energy (2) changing a methyl group from the 3- to the 2- to the 4-position increases the transition energy (3) varying the nature of the alkyl group from methyl to t-butyl on the 4-position has virtually no effect upon the transition energy and (4) the solvent sensitivity of 1-methylpyridinium iodide is appreciably greater than that of 1-ethyl-4-carbomethoxypyridinium iodide, as might have been expected on the basis of a previously proposed model. (See also PB 143 589)

EMISSIVITY OF THE 4.3 MICRON BAND OF CARBON DIOXIDE, by Gilbert N. Plass. Scientific rept. no. 2 on Contract AF 19(604)2166. 31 July 58, 39p. 13 refs. ASI pub. no. U-238; AFCRC TN-58-604.
Order from LC mi$3.00, ph$6.30 PB 138 860

The spectral emissivity of carbon dioxide in the 4 to 5 micron region is calculated as a function of temperature, pressure and amount of emitting gas. It is assumed that the electric moment matrix element can be calculated by using the harmonic oscillator approximation to represent the vibrational states. The emission of the isotopic molecule $C^{13}O_2$ is taken into account. The choice of a proper model to represent the CO_2 emission is discussed.

Amherst Coll., Mass.
AN ATTEMPT TO ESTABLISH THE EXISTENCE OF AND POSSIBLY THE NATURE OF THE COMPOUNDS $Na_2N_2O_x$ (x = 3, 4, 5 or 6) by Earle S. Scott Final summary rept. on Contract DA 19-059-ORD-2627. 25 July 59, 11p. 6 refs.
Order from LC mi$2.40, ph$3.30 PB 143 484

The study of the reaction of sodium hyponitrite, silver hyponitrite and sodium nitrohydroxylamate with liquid dinitrogen tetroxide has yielded no evidence for the existence of anions of the type N_2O_x. X-ray diffraction patterns and chemical analyses of the solid products obtained indicate that the nitrate is in each case the predominant product and that, in the case of the two sodium salts, an appreciable but variable quantity of sodium nitrite is formed. The product NaNO obtained from the reaction of nitric oxide with a solution of sodium in liquid ammonia has been prepared and caused to react with dinitrogen tetroxide in carbon tetrachloride at 0° C. Attempts were also made to prepare a third compound reported to be NaNO by the direct reaction of molten sodium with nitric oxide. To date, the conditions required to get a reproducible product have not been established.

SPECTRALLY SELECTIVE INFRARED DETECTOR DEVELOPMENT, by Andrew C. Rudomanski. Final rept. for June 57-May 58 on Contract DA 18-108-cml-6386. 11 June 58, 41p.
Order from LC mi$3.30, ph$7.80 PB 143 340

Spectrally Selective Thermistor Detectors have been developed to be incorporated in a simplified gas alarm system. Detectors are responsive in narrow spectral intervals matched to generic absorption bands, thus eliminating the need of dispersive optics. Two detectors have been made, one sensitive at 9.8 μ and the other to intervals above and below 9.8 μ and can thus be used in a standard two-channel radiometer.

Battelle Memorial Inst., Columbus, Ohio.
PARTICLE-SIZE DISTRIBUTION AND CONCENTRATION OF AEROSOLS, by J. M. Pilcher, R. I. Mitchell, and R. E. Thomas. Annual rept. no. 2 for 1 Apr 53-31 Mar 54 on Contract DA 18-064-cml-1914. 31 Mar 54, declassified 26 Apr 56, 75p.
Order from LC mi$4.50, ph$12.30 PB 143 365

The performance of the Battelle No. 3 cascade impactor has been substantially improved as an instrument for determining the particle-size distribution and concentration of aerosols. A fluorometric method

of analysis, to determine the amount of aerosol particles impacted on each stage, has been developed as a substitute for the more tedious gravimetric analysis using microbalances. Analysis of variance of particle-size data obtained by gravimetric methods indicates that with suitable precautions, the procedure may be brought under statistical control. The reproducibility of weighing on microbalances is about ±9 micrograms at the five per cent level. Studies related to particle-size analysis such as (1) the performance of the Casella impactor, (2) isokinetic sampling, (3) equilibrium evaporation of SM slurry, and (4) control of BG contamination are reported. Considerable additional research is required to perfect the impactor method of particle-size analysis. Eleven recommendations are made herein.

Florida State U., Tallahassee.
ORGANIC REACTIONS OCCURRING IN OR ON MICELLES. I. KINETIC STUDIES OF THE ALKALINE FADING OF TRIPHENYLMETHANE DYES AND SULFONPHTHALEIN INDICATORS IN THE PRESENCE OF DETERGENT SALTS, by E. F. J. Duynstee and E. Grunwald. Technical rept. on Contract Nonr-988(02). 2 Dec 58, 22p. 10 refs. AD-207 095.
Order from LC mi$2.70, ph$4.80 PB 143 611

Kinetic studies were made of the fading in alkaline solution of triphenylmethane dyes and of sulfonphthalein indicators in the presence of micelle-forming salts.

STUDIES AND EXPERIMENTAL INVESTIGATIONS IN THE FIELD OF MEASUREMENTS OF THE HEAT OF FREE ENERGY OF FORMATION OF THE CHLORIDES AND BROMIDES OF NIOBIUM AND TANTALUM, by P. Gross, C. Hayman and others. Final technical rept. for 1 June 57-31 May 59 on Contract DA 91-508-euc-176. 23 June 59, 46p. 12 refs. R. 115/5/23.
Order from LC mi$3.30, ph$7.80 PB 143 115

The standard heat of formation established for each compound is as follows:-
Niobium pentachloride ΔH^{o}_{298} = -190.6 kcal/mole
Niobium pentabromide ΔH^{o}_{298} = -132.85 kcal/mole
Tantalum pentachloride ΔH^{o}_{298} = -205.52 kcal/mole
Tantalum pentabromide ΔH^{o}_{298} = -142.96 kcal/mole
The total error in these values is estimated to be not greater than 0.3 kcal/mole for the pentachlorides, and not greater than 0.4 kcal/mole for the pentabromides.

General Electric Research Lab., Schenectady, N. Y.
PREPARATION OF DIBORANE BY REACTION OF LITHIUM HYDRIDE AND BORON CHLORIDE, by J. R. Elliott and G. F. Roedel. Rept. on Project Hermes, Contract [DA 30-115-ORD-23]. 18 Feb 48, declassified 11 Aug 49, 11p. 1 ref. Rept. no. 55254.
Order from LC mi$2.40, ph$3.30 PB 144 264

Boron chloride gas passed into a slurry of lithium hydride in ethyl ether yields diborane of high purity.

Guggenheim Jet Propulsion Center, Calif. Inst. of Tech., Pasadena.
EXPERIMENTAL VERIFICATION OF THEORETICAL RELATIONS BETWEEN TOTAL GAS ABSORPTIVES AND TOTAL GAS EMISSIVITIES FOR CO, by U. P. Oppenheim. Technical rept. no. 28 on Contract Nonr-220(03). Oct 58, 19p. 10 refs.
Order from LC mi$2.40, ph$3.30 PB 143 241

An experimental study has been carried out for the purpose of verifying theoretical predictions concerning the relations between total absorptivities and total emissivities for transparent gases. The experimental conditions have been designed in such a way as to permit a direct check of theoretical relations derived for (a) non-overlapping dispersion lines and (b) spectral lines with sufficient pressure broadening to permit neglect of the rotational fine structure. The apparatus for the measurement of total gas absorptivities is described. Results for total absorptivities of carbon monoxide measured at temperatures between 300 and 500°K are given and total emissivities have been calculated in the temperature range of 300 to 1600°K. The range of total gas pressure is 0 to 515 psia.

Institute of Mathematical Sciences, New York U., N. Y.
GROWTH OF DROPS BY CONDENSATION, by Ignace I. Kolodner. Rept. on Contract DA 18-064-cml-2518. Mar 55, 30p. 4 refs. IMM-NYU-215; AD-121 943.
Order from LC mi$2.70, ph$4.80 PB 143 262

When the vapor pressure (or concentration) in air surrounding a liquid nucleus exceeds the saturation pressure for a given temperature, vapor will condense on the nucleus and the drop will grow; effort is made to determine this growth. The problem is preliminary to a more difficult study of the behavior of a collection of drops in a supersaturated medium, a situation which may serve as a model of the formation of clouds. The problem is formulated, and the results obtained are compared with those already available. The remainder of the paper is devoted to derivations and proofs.

Instituto de Quimica Fisica (Spain).
KINETICS OF THE SULPHURATION OF METALLIC SURFACES, by J. Llopis, J. M. Gamboa, and L. Arizmendi. Annual rept. no. 2 on Contract AF 61(514)1329. May 59, 48p. 11 refs. AFOSR-TN-59-597; AD-217 180.
Order from LC mi$3.30, ph$7.80 PB 143 681

Surface reaction of copper with solutions of diphenylthiourea: The kinetics of the surface reaction of copper with solutions of diphenylthiourea in xylene has been followed by the radiochemical method. This reaction yields coherent sulphide films, showing neat and uniform interference colors. In the circumstances of these experiments, the reactivity of the diphynylthiourea with copper is lower than that of thiourea in

aqueous solution and the kinetic law of the film growth is linear with time. Surface reaction of copper with solutions of diethyl polysulphides: The results of the present experiments suggest that diethyl disulphide, dissolved in dry xylene, does not react with copper, while diethyl trisulphide in the same conditions does react, giving up the three atoms of sulphur to form a film of sulphide on the surface. In the reaction of trisulphide, the kinetic law of film growth is linear with time. The films of sulphide formed are at first coherent and show interference colors; however, black circular stains soon appear and the corrosion rate increases then appreciably with time. The influence of free sulphur in mixed xylenic solutions with diethyl trisulphide has been studied. (See also PB 136 867)

John Harrison Lab. of Chemistry, U. of Pennsylvania, Philadelphia.
INVESTIGATIONS OF THE COVERAGE OF ELECTRODES WITH ADSORBED ATOMIC HYDROGEN DURING HYDROGEN EVOLUTION, by J. O'M. Bockris and F. Colum. Rept. on Contract Nonr-551(22). 31 Dec 58, 36p. 4 refs.
Order from LC mi$3.00, ph$6.30 PB 143 849

The study of the ionization of adsorbed H on noble metal electrodes carried out in alkaline solutions is described in this report. Most of the experimental procedures in this work were similar to those used in Devanathan's work.

Linfield Research Inst., McMinnville, Oreg.
RESEARCH ON ELECTROLYTIC MICROMACHINING TECHNIQUES OF REFRACTORY METALS FOR USE IN FIELD EMISSION DEVICES, by H. W. Pitman and D. C. Hamby. Quarterly progress rept. no. 1, 15 July-15 Oct 58, on Contract DA 36-039-sc-78191. [1958] 49p. 10 refs.
Order from LC mi$3.30, ph$7.80 PB 143 697

Existing literature data on the emf of the tungsten electrode in alkaline electrolytes is analyzed with a view toward establishing the electrode process responsible for the observed dependence of emf on pH and tungstate ion concentration. Coulometric measurements on the tungstic oxide layer forming process have been initiated and an estimate of the forming field required to produce oxide growth has been obtained for formations in dilute nitric acid. Initial runs in the establishment of a calibration curve for spectrophotometric tungsten analysis are being made.

Minnesota U., Minneapolis.
A MODIFICATION OF THE METHOD OF FLASH PHOTOLYSIS AND ITS APPLICATION TO THE STUDY OF LABILE INTERMEDIATES IN REACTIONS SENSITIZED BY COMPLEX MOLECULES, by Robert Livingston. Final rept. for 1 Sep 55-31 Mar 59 on Contract AF 18(600)1485. 12 Aug 59, 12p. 3 refs. AFOSR-TR-59-114.
Order from LC mi$2.40, ph$3.30 PB 143 630

This project was initiated to obtain quantitative information regarding the spectroscopic properties and reactions of photochemically-produced labile states of certain polyatomic molecules. A modification of the flash photolytic technique was used in those studies and a substantial part of our time was spent in developing and testing new apparatus. The half lives of the triplet states of chlorophyll and anthracene in solution and the quenching action of certain compounds upon these triplet states were measured.

Missouri U., Columbia.
ELECTROCHEMICAL SYSTEMS FOR USE IN LOW TEMPERATURE BATTERIES, by G. M. Arcand and J. R. Tudor. Quarterly progress rept. no. 1, 17 Mar-16 June 58, on Contract DA 36-039-sc-74994. [1958] 49p. 6 refs.
Order from LC mi$3.30, ph$7.80 PB 138 837

Progress is reported on a fundamental investigation of KSCN and water in acetonitrile, of $ZnCl_2$ in dry propionitrile. Load tests at room temperature have been made on magnesium-manganese dioxide and zinc-manganese dioxide cells employing $KSCN-H_2O-CH_3CN$ electrolytes.

Modena U. (Italy).
ANODIC BEHAVIOR OF HYDROGEN PEROXIDE ON PLATINUM ELECTRODES, by G. Bianchi, G. Caprioglio and others. Technical scientific note no. 4 on Contract AF 61(052)85. 30 Apr 59, 38p. 16 refs. AFOSR-TN-59-921.
Order from LC mi$3.00, ph$6.30 PB 143 637

The evolution of oxygen from the acid solutions of hydrogen peroxide begins on platinum at low anodic tensions (+800 mV), on account of the probable intervention of the platinum oxides. At greater current densities, the process occurs in the same conditions as on other metals, like gold, and probably requires the intervention of the adsorbed atomic oxygen. The reaction between hydrogen peroxide and adsorbed oxygen would give rise to the evolution of the oxygen. The adsorption and the formation of platinum oxides can explain the anodic phenomena of hysteresis. In alkaline solutions the oxidation of hydrogen peroxide occurs on platinum with the same mechanism as on other metals. At greater current densities the discharge of the ions OH^- and the formation on platinum of a film of adsorbed OH radicals can intervene. The radicals can react with hydrogen peroxide to give rise to the evolution of oxygen.

Modena U. (Italy).
ELECTROCHEMICAL BEHAVIOR OF GRAPHITE ELECTRODES IN SOLUTIONS OF VARIOUS pH CONTAINING OXYGEN AND HYDROGEN PEROXIDE, by G. Bianchi, G. Caprioglio and others. Technical scientific note no. 3 on Contract AF 61(052)85. 30 Apr 59, 42p. 10 refs. AFOSR-TN-59-708.
Order from LC mi$3.30, ph$7.80 PB 143 596

Polarization measurements with graphite electrodes were affected in solutions of different pH, with oxygen or CO_2 bubbling and varying the H_2O_2 concentration of the solutions from zero to 10^{-1}M. Variations of potential with time at the moment of opening and closing the polarization circuit were also registered.

The results were interpreted by considering the intervention of processes occurring on graphite, which, however, does not behave as an inert electrode with respect to oxygen and H_2O_2 processes. The intervention of the electrode is manifested under the form of processes presumably due to the presence of the superficial oxide C (O) and to adsorbed carbonates $(CO_3^{--})_{ads.}$. Such processes can substitute or superimpose those concerning H_2O_2 and oxygen particularly in the case of acid solutions.

Naval Ordnance Lab., White Oak, Md.
ON THE NUMERICAL SOLUTION OF THE ADIABATICALLY EXPANDING GAS BUBBLE OF VARIABLE MASS IN AN INFINITE LIQUID MEDIUM, by Bernard Chern and Julius W. Enig. 20 Jan 58, 14p. 20 refs. NAVORD rept. 5735.
Order from LC mi$2.40, ph$3.30 PB 143 307

This report describes the behavior of a gas bubble, free from external forces and immersed in an infinite liquid medium, when gas is added to the bubble at a constant mass rate. Numerical solutions are obtained giving the bubble pressure, radius and temperature as a function of time for different values of mass addition rate. It is shown that the gas bubble reaches a first maximum pressure $P^{(1)}_{max}$, much greater than subsequent maxima. Up to the first pressure maximum, the bubble expansion is seen to be approximately isothermal. In terms of the reduced pressure, P, and a dimensionless parameter C, the relation

$$P^{(1)}_{max} = 1 + 0.5532\, C^{0.6808} \quad ; 0 \leq C \leq 2000$$

holds over the range studied.

Naval Research Lab., Washington, D. C.
CONSTITUTIVE RELATIONS IN THE WETTING OF LOW-ENERGY SURFACES AND THE THEORY OF THE RETRACTION METHOD OF PREPARING MONOLAYERS, by Elaine G. Shafrin and W. A. Zisman. Interim rept. 21 Oct 59, 14p. 32 refs. NRL rept. 5394.
Order from OTS $0.50 PB 151 936

Earlier systematic studies of the angle of contact θ exhibited by drops of liquid on plane, solid surfaces of low surface energy have revealed a regular linear variation in cos θ with the surface tension (γ_{LV}) of a large variety of liquids; this led to the concept of the critical surface tension of spreading (γ_C) and its use in characterizing the wettability of organic solids and of high-energy surfaces coated with adsorbed organic films. The wetting properties of low-energy organic surfaces are shown to depend upon the chemical structure and the physical packing of the atom groups in the outermost layer. For hydrocarbons, wettability decreases with increasing hydrogenation. Fluorine is the most effective hydrogen substitute in decreasing γ_C, whereas Cl, Br, I, O, and N increase the wettability of organic surfaces. The "retraction method" of preparing monomolecular films from solutions on solids is shown to be a direct consequence of the above constitutive law of wetting. The same analysis, applied to a pure liquid, results in the explanation of the behavior of the autophobic liquids at room temperature and of the process of depositing a monolayer on a solid by retraction from the melt over a range of temperature.

Naval Research Lab., Washington, D. C.
METALS COATED WITH FILMS OF LOW SURFACE ENERGY AS REFERENCE ELECTRODES FOR THE MEASUREMENTS OF CONTACT POTENTIAL DIFFERENCES, by K. Bewig and W. A. Zisman. Final rept. 23 Oct 59, 15p. 23 refs. NRL rept. 5383.
Order from OTS $0.50 PB 151 994

The central problem in the measurement of the contact potentials of solid and liquid surfaces in gaseous atmospheres is the stability of the contact potential of the reference electrode to which the potential difference between the two is referred. Noble metals, such as gold or platinum, are usually employed as reference electrodes, but, in gaseous atmospheres, their contact potentials can change significantly because of vapor adsorption on the reference surfaces. This occurs even on aged metals, the effect of adsorbed water vapor being especially great. But a metal which had been coated with a low-energy film, such as Teflon or FEP Teflon resin, exhibits little change in the contact potential in a wide variety of polar and nonpolar vapors. This is demonstrated by the results of recent studies of metals in a nitrogen atmosphere in which the water-vapor content was varied from 1% to as high as 91% R. H. Teflon-coated metal reference electrodes have proved to be remarkably stable under these conditions.

Naval Research Lab., Washington, D. C.
SURFACE ACTIVITY OF FLUORINATED ORGANIC COMPOUNDS AT ORGANIC-LIQUID/AIR INTERFACES. PART III. EQUATION OF STATE OF ADSORBED MONOLAYERS AND WORK OF ADSORPTION OF A FLUOROCARBON GROUP, by N. L. Jarvis and W. A. Zisman. Interim rept. 17 Nov 59, 10p. 12 refs. NRL rept. 5401.
Order from OTS $0.50 PB 151 997

Previous investigations have demonstrated that a wide variety of partially fluorinated carboxylic esters are capable of adsorbing as unimolecular films at the interfaces between various organic liquids and air, and also that these films are usually in a gaseous or otherwise expanded state. In the present study it is shown that isotherms of film pressure (F) vs area (A) per adsorbed molecule of solute, at large values of A, obey the simple equation of state $(F + F_o)(A - A_o) = kT$. However, as the film pressures increase, the deviation from this equation increases. The two-dimensional analog of the van der Waals equation $(F + a/A^2)(A - A_o) = kT$, which includes a more definitive correction factor for the intermolecular attraction between neighboring molecules in the film, was in good agreement with the experimental data even at very low areas per molecule. The constants a and A_o of the van der Waals equation were calculated for the F vs A isotherms of solute in various solvents, and the relation of these constants to the organophobic-organophilic balance in the solute molecules and to the association of solute and solvent molecules is discussed. In addition, the work of adsorption $\Delta\lambda$ of $-CF_2-$ groups at each organic-liquid/air interface was calculated. The plot of $\Delta\lambda$ vs solvent surface tension was a straight line, which extrapolated fairly well to the value for $-CF_2-$ groups adsorbed at the water/air interface, as determined from surface tension vs concentration isotherms given in the literature for fluorinated solutes in water. (See also PB 151 808)

Ohio State U. Research Foundation, Columbus.
THE SOLUBILITY OF HYDROGEN IN DIBORANE, by Jih-Heng Hu and George E. MacWood. Technical research rept. Jan 56, 17p. 6 refs. MCC-1023-TR-196.
Order from LC mi$2.40, ph$3.30 PB 144 094

The solubility of hydrogen in liquid diborane was determined in the temperature range 113-181°K and the pressure range 0-40 atm. The solubility is found to increase with temperature. The heat of solution at infinite dilution ranges from 386-601 cal./mole.

Oregon U., Eugene.
PRESSURE BROADENING OF THE VIOLET TRIPLET OF MANGANESE IN THE PRESENCE OF ARGON AND HELIUM, by Shang-Yi Ch'en and Robert B. Bennett. Interim technical rept. no. 2, 1 Dec 57-Aug 59, on The Modification of the Shape and Positions of Spectral Lines by Foreign Gases under Well-Defined Conditions of High Pressure and High Temperature, Contract DA 04-200-ORD-713. [1959] 10p. 4 refs. AD-226 185.
Order from LC mi$1.80, ph$1.80 PB 144 026

The λ4030 absorption triplet of Mn ($3d^54s^2$, ^6S - $3d^54s4p$, ^6P) was studied under various pressures of argon and helium of relative density ranging from 1 to 30. The result indicates the inverse sixth power law of interatomic interaction and that the difference in interaction energy constant for the ground ^6S state and the excited ^6P states of Mn in argon is 3×10^{-58} erg cm^6.

CELL-VACANCY THEORY OF LIQUIDS, by Abdel S. Said and Frank C. Collins. Rept. on Study on Relation of Chemical Composition, Structure, and Physical Environment to Viscosity, Thermal Conductivity and Diffusion, Contract AF 33(616)3894. June 59, 14p. 8 refs. WADC Technical note 59-154.
Order from OTS $0.50 PB 161 109

The cell vacancy theory of Peek and Hill had been refined by spherically symmetrizing the cell density calculated from a cell potential which is unsymmetrically perturbed by the presence of an adjacent vacant cell instead of first spherically symmetrizing the cell potential before constructing the cell density as done by Peek and Hill. The refined procedure enables the enhanced density in the cell in the immediate neighborhood of the vacancy to be more fully taken into account. A variable fraction of vacancies is permitted by superposing the cell densities of a cell with no adjacent vacancies and a cell with one adjacent vacancy. In contrast to the results of Peek and Hill, minimizing the free energy in the present instance, predicts a substantial fraction of vacancies at normal liquid densities. The calculated pressure is not significantly improved. Further improvement of the cell-vacancy theory would require detailed calculations of the non-symmetrized cell density for various arrangements of multiple adjacent vacancies.

Rocketdyne, Canoga Park, Calif.
RESEARCH ON NITRIC ACID-SUPPORTED COMBUSTION, by R. J. Thompson. Final progress rept. on Contract AF 49(638)163. Mar 59, 66p. 13 refs. R-1157, [AFOSR]-TR-59-1; AD-208 301.
Order from LC mi$3.90, ph$10.80 PB 143 916

Details concerning an investigation of nitric acid flames with methane, propane, hydrogen, and acetylene are presented. Flame stability limits, flame speeds, combustion products and emission spectra were studied. (See also PB 135 609)

Stanford Research Inst., Menlo Park, Calif.
A FEASIBILITY STUDY: SUPERIMPOSED BEAMS: A TECHNIQUE FOR DETERMINING TWO-BODY REACTION CROSS SECTIONS, by Charles J. Cook and Clarence M. Ablow. Scientific rept. no. 1 on Contract AF 19(604)3475. 17 Sep 59, 54p. 38 refs. AFCRC-TN-59-472.
Order from LC mi$3.60, ph$9.30 PB 143 685

Crossed molecular beams cannot be utilized to measure two-body reaction cross sections for arbitrary reactants due to difficulties of production and detection of all but a few selected species. However, a wide range of reactants can be produced in fast (kev) beams and can be individually detected. Similarly, the reaction products resulting from superimposing two fast beams could be individually detected. The feasibility of accurately determining two-body reaction cross sections by a superimposed beam technique has been investigated. The apparatus described must be improved before accurate studies of ion-ion recombinations or sharply resonant chemical reactions can be made.

Stanford Research Inst., Menlo Park, Calif.
LATTICE ENERGIES OF THE ALKALI HALIDES AND THE ELECTRON AFFINITIES OF THE HALOGENS, by Daniel Cubicciotti. Technical note no. 4 on Contract AF 49(638)89. July 59, 24p. 27 refs AFOSR-TN-59-726.
Order from LC mi$2.70, ph$4.80 PB 143 162

The overlap repulsion parameters that occur in the Born-Mayer treatment of lattice energies have been re-evaluated for the alkali halides from recent compressibility data. With these parameters the lattice energies of the alkali halides were calculated. The lattice energies were combined with thermochemical

data to calculate the electron affinities of the halogens. The values obtained were: F 80.2; Cl 85.0; Br 79.5; I 72.5 kcal/mole.

Syracuse U., N. Y.
STUDY OF THE MIGRATION AND DESCRIPTION OF A DIMORPHIC ADSORBATE USING THE FIELD EMISSION MICROSCOPE: TITANIUM ON TUNGSTEN, by Robert C. Abbott and Allan M. Russell. Technical rept. on Contract AF 49(638)93. June 59, 49p. 31 refs. AFOSR-TR-59-89.
Order from LC mi$3.30, ph$7.80 PB 143 678

The desorption was measured by the field emission technique and the activation energies were determined. In addition, estimates were made for the average number of titanium-titanium and titanium-tungsten bonds broken during migration and desorption.

Washington U., Seattle.
RESEARCH IN HETEROGENEOUS CATALYSIS, by G. D. Halsey, Jr. Technical rept. for 15 Sep 53-15 Sep 59 on Contract AF 18(600)987. [1959] 10p. 8 refs. AFOSR-TR-59-127.
Order from LC mi$1.80, ph$1.80 PB 143 909

Papers covering the project are listed. None have been published. A summary of the present status of the problem is also given.

EARTH SCIENCES

Oregon State Coll. School of Science, Corvallis.
HYDROGRAPHY OF OREGON ESTUARIES, by Wayne V. Burt and Bruce McAlister. Data rept. no. 3, June 56-Sep 58, on Contract Nonr-1286(02). Oct 58, 20p. Reference 58-6.
Order from LC mi$2.40, ph$3.30 PB 143 699

Unpublished hydrographic data for Oregon Estuaries (Alsea, Columbia, Coos, Nehalem, Netarts, Siletz, Siuslaw, Tillamook, Umpqua, and Yaquina) are tabulated.

Climatology and Meteorology

Air Force Cambridge Research Center, Bedford, Mass.
ACCURACY OF MEAN MONTHLY GEOSTROPHIC WIND VECTORS AS A FUNCTION OF STATION NETWORK DENSITY, by Henry A. Salmela. June 59, 45p. 3 refs. Air Force Surveys in Geophysics no. 112; AFCRC-TN-59-268; AD-217 034.
Order from OTS $1.25 PB 161 113

Two experiments, aimed at studying the accuracy of analyses of mean monthly contour charts at three levels, with five different densities of station network coverage in one experiment and four in the other, are described. The results of the experiments show that when geostrophic winds computed from mean monthly upper-air contour charts based on sparse data coverage are compared to those derived over areas of optimum coverage a quantitative measure of the relative accuracy is obtained.

Air Force Cambridge Research Center, Bedford, Mass.
NUMERICAL EXPERIMENTS IN FORECASTING AIR AND SOIL TEMPERATURE PROFILES, by Donald W. Stevens. July 59, 68p. 42 refs. GRD Research notes no. 12; AFCRC-TN-59-252.
Order from OTS $1.75 PB 161 151

A numerical forecasting model based on Taylor's heat-transfer equation for the atmosphere and the classical heat-conduction equation for the soil is presented. The surface energy-budget equation is solved for the surface temperature, and the equations are integrated numerically to provide 4-hour forecasts of the temperature profiles in the soil and atmosphere. Five experiments using different functional forms for eddy conductivity are described, and the results are compared with observations. The last experiment showed reasonably good agreement between the forecast and observed temperatures, the maximum error being 1.6°K. The model constants producing this result are not unreasonable in the light of present knowledge of the magnitude and vertical variation of the eddy conductivity. The shortcomings of the model are discussed, and some plans for further testing are listed. Suggestions for improving the model are presented, and a brief discussion of the potentialities of an analogue computer for solving problems of this type is given.

Air Weather Service, Washington, D. C.
MEMORANDUM ON DENSITY-ALTITUDE. Sep 57, 15p. 7 refs. AWS Technical rept. no. 105-101 (Rev. 2).
Order from LC mi$2.40, ph$3.30 PB 143 289

Basic definitions and discussions are presented.

[Army Signal] Radio Propagation Agency, Fort Monmouth, N. J.
COMPARISON OF PREDICTED AND OBSERVED SIGNALS ON A NORTH ATLANTIC PATH, by Luther C. Kelley. July 56, 16p. Proj. 419.
Order from LC mi$2.40, ph$3.30 PB 143 139

The objective of this report is to determine the accuracy of the method presented in Technical Report No. 9 (PB 103 045) for determining the monthly median received signal intensity of a high frequency radio circuit whose path crosses the North Atlantic and skirts the auroral zone. Observed data (receiver input voltage) is available for the circuit, GLH, Dorchester, England to Riverhead, Long Island, New

York. The validity of Technical Report No. 9 methods for this type of path is to be checked by comparing observed and calculated values. The period considered is January 1947 to December 1949 inclusive.

Blue Hill Meteorological Observatory, Milton, Mass.
CLOUD PATTERNS AND RELATED AIR MOTIONS DERIVED BY PHOTOGRAPHY, by John H. Conover. Final rept. on Contract AF 19(604)1589. June 59, 273p. 24 refs. AFCRC-TR-59-246; AD-215 936.
Order from LC mi$11.10, ph$42.60 PB 143 659

Under conditions of strong winds a banded structure of the troposphere, approximately parallel to the wind, may be revealed by clouds at any level. The following band types and their approximate dimensions were found at cirrus levels: large scale, 100 mi apart and up to at least 350 mi long; major bands 2.3 mi apart and up to at least 80 mi long; minor bands 0.2 mi apart and a few miles long. At altocumulus levels major bands are found. Sharp edges to extensive cirrus sheets or banded cirrus are generally found a few miles south of the jet stream core. "Streaky" cirrus denotes jets to the north and south. When banded or "streaky" cirrus is observed 50% of the time it lies on the warm side and within 200 mi of the jet core and in the entrance or neutral regions. Horizontal vortices, approximately parallel to the wind, through which the air flows in a helical motion create the major cloud bands. Adjacent vortices rotate in opposite directions. Cloud forms between vortices in rising air and spreads laterally, depending on the average shear and lapse rate through the layer of cloud formation. Cumulus cloud streets appear to be unaffected by irregularities of at least 700 ft in the earth's topography; they generally form in vortices of like rotation, the intervening vortices apparently are wiped out by the prevailing horizontal shear. The sea breeze may cause lifting to at least 16,000 ft as shown by stationary clouds at that level. Thunderstorm roll clouds rotate upward on the advancing side about a horizontal axis. Vertical motions dangerous to aircraft, operating at levels in which these rolls form, may be encountered.

Blue Hill Meteorological Observatory, Milton, Mass.
GROUND TEMPERATURE, VOLUME I, by Jen-Hu-Chang. Rept. on Contract DA 19-129-qm-348. 21 June 58, 305p. 402 refs.
Order from LC mi$11.10, ph$47.10 PB 143 364

This volume contains a comprehensive study and bibliography on the subject of ground temperature.

Chicago U., Ill.
ON THE INFLUENCE OF HEAT EXCHANGES ON MOTION AND WEATHER SYSTEMS, by Sverre Petterssen. Scientific rept. no. 10 on Contract AF 19(604) 2179. July 59, 18p. 11 refs. AFCRC TN-59-446.
Order from LC mi$2.40, ph$3.30 PB 143 027

In the present report is given a brief summary of the results of two pilot projects, the one dealing with stationary systems over the Great Lakes and the other with mobile systems on the North Atlantic Ocean.

Massachusetts Inst. of Tech., Cambridge.
NOTE ON VERTICAL VARIATIONS IN RADAR REFLECTIVITY, by C. William C. Rogers. Technical note no. 1 on Weather Radar Research, Contract AF 19(604)2291. June 59, 17p. 6 refs. AFCRC-TN-59-427.
Order from LC mi$2.40, ph$3.30 PB 143 401

This paper presents the results of a survey of the frequency of occurrence of detectable increases or decreases in radar reflectivity with height in the lower levels of the atmosphere. The survey is based on a series of RHI photographs taken by the Air Force at its AN/CPS-9 radar at Great Blue Hill. Only situations characterized by continuous non-showery precipitation were used. The total number of cases analyzed was 805; of these, 470 were in rain echoes below the bright band and 335 were in snow. It was found that by far the majority of the cases showed no detectable change in reflectivity with height in the lower levels of the atmosphere. The relationship between variations in reflectivity with height and the vertical velocity profiles is discussed. It is pointed out that larger vertical velocities and greater variations in reflectivity with height are observed in the middle atmosphere and it is suggested that in further studies of the relationship between these parameters attention should be directed toward the upper levels.

Naval Research Lab., Washington, D. C.
UPPER ATMOSPHERE RESEARCH REPORT NO. XXXIII. AEROBEE-HI REPORT NUMBER 6; SINGLE-LINE-SCAN TELEVISION FOR SPINNING ROCKETS, by F. H. Harris and J. Ainsworth. 11 Aug 58, 15p. 9 refs. NRL rept. 5168.
Order from LC mi$2.40, ph$3.30 PB 134 203

A brief experimental and theoretical study was made of the practicability of using a vidicon camera tube to measure the space orientation of spin stabilized Aerobee-Hi research rockets. The usual television camera tube xy scan was replaced by a single-line y scan and the motion of the image obtained by rotation of the television camera was used in lieu of the x scan. While ordinary television pictures are badly blurred by camera rotation, laboratory photographs which were obtained by means of a spinning, line scan camera demonstrated that this method can be used to obtain pictures whose quality is similar to those of standard television. Design equations for determining the sensitivity and resolution of a vidicon camera tube with single-line scan were derived and verified experimentally. It is concluded that with the use of a single-line scan, satisfactory sensitivity and resolution can be obtained with compact lightweight equipment, low power consumption, simplified circuitry, and reduced transmission bandwidth.

New York U. Coll. of Engineering, N. Y.
THE DIURNAL VARIATION OF TEMPERATURE NEAR TROPOPAUSE DUE TO A DIURNAL VARIATION OF TERRESTRIAL RADIATION, by Paul A. Davis. Scientific rept. no. 5 on Contract

AF 19(604)1755. June 59, 44p. 15 refs. AFCRC-TN-59-424.
Order from LC mi$3.30, ph$7.80 PB 143 592

Computations are made of the diurnal temperature variation experienced by the atmosphere in the 8-18 kilometer region as a result of the diurnal variation of terrestrial radiation reaching each layer. The methods of calculation are discussed in detail. For the two localities considered, Albuquerque, New Mexico and Bismarck, North Dakota, the diurnal ranges of temperature resulting from the terrestrial radiation were found to be less than 0.05°C. Of the three infrared absorbers considered, ozone contributed most to the diurnal temperature variation, followed by carbon dioxide and water vapor respectively. (See also PB 140 212)

New York U. Coll. of Engineering, N. Y.
VALLEY WIND STUDIES IN VERMONT, 1957, by Ben Davidson and P. Krishna Rao. Preliminary rept. on Contract AF 19(604)1971. Nov 58, 61p. 12 refs. AFCRC-TR-58-29.
Order from LC mi$3.90, ph$10.80 PB 138 594

A series of experiments, designed to isolate the effects of valley geometry and prevailing wind on the valley-wind system is described in detail.

Quartermaster Research and Engineering Center, Natick, Mass.
ATLAS OF MEAN DAILY MINIMUM TEMPERATURES, by Samuel Van Valkenburg, Henry J. Warman (Clark U.) and William C. Robison. May 59, 32p. 5 refs. Technical rept. EP-110.
Order from LC mi$3.00, ph$6.30 PB 143 788

The report, shows the worldwide variation, by seasons, of a climatic element that is a useful criterion of the degree of cold stress to be expected in a given area. The maps in this atlas have a direct application in determining clothing allowance zones and areas of issue for other items designed to meet specified temperature minima. The maps will serve as a useful reference in environmental research.

Quartermaster Research and Engineering Center, Natick, Mass.
CANAL ZONE ANALOGS VII. ANALOGS OF CANAL ZONE CLIMATE IN INDONESIA, THE PHILIPPINES AND BORNEO, by Will F. Thompson. June 59, 57p. 22 refs. Technical rept. EP-116.
Order from LC mi$3.60, ph$9.30 PB 143 281

The climate of Indonesia, the Philippines, and Borneo is compared with that of two localities in the Canal Zone: Balboa Heights, representing the drier, leeward Pacific side of the Isthmus of Panama, and Cristobal, representing the wetter, windward, Atlantic side. Distribution of areas of analogy of pertinent climatic elements and combinations of these elements are shown on maps. (See also PB 137 857)

Quartermaster Research and Engineering Center, Natick, Mass.
CANAL ZONE ANALOGS VIII. ANALOGS OF CANAL ZONE CLIMATE IN AUSTRALIA AND NEW GUINEA, by Walter Beale Blair and Jack V. Chambers. Rept. on Military Evaluation of Geographical Areas. July 59, 60p. 15 refs. Technical rept. EP-113.
Order from LC mi$3.60, ph$9.30 PB 143 832

The climate of Australia and New Guinea is compared with that of two locations in the Canal Zone: Balboa Heights, representing the drier, leeward, Pacific side of the Isthmus of Panama, and Cristobal, representing the wetter, windward, Atlantic side. Areas of analogy of pertinent climatic elements and combinations of these elements and combinations of these elements are shown on maps. (See also PB 143 281)

Sperry Gyroscope Co., Great Neck, N. Y.
A FLIGHT INVESTIGATION OF THE PERFORMANCE OF LOW CEILING/VISIBILITY METEOROLOGICAL EQUIPMENT. Summary rept. on Contract CCA 29773. Oct 54, 55p. Sperry rept. no. 5245-4060.
Order from LC mi$3.60, ph$9.30 PB 144 114

A general analysis of the flight test data has been performed. The results of this analysis can be used to determine what a pilot will see from the cockpit under observed meteorological and photometric conditions at any airport equipped with the ceilometer-transmissometer system. Information which is not currently available to the pilot, such as when the pilot can first see the ground, the approach lights, and the end of the runway, can be obtained from this system. This information, when used by the pilot, can provide an improvement in approach success and an increase in the safety of instrument approaches.

Stanford Research Inst., Menlo Park, Calif.
STUDY OF WEATHER STATIONS FOR ARMY USE. PHASE I: STATE OF THE ART, by I. G. Poppoff, G. B. Bell and others. Summary rept. on Contract DA 36-030-sc-78154. 15 Dec 58, 110p. 303 refs.
Order from LC mi$5.70, ph$16.80 PB 143 774

This report covers Phase I of a survey of the field of semi-automatic and automatic weather stations. Detailed results of the survey are presented as an annotated bibliography appended to this report.

Texas A. and M. Research Foundation, College Station.
SOME NON-PRECIPITATION ECHOES AS OBSERVED BY CPS-9 RADAR, by Stuart G. Bigler. Scientific rept. no. 1 on Contract AF 19(604)3864. Sep 59, 37p. 28 refs. Reference 59-12T; AFCRC-TN-59-475; AD-225 977.
Order from LC mi$3.00, ph$6.30 PB 143 590

Echoes from regions in the atmosphere where no reflecting or scattering sources could be seen are described. Such echoes, commonly called angels, include the following types, (1) thin lines associated with wind shifts in dry fronts, and preceding squall lines and air-mass showers, (2) echoes arranged in

layers aloft, (3) others which are uniform and diffuse, (4) fibrilliform echoes presumably resulting from thermals, and (5) mantle echoes which correspond to the outer boundaries of cumulus clouds. One or more of these echo types were photographed on 79% of the 37 radar operating days between 1 June and 23 July 1958. Meteorological conditions during the observations are described. First gust lines associated with scattered showers and thunderstorms are considered in some detail. Illustrations of the PPI and RHI presentations of these lines as well as wind, pressure, and temperature records are included. It is concluded that these thin lines are the boundary of mesosystems and provide another method for study of the characteristics of mesosystems.

Travelers Insurance Co., Hartford, Conn.
MULTIVARIATE STATISTICAL ANALYSIS OF ATMOSPHERIC PROCESSES, by Thomas F. Malone. Final rept. on Contract AF 19(604)3877. 1 Aug 59, 86p. 26 refs. AFCRC-TR-59-271.
Order from LC mi$4.80, ph$13.80 PB 143 519

Section I is an objective method for classifying sets of observed weather elements into groups, the classification depending upon events observed on the next day. Probabilities can be derived for various classes of events, and a screening type procedure can be applied to select the important classificatory variables. Canonical correlation, described in Section II provides a measure of the strength of the relationships between one entire set of variables and another entire set and thus may be viewed as a generalization of multiple correlation. In Section III the design of a large-scale experiment to examine this problem is described. The paper emphasizes the concept of a coordinate system moving with the storm center, outlines data-gathering procedures for the 352 cases, and presents plans for the data analysis.

A PROPOSED STEREOPHOTOGRAMMETRIC SYSTEM FOR TOPOGRAPHIC MAPPING FROM PHOTOGRAPHY TAKEN AT ALTITUDES UP TO 100,000 FEET, by J. W. Halbrook. 1 Apr 58, 18p. 1 ref. Technical rept. 1518-TR.
Order from LC mi$2.40, ph$3.30 PB 143 269

It is recognized that higher ceilings of aircraft will entail mapping for military purposes from photography taken above 50,000 ft. It is known that present day plotting equipment is not sufficiently precise to permit plotting of accurate large-scale military maps from photography taken at such altitudes. The system proposed as having a chance of meeting the requirements consists of convergent, 18-in. focal length, 9- by 9-in. format cameras with an optical projection plotting instrument to match. Magnification will be such that operator errors are smaller, percentage-wise. It is expected that the effect of reducing errors from all sources will result in sufficient accuracy to draw 20-ft contours approaching national map accuracy standards from 100,000-ft photography. It is concluded that: (a) it is possible to prepare topographic maps with 20-ft contours from photographs taken at altitudes up to 100,000 ft, (b) the proposed system is expected to produce maps that will meet emergency accuracy standards and possibly peacetime standards, and (c) the analytical method offers the best solution to the problem of triangulation.

Quartermaster Research and Engineering Center, Natick, Mass.
PREDICTIVE METHODS IN TOPOGRAPHIC ANALYSIS: II. ESTIMATING RELIEF FROM WORLD AERONAUTICAL CHARTS, by Walter F. Wood and Joan B. Snell. June 59, 23p. 3 refs. Technical rept. EP-114.
Order from LC mi$2.70, ph$4.80 PB 143 428

A method has been developed for obtaining an estimate of relief of an area from the World Aeronautical Charts (scale 1:1,000,000). This consists of determining a value for the lowest elevation and a value for the highest elevation of an area: relief of the area is the difference between these two values. The technique for determining lowest elevations is based on an assumed geometric progression of elevations along a stream; the technique for determining highest elevations depends on an arithmetic progression of elevations on a land surface. The accuracy of these methods was tested on 197 160-square-mile areas in the United States. Correlation of relief values at a scale of 1:1,000,000 with values for the same areas at a scale of 1:62,500 resulted in a coefficient of correlation of .9952. For the most part, relief from the 1:1,000,000-scale maps was within 200 feet of error. A series of regression equations has been devised which can be applied to improve these estimated values. Since it has been demonstrated that it is possible to obtain a realistic relief figure from the World Aeronautical Charts, rather serious limitations to quantitative terrain analysis, imposed by inadequate map coverage, can be overcome.

Wharton School of Finance and Commerce, U. of Pennsylvania, Philadelphia.
THE D-LINE METHOD OF ANALYZING A DISTRIBUTION, by Lester E. Klimm. Technical rept. no. 3 on Contract Nonr-551(01). 1 Oct 58, 14p. 1 ref.
Order from LC mi$2.40, ph$3.30 PB 143 796

Geographers and other investigators frequently encounter the problem of making orderly analyses of distributions in which the phenomena occur as interrupted areas of varying sizes and shapes, or as points. Examples of such areas are islands, lakes, cropland, urban agglomerations, clumps of vegetation, etc. On scales suitable for analysis, phenomena such as homesteads, farmsteads, etc., are often considered as dimensionless points. Distance relations between the occurences in a phenomenon having such an interrupted distribution are important qualities of that distribution. In essence, these relations are expressable in terms of distances across the interruptions. These distances across the interruptions may be measured or sampled and statistical results arrived at in terms of maximum, minimum, mode, mean, frequency, etc. In this study, however, attention will be concentrated on the geography of the distribution; i.e., the organization of a map of the distribution into regions with objectively-determined boundaries based on distance relations across interruptions.

ENVIRONMENTAL HANDBOOK FOR THE CAMP HALE AND PIKES PEAK AREAS, COLORADO, by Will F. Thompson and Arthur V. Dodd. Jan 58, 93p. 42 refs. Technical rept. EP-79.
Order from LC mi$5.40, ph$15.30 PB 138 598

This report is one of a series of handbooks, prepared by the Environmental Protection Research Division, on the physical environment of sites where tests are conducted by the Quartermaster Corps and other technical services of the Army. A section on comparisons of the Camp Hale and Pikes Peak areas with other mountain areas of the world has been included to indicate worldwide applicability of the findings.

Wisconsin U., Madison.
PROCEDURES IN THE DESCRIPTIVE ANALYSIS OF TERRAIN, by Edwin H. Hammond. Final rept. on Contract Nonr-1202(01). July 58, 160p. 19 refs.
Order from LC mi$7.50, ph$24.30 PB 143 100

The project originally grew out of the principal investigator's efforts to find, primarily for teaching purposes, an approach to land form study that would be of maximum use to geographers and to other students who are interested in the use of the land. One obvious need appeared to be a method for systematically characterizing the land form in terms of its inherent nature. It was with the hope of partially filling this gap that the present investigation was conceived and proposed.

Geology

Blue Hill Meteorological Observatory, Milton, Mass.
GROUND TEMPERATURE VOLUME II, by Jen-hu-Chang. Rept. on Contract DA 19-129-qm-348. 21 June 58, 215p.
Order from LC mi$9.60, ph$33.30 PB 143 693

This volume contains a collection of ground temperature means at stations located throughout the world. Volume I contains the text of the ground temperature study. The data are arranged alphabetically within continents according to country and station. An alphabetical list of the stations is also included. The assembled data are not homogeneous since the times of observation, the ground conditions and the methods of observation all differ greatly from station to station. However, the methods of observation have been described whenever such information is available. The coordinates of most stations are given. For most stations only the long period monthly means are presented but for a few selected stations the monthly values for individual years have been listed. Only in a very, very few cases have means been computed from data that were not entirely complete.

Physics of the Atmosphere

Geophysical Inst., U. of Alaska, College.
EXPERIMENT LUXEMBOURG, by G. C. Rumi and C. G. Little. Scientific rept. no. 1 on Contract AF 19(604)3880. Dec 58, 55p. 29 refs. AFCRC-TN-59-400; AD-216 316.
Order from LC mi$3.60, ph$9.30 PB 143 687

This report discusses the theoretical aspects of a radio wave interaction experiment designed to determine ν (the electron collision frequency), and N (the electron density), as a function of height in the artic D region. The proposed high latitude location of the observations plays an important role in the design of the experiment, which should be capable of providing continuous information on the state of the lower ionosphere in the auroral zone.

Geophysical Inst., U. of Alaska, College.
EXPERIMENT LUXEMBOURG, by G. C. Rumi. Scientific rept. no. 2 on Contract AF 19(604)3880. May 59, 35p. 11 refs. AFCRC-TN-59-471.
Order from LC mi$3.00, ph$6.30 PB 143 686

The present study is concerned with the absorption of radio waves in the D region of the ionosphere. A second section of the paper is devoted to an investigation of the electron collision frequency in the D region. It is deduced that the electron collision frequency in the D region increases during disturbed periods at auroral latitudes.

Naval Research Lab., Washington, D. C.
ATMOSPHERIC TRANSMISSION IN THE VISIBLE REGION, by J. A. Curcio and K. A. Durbin. Final rept. 6 Oct 58, 29p. 12 refs. Rept. 5368.
Order from LC mi$2.70, ph$4.80 PB 140 932

Atmospheric transmission measurements have been made over a period of one year at Washington, D. C., White Sands, New Mexico, and the east coast of Florida. Attenuation coefficients have been determined at three wavelengths (4700A, 5350A, and 6650A) by the Koschmieder contrast relationship, from about 300 sets of visual observations. Measurements were made through a variety of weather conditions including rain, drizzle, snow, and various degrees of haziness. The meteorological range varied from 1.5 to 120 km at a temperature range of 17° to 96°F and the relative humidity varied from 16 to 99 percent. Analysis of the data for the three wavelengths shows that within limits of ±15 percent the following relationship exists for all experimental conditions other than drizzle or rain: attenuation coefficient $\sim$(wavelength)$^{-1.3}$. The White Sands and Florida data are relatively small in number but appear to be similar to the Washington results. The foregoing relationship is in agreement with the particle size distribution function, $dN/d \log r = cr^{-3}$, observed experimentally by Junge. The particle size distribution appears to be independent of relative humidity and attenuation coefficient.

Naval Research Lab., Washington, D. C.
UPPER ATMOSPHERE REPORT NO. 35. GROUND STATIONS FOR NRL ROCKET STUDIES OF THE IONOSPHERE, by J. E. Jackson and G. H. Spaid. 31 Aug 59, 38p. 11 refs. NRL rept. 5342.
Order from OTS $1.00 PB 151 763

Between 1946 and 1958, a total of 23 rocket flights have been instrumented by NRL to measure electron densities in the ionosphere and to investigate various related phenomena. The measurements were based upon the transmission of cw signals from a rocket to receiving and recording stations on the ground. The nature of the experiments required phase comparisons between two harmonically related frequencies.

Since commercial receivers are unsuitable for this purpose, special receiving equipment was designed by NRL scientists to meet the experimental requirements. Particular considerations were given to bandwidth, noise, dynamic range, phase stability, signal-strength metering, and input circuitry. The extremely narrow-bandwidth operation which is possible with the cw method led to the design and use of a new type of crystal filter in the receiving system. The need for separate reception of the ordinary and extraordinary modes of propagation led to a novel adaptation of the magic T at 7.75 Mc. A two-station system, first used at White Sands, New Mexico, was later, during IGY, transferred to Ft. Churchill, Canada. A number of unusually stable, narrow-band rf sweep generators were developed to test, adjust, and calibrate the ground-station equipment. A greatly improved knowledge of the ionosphere at middle and arctic latitudes has resulted from the data acquired at these ground stations.

Naval Research Lab., Washington, D. C.
UPPER ATMOSPHERE RESEARCH REPORT NO. 36. BREAKDOWN AND DETUNING OF TRANSMITTING ANTENNAS IN THE IONOSPHERE, by J. E. Jackson and J. A. Kane. 24 Aug 59, 27p. 20 refs. NRL rept. 5345.
Order from LC mi$2.70, ph$4.80 PB 140 726

Impedance measurements made on a 7.75-Mc rocket-borne antenna during several rocket flights indicate at altitudes above 110 km a capacitance change whose magnitude can be used to determine ambient electron densities. In the 50 to 110 km region the antenna undergoes an rf glow discharge resulting in a severe resistive loading and reduction of radiated power. The properties of this breakdown were investigated both theoretically and by laboratory experiments. The use of a dc bias on the antenna was found helpful in preventing breakdown. The knowledge acquired from this project is being applied to the development of improved rf probe techniques for the direct measurements of electron densities in the ionosphere. A CASE STUDY OF THE TROPOPAUSE, by Edward G. Albert. Scientific rept. no. 6 on Contract AF 19(604)1755. July 59, 59p. 18 refs. AFCRC-TN-59-435.
Order from LC mi$3.60, ph$9.30 PB 143 668

From detailed analyses of a warm homogeneous anticyclone it is shown that the generally accepted model of tropopause configuration away from the disturbing influences of fronts and jet streams is untenable. The tropopause is not found to be a smooth and continuous surface of lapse rate discontinuity. A deep tropopause layer containing many such surfaces, some of small horizontal extent, is indicated. Additional analyses, in sub-polar and sub-tropical regions, indicate that this complex type of tropopause layer may extend even into areas where individual soundings show a single, unmistakable tropopause.

A DETERMINATION OF THE ABUNDANCE OF NITROUS OXIDE, CARBON MONOXIDE, AND METHANE IN GROUND LEVEL AIR AT SEVERAL LOCATIONS NEAR COLUMBUS, OHIO, by John H. Shaw. Scientific rept. no. 1 on Contract AF 19(604)2259. June 59, 44p. 16 refs. AFCRC-TN-59-428; AD-225 685.
Order from LC mi$3.30, ph$7.80 PB 143 359

Studies of the infrared spectra of long path lengths of air (704 m) permitted determination of the abundances of N_2O, CH_4 and CO in ground level air. The N_2O abundance was estimated as 0.28 ± 0.04 ppm with no seasonal variation detected. Air samples from greenhouses and barns showed an N_2O abundance of 0.33 ± 0.04 ppm. The estimated abundances of CH_4 and CO in ground level air were 2.4 ppm and 1.1 ppm, respectively.

RESPONSE TO TALL BUILDINGS TO RANDOM EARTHQUAKES, by A. Cemal Eringen. Technical rept. no. 12 on Contract Nonr-1100(02). Dec 57, 27p. 4 refs. AD-150 640.
Order from LC mi$2.70, ph$4.80 PB 138 182

A method of analysis is given for the calculation of mean square displacements and various correlation functions for a tall building having an arbitrary number of stories. The building is approximated by a series of masses and dashpots, and it is assumed that the mean square displacements of the earth movements are known. Mean square shearing forces and the energy present at each story are evaluated. It is indicated that Rice's formula may be used to calculate the number of times per unit time the random variable (e.g., displacements) will exceed a known, safe value. Computations concerning a ten-story building subject to purely random earthquake process were carried out on an electronic computer and are plotted.

WAVES IN LAKE ICE FROM IMPACTS, by D. H. Clements, D. E. Willis, and J. T. Wilson. Rept. on Project Michigan, Contract DA 36-039-sc-52654. Aug 58, 22p. 7 refs. Rept. no. 2144-265-T.
Order from LC mi$2.70, ph$4.80 PB 143 447

A method similar to the standard seismic-refraction techniques was employed for the wave studies. The impacts of falling weights on ice produced a longitudinal plate wave and a dispersive train of flexural waves.

The observed flexural wave dispersion was consistent with theoretical dispersion curves computed from the theory of long flexural waves in an ice sheet in water of a finite depth developed by Ewing and Crary (1934) and Wilson (1955). Three groups of points on the observed dispersion curves obtained from Lake Margrethe data represent flexural waves with frequencies from 2 to 8 cps, 13 to 25 cps and 40 to 140 cps. The first and third groups exhibit dispersion appropriate for the combined thickness of the two-layer floating ice sheet. The second group demonstrates dispersion for a wave path in the upper layer only. Hammer drops on land generate in the layer of frozen ground flexural waves in the frequency range 15 to 40 cps. These waves are transmitted across the lake-shore boundary and follow a wave path in the upper layer of lake ice. The observed flexural wave dispersion curve constructed from propagation data obtained at Garrison Dam, N. D., indicates a single-layer ice sheet. The ice thickness predicted by flexural wave theory is in good agreement with the measured thickness of ice at this site.

FITTING TRIALS OF E52R23 and E52R24 CIVILIAN PROTECTIVE MASKS, by Robert E. Martin. Interim rept. 10 Sep 53, declassified. 20p. CRLR 249.
Order from LC mi$2.40, ph$3.30 PB 144 208

The civilian protective mask E52R23, which resulted from modifying the E52R18 by adding a temple band, using a thicker headharness, and increasing the number of sizes from four (4) to five (5), was fitted on approximately 400 subjects, including children and adults. Only three (3) subjects were unable to be satisfactorily fitted, these being Negro adults with sloping foreheads who could not be properly fitted even with field protective mask M9A1. Near the end of these tests, the masks E52R23 showed deterioration due to the continuous handling and disinfecting. Of the 115 adult subjects on whom the one size (medium) of the Kimberly-Clark civilian protective mask E52R24 was fitted, an excellent face seal was obtained on all but three (3) subjects. The improper fit on these three (3) subjects was due primarily to the fact that they had small faces and the initial model of this mask was made in only one (1) size.

TEST OF FIRE EXTINGUISHING AGENTS FOR MAGNESIUM FIRES, by Ralph L. Hough. Mar 59, 21p. 4 refs. WADC Technical note 59-71; AD-212 631.
Order from LC mi$2.70, ph$4.80 PB 144 209

Magnesium and its alloys are frequently associated with aircraft or missile fires. Once ignited the material burns with great intensity and is supported by many materials used in ordinary fire extinguishing agents such as nitrogen, water, carbon dioxide and sulfur dioxide. Tests were conducted on five liquid agents: tricresyl phosphate (TCP), triethylene glycol and orthoboric acid (TEG-H_3BO_3), di-isodecyl phthalate and bromochloromethane in equal parts (DIDP-CB), di-2-ethylhexyl phthalate and bromochloromethane in equal parts (DOP-CB), and tri-methoxyboroxine (TMB). Of the agents tested, DOP-CB proved most effective in extinguishing the flame and inerting the metal so that it could be cooled with water. The mixture provides no handling or storage problems and is not adversely affected by extreme temperatures.

THE CALIBRATION OF CAPACITOR TYPE FUEL QUANTITY GAGES, by C. L. Bartberger. Rept. on Proj. TED NAM AE-7161. 13 Sep 51, 36p. 3 refs. Rept. no. NAES-INSTR-39-51.
Order from LC mi$3.00, ph$6.30 PB 143 433

To establish a standard basis for the calibration of capacitor type fuel quantity gages, with numerical values determined from an analysis of the Armour Research Foundation data on fuel characteristics.

Aeronautical Structures Lab., Naval Air Material Center, Philadelphia, Pa.
DEVELOPMENT OF AUTOMATICALLY ATTENUATED SHAKER EQUIPMENT; M. I. T. MULTIPLE SHAKER SYSTEM, ACCEPTANCE TESTS OF, by R. Friedman and G. Borod. 18 July 50, 69p. 4 refs. Rept. no. ASL NAM-24104.
Order from LC mi$3.90, ph$10.80 PB 143 354

Acceptance and preliminary evaluation tests were conducted on the M. I. T. Multiple Shaker Equipment to determine its suitability for use in exciting natural modes in aircraft structures. The equipment consists of a console, which contains all the necessary power supplies and controls for operating 24 shakers simultaneously, and 30 shakers, pickups and mounting stands. Each shaker has an associated vibration pick-up, the electrical output of which is used both as an aid in selecting the proper excitation and for recording purposes. Included in the console are 24 pick-up attenuator circuits and space for a multichannel oscillograph. The oscillograph itself was not furnished under the M. I. T. contract. The automatic feature of the system is the normalizer, which with the aid of an oscilloscope, enables the operator to apply to any or all 24 shakers a force proportional to the product of an assigned mass and actual vibration amplitude in accordance with the proportionality set up by a master shaker vibrating at or near a resonant frequency of the structure. Results obtained from a vibration survey on a Model SB2C-5 airplane and tests conducted on equipment components are presented.

Aerophysics Co., Washington, D. C.
AERODYNAMIC THEORY OF THE ANNULAR JET, PART I, by Gabriel D. Boehler and Robert J.

Spindler. Rept. on Contracts Nonr-2398(00) and 2747(00). Dec 58, 16/p. 37 refs. Rept. no. AR-581-R.
Order from LC mi$7.80, ph$25.80 PB 143 653

A theory is presented to describe the flow mechanics of air jets issuing from annular openings. Such jets are termed "annular jets". Two configurations are studied: (1) Annular nozzle far from the ground. The jet takes the form of a hollow tulip attached to the orifice of the nozzle and the thrust of the annular nozzle is smaller than that of the corresponding circular nozzle, since it is reduced by the negative pressure on the nozzle base plate resulting from the "jet pump" action of the "two dimensional" viscous laminar or turbulent, incompressible or compressible jet, using a "dividing streamline" concept. A solution of the three-dimensional problem is given in principle; this solution makes use of a Mangler transformation. Calculated base pressures are found to agree fairly well with those found experimentally. (2) Annular nozzle close to the ground. The annular jet, initially vertical, spreads out radially in the horizontal direction, thus creating a region of high pressure air under the nozzle base plate. The thrust of the annular nozzle is now larger than that of the corresponding circular nozzle since it is the sum of the direct jet thrust and of the pressure reaction between the ground and the nozzle base. The variation of the thrust augmentation with the distance from the ground can be explained in terms of simple momentum considerations and fairly good agreement with experimental results is found. The velocity distribution within the curved jet can only be found if viscous effects are introduced; a solution to the viscous problem is sketched in the two-dimensional case. Finally, existing experimental data are briefly reviewed and the parameters which make possible a correlation of these data are pointed out.

Aviation Medical Acceleration Lab., Naval Air Development Center, Johnsville, Pa.
THE REQUIREMENTS FOR MODIFICATION OF THE HUMAN CENTRIFUGE FOR HIGH PERFORMANCE AIRCRAFT AND SPACE VEHICLE SIMULATION RESEARCH, by Richard J. Crosbie. Rept. no. 3 on Proj. NM 11 02 12.6. 6 July 59, 34p. NADC-MA-5907.
Order from LC mi$3.00, ph$6.30 PB 143 723

Dynamic flight simulation is being conducted on the human centrifuge with gratifying success. The contributions are particularly important in the following areas: pilot tolerance, pilot restraint, cockpit instrumentation, control system design, controllability - with its implication of airframe and engine design, flight techniques including emergency procedures, and pilot training. Preliminary studies indicate that, by a number of modifications to the centrifuge, its capability can be increased.

Bell Helicopter Corp., Fort Worth, Tex.
COST ANALYSIS OF A LIGHT WEIGHT TWO-PLACE OBSERVATION HELICOPTER. Rept. on Contract DA 44-177-tc-420. 27 Oct 57, 33p. Rept. no. D233-099-003; AD-204 372L.
Order from LC mi$3.00, ph$6.30 PB 138 543

Chicago Midway Labs., U. of Chicago, Ill.
DETERMINATION OF FACTORS GOVERNING SELECTION AND APPLICATION OF MATERIALS FOR ABLATION COOLING OF HYPERVELOCITY VEHICLES, by John H. Bonin, Channon F. Price, and Donald E. Taylor. Rept. for 1 Dec 57-30 Nov 58 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)5436. July 59, 142p. 6 refs. WADC Technical rept. 59-87, Pt. 1; AD-226 829.
Order from OTS $2.75 PB 161 090

The report includes the results of an investigation for which the prime objective was the determination of the behavior of materials exposed to thermal environments representative of re-entry conditions. The environment encountered by ballistic, glide, and skip vehicles is reviewed. Heat flow into single and composite slab materials for heat sink applications is discussed. The development and calibration of an air-stabilized arc facility of a nominal 1000-KW rating is described. In the experimental phase of the investigation, representative materials were exposed to the high-temperature plasma discharge produced in stabilized arcs. The results obtained are reported upon, along with a correlation of the observed behavior with theory.

Convair, Fort Worth, Tex.
ACTIVATION HANDBOOK FOR AIRCRAFT DESIGNERS, REVISED. Rept. on [Contract AF 33(600)32054]. 30 Sep 57, 407p. 19 refs. ANP Doc. no. NARF-57-50 T; FZK-9-124.
Order from LC mi$11.10, ph$62.10 PB 144 269

This revision is intended to furnish the aircraft design engineer with a readily accessible reference source for the underlying theory, the necessary nuclear data, and the analytical techniques required in the practical analysis of the neutron induced activation of aircraft materials functioning in a nuclear environment.

Courtney and Co., Philadelphia, Pa.
HUMAN FACTORS IN AIR TRAFFIC CONTROL SYSTEMS DESIGN, by Kenneth W. Colman, Douglas Courtney, and Wallace W. Wallace. Summary rept. on Contract Nonr-2346(00). 1 Dec 58, 53p. Rept. no. 24.
Order from LC mi$3.30, ph$7.80 PB 143 930

The organization of this report follows the natural phases into which the work was divided: Chapter Two Phase I describes the work performed in support of the Air Navigation Development Board and the CAA Technical Development Center, while Chapter Three Phase II describes the human factors effort carried out in support of the Airways Modernization Board.

David Taylor Model Basin, Washington, D. C.
COMPARISON OF EXPERIMENTAL AND THEORETICAL DESIGN PARAMETERS OF A 6-INCH-DIAMETER ANNULAR JET MODEL WITH A JET ANGLE OF -45° HOVERING IN PROXIMITY TO THE GROUND; AND EXPERIMENTAL RESULTS FOR FORWARD FLIGHT AT ZERO ANGLE OF ATTACK, by Anibal Alfredo Tinajero. May 59, 68p. 5 refs. Aero rept. 954.
Order from LC mi$3.90, ph$10.80 PB 143 574

The results of static and dynamic tests of a 6-inch-diameter "annular jet" model with a jet angle of -45° and at zero angle of attack are presented. Experimental values are compared with the theoretical results available for the static condition. The effects of ground proximity upon the aerodynamic characteristics were investigated. Lift, drag, and pitching-moment coefficients were determined. The "annular jet nozzle" was found to be highly effective as a lift producer. It was found that the lifting property that exists in the static configuration at low pressure ratios decays with increasing forward speed. At the higher pressure ratios the loss is still great at very low forward speeds, but there is some recovery as the speed is increased.

Diamond Ordnance Fuze Labs., Washington, D. C.
RADIO COLLISION AVOIDANCE SYSTEMS FOR AIRCRAFT, by R. T. Fitzgerald, H. C. Brown and M. D. Reed. 15 Sep 59, 52p. 10 refs. TR-744.
Order from OTS $1.50 PB 161 119

Several cooperative radio systems for avoiding aircraft collisions are considered from the standpoints of technical requirements, feasibility, and cost. The system with the broadest potential application is selected. In basic form, the selected system utilizes the upper UHF region to communicate altitude and heading information, and vertical maneuvers are defined by the altitude information. In expanded form this system determines relative bearing and heading, to predict collision hazard in both the vertical and horizontal planes. Potentially, a reduction in unintentional collisions of 100:1 can be achieved with the selected approach. The applicability of this system to collision avoidance problems of military, commercial, and private aircraft, and to related problems of navigation and air traffic control is outlined.

Gyrodyne Co. of America, Inc., St. James, N. Y.
PRELIMINARY DESIGN STUDY OF OPTIMUM ARMY TWO-PLACE OBSERVATION HELICOPTER, by Edward W. Strong. Final rept. on Contract DA 44-177-tc-419. Aug 57, 213p. 25 refs. Rept. no. RD46-310000-1; AD-207 276.
Order from LC mi$9.60, ph$33.30 PB 138 544

A study has been conducted to arrive at the design of the optimum Army two-place observation helicopter for use in the 1960-70 decade. Of the configurations considered, the coaxial type and the single rotor-tail rotor type have been found to be the most suitable. A detailed comparative evaluation of these two configurations indicates that the coaxial type offers a much greater degree of fulfillment of the characteristics desired by the Army than does the single rotor-tail rotor type. The design selected as optimum - namely a coaxial rotor type incorporating two two-bladed semi-rigid coaxial rotors, powered by a 250 horsepower turbine engine (final version) and/or a Lycoming VO-360 reciprocating engine (interim version) - is described. The design of the proposed two-place helicopter is based very closely upon that of the Model XRON-1 Rotorcycle (one-man helicopter).

Hiller Aircraft Corp., Palo Alto, Calif.
STATIC LIFT CHARACTERISTICS OF JET SLOTS: A CLARIFYING STUDY OF THE EXTERNAL EJECTOR, by M. F. Gates. Final rept. on Contract Nonr-2428(00). 15 Oct 58, 95p. 29 refs. Rept. no. ARD 213.
Order from LC mi$5.40; ph$15.30 PB 143 229

The external ejector utilizing a surface profile developed by Cornell Aeronautical Laboratory was evaluated in both two-dimensional and three-dimensional configurations for the purpose of defining the thrust augmentation potentialities of this phenomenon in an attempt to end a controversy that has existed for a number of years. The results of the program, the recent work of NACA and the almost unanimous conclusions of other reviewed work indicate that static thrust augmentation is not possible with the external ejector. It was found however, that ideal turning efficiencies as high as 88% are possible with this extremely simple hardware. In both two-dimensional and three-dimensional configurations, the turning efficiency increased with increasing nozzle slot height (σ) which was terminated by breakaway in the two-dimensional tests and by insufficient air supply in the three-dimensional tests. Performance data and surface pressure surveys are presented for both configurations. Flow visualization by means of smoke streams is discussed.

Lockheed Aircraft Corp., Burbank, Calif.
HIGH ENERGY RATE METAL FORMING, by Glen N. Rardin. Interim engineering rept. no. 1 for 18 Oct 57-28 Feb 58 on Contract AF 33(600)35543. 28 Feb 58, 192p. 79 refs. LR-12970; AD-156 722.
Order from OTS $3.00 PB 161 271

This report covers the first phase of an investigation into the application of high rates of energy to the forming of materials difficult or impossible to form by conventional means. A thorough literature survey has been made of the theoretical differences between statically and dynamically applied loads. Twenty-seven organizations were contacted to determine the level of knowledge extant. Their methods of applying high velocity energy and high hydrostatic pressures have been examined and reported.

Lockheed Aircraft Corp., Burbank, Calif.
HIGH ENERGY RATE METAL FORMING, by Glen N. Rardin and A. F. Watts. Interim engineering rept. no. 2, 1 July-30 Sep 58, on Contract AF 33(600)35543. [1958] 54p. 37 refs. LR-13350.
Order from OTS $1.50 PB 161 272

This report describes the facilities that have been constructed, the design and manufacture of the tooling, preparation of the materials, and the instrumentation required to conduct forming tests. (See also PB 161 271)

Lockheed Aircraft Corp., Burbank, Calif.
HIGH ENERGY RATE METAL FORMING, by Glen N. Rardin and A. F. Watts. Interim engineering rept. no. 3, 1 Oct-31 Dec 58, on Contract AF 33(600)35543. [1958] 43p. LR-13435.
Order from OTS $1.25 PB 161 273

The program deals with open die forming in air and water, employing a steel die to produce a 2.5 inch diameter hemisphere with a draw radius of .25 inches. The material used throughout this phase was Vascojet-1000 in the annealed condition, 5.75 inches in diameter, 0.025 inches thick. (See also PB 161 272)

Lockheed Aircraft Corp., Burbank, Calif.
HIGH ENERGY RATE METAL FORMING, by A. F. Watts and Glen N. Rardin. Interim technical engineering rept. no. 5 for 1 Apr-30 June 59 on Contract AF 33(600)35543. [1959] 268p. 54 refs. LR-13873; AD-225 601.
Order from OTS $4.00 PB 161 274

The result of forming tests on two steel and two titanium alloys using high explosives is presented. Measurements of strain rates, velocities and temperatures together with the metallurgical effects of materials subjected to high strain rates are given. Although forming sheet materials with high explosives offers decided advantages in certain areas, within the limits of the test procedure there was no evidence of increased elongations as a result of increased strain rates or pressures. (See also PB 151 849)

Martin Co., Baltimore, Md.
ANALYSIS OF WIND TUNNEL TEST RESULTS OBTAINED FOR A PROPELLER-POWERED MODEL WITH FLAP BLOWING, by Milton A. Schwartzberg and Theodore E. Challberg. Rept. on Contract NO a(s) 56-311C. 30 Aug 57, declassified 2 July 58, 176p. 25 refs. Engineering rept. no. 9429.
Order from LC mi$8.10, ph$27.30 PB 143 603

A wind tunnel test has been conducted of a propeller-powered model seaplane with high-speed air blown over the trailing-edge flaps. The configuration had a high-mounted, aspect ratio 10 straight wing, a high fineness ratio hull and a T-tail. The wing mounted a full-span, 25-percent chord plain flap with blowing momentum coefficients up to 1.2. Power was simulated for four inboard propeller engines at thrust coefficients up to 0.7 per engine. The test results are presented in David Taylor Model Basin wind tunnel report No, 919 (Ref. 7). These results have been analyzed in the present report. The analysis of the test results is concerned with the effects on lift, drag and pitching moment of propeller power, flap blowing and combined power and blowing. The effect of these parameters on the dynamic pressure ratio and downwash at the tail as well as the stabilizer incidence required to trim the configuration were also determined. Some effects of the presence of a ground are noted. In the course of the analysis, it has been possible to devise methods for predicting some of the effects of propeller power and flap blowing on a general airplane configuration. These methods are presented for consideration and future application.

Massachusetts Inst. of Tech., Cambridge.
AN EXPERIMENTAL STUDY OF THE FLOW FIELD ABOUT SWEPT AND DELTA WINGS WITH SHARP LEADING EDGES, by Ivan Jaszlics and Leon Trilling. Rept. on Contract AF 18(600)1306. Oct 57, 54p. 16 refs. Fluid Dynamics Research Group rept. no. 57-4; AFOSR Technical [rept.] no. 58-6; AD-157 948.
Order from LC mi$3.60, ph$9.30 PB 144 067

A series of experiments was performed to define the flow field on the upper surface of high aspect ratio swept wings and narrow delta wings at high angles of attack. It was found that near the root section of either type of wing, the flow is conical. The edge of the vortex sheet which originates at the leading edge is a straight line whose position relative to the leading edge depends only on incidence. On swept wings, the vortex edge turns downstream as soon as the vortex sheet covers the front half of the wing chord, and the flow under the vortex sheet outboard of that turning point is uniform and parallel to the leading edge of the wing. On narrow delta wings, the conical symmetry persists almost to the trailing edge.

National Research Labs., Ottawa (Canada).
PRESSURE DISTRIBUTION AND FORCE MEASUREMENTS ON A VTOL TILTING WING-PROPELLER MODEL. PART I. DESCRIPTION AND TABULATED RESULTS, by J. A. Dunsby, M. M. Currie and R. L. Wardlaw. June 59, 52p. 7 refs. Aeronautical rept. LR-252.
Order from LC mi$3.60, ph$9.30 PB 143 579

This report presents tabulated results of pressure and force measurements on a half wing model of a twin-engined tilt-wing VTOL configuration over a range of thrust coefficient for a limited range of incidence.

Ohio State U. Research Foundation, Columbus.
A SURVEY OF FLIGHT-LINE HAND SIGNALS, by Henry M. Moser, John J. O'Neill and others. Technical note no. 51 on Contract AF 19(604)1577. Sep 58, 26p. 20 refs. AFCRC TN-58-57; AD-160 705.
Order from LC mi$2.70, ph$4.80 PB 138 776

This report is essentially a collection and preliminary survey of hand signals used by flight line personnel. Two Air Force publications were used as pictorial and descriptive sources and visits were made to an Air Force Base, a Naval station, and an aircraft factory. Photographs were taken of hand signals previously represented in publications by drawings. Modifications of these signs, new signs, and variations on the signs by a deaf man are also shown in photographs. Recommendations are made for further surveys and a pocket manual of photographed signs.

Quick, A. W.
OSCILLATIONS IN AXIAL-FLOW COMPRESSORS, by H. Söhngen and A. W. Quick. Scientific rept. no. 2 on Contract DA 91-508-EUC-298. 25 Apr 59, 38p. 10 refs.
Order from LC mi$3.00, ph$6.30 PB 143 455

It will be shown that in the case of blade oscillations in axial-flow machines the compressibility of the fluid, however small the flow speeds may be, is of vital importance.

Rensselaer Polytechnic Inst., Troy, N. Y.
ON THE THRUST HYPOTHESIS FOR THE JET FLAP INCLUDING MIXING EFFECTS, by K. T. Yen. Rept. on Contract AF 49(638)23. June 59, 37p. 11 refs. TR AE-5902, AFOSR-TN-59-737.
Order from LC mi$3.00, ph$6.30 PB 143 159

This paper is concerned with the thrust generated by a jet flap. It is shown that a "linear" thrust hypothesis can be obtained, provided linearized potential flow is assumed. In fact, the linearized problem of a jet flap system is found to be the linear combination of a lift problem and a thrust problem. The lift problem gives all the lift generated, but it is of interest to note that the thrust problem would yield all the thrust developed by the jet flap within the limitation of the linearized theory. The mixing of the jet flap with the surrounding fluid is analyzed by the momentum integral method. The analysis substantiates Stratford's suggestion for obtaining an increase of thrust by causing the jet to mix with the main stream in a region of high suction. Finally, some approximate formulas, relating the thrust and the jet angle, are derived. The drag of the airfoil section and other viscous effects are, however, not considered.

STUDY OF INTERNAL ACOUSTIC ABSORBERS AS A TECHNIQUE FOR TURBOJET ENGINE NOISE REDUCTION: DATA, by D. A. Bies, J. H. Caffrey, and O. B. Wilson, Jr. Final rept. on Contract NOas-55-541-c. Aug 57, 167p. Rept. no. 94.
Order from LC mi$7.80, ph$25.80 PB 138 868

Southern Calif. Labs., Stanford Research Inst., South Pasadena.
PRESENT STATUS OF THE FUTURE OUTLOOK FOR ALL-METAL SANDWICH CONSTRUCTION FOR AIR VEHICLES, by William A. Tweedie, Peter D. Tilton and Redford C. Rollins. Rept. on Contract NOas-59-4264-f. Aug 59, 148p. 69 refs. SRI Proj. no. IU-2932.
Order from OTS $2.75 PB 161 099

The information presented in this report has been drawn from a wide variety of sources and has been supplemented by extensive field investigations by the Institute's project team. Although every attempt has been made to obtain and present the most reliable data, it is possible that the rapid pace of technological development may have introduced certain changes since the conduct of the study and the preparation of the report. In making this study, the Institute's project team held discussions with manufacturers of both core and panels and with the major contractors in the aircraft industry under BuAer cognizance. In certain instances, other aircraft manufacturers were contacted when it was known that development work was under way on core panel construction or that specific design dictated the use of low-density core panel components. Section II of this report summarizes the findings of the research. Since a study of honeycomb requires some familiarity with airframe design requirements and applications, Section III provides a resumé of information on this subject. Section IV and V are concerned with the manufacture of welded honeycomb core and low-density core panels, respectively. Section VI provides a discussion of quality control, and Section VII is concerned with testing and inspection. Section VIII presents a projection of the estimated requirements for honeycomb core and core panels and an estimate of the industry's capability to produce these requirements.

Vertol Aircraft Corp., Morton, Pa.
FEASIBILITY STUDY OF HELICOPTER RANGE EXTENSION USING FLOATING WING FUEL TANKS, by C. B. Fay. Rept. on Proj. no. 9-38-01-000 ST801 Contract DA 44-177-tc-478. 28 Sep 58, 88p. 9 refs. Rept. R-156; AD-203 262.
Order from LC mi$4.80, ph$13.80 PB 142 950

This report presents the results of an engineering analysis of floating wing fuel tanks as a means of helicopter range extension. Both single and tandem rotor helicopters of current operational types are considered. The floating wing concept is one in which the wing supports the required fuel for the ferry mission while the helicopter provides the propulsive force to overcome the wing drag. The wing is attached to the helicopter through a skewed horizontal hinge. Calculations of wing parameters and characteristics were based on 1200 and 2400 nautical mile range missions for both the VERTOL H-21 and Sikorsky H-34 helicopters. The results of the study show that the concept is feasible and that the structural modification of the basic helicopter using the floating fuel-wing kit is minor.

ENGINEERING RESEARCH IN SOIL MECHANICS WITH EMPHASIS ON STRESS-STRAIN RELATIONS AND SOLUTIONS BASED ON SIMPLE THEORY, by Daniel C. Drucker. Final technical rept. on Contract DA-19-020-ORD-3703. 31 Mar 58, 2p. 1 ref. AD-157 858.
Order from LC mi$1.80, ph$1.80 PB 138 587

Bureau of Yards and Docks, Washington, D. C.
DREDGING. 1 July 53, 50p. Technical Pub. NAVDOCKS TP-Pw-19.
Order from OTS $1.25 PB 161 254

This publication serves as an introduction to the subject of dredging and is provided for personnel concerned with dredging operations. These operations include: (a) providing and maintaining channels, anchorages, turning basins, and slips used primarily by Navy vessels, where suitability for use by commercial craft is only incidental; and (b) providing material for aggregate or for filling low areas. Part A presents the Bureau's policies and responsibilities for dredging operations and facilities, and defines terms relating to the subject of dredging. Part B describes the various kinds of dredges, submerged-rock-removal equipment, dump scows, pontoons, and

pipe lines. Part C outlines dredging operations and deals with the objects of dredging, preliminary engineering involved, the handling of dredging equipment, and subsurface rock removal.

Massachusetts Inst. of Tech., Cambridge.
FEASIBILITY STUDY CONCERNING THE UTILIZATION OF PLASTICS FOR UNDERGROUND PERSONNEL SHELTERS, by Denis A. Blackett and Saul Namyet. Rept. on Contract NBy-3150. Sep 59, 144p. 33 refs.
Order from LC mi$7.20, ph$22.80 PB 143 895

An investigation is made into the feasibility and practicability of using plastic materials for the structural components of underground personnel shelters. It is found that fiberglass reinforced plastic is the only suitable, presently available plastic material. The general nature of underground structural behavior is investigated and it is found that curvilinear surfaces having at least one radius of positive curvature are the best shelter shapes. Doubly-curved or warped surfaces are recommended for underground shelter purposes. Certain aspects of underground load-response phenomena are investigated. Design procedures are developed for various structural types and cost data obtained. Brief recommendations concerning future research and development are presented.

Air Force Cambridge Research Center, Bedford, Mass.
OFF-AXIS SIDELOBE REDUCTION IN ELLIPTIC TORUS REFLECTORS, by William G. Mavroides and Joseph H. Provencher. Dec 58, 15p. 5 refs. AFCRC-TR-58-199; AD-160 758.
Order from LC mi$2.40, ph$3.30 PB 142 802

A three-horn primary feed used with an elliptic torus effectively reduces undesirable sidelobes. Patterns and contour plots show a reduction of 8 to 14 db in sidelobe level while the beamwidth remains essentially unchanged.

Air Force Cambridge Research Center, Bedford, Mass.
TECHNIQUES FOR AIR CONTROL SYSTEM APPLICATIONS, by Thomas C. North, George Harpell and others. July 59, 38p. AFCRC-TR-59-165.
Order from LC mi$3.00, ph$6.30 PB 143 966

During the development of the Tactical Air Control System at AFCRC several techniques that were found feasible were not put into the production model, but it was felt that they were of sufficient value to warrant being made a matter of record. Four of these efforts are described in this report. The passive coincidence circuit was designed to aid the prediction of collisions when used with an iterative display computer, such as SAINT. The optical analog-to-digital converter (optical digitometer) was originated to read the outputs of a time-sharing analog intercept computer. The two-speed joystick was an attempt to simplify the manual assignment operation in the tracking console, CARTRAC. The electronic switch was built to switch dc analog tracking voltages to permit tracks to be labeled.

American Machine and Foundry Co., Boston, Mass.
RECEIVER INDICATOR FOR A LONG RANGE DISTANCE MEASURING SYSTEM. Final engineering rept. on Contract AF 30(602)668. 20 June 57, 93p. AMFED Ref. no. 262-9; RADC-TR-57-134; AD-131 214.
Order from LC mi$5.40, ph$15.30 PB 144 020

A receiving and range-measuring equipment which will furnish distance information in rho-rho form with respect to fixed ground stations was constructed to test the practicability of a system which operates on the principle of the phase shift of a received signal as a function of the distance between the receiver and the transmitter. The development of this equipment indicated the feasibility of an equipment designed to measure the phase of a received signal and compare it with the phase of a locally generated signal. The operation of the system in the laboratory proved satisfactory. The evaluation of field data was suggested to determine the value of the rho technique for use in a long-range navigation system.

[Army Signal] Radio Propagation Agency, Fort Monmouth, N. J.
ANALYSIS AND PREDICTION OF SKY-WAVE FIELD INTENSITIES IN THE HIGH FREQUENCY BAND, by Paul O. Laitinen and George W. Hayden. Aug 50, reprinted Mar 56. 132p. 16 refs. Technical rept. no. 9.
Order from LC mi$6.90, ph$21.30 PB 143 141

The purpose of this report is to present an engineering method of evaluating sky-wave field intensities in the high frequency band for any transmission distance up to about 15,000 kilometers. Field intensity recordings were statistically analyzed in order to study daytime absorption, day-to-day variations, and absolute magnitudes. Based upon the analysis, a proposed prediction method was obtained which should give relatively accurate sky-wave field intensities for the frequencies and distances considered. Succeeding sections show the method of analysis of absorption, the method of analysis of absolute magnitudes, the method of analysis of day-to-day variations, the proposed field intensity prediction method, and summarizing conclusions. All necessary equations used in the prediction method are represented in nomograms.

Army Signal Radio Propagation Agency, Fort Monmouth, N. J.
LONG-TERM PREDICTIONS OF GEOMAGNETIC DISTURBANCES AND THEIR EFFECTS ON RADIO COMMUNICATIONS, by Luther C. Kelley. Nov 58, 40p. 10 refs. Proj. no. 636A.
Order from LC mi$3.00, ph$6.30 PB 143 138

This report forewarns supervisory and operating personnel of increased radio circuit outage during the downward trend of the current sunspot cycle. Long-range predictions indicate that severe disruptions of radio service will result from geomagnetic or ionospheric storms during this period. Data of actual circuit performance illustrate the curtailment of radio communication with rising geomagnetic activity. Long-term forecasts are based on the correlation between geomagnetic activity and sunspot number observed for many years. Recommendations for the reduction of outage are made. A general discussion is included.

Army Signal Radio Propagation Agency, Fort Monmouth, N. J.
OTHER-THAN-CO-CHANNEL INTERFERENCE WITH RESPECT TO TROPOSPHERIC SCATTER COMMUNICATION. PART A: CONSTANT BARELY AUDIBLE SIGNALS, by Sol Perlman, William J. Russell, Jr. and William D. Stuart. May 58, 157p. 26 refs. Proj. no. 646.
Order from LC mi$7.50, ph$24.30 PB 143 140

Mutual interference between "Forward Propagation by Tropospheric Scatter" ("FPTS") circuits and other communication circuits is examined for other-than-co-channel intrusions. The first sections and the Appendix of the report define the various types of interference and briefly analyze their causes and remedies. In a later section certain interim assumptions are proposed concerning measures of the interference threshold signal strength at the inputs to the affected receivers. For the various antennas, frequencies, and azimuths examined, tabulated values are presented of the distances of separation between the receivers and the sources of interference required to satisfy these assumptions. Recommendations include possible means of reducing the interference and measurements that should be taken to enable the interference to be predicted more accurately. A supplement is included covering co-band interference at 2000 Mc and second harmonic interference from 1000 Mc "FPTS" equipment.

Army Signal Radio Propagation Agency, Fort Monmouth, N. J.
TENTATIVE EVALUATION OF TRANSMISSION FACTORS FOR SPACE VEHICLE COMMUNICATION, by Luther C. Kelley, Sol Perlman and others. Sep 58, 145p. 88 refs. Proj. no. 664.
Order from LC mi$7.20, ph$22.80 PB 143 142

With the increased use of space vehicles a study of the various propagational and equipment factors affecting space vehicle communication is needed. This report makes a preliminary evaluation based on theoretical considerations and the limited experimental evidence from the existing satellites, moon-radar experiments, and radio astronomy measurements. The optimum frequencies for the varied needs of space vehicle communication can best be determined from estimated system performance. A discussion is given of the noise limitations, equipment limitations, proper choice of earth station locations and the other factors that affect the signal-to-noise ratio at the receiver. Some of the newer technical developments that increase sensitivity to weak signals are evaluated for their potential increase in distance of communication. Some consideration is given to the effects of the ionosphere including absorption, angle errors, Faraday rotation of polarization, meteor trail interference, and auroral interference and to the effects of oxygen, water vapor, and other gases that cause absorption, angular deviation, and noise. Included is a selection of the better frequencies for line-of-sight and for over-the-horizon communication with space vehicles and the frequencies that would be less subject to mutual interference with earth stations for communication between vehicles. A discussion is given of the advantages of elevated locations for communication with space vehicles including "hovering" ones.

Army Signal [Research and Development Lab.] Fort Monmouth, N. J.
DESIGN TECHNIQUES FOR STRIP LINE DIRECTIONAL COUPLERS AND RESONATORS, by Isaac Aheyta. 10 June 57, 36p. 9 refs. Technical memo. no. M-1893.
Order from LC mi$3.00, ph$6.30 PB 142 809

Because of their outstanding characteristics, two of the components treated under this program deserve special consideration from the standpoint of user and designer. The two items are coupled strip-line directional couplers and resonators. It is the purpose of this memorandum to point out some of the outstanding characteristics, suggest possible applications, and present the necessary design information. The design information is, of course, available in the various SRI progress reports, however, as presented in this memorandum the designer interested in final results will find it unnecessary to digest the SRI research work before he can design either of these components. This memorandum will also serve as a summary for those who do not have the time to follow the detailed analysis carried out by SRI but who are nonetheless interested in forming an idea of what can be achieved with these components.

Army Signal Research and Development Lab., Fort Monmouth, N. J.
RECENT ADVANCES IN SOLID STATE RECEIVERS by Wesley G. Matthel. 15 Oct 58, 29p. 29 refs. USASRDL Technical rept. 1993.
Order from LC mi$2.70, ph$4.80 PB 143 352

With new variable reactance semiconductor diodes, ferrites, and maser materials and techniques, broadband and narrow-band receivers have been built up to X-band frequencies with effective noise temperatures less then 200°K. The relative importance of these various types of solid state receivers and their future possibilities are presented.

Bartol Research Foundation, Franklin Inst., Swarthmore, Pa.
RESEARCH INVESTIGATION OF CATHODE EMISSIVE MATERIALS, by W. E. Danforth and D. L. Goldwater. Scientific rept. no. 5 on Contract AF 19(604)3904. 15 July 59, 47p. 5 refs. AFCRC-TN-59-577.
Order from LC mi$3.30, ph$7.80 PB 143 683

In a program of development of thorium impregnated tungsten matrix cathodes life studies have been extended to 6000 hours at 1 amp/cm^2, at approximately 1550°C_B, and 3500 hours at 2.4 amps/cm^2 at approximately 1620°C_B, both life figures subject to upward revision as tests continue. An experimental determination of preliminary character has been made of the surface density of thorium on tungsten corresponding to the emission maximum. Relevant to studies concerning the possibility of desorption of thorium by electron bombardment, work is in progress regarding thermal deactivation (evaporation) rates as a function of temperature and coverage. Experiments are described concerning "knife-edge" seal techniques for dry box closure of experimental tubes which must thereafter have extensive baking. (See also PB 142 293)

Battelle Memorial Inst., Columbus, Ohio.
EXPERIMENTAL ANALYSIS OF PERFORMANCE OF GALVANOMAGNETIC AMPLIFIERS, by R. K. Crooks, G. J. Falkenbach, and T. S. Shilliday. Final rept. on Contract AF 30(602)1839, 15 July 59, 79p. 24 refs. RADC TR-59-119, AD-220 116.
Order from LC mi$4.50, ph$12.30 PB 142 934

This investigation is concerned with the theoretical and experimental analysis of the performance of galvanomagnetic amplifiers, especially the magnetoresistance amplifier, with verification of the analysis by laboratory investigation. Particular emphasis is placed on consideration of amplifier gain, impedance level, noise, bandwidth, and power-handling capabilities. Expressions for amplifier gain are developed and are verified experimentally for the magnetoresistance amplifier. Gain is shown to be a function of the d-c power dissipated in the semiconductor element, the mobility of the majority carriers in the element material, the magnetic bias on the element, and the efficiency of the input circuit in establishing the necessary a-c magnetic-flux density in the element.

Bell Telephone Labs., Inc. [Whippany, N. J.]
AN ULTRA-PRECISE STANDARD OF FREQUENCY, by R. A. Sykes. Interim rept. no. 1 for 12 July-12 Oct 56 on Contract DA 36-039-sc-73078. 21 Nov 56, 39p. 4 refs. Rept. no. 27480.
Order from LC mi$3.00, ph$6.30 PB 143 348

A preliminary analysis has been made of the behavior of quartz crystal units over a wide range of frequencies at very low ambient temperatures, and some experimental results are given for the temperature coefficient and Q as a function of temperature. An analysis is made of the effects on frequency resulting from variations in circuit reactances and tube-gain characteristics for two kinds of oscillators, with a comparison of the theoretical stability limitations of both types.

Bliley Electric Co., Erie, Pa.
SERVICE, FACILITIES AND MATERIALS TO CONDUCT RESEARCH AND INVESTIGATION INTO THE ORIGIN OF ACTIVITY DIPS IN THE RESPONSE OF AT CUT LOW FREQUENCY RESONATORS, by J. M. Wolfskill and R. H. Tuznik. Progress rept. no. 6 for 15 Mar-15 June 56 on Contract DA 36-039-sc-63105. [1956] 69p.
Order from LC mi$3.90, ph$10.80 PB 143 347

Bliley Electric Co., Erie, Pa.
SERVICES, FACILITIES, AND MATERIALS TO DESIGN AND DEVELOP HIGH SHOCK AND VIBRATION RESISTANT CRYSTAL UNITS IN THE FREQUENCY RANGE 200kc TO 500kc, by J. M. Wolfskill and R. H. Tuznik. Quarterly progress rept. no. 1 for 1 Jan-30 Apr 57 on Contract DA 36-039-sc-73148. [1957] 78p, AD 154 [illegible]
Order from LC mi$4.50, ph$12.30 PB 143 351

Testing and evaluation of the performance of standard type CR-26/U crystal units under shock and vibration conditions. Techniques, methods, and materials used in the manufacture of these standard units. Failure of these standard units under the conditions of the vibration test makes necessary a new type support structure to remedy the defects. Design considerations involved in meeting these new requirements are included.

Bliley Electric Co., Erie, Pa.
SERVICES, FACILITIES AND MATERIALS TO DESIGN AND DEVELOP HIGH SHOCK AND VIBRATION RESISTANT CRYSTAL UNITS, by J. M. Wolfskill and R. H. Tuznik. Quarterly progress rept. no. 2 for 1 May-30 Sep 57 on Contract DA 36-039-sc-73148. [1957] 31p.
Order from LC mi$3.00, ph$6.30 PB 143 034

Selection of an optimum "cut" in these 455 kc/s units, and performance of both "CT" and "DT" blanks in the ceramic frame symmetrical "H" supporting structure. The support structure design in experimental models eliminates significant resonances during the vibration spectrum from 10 to 2,000 cps.

Bureau of Yards and Docks, Washington, D. C.
BASIC ELECTRICAL ENGINEERING. CHAPTER 1. WIRE COMMUNICATION AND SIGNAL SYSTEMS. 15 Sep 55, 116p. 21 refs. Technical Pub. NAVDOCKS TP-Te-5.
Order from OTS $2.50 PB 161 253

This Technical Publication, which consists of four chapters, provides guidance to Bureau and field personnel responsible for the design, installation, maintenance, and operation of wire communication and signal systems, interior lighting and power facilities, lighting and cathodic protection, and suppression of radio interference at naval shore activities. The general introduction presents the authority and general responsibilities of this Bureau for the above-named phases of public works and public utilities operations. Chapter 1 is concerned with wire communication and signal facilities, including detailed criteria on all aspects of telephone installations.

Bureau of Yards and Docks, Washington, D. C.
BASIC ELECTRICAL ENGINEERING. CHAPTER 2. LIGHTING AND POWER SYSTEMS. CHAPTER 3. LIGHTNING AND CATHODIC PROTECTION. CHAPTER 4. ELECTROMAGNETIC INTERFERENCE SUPPRESSION. Rev. 26 June 58, 106p. Technical Pub. NAVDOCKS TP-Te-5; BuDOCKSINST 11000.12A.
Order from OTS $2.50 PB 161 256

Chapter 2 presents engineering criteria on (a) lighting and power systems inside buildings and structures and (b) street-lighting systems. Chapter 3 deals with (a) lightning protection methods and systems and (b) cathodic protection for underground and aboveground installations. Chapter 4 deals with the methods and systems used for suppression of electromagnetic interference from electrical sources. (See also PB 161 253)

Bureau of Yards and Docks, Washington, D. C.
POWER GENERATION AND DISTRIBUTION. CHAPTER I. ELECTRIC POWER GENERATION. 15 Sep 54, 194p. 34 refs. Technical Pub. NAVDOCKS TP-Pu-3; BUDOCKSINST 11310.9.
Order from OTS $3.00 PB 161 252

This Technical Publication, which consists of nine chapters, provides guidance to Bureau and field personnel responsible for the design, installation, maintenance, and operation of power generating plants and distribution systems at naval shore activities. The general introduction for this series of publications presents the general authority of this Bureau for power facilities. Chapter 1 deals with the major phases of electric power generation. The first part of the chapter discusses the design of steam generating plants, fuels, boilers and accessories, boiler feed, methods of firing, combustion control systems, and the generation of electric power by steam turbine. The last part of the chapter is concerned mainly with operation and maintenance of steam generating plants but also includes the essential plant elements for the generation of electric power by internal combustion engine.

California U., Los Angeles.
TRANSFORMS FOR LINEAR TIME-VARYING SYSTEMS, by John A. Aseltine. Rept. on Contract N6onr-275(16). Feb 52, 112p. 36 refs. Dept. of Engineering rept. 52-1; ATI-196 326.
Order from LC mi$6.00, ph$18.30 PB 144 286

This paper presents a method for finding an integral transformation appropriate for a given linear time-varying system. The method makes possible analysis and synthesis of certain time-varying systems through the use of transform tables and associated theorems. Although the method is not restricted to a particular kind of time-varying physical system, examples center around electrical circuits.

Case Inst. of Tech., Cleveland, Ohio.
SOLID ANGLE SYNTHESIS, by Robert Plonsey. Scientific rept. no. 7 on Contract AF 19(604)3887. 17 Aug 59, 61p. 16 refs. AFCRC-TN-59-595.
Order from LC mi$3.90, ph$10.80 PB 143 661

This paper discusses synthesis of solid angle antenna patterns by means of planar aperture or array distributions. The available techniques for one dimensional pattern synthesis (in particular that based on Fourier analysis, and methods due to Woodward and to Ruze) are applied to the two dimensional case. A discussion of antenna Q and its evaluation is given for an aperture with uniform source polarization. An approximation to the Q for a class of arrays is also given. Several optimization criteria are discussed for this problem, and the various techniques compared.

Centro Radioelettrico Sperimentale "G. Maroni", Rome (Italy).
H. F. BACKSCATTER FROM LAND AND SEA, by 1. Ranzi and P. Dominici. Scientific note no 1 on Contract AF 61(052)139. 30 May 59, 7p. 6 refs. AFCRC-TN-59-574.
Order from LC mi$1.80, ph$1.80 PB 143 642

The recordings of the backscattered echoes, performed since August 1957 on the frequencies of 18.6 and 22.3 Mc/s, in the station of Torrechiaruccia (42.03° N, 11.84° E), show an azimuthal distribution in the backscatter intensity, with maxima on the sea and minima on the land. This result is examined in the light of the observations of echoes directly backscattered from the sea at a short distance. The importance of the knowledge, concerning the dependence of the backscatter coefficient on the nature of the ground and on other eventual conditions, is emphasized especially for the solution of the problems about the protection of the ionospheric scatter communications against the signals arriving by backscattering.

Control Systems Lab., U. of Illinois, Urbana.
THE TRANSIENT RESPONSE OF CASCADED BUTTERWORTH FILTERS, by Bruce L. Hicks and Rosemarie Stemmler. Rept. on Contract DA 36-039-sc-56695. Aug 57, 26p. 3 refs. Rept. no. R-97; AD-144 937.
Order from LC mi$2.70, ph$4.80 PB 138 558

The impulse and step responses for cascaded, three or five pole Butterworth filters have been calculated on Illiac with an accuracy of three or more decimals. In this paper the dependence of the calculated step response upon the number of cascaded filters λ_2 studied, both with no phase correction and with complete phase correction, with λ_2 in the range from 4 to 512.

Cornell Aeronautical Lab., Inc., Buffalo, N. Y.
HANDBOOK OF METHODS OF COOLING AIR FORCE GROUND ELECTRONIC EQUIPMENT, by James P. Welsh and Thomas J. Walsh (Rome Air Development Center). Rept. on Contract NObsr-63043. June 59, 636p. 43 refs. RADC-TR-58-126; AD-148 907.
Order from OTS $8.00 PB 161 264

This Handbook was prepared to aid electronic engineers in the thermal design of reliable military electronic equipment. Enumerated herein are principles and techniques to be followed in the design of electronic parts, assemblies, and equipments, enabling

heat removal to be achieved to the greatest practical extent. It supplements previous CAL reports HF-710-D-16, NAVSHIPS 900, 187, AD-53 100; HF-845-D-8, NAVSHIPS 900, 192, AD-127 527; HF-845-D-9, NAVSHIPS 900, 185; HF-845-D-19, NAVSHIPS 900, 194; AD-202 440, and HF-1053-D-3, AD-141 400.

Cruft Lab., Harvard U., Cambridge, Mass.
CROSS RELAXATION IN SPIN SYSTEMS, by N. Bloembergen, S. Shapiro and others. Technical rept. on Contract Nonr-1866(28). 15 Oct 58, 54p. 38 refs. Technical rept. no. 285.
Order from LC mi$3.60, ph$9.30 PB 143 038

The energy transfer between adjacent resonances in nuclear and electron spin systems is analyzed in terms of the overlap of line-shape functions. The procedure is an enlargement on the original proposal of Kronig and Bouwkamp, and consists of taking partial account of off-diagonal elements in the spin-spin interaction, which are omitted in Van Vleck's truncated Hamiltonian.

Dalmo Victor Co., San Carlos, Calif.
OPTICAL AND ELECTROMAGNETIC TECHNIQUES FOR PREDICTION OF RADOME BORESIGHT ERRORS, by George M. Hahn. Rept. for 1 July 54-30 May 57 on Radome Techniques and Components, Contract AF 33(616)2524. Aug 59, 86p. 9 refs. WADC Technical note 59-257.
Order from OTS $2.25 PB 161 126

The rigorous electromagnetic solution to the radome problem will yield a method applicable to all radomes; however, the cumbersome computation requirements might make such an approach highly undesirable for many radomes whose characteristics are such as to permit the use of a much simpler optical technique. A thorough "state-of-the-art" survey indicates that considerable work has been completed elsewhere utilizing optical techniques. Reasonable results have been obtained whenever the radomes involved were governed by the following restrictions: 1. Antenna apertures greater than 10 wavelengths in diameter. 2. Clearance between antenna and radome housing of the order of wavelengths. 3. Radome wall curvature such as to permit the use of flat panel approximations. The prediction program was divided into two parts. The optical approach was to be simplified to such an extent that no large scale computing efforts would be required for boresight error predictions, and a new approach was to be devised utilizing electromagnetic methods for those radomes which do not have the three qualifications listed above. The optical approach promising the most rapid results is described in Section II of this report. A comparison of theoretical results with experimental data is included. The electromagnetic approach, which seems to be attractive at this time, is recorded in Section III of this report. A detailed account of directions for computer programming for one particular radome is included.

Diamond Ordnance Fuze Labs., Washington, D. C.
TRANSISTORIZED POWER SUPPLIES: A LITERATURE SURVEY, by Floyd Allen. 25 Aug 59, 24p. 17 refs. TR-725.
Order from OTS $0.75 PB 161 266

High voltages may be obtained from a low-voltage d-c supply when some form of converter is employed. A literature survey shows that transistorized converters, because of their high efficiency and lack of moving parts, are tending to displace rotary converters and vibrator-power units. Various transistor circuits of interest in ammunition electronics for converting dc-to-ac or dc-to-dc are reviewed here. The ringing choke converter offers a simple method of obtaining high voltage at power levels up to about two watts. For powers up to 200 watts the transformer-coupled push-pull circuit is recommended. Of particular interest is the driven type converter for high-power, single- and three-phase applications.

Dikewood Corp., Albuquerque, N. Mex.
REDUNDANCY FOR IMPROVING ACCURACY IN COMMUNICATIONS, by B. L. Basore. Final rept. on Contract AF 19(604)4078. 30 June 59, 46p. 11 refs. AFCRC-TR-59-170, AD-225 956.
Order from LC mi$3.30, ph$7.80 PB 143 507

This report summarizes a study of the role of redundancy in communication. The investigation was carried out principally in terms of an n-dimension model of message space to determine an intuitively clear method of comparing the significance of redundancy in reducing error rates in a communication link with the contribution realized through the use of long messages and delay. The study clearly indicates that the cost of communications including the cost of terminal coding and decoding equipment is not necessarily optimized when the channel capacity is used at highest efficiency, but a trade of channel capacity (in the use of redundancy) for improved reliability, i e., accuracy, may often be justified.

Douglas Aircraft Co., Inc., Long Beach, Calif.
DEVELOPMENT OF A VHF FAN ANTENNA FOR THE C-133A AIRCRAFT, by J. A. Kobe, E. C. Alsenz and H. J. Katzman. Rept. on Contract AF 33(600)22452. 15 Jan 55, 341p. 2 refs. Engineering rept. no. LB-21742.
Order from LC mi$11.10, ph$53.10 PB 143 334

The antenna discussed in this report is for use in the 100-156 mc frequency range on the C-133A aircraft. It is a fan-shaped vertical stub located on the top of the vertical stabilizer and has been designed from existing data. Necessary compensations were added to achieve a 2:1 VSWR. Radiation coverage is adequate for the purpose of the associated equipment.

Dunham Lab., Yale U., New Haven, Conn.
MAGNETIC AMPLIFIER CIRCUITS. PART I. THE SERIES CIRCUIT WITH A NONLINEAR INDUCTOR, by Amram Rasiel. Rept. on Improved Amplifiers for Flight Control Applications, Contract AF 33(616)3391. May 59, 101p. 56 refs. WADC Technical rept. 57-43, Pt. 1; AD-226 798.
Order from OTS $2.50 PB 161 142

The purpose of the present work is to investigate the oscillations of a circuit with non-linear restoring force, in particular under the influence of a driving force, and to explain the mechanism by which subharmonics of the driving force are generated in the circuit response. The general equation describing the oscillations of the circuit is first obtained. The free oscillations of the circuit are then examined in detail for circuits with non-linear restoring force given by a polynomial. In particular, when this polynomial is an odd cubic parabola, relationships between the period of the oscillations and the initial conditions are obtained in a closed form depending on the circuit parameters. The forced oscillations of the circuit are then investigated by obtaining an approximate first integral in the phase-plane. It is found that there are in general two different stable first integrals. One is associated with the forced oscillations of the linear equation and goes to zero with the driving force. The other is associated with the free oscillations of the circuit and remains finite as the driving force goes to zero. The role of the second solution in the mechanism of subharmonic generation is then discussed and the conditions under which subharmonic may exist are investigated. Four appendices, containing calculations and discussions, are included.

Dunham Lab., Yale U., New Haven, Conn.
MAGNETIC AMPLIFIER CIRCUITS, PART II. THE FULL-WAVE BRIDGE AMPLIFIER WITH TWO-TERMINAL LOADS, by Richard Clark Barker. Rept. on Improved Amplifiers for Flight Control Applications, Contract AF 33(616)3391. May 59, 100p. 4 refs. WADC Technical rept. 57-43, Pt. 2.
Order from OTS $2.25 PB 161 086

This report provides an analysis of a "universal" full-wave-bridge magnetic amplifier and several circuits and connection configurations are examined for two-terminal loads. Many of the aspects of the amplifier have been examined and explained and the mathematical relationships of the various components have been derived. An attempt has been made to describe the physics of the amplifier in an easy to understand manner. (See also PB 161 142)

BASIC RESEARCH INVESTIGATION FOR AMMONIA VAPOR ACTIVATED BATTERIES, by J. M. Freund, V. M. Bryant, Jr. and J. B. Schliff. Quarterly progress rept. no. 6, 15 Dec 58-14 Mar 59, on Contract DA 36-039-sc-74902. [1959] 35p.
Order from LC mi$3.00, ph$6.30 PB 143 896

This report presents data on the specific conductivity of NH_4SCN solutions in NH_3. Information is given for very concentrated solutions, ranging from 20 to 40 mol percent NH_4SCN at temperatures ranging from saturation to +40°C. and higher. It is evident that the specific conductivity increases with rising temperature at all concentrations in this range; whereas it decreases with increasing concentration. Values range from 0.050 $ohm^{-1}cm^{-1}$ to 0.500 $ohm^{-1}cm^{-1}$. Less concentrated solutions were also studied at temperatures below -40°C. It was observed that at -56°C.. the specific conductivity increases with increasing concentration to a peak of 0.135 $ohm^{-1}cm^{-1}$ at 6.5 mol percent, and then decreases as the concentration is further increased. Some data on NaSCN, KSCN, and $Mg(SCN)_2$ solution conductivities are also presented. (See also PB 140 618)

SECONDARY ELECTRON MULTIPLICATION IN MICROWAVE FIELD, by Frank Fu Fang. Scientific rept. no. 6 on Contract AF 19(604)2152. 15 May 59, 127p. 31 refs. AFCRC-TN-59-362; AD-217 035.
Order from LC mi$6.30, ph$19.80 PB 144 002

The electron dynamics of a periodic secondary electron multiplication process at microwave frequencies known as "multipactor" is analyzed theoretically and experimentally.

Electronic Defense Lab., Sylvania Electric Products, Inc., Mountain View, Calif.
COST CONSIDERATIONS IN THE EVALUATION OF ELECTRONIC COUNTERMEASURE SYSTEMS, by Guy Black. Rept. on Contract DA 36-039-sc-73170. 24 Apr 57, 48p. 31 refs. Technical memo. no. EDL-M109, AD-141 067.
Order from LC mi$3.30, ph$7.80 PB 138 566

The means of developing the cost information for significant and accurate parameters of models are discussed and the appropriate models are developed. The combined cost of system development, fabrication, and employment is considered. For analytical purposes, this cost is divided into investment and operating phases. The problems of cost analysis are examined and the methodology of cost estimation is discussed both generally and applied to particular phases. The theory of costs and the synthesis of over-all costs of complex operations from estimates for simple operations are explained in an appendix. Special attention is given maintenance cost analysis, which can be treated theoretically by models relating equipment design to reliability: the reliability analysis undertaken in electronics can be used in part in this analysis.

Electronics Research Lab., Stanford U., Calif.
MAXIMALLY-FLAT PHASE-DIFFERENCE NETWORK DESIGN, by George L. Matthaei. Technical rept. no. 2 on Contract AF 28(099)83. 31 Oct 50, 42p. 10 refs. ATI-96073.
Order from LC mi$3.30, ph$7.80 PB 144 064

The theory of networks which realize a constant difference in the phases of two outputs, over a wide band of frequencies, in the equal-ripple or Chebyshev manner is here extended to the limiting case of zero error and zero bandwidth. This is the maximally-flat or Taylor type of approximation. The electrostatic potential analogy is used, with an appropriate conformal transformation, to develop the mathematical theory, and a design procedure is developed. For application to single-sideband systems, a comparison is made of the performances of these and of the equal-ripple type. The maximally-flat type offers no advantage, in fact is inferior, in this application. There may,

however, be other applications in which the inherently smooth approximation of this type will be useful.

A STUDY OF THE APPROXIMATION PROBLEM FOR LINEAR-PHASE CONSTANT-PHASE-DIFFERENCE NETWORKS, by David D. Cherry. Technical rept. no. 4 on Contract AF 28(099)83. 29 June 51, 165p. 28 refs. ATI-139 916.
Order from LC mi$7.80, ph$25.80 PB 144 063

The need has arisen in single-sideband systems for networks that will give a constant phase difference of 90° over a frequency band of some width. Although this problem has been solved to some extent, the transient response and so-called delay characteristic for such networks are not all that could be desired. To improve these, attention is focussed herein on the problem of linear-phase, constant-phase-difference networks. The problem considers all-pass networks only. There are three different phase characteristics that are formulated and investigated. The first type is chosen as the linear transmission phase characteristic; the second type is chosen as one offset from the first type by ninety degrees. Then the difference between these two is to be the constant phase difference for which the solution is sought. The approximation is limited to a definite portion of the real frequency spectrum, usually normalized symmetrically about the origin from zero to one radian per second. As one by-product of this investigation, attempts are made to formulate a design procedure for an arbitrary-phase characteristic.

Electronics Research Labs., Columbia U., New York.
RESEARCH IN DESIGN TECHNIQUES FOR CONTROL SYSTEMS BY ELECTRONIC SIMULATION OF THE COMPLEX PLANE, by Stanley Fenster and John Wuorinen. Interim final rept. IF/110 for 1 Oct 53-31 May 56 on Contract AF 18(600)962. 30 June 56, 28p. 16 refs. CU-13-56-AF-962-EE; AFOSR-TR-56-[64]; AD-154 226.
Order from LC mi$2.70, ph$4.80 PB 144 066

This report covers research done on the complex Plane Scanner (CPS) of Contract AF 18(600)-962 with the Air Research and Development Command during the period 1 October 1953 through 31 May 1956. Research was devoted to study of methods of applying the scanning of the complex plane to the solution of various problems occurring in linear systems, to study of implementation of such scanning in electronic form, and to development of displays useful in engineering design problems. The theory of an electronic analog method of scanning the complex plane is outlined and applications of this theory are indicated. The Complex Plane Scanner (CPS), an analog computer, the operation of which is based on this method, is described. System block diagrams and waveforms are included.

General Electric Co. [Schenectady, N. Y.]
ULTRA HIGH TEMPERATURE (500°C) POWER TRANSFORMERS AND INDUCTORS, by Harold B. Harms and James C. Fraser. Rept. for 1 Mar 58-28 Feb 59 on Improved Electronic Components, Contract AF 33(616)5579. July 59, 576p. 15 refs. WADC Technical rept. 59-348.
Order from OTS $7.00 PB 161 046

Contract objectives called for the development of electronic power transformers capable of operation in a 500°C ambient temperature and in intense nuclear radiation. New projects were breakdown potential of air up to 500°C temperature and in a radiation environment, an impregnation material development, and a design optimization study. The breakdown potential of air was found to be significantly affected by nuclear radiation but only slightly by high temperature. A versatile material, aluminum phosphate solution, was found to be a useful coil impregnant by imparting strength to the insulations. Two constructions remain in the program, one a miniature hermetic whose encasement conforms to the contours of the core and coil, and a standard hermetic. Although it offers a substantial size and weight reduction, the former is more difficult to construct; both are capable of withstanding the mechanical, temperature and radiation requirements of the contract. A very significant advance in the high temperature magnet wire field was uncovered in a ceramic insulated nickel-clad copper wire. It offers a thin film insulation in very small wire diameters. The chief effect of radiation on the transformers tested was to create an extra internal source of heat and, thereby, to increase their temperature rise. An optimization procedure was developed and partially checked on a digital computer. The assembly of a design practice summarizes the favorable aspects of two contract periods.

Hazeltine Electronics Corp., Little Neck, N. Y.
FEASIBILITY OF TRANSISTORIZING BEACON, RADIO AN/DPN-31( ), by Robert Olsen, Ronald A. Orlando, and others. Final technical rept., phase 1, 15 June 56-14 Feb 57, on Contract DA 36-039-sc-72417. [1957] 61p. 18 refs. Rept. no. 9841; AD-146 686.
Order from LC mi$3.90, ph$10.80 PB 138 557

A study was carried out to determine whether it is feasible to transistorize Radio Beacon AN/DPN-31 (XE-1). It was concluded that transistorizing all stages of AN/DPN-31(XE-1) except the transmitter-oscillator, modulator, and modulator driver is now feasible. Breadboard models of the receiver, decoder, and command channels and the blocking-oscillator chain were constructed and successfully tested. It was not possible to reduce the modulation power required by grid pulsing the S-band cavity. Until power transistors with higher alpha-cutoff frequencies become available, a transistorized modulator and a transistorized modulator driver will not be feasible, except that restrictions on the former would be lessened considerably if technical requirements for the system could be altered to increase the delay between interrogation and reply to 12 μsec or so. The partially transistorized beacon now considered feasible would be no smaller and might be slightly heavier than AN/DPN-31(XE-1). However, if a transistorized modulator were feasible, large savings in size and weight as well as power would be possible.

Hughes Aircraft Co., Culver City, Calif.
BEAM POINTING ERRORS OF LONG LINE SOURCES, by M. Leichter. Rept. on Contract AF 30(602)1718. Apr 59, 38p. 11 refs. Technical memo. no. 588.
Order from LC mi$3.00, ph$6.30 PB 143 606

The relation between the statistics of the antenna beam pointing direction and the phase and amplitude errors at the source has been obtained to first order in the mean square errors, under certain restrictions, for long line sources. It is shown that when the desired phase at the source is a constant the results are, to first order, independent of the amplitude errors. When the desired amplitude is also constant there is a simple formula for computing the allowable rms phase error at the source when the pointing direction is required to lie in a given angular range with a given probability. When the amplitude distribution corresponds to the Taylor modified (sin x)/x pattern, the allowed rms phase error is obtained from the constant amplitude case by a multiplicative factor which depends only on the one parameter characterizing the Taylor distribution. This function is plotted for the range corresponding to sidelobe ratios of 13.2 to 40 db. At 40 db the allowed rms phase errors are about three fourths of the allowed rms phase errors at 13.2 db (constant amplitude) for the same uncertainty in the pointing direction. The results are applied to a hypothetical example and to an actual "Mills Cross" for illustrative purposes.

Institute for the Study of Metals, U. of Chicago, Ill.
IMPROVEMENTS ON A SIMPLE TEMPERATURE CONTROLLER, by C. T. Tomizuka and D. Zimmerman. Rept. on Contract AF 18(600)1489. 14 Nov 58, 6p. 2 refs. AFOSR-TN-58-942; AD-205 084.
Order from LC mi$1.80, ph$1.80 PB 138 420

A circuit was developed to be an improvement over a single temperature controller previously developed by Wilson and presently enjoying use in many laboratories. It uses a transistor preamplifier followed by a small thyratron activating a relay. The buzz frequency can attain 10 cycles/sec., a frequency which would destroy an ordinary relay.

THE AMPLITUDE ANALYZER, by Arthur C. Erdman, A. B. Fontaine, and David G. McConnell. Rept. on Contract AF 41(657)70. July 59, 21p. 2 refs. WADC Technical rept. 59-45; AD-227 481.
Order from OTS $0.75 PB 161 110

This report described a device developed for extracting information for a trend analysis of low-frequency (0.66 cpm to 4.98 cpm) signals with respect to amplitude of occurrence during a time period. The system here described uses 30 mechanical counters to accumulate a score equivalent to the time that a signal dwells within a predetermined voltage band. A comprehensive discussion as to the electronic principles and techniques is provided.

Machlett Labs., Inc., Springdale, Conn.
EVALUATION OF UHF PLANAR TRIODE TUBE TYPE 2C39A IN THE POSITIVE GRID REGION, by W. Brunhart. Final technical rept. for 1 Feb-31 Oct 58 on Contract DA 36-039-sc-74816. [1958] 44p.
Order from LC mi$3.30, ph$7.80 PB 142 994

Tests were performed on 2C39A and 2C39WA type tubes in accordance with the tentative technical requirement. Based on the accumulated data, test limits are proposed for inclusion in procurement specifications. However, it is recommended for the sake of uniformity to use slightly different test conditions and corresponding limits and to eliminate the positive grid current division test, since it is felt that this test does not result in new information about the tube. It was found that the presently used JAN specifications do in no way cover the tube performance with respect to the 4.5 ms pulse test.

Magnetic Research Corp., El Segundo, Calif.
NEW METHODS OF MAGNETIC PULSE GENERATION, by B. M. Wolfframm. Rept. on Improved Electronic Components, Contract AF 33(616)2970. Dec 57, 55p. 10 refs. WADC Technical rept. 57-66.
Order from OTS $1.50 PB 131 651

The efficiency of magnetic pulse generators is analyzed by locating their core losses. Because of saturation of magnetic components the major portion of losses can be found in the cores. The wattmeter and calorimetric methods are used to determine the losses

of single components as well as those of the whole system. In addition, an evaluation of the voltage pulse into resistive load is made. The results obtained in different ways vary only a few per cent and indicate almost fifty per cent efficiency for a three-stage pulse generator. Tests are reported on a pulse generator that is capable of changing the repetition rate by a ratio of 1:2, and also on a pulse generator with continuous changing repetition rate. Methods of pulse width control mentioned in earlier reports have been tested on the magnetron power level and indicate a successful solution for a variable pulse width.

Maryland U., College Park.
AN ASYMPTOTIC CAUSALITY REQUIREMENT FOR SYSTEMS WITH CONSTRAINED INPUTS, by J. Sucher. Rept. on Contract AF 49(638)24. July 59, 14p. 6 refs. Physics Dept. Technical rept. no. 141. AFOSR-TN-59-773, AD-220 577.
Order from LC mi$2.40, ph$3.30 PB 143 156

The usual formulation of causality for simple linear systems: "no output before input", may fail to imply that the system kernel, $K(\tau)$, is a causal function of the time delay τ, because the class of physically admissable input functions may not contain a complete set of causal signals. An attempt is made to formulate a causality requirement, asymptotic in nature, which overcomes this difficulty. It is found, rather generally, that systems which satisfy this requirement cannot have a finitely acausal kernel. If it could be shown that the kernel cannot be infinitely acausal, the validity of the usual dispersion relations for such systems would be ensured.

[Material Lab.] New York Naval Shipyard, Brooklyn.
TITANIUM CATHODE COUNTER TUBES, UNIVERSITY OF MARYLAND, EVALUATION OF, by A. B. Jones, Jr. Final rept. 10 Apr 57, 7p. Lab. Project 5115-B-19.62; AD-140 792.
Order from LC mi$1.80, ph$1.80 PB 138 567

The tubes were halogen-quenched, glass-enclosed cylindrical counter tubes with cylindrical titanium cathodes 3 in. long and 1/2 in. in diameter surrounding a 5-mil tungsten anode wire. The filling was a mixture of chlorine and neon under pressures of 0.5 and 400 mm Hg, respectively. The operating ability of 3 tubes over 8899 hr of active life and of 2 tubes over 14,050 hr of active life indicated a degree of stability not shown by most tube types presently in the field. Likewise, a high degree of stability in plateau characteristics was shown by the subject tubes over 617 days of shelf life. Significant changes occurred in tube response and plateau characteristics over the temperature range of -55° to 75°C. The count rate and current increased with depressed temperature and decreased with elevated temperature. It is recommended that the titanium cathode counter tube be improved mechanically and be further investigated for possible use in the Navy Radiac equipments.

Microwave Electronics Lab., Rutgers State U., New Brunswick, N. J.
POWER CONVERSION WITH NONLINEAR REACTANCES, by Edward Della Torre and Murray D. Sirkis. Rept. on Contract AF 49(638)554. June 59, 14p. 10 refs. Research rept. 59-1; AFOSR-TN-59-596; AD-217 181.
Order from LC mi$2.40, ph$3.30 PB 143 958

The Manley-Rowe relationships for a nonlinear reactance are derived proceeding from the voltage-charge characteristic for a capacitance. The method used follows the work of Van der Ziel. The problem is generalized to an arbitrary number of generators. A criterion on the degree of nonlinearity required for power conversion to power at a particular frequency is also derived. A condition on the oscillator frequencies is found, but this condition proves to be less strict in any practical case than the Manley-Rowe requirement of incommensurability. Output filter considerations are also discussed.

Microwave Engineering Labs., Inc., Palo Alto, Calif.
INVESTIGATION OF MICROWAVE NON-LINEAR EFFECTS UTILIZING FERROMAGNETIC MATERIALS, by Wesley P. Ayres and Perry H. Vartanian. Quarterly progress rept. for 4 May- 2 Aug 58 on Contract DA 36-039-sc-73278. [1958] 27p. 3 refs.
Order from LC mi$2.70, ph$4.80 PB 138 832

The harmonic generation measurement system has been improved by the addition of a new more sensitive crystal detector, a calibrated variable attenuator, a directional coupler and a phase shifter. A ferromagnetic amplifier has been operated in both the degenerate and non-degenerate conditions of electromagnetic mode operation.

Microwave Physics Lab., Sylvania Electric Products, Inc., Mountain View, Calif.
HIGH POWER MAGNETIC FIELD CONTROLLED MICROWAVE GAS DISCHARGE SWITCH, by S. J. Tetenbaum and R. M. Hill. Rept. on Contracts DA 36-039-sc-(71053, 73188). 22 July 57, 69p. 19 refs. Technical rept. MPL-8; AD-142 943.
Order from LC mi$3.90, ph$10.80 PB 138 554

A broadband magnetic field controlled, microwave gas discharge switch is described which is capable of rapidly switching high peak and average power at S band. The switch consists of two gas-filled tubes located at the junction of a rectangular waveguide Y-configuration One or the other of the switch tubes is fired by the incident microwave power when a magnetic field is applied to it. The high electron density of the discharge acts like a short circuit in one input arm of the Y effectively connecting the other input arm to the output.

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
BROADBAND, BEAD-SUPPORTED COAXIAL LINES AND FITTINGS, by Paul G. Mariotti. Final rept. on Contract DA 36-039-sc-64456. 16 Mar 56, 74p. Rept. no. R-474-56; PIB-404.
Order from LC mi$4.50, ph$12.30 PB 129 483

Type "N" Connectors were designed for use with 1/2" O. D. and 7/8" O. D. semiflexible Styroflex line of both waterproof and pressurized types. In addition, a 7/8" RETMA rigid line flange was modified to accept a 7/8" O. D. semiflexible Styroflex line. A rotary joint in 7/8" RETMA line has been designed and developed. This design was then scaled and constructed for the 1-5/8" O. D. RETMA line. Values of $\lambda/\lambda g$ as a function of frequency were calculated for the 1/2" Styroflex line for higher mode operation. Values of $\lambda/\lambda g$ as a function of frequency were also calculated for the 7/8" line up to the first critical frequency. The changes of $\lambda/\lambda g$ are indicative of characteristic impedance change. The values of $\lambda/\lambda g$ were checked experimentally for the 7/8" line by means of a cavity technique. A comparison of performance parameters for various Styroflex type line is presented.

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
COUPLED LEAKY WAVEGUIDES. II. TWO PARALLEL SLITS IN A CYLINDER, by S. Nishida. Rept. on Contract AF 19(604)2031. 10 June 59, 22p. 4 refs. Research rept. R-746-59; PIB-674; AFCRC-TN-59-392.
Order from LC mi$2.70, ph$4.80 PB 143 400

Theoretical expressions are derived for the effects of mutual coupling between two parallel leaky wave antennas which consist of slitted rectangular waveguides located in a cylinder. The expressions derived are presented in terms of the infinite plane result with additional terms due to the curvature of the cylinder. The graphical presentation of the numerical attenuation constants for the cylindrical case are compared with those for the infinite plane. (See also PB 135 401)

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
FREQUENCY TRANSFORMATION AND TRANSMISSION LINE FILTERS, by Yosef Shalev and Eugene N. Torgow. Rept. on Contract AF 30(602)1650. 29 Apr 59, 86p. 11 refs. Research rept. R-706-59; PIB-634; RADC-TN-59-181; AD-216 435.
Order from LC mi$4.80, ph$13.80 PB 143 769

A technique for the design of high-pass and band-pass transmission line filters, by transformation from low-pass prototype transmission line filter was investigated. Dealing with networks comprised of commensu rate sections of line, a change of variable $\lambda = j \tan \theta$ was introduced. The new variable λ may be regarded as a frequency variable, and it has been shown that theorems and synthesis procedures for lumped element networks, can be adopted and applied directly to the distributed case. A general proof as to the validity of the transformation technique for filter design in the lumped element case is worked out and the physical realizability of the transformed functions is demonstrated. In an analogous manner, the applicability of the transformation technique to distributed networks in the λ plane was examined.

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
TUNABLE MICROWAVE FILTERS, by Danlyo Jacenko and Eugene N. Torgow. Rept. on Contract AF 30(602)1650. 6 May 59, 67p. 8 refs. Research rept. R-740-59; PIB-668; RADC-TN-59-180; AD-216 436.
Order from LC mi$3.90, ph$10.80 PB 143 768

Tunable bandpass microwave filters with independently adjustable upper and lower cutoff frequencies have been developed. These filters use the hybrid junction cutoff waveguide structure which is modified, in the waveguide case, by the introduction of variable height ridges in the cutoff waveguide sections. The center frequency of the pass band can be varied over a maximum band of 20% and the bandwidth can be varied from 1.5% to 20% with low pass band losses. The maximum insertion loss at midband is 1.0 db. for the narrowest bandwidth. It has been shown that this loss can be significantly rereduced by minimizing the reflections from the tapered line inputs to the cutoff waveguide sections.

National Bureau of Standards, Washington, D. C.
RESISTANCE DIODE BRIDGE CIRCUIT FOR TEMPERATURE CONTROL, by Lawrence H. Bennett and Van M. Johnson. Oct 59, 4p. 3 refs. Technical note 34.
Order from OTS $0.50 PB 151 393

The conventional ac bridge gives irregular performance including loss of temperature control when the temperature error exceeds a certain critical value. The present note describes a simple method of achieving stable temperature control over a large range of temperatures.

Naval Air Development Center, Johnsville, Pa.
A TRANSISTOR ZERO-CROSSING DETECTOR, by John S. Denelsbeck. 16 Oct 58, 13p. 1 ref. Rept. no. NADC-ED-5826; AD-208 277.
Order from LC mi$2.40, ph$3.30 PB 144 108

A transistor detector is described which generates a pulse whenever the input waveform passes through zero. This device utilizes a combination of two grounded-emitter amplifiers which are fed by input signals of opposite phase relationship. Although specifically designed for use in a synchro shaft position encoder, this zero-crossing detector also has application as a composite pulse generator and as a frequency doubler.

Naval Ordnance Lab., White Oak, Md.
A FERRORESONANT REGULATOR WITH CONTROLLABLE OUTPUT, by George Schohan. 2 Oct 57, 29p. 5 refs. NAVORD rept. 5741.
Order from LC mi$2.70, ph$4.80 PB 143 308

A solution to the problem of obtaining essentially instantaneous correction for A. C. line voltage changes is shown. The combination of a ferroresonant regulator having controllable output voltage with degenerative feedback to produce a regulator having constant output voltage for changes in line

voltage, frequency and load conditions is discussed. Design procedures and actual construction details of a 1000 VA ferroresonant circuit are given.

Naval Ordnance Lab., White Oak, Md.
THEORY OF NOISE IN A MULTIDIMENSIONAL SEMICONDUCTOR WITH A P-N JUNCTION, by Max Solow. Doctoral thesis. 26 June 57, 102p. 18 refs. NAVORD rept. 5762; AD-205 428.
Order from LC mi$5.70, ph$16.80 PB 144 046

In the p-n junction the noise is the result of fluctuations in the minority carrier density, holes in the n-type material and electrons in the p-type material. The noise problem is solved by using Langevin equations and interpreting the distributed sources as random forces.

Naval Research Lab., Washington, D. C.
AN AUTOMATIC RADAR RANGE MOON TRACKING SYSTEM, by John E. Abel and Charles F. White. Final rept. 11 Aug 58, 27p. Rept. 5170.
Order from LC mi$2.70, ph$4.80 PB 133 235

The design and construction of a high-performance automatic range tracking system for radar echoes from the moon is reported. The servo-system transfer function employed is based upon range variations of the signal due to the maximum earth-moon distance variation with time and upon "velocity memory" requirements arising from the nature of the input signal. The impracticality of conventional measurement methods in repeated experimental verification during system development of transfer functions extending from 100 rad/sec to below 0.0001 rad/sec led to employment of analog techniques in a feedback system testing method by which open-loop transfer functions are determined from closed-loop transient testing.

Naval Research Lab., Washington, D. C.
ELECTROMAGNETIC PROBES FOR NEAR-ZONE MEASUREMENTS, by D. C. Rohlfs, W. W. Balwanz, and F. E. Boyd. Interim rept. 5 Oct 59, 42p. 9 refs. NRL rept. 5378.
Order from LC mi$3.30, ph$7.80 PB 142 451

A set of detailed drawings of horns, lenses, and heat-protection covers and photographs of antenna structures illustrate the instrumentation utilized at NRL to provide the focused electromagnetic beams used in flame-conductivity studies. These drawings have been compiled for the convenience of workers in the field of rocket-exhaust studies.

Naval Research Lab., Washington, D. C.
INVESTIGATION OF OSCILLATOR CIRCUITS FOR USE WITH CR-9/U OVER-MODE CRYSTAL UNITS, by Bertram C. Hill, Jr. and Sylvaine L. Kenyon. 1 Nov 47, declassified 15 Dec 53. 35p. NRL rept. no. R-3158.
Order from LC mi$3.00, ph$6.30 PB 129 172

The overall performance of some early production CR-9/U over Mode Crystal Units was evaluated in the activity in terms of series resonant resistance, frequency stability and the type of holder used to mount the crystal plate. Crystal activity was, on the average, satisfactory. Frequency drift was generally excessive and further tests showed that both crystal frequency stability and crystal activity were functions of the voltage applied across the unit - the lower the voltage drive across the unit, the greater the crystal frequency stability, with activity varying with drive.

Naval Research Lab., Washington, D. C.
A THREE-LEVEL CHROMIUM ION MASER, by M. A. Garstens and W. W. McAllister. Progress rept. 13 Nov 59, 8p. 4 refs. NRL rept. 5400.
Order from OTS $0.50 PB 151 996

A brief discussion of three-level solid state maser theory is presented, as well as the experimental results for a chromium ion ruby maser operated both at temperatures of liquid helium and liquid nitrogen.

Naval Research Lab., Washington, D. C.
THE ZERO CROSSING PROBLEM, by D. F. Grady. Interim rept. 10 Nov 59, 22p. 4 refs. NRL rept. 5397
Order from LC mi$2.70, ph$4.80 PB 142 595

One of the basic problems encountered in the analysis of signals is that of determining the effect of noise, which is inevitably present along with the signal, on the frequency of the signal. One method of determining frequency is to measure the number of crossings of the zero axis by the signal. A pure sine wave of frequency f_0 would have $2f_0$ zero crossings per second. A sine wave has a fixed frequency, whereas random noise is composed of a mixture of frequencies; when noise is present with a sine wave, the frequency of the composite signal will be in doubt due to the random variations of the noise. One approach to predicting the frequency of a composite signal of a sine wave plus noise is to determine by measurement the number of zero crossings of the composite signal. This method of analysis includes the case of predicting the frequency of random noise as an introduction to the case of random noise plus a sine wave. For a sine wave plus random noise passed through a low-pass filter with a cutoff frequency of five times the frequency of the sine wave and an input signal-to-noise ratio of one, it was found that the frequency of the composite signal determined by measuring the number of zero crossings was over twice the frequency of the input sine wave. A set of curves was plotted for various low-pass and bandpass filters.

Navy Electronics Lab., San Diego, Calif.
TECHNIQUES FOR RECORDING SURFACE BIOELECTRIC DIRECT CURRENTS, by A. Ford and J. L. Leonard. 6 May 58, 23p. 16 refs. Research rept. no. 839.
Order from LC mi$2.70, ph$4.80 PB 143 733

Despite its potential value in human engineering, bioelectric DC recording has been neglected in comparison with AC recording. The neglect is a result of the experimental difficulties encountered in DC recording, particularly in avoiding electrical

drift effects. This report describes successful DC recording techniques, largely developed at NEL, with special emphasis on the fabrication and application of silver-silver chloride electrodes.

New York U. Coll. of Engineering, N. Y.
EXTENSION OF NULL-RECEPTION ANALYSIS TO BINARY COMMUNICATION SYSTEMS EMPLOYING ENVELOPE DETECTION, INCLUDING FSK, by J. J. Metzner and K. C. Morgan. Scientific rept. no. 8 on Contract AF 19(604)1964. 1 July 59, 120p. 24 refs. AFCRC-TN-59-562.
Order from LC mi$6.00, ph$18.30 PB 143 662

The effects of applying the null-zone decision mechanism to two types of envelope-detection systems have been investigated, and comparisons have been made with previous results for synchronous-detection systems, primarily within the framework of discarding and cumulative decision-feedback configurations. (See also PB 142 384)

CONVERSION OF CARBONACEOUS FUELS TO ELECTRICAL ENERGY, by Everett Gorin and Howard L. Recht. Final rept. for 15 Aug 57-14 Aug 58 on Contract DA 36-039-sc-74941. [1958] 76p.
Order from LC mi$3.90, ph$10.80 PB 138 803

This work was directed toward the development of a high temperature fuel cell whose electrochemical output is derived from the free energy change in the combustion of gaseous fuels with air. The ultimate aim is the development of a cell which may be used in an integrated fuel cell - gasification system. It summarizes the results of the present one-year contract. Procedures have been worked out for the preparation of double-porosity lithiated nickel oxide air electrodes, and ultra-strong magnesia electrolyte matrices. The experimental work has been carried to the point where operations can be conducted with pressurized double porosity electrodes. Stable short term outputs of over 4×10^{-2} watts/cm^2 at approximately 0.5 volts have been obtained with both silver gauze and lithiated nickel oxide electrodes.

Plasmadyne Corp., Santa Ana, Calif.
FUNDAMENTAL INVESTIGATIONS OF ELECTRICAL SOURCES. VOLUME II. BATTERIES, by Emil J. Hellund. Rept. on Contract AF 49(638)332. 24 Apr 59, 99p. E-2FR049-332, AFOSR-TN-59-430. AD-214 780.
Order from OTS $2.25 PB 161 262

The following section comprises a summary of performance characteristics, structure, power weight ratios, and power volume ratios, whenever available, of chemical batteries. Performance data include such items as watt hours per pound, watt hours per cubic inch, behavior at low temperatures, unactivated shelf life, activated shelf life, rechargeability, reliability, open circuit voltage, average operating voltage, and adaptability for particular service. Fuel cells, essentially of the same class of converters of chemical energy into electrical energy will be discussed. So-called nuclear batteries are presented last.

Radiation, Inc., Melbourne, Fla.
TELEMETRIC DATA TRANSMITTING SET AN/AKT-14 AND TELEMETRIC DATA RECEIVING SET AN/UKR-7(XA-2). Final engineering rept. on Contract AF 33(600)27465. 29 Dec 58, 207p. 14 refs.

Radio Corp. of America, Camden, N. J.
TRANSISTORIZED INTERPHONE MICROPHONE AMPLIFIER, by Willard F. Meeker and R. Michael Carrell. Final rept. on Contract DA 36-039-sc-64453. [1954] 195p. 14 refs. AD-151 762.
Order from LC mi$8.70, ph$30.30 PB 138 552

Articulation tests were conducted to determine how to make the best use of speech peak clipping, preemphasis, deemphasis, and AGC in the microphone amplifier of an interphone system for Army aircraft in which the noise can be as high as 120 db. The system considered uses

M-33/AIC microphones, H-70/AIC headsets, and listening amplifiers of the AN/AIC-12(XC-1) intercommunication set. Results indicated that no pre-emphasis or deemphasis should be used, 6 to 12 db of peak clipping should be provided (under control of the listener), and AGC should be provided in the microphone amplifier. Word articulation performance with such a system was 82% in the presence of 120-db noise at talker and listener stations, 95% with 120-db talker noise and 50-db listener noise, 93% with less than 80-db talker noise and 120 db of listener noise, and 98% in the presence of about 50 db of talker and listener noise.

Raytheon Co., Newton, Mass.
INVESTIGATION OF THE CORRELATION OF STANDARD DIODE EMISSION STUDY CONTRACT FINDINGS WITH PRODUCTION TYPE TUBES USING STANDARD PRODUCTION EQUIPMENT, by F. Hill, C. Bardsley and others. Scientific rept. no. 2 for 16 Mar-15 June 59 on Contract AF 19(604)4095. 26 June 59, 52p. AFCRC-TN-59-382.
Order from LC mi$3.60, ph$9.30 PB 143 399

An evaluation and explanation of a rapid method for the determination of dynamic cathode activity is described. The results of a laboratory study of the effect of high and low pilot voltages on the decomposition rate of the cathode coating are listed. The lower the pilot voltage, the faster the rate of decomposition. Also, a method for the determination of the proper coil orientation and the results of its application is included.

[Remington Rand Univac Div., Sperry Rand Corp.] St. Paul, Minn.
PREPARATION AND CHARACTERISTICS OF MAGNETIC RECORDING SURFACES, by Edward D. Korhone, Lawrence W. Reid, and Walter L. Anderson. Rept. on Contract NObsr-42001. 7 Jan 49, 23p.
Order from LC mi$2.70, ph$4.80 PB 144 148

The operation of magnetic recording drums at high peripheral speeds has indicated the need for coatings with greater adhering properties than have been obtainable with recording tape and cements. In other tasks, the magnetic material has been deposited directly on the drum surface by brushing, dipping, and other similar means. The coatings thus obtained were non-homogeneous, fragile, and magnetically noisy. Further trials brought about the use of various spray methods, probably the first of which employed a crude atomizer, and next, ordinary paint spraying equipment. While these yielded promising results, it was not until an artist's airbrush was used that magnetically satisfactory coatings were achieved. However, the adherance to well-polished metal surfaces was still inadequate. This problem was overcome by the addition of a zinc-chromate primer coat to the drum before application of the magnetic material. This report is limited to practical considerations involved in the preparation of magnetic recording surfaces in the subject Task; the purpose is to describe the application of magnetic surfaces, and to compare characteristics of several types of surfaces.

Rome Air Development Center, Griffiss AFB, N. Y.
ACCURACY IN THE ESTIMATION OF DEVIATIONS FROM THE GLIDEPATH AS A FUNCTION OF DISPLAY CONFIGURATION, by Edward F. LaForge and Edmund J. Kennedy. June 59, 11p. RADC-TN-59-140; AD-214 493.
Order from LC mi$2.40, ph$3.30 PB 144 081

This report describes the results of a comparative evaluation of two precision approach displays. The currently used azimuth-elevation CRT display was found to be less accurate in estimating quantified deviations from the glidepath than a display with visual references enabling rapid perception of deviations in azimuth and elevation. The detection of changes in these two dimensions is a critical requirement in monitoring guidance by both automatic and manual precision approach and landing systems.

Rome Air Development Center, Griffiss AFB, N. Y.
DESIGN AND DEVELOPMENT OF A HIGH-FREQUENCY RECEIVING-ANTENNA MULTICOUPLER, by Donald W. Sykes. Rept. on Contract AF 30(602)1492. Oct 59, 40p. RADC-TR-59-117.
Order from LC mi$3.00, ph$6.30 PB 143 954

This report lists the technical characteristics of the CU-483(XW-1)/GR antenna multicoupler developed by CGS Laboratories, Stamford, Connecticut, for Rome Air Development Center under Contract AF 30(602)1492. This equipment was developed to satisfy the current antenna coupler requirements of AACS and other Air Force organizations. The antenna multicoupler possesses exceptional performance characteristics and provides for the simultaneous operation of ten high-frequency receivers from one antenna.

Rome Air Development Center, Griffiss AFB, N. Y.
INTELLIGIBILITY TESTS ON THE R-361 (GRR-7) RECEIVER IN THE PRESENCE OF RF PULSE INTERFERENCE, by Joseph G. Molnar. June 59, 10p. 1 ref. RADC-TN-59-198; AD-216 700.
Order from LC mi$1.80, ph$1.80 PB 142 944

The results of the effects of RF pulse interference on a UHF voice receiver are discussed. Percentage word articulation is presented for desired signal levels of 3 - 100 microvolts in the presence of peak pulse interference 20 - 60 db greater. Test results on the R-361 receiver indicate that RF peak pulse interference 40 db greater than the desired signal level will enable a listener to obtain at least 50 percent word articulation and at least 83 percent sentence intelligibility.

Rome Air Development Center, Griffiss AFB, N. Y.
INTELLIGIBILITY TESTING OF VOICE COMMUNICATION SYSTEMS, by George E. Renaud. May 59, 10p. 4 refs. RADC-TN-59-156; AD-215 023.
Order from LC mi$1.80, ph$1.80 PB 143 750

This report describes methods of testing voice communication. Particular emphasis is placed on the use of PB-50 lists, developed by Harvard University, in testing actual speakers and listeners.

Rome Air Development Center, Griffiss AFB, N. Y.
UTILIZATION OF AIR STRUCTURES IN USAF GROUND ELECTRONIC SYSTEMS, by Albert A. Ondrejka. Aug 59, 45p. 5 refs. RADC-TR-59-137; AD-225 509.
Order from LC mi$3.30, ph$7.80 PB 143 580

This report is intended to acquaint the reader with so-called air structures which have been recently developed and show great promise for use in electronic aircraft control and warning systems. Their present status, as applicable to military operations, is reviewed in general, and prominent types are discussed more closely for the purpose of presenting their basic features and characteristics. Advantages and disadvantages associated with air structures operating under actual conditions are revealed, and recommendations regarding further development work are indicated. Properties inherent to air structures tend to suggest their wider future applications, including operations in outer space.

Sonotone Corp., Elmsford, N. Y.
INVESTIGATION LEADING TO THE DEVELOPMENT OF A NICKEL CADMIUM BATTERY HAVING A HERMETICALLY SEALED CONSTRUCTION, by Irwin M. Schulman and Paul F. Ritterman. Final rept. for 10 Aug 56-30 Nov 57 on Contract DA 36-039-sc-73009. [1957] 86p. 7 refs. AD 153 553.
Order from LC mi$4.80, ph$13.80 PB 143 664

Automatic cycling (60 minute charge - 40 minute discharge) was continued for the 3-1x1 (0.45 A.H.) batteries at discharge rates of 0.07 to 0.20 amperes. The effects of temperature, rate of charge, and electrolyte concentration on the reaction rate of the charged negative cadmium plate with oxygen in the presence of potassium hydroxide solution was investigated. Summaries of all reaction rate studies done under this contract are shown.

Sparton Radio-Television Div., Sparks-Withington Co., Jackson, Mich.
FREQUENCY METER FR-4/U, by Milton Kaufman. Final engineering rept. on Contract DA 36-039-sc-5642. 10 June 53, 86p.
Order from LC mi$4.80, ph$13.80 PB 143 752

It was determined by Sparton that the Government furnished models would not meet specifications with regard to stability, output, and spurious responses. In the proxy oscillator sub-chassis, the type of oscillator circuit has been changed to a tuned-grid type, the order of frequency multiplication is different and a substantial mechanical and electrical re-design has been accomplished. These changes have resulted in better stability and reduced spurious responses. A tuning meter has been added and the r-f output has been boosted on some bands. In addition, a separate mixer tube is now used and provides more stable operation. A CR-36/U (1250kc) crystal oscillator of a type recommended by the Signal Corps is now being used in the crystal oscillator-divider sub-chassis. A number of divider circuits were experimented with. The type now used is similar to the original design, but has been stabilized and is not free-running. In the harmonic selector sub-chassis, the blocking oscillator has been stabilized with respect to line voltage variations. Amplitude variations between harmonics have been minimized and spurious outputs from the sub-chassis considerably reduced. The function switch has been greatly simplified and the comparitor switch which was necessary in the model eliminated. The interpolation oscillator has been changed to a tuned-grid type. To improve oscillator performance coils of better Q have been wound and a large shield can be used. Mechanical design has been improved to provide better frequency stability. The indicator sub-chassis has undergone considerable change and simplification. Iron-core plate chokes have been eliminated in favor of d-c coupling to the oscilloscope deflection plates. The audio amplifier-expander has been greatly simplified and improved in performance. A negative high-voltage supply is now used for the oscilloscope and facilitates simplification of the circuits. In the power supply, a series-type regulator is used instead of the gas tubes used in the model. Better regulation under varying line voltage conditions is obtained.

Sprague Electric Co., North Adams, Mass.
FOLDED FOIL SINUSOIDAL POTENTIOMETER. Final Engineering rept. on Contract NObsr-52366. July 58, 78p.
Order from LC mi$4.50, ph$12.30 PB 143 559

Stanford Electronics Labs., Stanford U., Calif.
CIRCUIT CONSIDERATIONS IN TRAVELING-WAVE PARAMETRIC AMPLIFIERS, by C. V. Bell and G. Wade. Rept. on Contract AF 19(604)1847. 28 Aug 59, 31p. 7 refs. Technical rept. no. 316-1.
Order from LC mi$3.00, ph$6.30 PB 143 483

This paper presents the circuit considerations appropriate to wide-band operation in a traveling-wave parametric amplifier. The model which is analyzed is a transmission line periodically loaded with parametric diodes. The diodes constitute the variable elements. Across each diode is fed a large pumping voltage which produces a time-varying capacitance. A Brillouin diagram for the structure (i. e., a plot of ω vs β) can be computed from the analysis. The conditions for high gain, wide band, and other desirable characteristics are conveniently determined from this diagram.

Stanford Electronic Labs., Stanford U., Calif.
THE HELITRON OSCILLATOR, by G. Wada. Technical rept. no. 31 on Contract Nonr-225(24). 21 Apr 58, 102p. 12 refs.
Order from LC mi$5.70, ph$16.80 PB 138 586

Three different models of the helitron were constructed. The first tube showed that an operational helitron was feasible. The second tube contained modifications permitting operation at relatively large currents. These modifications also eliminated undesirable modes present in the first model. The third model had modifications leading to a better understanding of the behavior of the device. The experimental data on the three tubes are presented. A few of the pertinent experimental data are: continuous voltage tuning from 1. 2 to 2. 4 kMc with an accompanying change in tuning voltage of from 650 to 1700 volts; power output is in the vicinity of 1 to 10 milliwatts; and start-oscillation current is approximately 0. 4 ma for a structure 4 inches long.

Stanford Electronics Labs., Stanford U., Calif.
AN INVESTIGATION OF ADIABATIC RAPID PASSAGE IN IONIC PARAMAGNETS FOR USE IN SOLID-STATE MASERS, by W. W. Anderson. Rept. on Contract AF 19(604)1847. 20 Apr 59, 171p. 40 refs. Technical rept. no. 211-1; AD-220 584.
Order from LC mi$8.10, ph$27.30 PB 143 327

The theory of adiabatic rapid passage and the first applications were used in the study of nuclear magnetic moments. This study extends the results to electron spin resonance systems with emphasis on ionic paramagnets. The theory of adiabatic rapid passage is shown to apply to any two-level quantum system under the appropriate conditions. Interactions with other quantum levels and interactions not taken account of in the simple theory developed are then described by phenomenological relaxation times. It is shown that the only significant relaxation time in adiabatic rapid passage experiments is the spin-lattice relaxation time. Several types of masers are discussed.

Stanford Electronics Labs., Stanford U., Calif.
MICROWAVE INTERACTION OF ELECTRON BEAMS AND NON-PROPAGATING PERIODIC STRUCTURES, by J. A. Ruetz. Technical rept. no. 30 on Contract Nonr-225(24). 27 Mar 58, 157p. 21 refs; AD-156 783.
Order from LC mi$7.50, ph$24.30 PB 138 588

The possibility of obtaining gain in periodic non-propagating structures is investigated. The analysis makes use of an equivalent circuit representation of the microwave structure. The electron beam is assumed to flow through constant-field gaps followed by field-free drift regions. The gap voltage is associated with two different voltages of the equivalent circuit. One case assumes that the gap-voltage is the voltage appearing across a part of the shunt branch of the equivalent circuit while the other case assumes that the gap-voltage is the voltage across part of the series branch of the equivalent circuit. It is shown, by making traveling-wave tube approximations, that the first case reduces to a Bernier type analysis while the second is a Pierce type analysis.

Stanford Research Inst., Menlo Park, Calif.
FEASIBILITY STUDY OF AIRCRAFT ANTENNAS FOR FORWARD-SCATTER AND METEOR-BURST COMMUNICATION, by J. F. Cline. Rept. on Contract AF 19(604)3458. July 59, 63p. 38 refs. Technical rept. no. 66; AFCRC-TN-59-397.
Order from LC mi$3.90, ph$10.80 PB 143 398

The characteristics of the tropospheric forward-scatter and meteor-burst modes of propagation are discussed insofar as they affect the design of aircraft antennas. Considering the antenna design limitations, the existing frequency allocations, the propagation characteristics, and the cosmic and thermal noise spectra, it is concluded that the best frequency for air-ground or ground-air forward-scatter communication is about 225 Mc. It is also concluded that the best frequency for air-ground or ground-air meteor-burst communication is about 50 Mc, although frequencies up to somewhat above 100 Mc may be satisfactory for transmission in the ground-air detection. General types of aircraft antenna arrays are suggested for fore-and-aft or omnidirectional coverage, and estimates are given for the obtainable values of directive gain. Flush-mounted or slightly protruding antenna elements are recommended. Slot, patch, loop, and monopole elements are discussed in regard to size, location, and orientation. In particular, it is suggested that arrays of these elements be mounted on the fore part of the fuselage for forward transmission, and near the wing tips for fore-or-aft space-diversity reception.

Stanford Research Inst., Menlo Park, Calif.
A STUDY OF POSSIBILITIES FOR IMPROVING SPACE UTILIZATION AND PERFORMANCE OF RHOMBIC ANTENNAS, by Angel Martin-Caloto. Rept. on Contract AF 19(604)3458. July 59, 128p. 12 refs. Technical rept. 67; AFCRC-TN-59-572; AD-225 971.
Order from LC mi$6.30, ph$19.80 PB 143 404

A study of the mutual coupling of concentric rhombic antennas is made together with the analysis of the radiation properties of multiple concentric rhombics.

Stromberg-Carlson-San Diego, Calif.
DIGITAL COMPUTER INTERVENTION AND DISPLAY SYSTEM: MODEL 130, by John L. Moser. Final engineering rept. on Contract AF 08(616)81. May 58, 18p. ER-249; APGC-TR-58-82; AD-152 069.
Order from LC mi$2.40, ph$3.30 PB 138 560

The Digital Computer Intervention and Display System, Model 130, is designed to be used as an input-output device for the ERA 1103 computer. The equipment purpose is to allow fast, efficient communication between an operator and the computer, and to provide a means of high-speed photographic data-recording. A CHARACTRON Shaped Beam Tube and a series of Indicate Lights are used to display information to the operator. Activate buttons, intervention switches, and a Flexowriter (typewriter) are used to introduce information into the computer. A second CHARACTRON shaped Beam Tube is used to facilitate photographic recording.

Technical Research Group, New York.
NUCLEAR RESONANCE FILTERS FOR RADAR AND COMMUNICATIONS APPLICATIONS, by R. T. Daly and M. Newstein. Final rept. for 15 June 56-14 Sep 57 on Contract DA 36-039-sc-72408. 1957, 108p. 8 refs. AD-155 480.
Order from LC mi$5.70, ph$16.80 PB 138 551

A method of artificially "shimming" the inhomogeneous field of a small magnet by means of a series of radio frequency pulses applied to the nuclear induction sample has been investigated. The investigation was directed toward the development of a sharp, tunable, bandpass filter. Both analytical and experimental results show that two difficulties present themselves. First, the method is unstable with respect to small variations in the amplitude or width of the shimming pulses. Second, to realize a "quiet" sample under no-signal conditions, the shimming pulses must be of impractically short duration. For the case of an initial transverse relaxation time of 200 μsec, it is shown that 1000 shimming pulses must be applied during the transient signal build-up (20 millisec) in a glycerine sample if spurious output is to be kept below a reasonable level. Under these same conditions the shimming pulse length should be about 100 millimicrosec. Fractional variation in the amplitude x width value of the pulses must be held to 7×10^{-6}. A brief analysis of the steady state response of a filter is given under the assumption that the pulse qualities can be met; however, a conclusion is reached that it is impractical to meet these requirements.

Transitron Electronic Corp., Wakefield, Mass.
INDUSTRIAL PREPAREDNESS STUDY FOR DIFFUSED SEMICONDUCTOR DEVICES; DEVICE NO. 2, by B. B. Frusztajer, G. A. Ferris and H. C. Rudenberg. Feasibility rept. for 1 July 56-30 Nov 57 on Contract DA 36-039-sc-72714. [1957] 76p.
Order from LC mi$4.50, ph$12.30 PB 138 801

Feasibility of design and reproducibility of the fabrication procedures for device 2 has been demonstrated and 50 samples have been submitted for evaluation. Electrical and environmental performance tests meet the objectives. Data on 100°C storage indicates no significant deterioration over the 85°C storage temperature.

Union Thermoelectric Corp., Forest Park, Ill.
TWO DOUBLE CRYSTAL X-RAY DIFFRACTION SYSTEMS FOR SORTING QUARTZ OSCILLATOR BLANKS BY ANGLE, by James T. Lavan, Robert Mechanic and others. Special rept. on Contract DA 36-039-sc-71061. 15 July 58, 168p. 1 ref. AD-201 356.
Order from LC mi$7.80, ph$25.80 PB 144 068

Two double diffraction X-ray systems for the precision sorting of quartz resonator blanks according to angle are described together with full drawings and assembly and installation instructions. One system is designed specifically for the measurement of AT cuts. The other is more flexible, having provisions for the adjustment of the reference crystal. This second machine also employs a rotary, three-point, vacuum chuck, which could also be used with the fixed reference crystal, instead of the fixed, three-point, vacuum chuck. The use of one or the other of these chucks is important, especially for the accurate measurement of thin blanks. Both systems are designed for installation on a General Electric XRD-4 X-ray. Instructions for installing the fixed system on a General Electric XRD-2 are also given.

Varian Associates, Palo Alto, Calif.
RESEARCH ON MOLECULAR AND ATOMIC RESONANCE DEVICE, by John C. Helmer and Marcel W. Muller. Final rept. for 1 June 56-31 May 57 on Contract DA 36-039-sc-72398. [1957] 30p. 21 refs. Engineering rept. no. 189-1F; AD-143 382.
Order from LC mi$2.70, ph$4.80 PB 137 923

The properties of molecular and atomic resonance devices were investigated for use as submillimeter wave generators and/or amplifiers. Two ammonia-beam maser oscillators were constructed and tested. A maser amplifier was developed which has a gain of 20 db. The noise figure of the amplifier was measured with the aid of a novel microwave receiver which uses a maser oscillator as the second local oscillator in a double superheterodyne system. An analysis predicted the contribution of spontaneous emission to noise in maser amplifiers. The noise was considered to be a kind of thermal noise. The noise temperature of a polarized medium with n_a elements in the upper state and n_b elements in the lower states is given by $e^{h\nu/kT_e} - 1 = (n_a - n_b)/n_a$, where $h\nu$ is the energy difference between states and T_e is the temperature in question. A maser noise figure of 3.5 ± 0.5 db was measured which is constant within the experimental scatter for any gain between 18 and 32 db. A noise figure of 3.5 ± 0.1 db is predicted by the magnitude of the cavity coupling alone. The spontaneous emission noise in the beam was not observed. The possibility of developing a background gas pressure in the cavity which could contribute up to 0.7 db with an upper limit of about 0.2 db was indicated. A preliminary investigation of other molecules for use in beam-type masers indicated that the rotational energy states in linear molecules may be separated by an inhomogeneous electric field such as that used in a Townes maser.

Willow Run Labs., U. of Michigan, Ann Arbor.
RUBY AS A MASER MATERIAL, by Chihiro Kikuchi, John Lambe and others. Rept. on Project Michigan, Contract DA 36-039-sc-52654. Mar 59, 22p. 29 refs. Rept. no. 2144-3-T.
Order from LC mi$2.70, ph$4.80 PB 143 626

The reasons for the initial choice of ruby as a maser material are outlined and some measurements of the parameters in the spin Hamiltonian and of spin relaxation times are reported. The relative merits of single and double pump modes of operation of a four-level are discussed and measurements of the oscillator power for the two cases are included.

Ordnance, Missiles, and Satellite Vehicles

Aberdeen Proving Ground, Md.
POWER REQUIREMENTS AND INTERNAL FRICTION OF GRAPHITE LUBRICATED MECHANISMS, FEED, 20mm, AN-M2 [AND] INVESTIGATION OF TORQUE AND FRICTION CHARACTERISTICS OF 20mm M2 FEED MECHANISMS, by J. R. Patchell and N. Karasik. Rept. no. 73, 23 Mar-4 Sep 53, on Ordnance proj. no. TS3-3014. 9 Oct 53, 29p. 8 refs. Includes BRL TN-801.
Order from LC mi$2.70, ph$4.80 PB 142 922

To determine the power input requirements, shaft speed, internal friction, and potential output of Mechanisms, Feed, 20mm, AN-M2, with dry graphite lubricant, and to compare power requirements and internal friction with values obtained with feeds lubricated by other methods, under conditions of both normal and extreme low temperature.

Air Force Missile Development Center, Holloman AFB, N. Mex.
CENTRAL INERTIAL GUIDANCE TEST FACILITY, I: ERROR ANALYSIS FOR THE VELOCITY MEASURING SYSTEM OF THE HOLLOMAN TRACK, by Hermann P. Greinel. June 59, 77p. 12 refs. AFMDC-TR-59-25; AD-216 525.
Order from LC mi$4.50, ph$12.30 PB 143 184

The influence of physical error sources on the accuracy of the Velocity Measuring System, correlating space and time, is investigated. As far as it is possible up to date, the errors involved in spacing and timing are calculated in the mean square sense, or estimated, at least. The predominant effect of the random yaw-motions of the sled is shown as the main result of the study. Additional effort is requested to reduce the influence of this vibrational error source. To obtain an estimate of the relative error in velocity, finally, a comparison of the formulae of Beutler and Rauch, of the Midwest Research Institute, and of Dr. Moore, STL, is carried through.

Army Chemical Warfare Labs., Army Chemical Center, Md.
THE PENETRATION OF STEEL SPHERES INTO TISSUE MODELS, by Arthur J. Dziemian. Aug 58, 43p. 14 refs. CWLR-2226.
Order from LC mi$3.30, ph$7.80 PB 143 694

The penetrations of 3/16-, 1/4-, 3/8-, and 7/16-inch steel spheres, at striking velocities up to 1000 m./sec., into 20 per cent gelatin tissue models at 10.8°C. were studied by the use of high-speed motion pictures. By integration of the equations, the velocity, time or distance of penetration at any point in the target could be calculated if the striking velocity and size and weight of the sphere were known.

Astronautics Inst., Westinghouse Electric Corp., Baltimore, Md.
PERFORMANCE OF CLOSED-LOOP FLIP-FLOP CONTROL SYSTEMS IN MISSILES AND ROCKETS, by Milton Rogers (Air Force Office of Scientific Research) and George Shapiro. 15 Apr 59, 71p. 5 refs. AFOSR-TN-59-349; AD-213 677.
Order from LC mi$4.50, ph$12.30 PB 143 593

The basic concepts underlying the synthesis and analysis of closed-loop, flip-flop control systems of the electro-mechanical type are developed. Generalized design and analysis charts are presented to aid the engineer in quickly gaining an understanding of the relative importance of various elements in the system to the system's performance and stability. The importance of considering not only control-system dynamics, but also the damping provided by the airframe in developing practical flip-flop control systems is forcefully demonstrated to the engineer and scientist. Analog computer data, obtained as part of the present study, are used to substantiate analytic approaches and to advance the understanding of such systems.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
DESIGN OF AN OPTICAL INSTRUMENT (SMT) FOR SMALL, HIGH VELOCITY MISSILES. by W. J. Carrion. Aug 58, 27p. 7 refs. Rept. no. 1053.
Order from LC mi$2.70, ph$4.80 PB 138 615

The design and development of an instrument for acquiring trajectory data of small, high velocity missiles at great distances are discussed. A new optical technique for instrument alignment is described. Tests of the instrument are described and the capabilities of the instrument in a wide field of application are noted.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
DOPLOC TRACKING FILTER, by Victor W. Richard. Oct 58, 23p. 7 refs. Memo rept. no. 1173.
Order from LC mi$2.70, ph$4.80 PB 143 260

The operation and application of a phase-locked, audio frequency, tracking filter is described. The filters' primary function is to provide large improvements of the signal-to-noise ratio of noisy doppler signals by extreme reduction of bandwidth. Bandwidths adjustable from 0.5 to 50 cps are presently available, capable of operating when the input signal is 36 db below the noise, i.e., noise power 4000 times the signal power. The center frequency of the electronic bandpass filter tracks the input frequency by means of a phase-locked servo loop. A unique feature of the filter is the employment of a third order servo control system which makes it possible to maintain lock-on to the signal under dynamic flight conditions, thus obtaining maximum signal-to-noise improvement by permitting use of narrowest possible bandwidths.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
INSTRUMENTATION, FLIGHT SUMMARIES AND ASPECT DATA OF NIKE-CAJUN ROCKETS OB6.04, OB6.06 AND OB6.15, by Spence T. Marks and Joseph M. Conley. Upper Atmosphere Research rept. no. 8, June 59, 34p. 7 refs. Memo. rept. no. 1214.
Order from LC mi$3.00, ph$6.30 PB 143 146

A series of Nike-Cajun rocket firings for the purpose of conducting magnetometer experiments to an altitude of 140 km are described. Flight objectives are enumerated. The nose cone instrumentation is described in some detail. Flight summaries for the three rockets are given. Aspect magnetometer data are also presented. The precession magnetometer data are being reduced, and will be the subject of a separate report. The firings here reported were part of a series conducted by these Laboratories during the International Geophysical Year, and were supported in part by the National Science Foundation under NSF Grant Number Y/10.14/151.

THE EQUATIONS OF MOTION OF AND EQUIVALENT CIRCUITS FOR A GEOPHONE, by C. W. Horton. Rept. on Contract DA 44-009-eng-2073. 18 Oct 54, 23p. 2 refs. DRL Acoustical rept. no. 84.
Order from LC mi$2.70, ph$4.80 PB 143 731

Defense Research Lab., U. of Texas, Austin.
A PRELIMINARY STUDY AND ANALYSIS OF THE MECHANICAL-ACOUSTICAL IMPEDANCE OF THE EARTH, by E. L. Hixson and J. F. Mifsud. Final rept. on Contract DA 44-009-eng-2073. 21 Aug 56, declassified 14 Mar 58. 70p. 21 refs. DRL-A-111.
Order from LC mi$3.90, ph$10.80 PB 143 726

A device has been built which measures the driving-point impedance of the ground from 50 cps to 350 cps. The experimental dependence of the driving-point impedance on soil parameters such as particle size, moisture content, and density has been measured. Discontinuities in the ground such as cracks or stratifications show up as circles or loops on the complex impedance plot and also change the magnitude of the impedance, particularly at the low frequency end. The impedance increases over a buried mine if the mine is less compliant than the soil in which it is buried and vice versa. Some experimental results also are given on the dependence of the driving-point impedance on the size of the driving piston and the magnitude of the static and dynamic force. Equivalent electric circuits of the driving-point impedance are discussed. In agreement with the recommendation of the Panel on Acoustic Detection of Buried Land Mines, it is suggested that an automatic impedance recording device be constructed. This new system could be used for both a more complete study of the driving-point impedance of soils and buried objects and the measurement of transfer admittance.

Defense Research Lab., U. of Texas, Austin.
A STUDY OF THE PROPAGATION OF SOUND WAVES NEAR THE SURFACE OF THE EARTH AND THE MEASUREMENT OF THE DRIVING-POINT IMPEDANCE OF THE EARTH, by W. R. Runyan and J. F. Mifsud. Interim technical rept. on Contract DA 44-009-eng-2073. 10 Mar 55, declassified 12 Mar 58, 57p. 33 refs. DRL Acoustical rept. no. 88.
Order from LC mi$3.60, ph$9.30 PB 143 730

The work already accomplished consists of (1) the design of a system which will measure the driving-point impedance of the ground in the frequency range of 50 to 350 cps, (2) the measurement of the driving-point impedance of a silty sand and a clay soil as a function of frequency, and (3) a few measurements of the velocity of the Rayleigh wave on the surface of a semi-infinite soil.

Defense Research Lab., U. of Texas, Austin.
THE STUDY OF SOME ACOUSTIC PROPERTIES OF SOILS, by S. J. Brient and E. L. Hixson. Final technical rept. on Contract DA 44-009-eng-2875. 30 30 Sep 57, declassified 14 Mar 58, 49p. 5 refs. DRL Acoustical rept. no. 128.
Order from LC mi$3.30, ph$7.80 PB 143 724

The performance of any acoustic buried mine detector depends on the acoustic properties of soils. A study of the surface characteristics has been made using the impedance concept. Several devices have been developed for measuring force and the resulting velocity and an automatic computer-recorder has been built to calculate and plot impedance as the measurement is made. Driving-point impedance measurements have been made over several buried objects and the surface characteristics noted. In a study of the problem in increasing detector range some transfer impedance and velocity transfer functions have been measured. Impedance information has been used to predict the transient response of a soil to an impulsive force and the results verified experimentally. The results and information collected have been applied to the detection problem and some acoustic mine detection principles are presented.

Electronic Defense Lab., Sylvania Electric Products, Inc., Mountain View, Calif.
OPTIMUM SEARCH PROCEDURES: DISCRETE CASE, by Frank Proschan and William Pruitt. Rept. on Contract DA 36-039-sc-73170. 1 Aug 57, 24p. Technical memo. no. EDL-M112; AD-153 346.
Order from LC mi$2.70, ph$4.80 PB 138 565

Optimum search procedure is derived mathematically. An enemy missile is assumed to arrive at some time and in some location with some corresponding probability which is uniform over time. Detection of the enemy plane occurs with some fixed probability w when the search equipment scans its location. The resultant gain is some specified function of time arrival and detection. Proof is given that the scans devoted to a given location should be regularly spaced over time. The ideal proportion of scans devoted to a given location is determined explicitly as a function of the probability of missile arrival in the given location. For a large class of payoff functions, the ideal proportion of scans allocated to the i^{th} location is proportional to a corresponding power of the probability p_i. The solution does not depend on the probability of detection. A numerical example for a 6-location case is given to compare the ideal procedure with alternative procedures. Actual search schedules are presented.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
CHARACTERISTICS OF VARIOUS METHODS OF COLLECTING DATA IN TESTS OF INCREASED SEVERITY, by Alonzo Bulfinch. Aug 59, 24p. 10 refs. Technical rept. 2627.
Order from LC mi$2.70, ph$4.80 PB 143 720

The need for a better understanding of the characteristics of methods for collecting data in tests of increased severity is described. A number of problem areas in Ordnance research are listed in which tests of this kind are required. Characteristics of various standard methods and some of their modifications have been studied by Monte Carlo techniques. The results of sampling known normal and skewed distributions are evaluated. The relation of tests of increased severity to reliability testing is pointed out.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
DEVELOPMENT OF UNIVERSAL HIGH-ALTITUDE, HIGH-TEMPERATURE-RESISTANT SQUIBS WITH AND WITHOUT RF AND MF PROTECTION, by Charles Knapp. Oct 59, 30p. 11 refs. Technical rept. 2653; AD-226 825.
Order from LC mi$2.70, ph$4.80 PB 142 488

Prototypes of universal high-altitude, high-temperature-resistant squibs both with and without RF and microwave frequency (MF) protection, have been developed. They are designed to endure such outer space conditions as temperatures of 200°C; vacuums of 10^{-8} mm mercury; and the vibration, acceleration, and shock of rocket launching and flight. Outstanding features of the new squibs are the hermetic sealing of the charge compartment and the use of materials of very low vapor pressures--stainless steel, Kovar, and glass or ceramics.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J
EXPERIMENTAL VERIFICATION OF EXPRESSION FOR RATE OF FALL OF PARACHUTE-SUSPENDED FLARE, by Matthew Nowak and Jesse F. Tyroler. July 59, 18p. Technical rept. 2623; AD-214 769.
Order from LC mi$2.40, ph$3.30 PB 143 320

An expression for the distance traveled as a function of time for a flare assembly suspended from a parachute was derived on the basis of the assumption that the frictional drag is expressible as a function of the velocity ($M=KV^2$), This expression was verified by comparing values obtained from it with experimental values. The derived values agreed with the experimental data to within less than 5%. The work done makes possible the use of the expression with a known degree of confidence.

Feltman [Research and Engineering] Labs., Picatinny Arsenal, Dover, N. J.
THE MECHANISM OF IGNITION AND PROPAGATION OF OXIDANT-METAL FLASHES, by Joseph Hershkowitz. Apr 58, 46p. 6 refs. Technical rept. 2526; AD-156 424.
Order from LC mi$3.30, ph$7.80 PB 138 639

The physics of a system consisting of a small quantity of explosive, centrally located in a case containing an oxidant/metal flash composition has been qualitatively described on the basis of an experimental study.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
QUANTITATIVE STUDY OF PARAMETERS AFFECTING BULLET SENSITIVITY OF EXPLOSIVES, by Samuel D. Stein. Sep 59, 63p. 7 refs. Technical rept. 2636; AD-226 111.
Order from LC mi$3.90, ph$10.80 PB 143 822

Rifle-bullet sensitivity tests (Caliber .30) were conducted to determine the extent to which explosive-column length, thickness of confining wall, and kind of wall material affect the bullet sensitivity of commonly used explosives. Also studied was the feasibility of evaluating the test results quantitatively by measuring the magnitude of the shock wave generated when an explosive detonates.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
STATIC TEST DEVICE WHICH SIMULATES GUN-FIRING PRESSURE ON BASE OF SHELL, by Samuel D. Stein, Stanley J. Lowell, and Richard W. Snook. Aug 59, 38p. 3 refs. Technical rept. 2640.
Order from OTS $1.00 PB 151 801

The device consists principally of a test chamber in which a propellant charge is fired, a locking mechanism to hold the test specimen in position, ventings, and auxiliary component parts and instrumentation. The device generates pressures up to 50,000 psi over a period of approximately 1 to 2 milliseconds. In addition to simulating the conditions to which the bases of shell are subjected during gun firing, the device can be used to study the strength and permeability of materials and joints under high pressures at ultra high rates of loading and to study the strength of materials under rapid compression. Its use should eliminate costly gun firing tests.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
THERMOANALYSIS OF BINARY SYSTEMS: $KClO_4$/ALKALI AND ALKALINE EARTH METAL NITRATES, by Virginia D. Hogan and Saul Gordon. Sep 59, 29p. 6 refs. Technical rept. 2608.
Order from LC mi$2.70, ph$4.80 PB 143 903

To investigate the high temperature physicochemical behavior of binary oxidant mixtures containing potassium perchlorate and the nitrates of the alkali and alkaline earth metals (lithium, sodium, potassium, rubidium, cesium, calcium, and strontium).

Institute for System Research, U. of Chicago, Ill.
DETERMINING AIR REACTIONS ON MOVING VEHICLES. PART III. METHODS OF HYDRODYNAMICS, by M. Z. Krzywoblocki. Rept. on Contract AF 33(616)5689. July 59, 217p. 820 refs. WADC Technical rept. 56-51, Pt. 3.
Order from OTS $3.50 PB 161 141

The present report describes briefly the most important methods of hydrodynamics to calculate the forces and moments acting on a body moving in a fluid which is at rest or on a body at rest in a moving fluid. Only the most distinguished features of each method under discussion are presented. The report is divided into two parts: incompressible and compressible fluids. Each part contains a separate list of references and separate numeration of equations. Along with the discussion of the most advanced methods in each part there are briefly mentioned some more advanced papers on the subject in question. Under the definition of "hydrodynamic methods" we understand the mathematical methods which have a full rigor of analysis. This implies that all the methods discussed in this report have mathematical justification and no approximative assumptions of an intuitive nature are introduced.

Institute of Molecular Physics, U. of Maryland, College Park.
ELECTRONIC TRANSIENT RECORDER FOR TRACKING OF HIGH SPEED PROJECTILES, by D. Ritke and E. White (Naval Ordnance Lab.). Rept. on Contract Nonr-595(02). 19 Nov 58, 33p. 12 refs. IMP-ONR-1.
Order from LC mi$3.00, ph$6.30 PB 143 457

A microwave interferometer system which is used to follow the motion of a high speed projectile is described. A block diagram is given for the complete apparatus as well as diagrams for the component units. The system described here differs in some respects from other microwave systems reported in the literature.

Integrated Range Mission, White Sands Missile Range, N. Mex.
A HIGH FREQUENCY DIRECT-WRITING RECORDER, by Robert C. Barto. 15 July 58, 43p. 5 refs.
Order from LC mi$3.20, ph$7.80 PB 143 357

A direct-writing analog recorder has been developed to provide "quick-look" recordings of telemetry data. The instrument produces high-resolution oscillogram records on electrophotographic paper. A xerographic process is used that allows a continuous and automatic processing of the record in the instrument. The result is a permanent record made without the use of wet chemical processing. The permanent, high-contrast record can be reproduced by Ozalid or Bruning processes, as well as photographically. Sensitizing, exposing, developing, and fixing are accomplished at paper speeds of one-half inch per second to sixteen inches per second. After exposure, the developed record can be viewed in the time required for four inches of chart movement. This corresponds to eight seconds for the slowest paper speed and one-quarter second for the highest paper speed.

Naval Ordnance Lab., Corona, Calif.
DESIGN CONSIDERATIONS IN THE USE OF SOLENOIDS IN SAFETY-ARMING DEVICES, by W. B. Lunt and R. E. Tafel. 3 Sep 59, 50p. NAVORD rept. 5952; NOLC rept. 451.
Order from LC mi$3.30, ph$7.80 PB 144 111

In a certain guided missile safety-arming device (S-A), reopening of the once-activated solenoid circuit caused the coupling of large transient voltages into the otherwise independent detonator circuit, and resulted in premature initiation. These electrical difficulties stemmed solely from the use of a solenoid as the S-A launch-latch actuator. This report details the investigation of the S-A in question and discusses the results obtained. Various corrective measures are considered, and recommendations are made for incorporating such improvements in future S-A's.

Naval Ordnance Lab., White Oak, Md.
UNDERWATER SHOCKWAVE PARAMETERS FOR TNT, by John P. Slifko and Thomas E. Farley. 1 June 59, 27p. 16 refs. NAVORD rept. 6634.
Order from LC mi$2.70, ph$4.80 PB 143 823

Free water shockwave parameters obtained from 80-pound spherical TNT charges, covering the scaled reciprocal range of $W^{1/3}/R$ from 0.08 to 0.6 $lbs^{1/3}/ft$, and similitude lines for peak pressure, time constant, impulse and energy are presented.

Naval Ordnance Test Station, China Lake, Calif.
SEA ANIMALS AND TORPEDOES, by William C. Shaw. 10 Aug 59, 49p. 103 refs. NOTS TP-2299; NAVORD-6573; AD-226 362.
Order from LC mi$3.30, ph$7.80 PB 143 824

Various aspects of sea-animal locomotion are surveyed in the light of the tactical propulsive requirements placed upon torpedoes. Intensive investigation looking toward the eventual application of the fundamental principles of locomotion that are utilized by the sea animals (without necessarily imitating their structure) is believed to offer a new

avenue of approach toward achieving the silent and efficient operation that is so essential for effective homing and stealth.

Naval Proving Ground, Dahlgren, Va.
SATELLITE TRAJECTORY AND ORBIT CALCULATIONS FROM MINITRACK TRIANGULATION, by W. A. Kemper. 8 Dec 58, 62p. 6 refs. NPG rept. no. 1633.
Order from LC mi$3.90, ph$10.80 PB 138 538

This work was undertaken to provide information on the performance of the Vanguard satellite launching vehicles during the third stage burning and also to provide a back-up prediction of the orbit or trajectory from simultaneous Minitrack data taken at Grand Turk and Antigua. The report describes the calculation procedures used and the results obtained through May 1958. The calculations are made in three steps. First, position coordinates are obtained by a least squares triangulation using simultaneous data from the two stations. Then a "best" fit is made to the position coordinates using orthonormal polynomials, and smooth position, velocity and acceleration are obtained. With these data as initial conditions, trajectories are integrated around an oblate spheroidal earth with a gravity field corresponding to the figure of the earth. Results are given for 1958 α and β and on the orbit attempts of Explorer II and SLV I.

[Naval Weapons Plant] Washington, D. C.
THE DESIGN OF AN ELECTROMECHANICAL SERVOMECHANISM WITH PHOTO ELECTRIC ERROR DETECTION, by Ralph C. Liebowitz and Seymor Kant. 30 June 49, issued 5 Jan 58. 89p. 6 refs. Technical rept. no. NGF-T-42-57; NAVORD rept. no. 5526; AD-152 772.
Order from LC mi$4.80, ph$13.80 PB 138 596

A servomechanism has been designed using two independent servo loops with a photoelectric cell as the error detecting device. Mathematical analysis shows that if the angle of rotation of the mirror which reflects light to the photocell along two orthogonal paths does not exceed 20 minutes then the two servo loops are mutually independent and the photocell voltage output will be a linear function of the error angle for each servo. The servomechanism has been designed by means of the "decibel-log-frequency" type of synthesis and a detailed mathematical analysis shows that the design specifications are satisfied.

Picatinny Arsenal, Dover, N. J.
DICTIONARY OF EXPLOSIVES, AMMUNITION AND WEAPONS (GERMAN SECTION) by Basil T. Fedoroff, Henry A. Aaronson and others. 1958 [declassified 20 July 59]. 352p. Technical rept. no. 2510.
Order from OTS $4.00 PB 161 270

This compilation has been made with the object of providing a ready reference to the subject matter covered by means of an alphabetical arrangement. In general, only sufficient information is furnished for understanding of the principles, meaning of terms, process, mechanical layout etc. Numerous references to original sources are provided for those seeking more detailed information. Classified information has been carefully excluded. However, a few classified references have been given to permit further study by those with authorized access to such sources. No attempt has been made to include all data and information available to the Ordnance Corps.

Rock Island Arsenal Lab., Ill.
GAMMA RADIATION OF PACKAGING MATERIALS, by W. F. Garland. 31 July 59, 19p. 19 refs. Rept. no. 59-2056.
Order from OTS $0.50 PB 161 097

This report summarizes the results obtained from exposing ten barrier materials or component parts over a dose range of 1.4×10^6 to 30.1×10^6 Rad. Spent reactor fuel elements were used as the source of gamma (ionizing) radiation. The study was of an exploratory nature. Although all materials were degraded somewhat by the highest dose of radiation, the plastic films seemed to be the least affected. Among the materials evaluated, cotton scrim was the poorest of the materials, losing approximately 60% tensile strength at 30.1×10^6 Rad.

Springfield Armory, Mass.
UTILIZATION OF INVESTMENT CASTINGS FOR SMALL ARMS WEAPON COMPONENTS, by J. F. Panda. 26 June 59, 42p. Rept. SA-TR19-1004.
Order from OTS $1.25 PB 161 268

An investigation was conducted to determine the feasibility of using investment castings for components of various small arms weapons. Description of the procedure used in fabricating components by the investment casting method is discussed.

Systems Labs. Corp., Sherman Oaks, Calif.
THE GEODETIC USE OF ARTIFICIAL EARTH SATELLITES. Final rept., Pt. 1, on Contract AF 19(604)5517. 15 Aug 59, 127p. 53 refs. CMCC 24.9; AFCRC-TR-59-276, Pt. 1.
Order from OTS $2.75 PB 161 147

This report discusses various ways in which an artificial earth satellite may be used to provide the geodesist with more accurate information about the relation between different geodetic datums. The various available methods are discussed both from a general point of view and in terms of a number of specific methods which have been proposed for this purpose. These include both optical and electronic techniques and in each case the predicted accuracy of the principal datum ties is discussed. Connection methods based both on orbit prediction and on simultaneous visibility of the satellite from the datums are investigated. The report is divided into two parts; Part I presents a general, non-mathematical discussion of the problems and methods and summarizes our principal conclusions; Part II presents a more detailed technical analysis of the accuracy of various methods, of equipment design and performance and of the effects of physical phenomena, such as ionospheric and atmospheric fluctuations, on the measurements.

Systems Labs. Corp., Sherman Oaks, Calif.
THE GEODETIC USE OF ARTIFICIAL EARTH SATELLITES. Final rept., Pt. 2, on Contract AF 19(604)5517. 15 Aug 59, 87p. 51 refs. CMCC 24.10; AFCRC-TR-59-276, Pt. 2.
Order from OTS $2.25 PB 161 148

This part of the report constitutes a technical appendix to Part I, and a number of mathematical and technical questions are analyzed in some greater detail here. There has not been any attempt made to ensure continuity between the sections here, and apart from the first three each may be read largely without reference to the others. As far as possible the notation has been kept consistent, and with some exceptions conforms to conventional usage. (See also PB 161 147)

Sanitation and Safety Engineering

Army Chemical Warfare Labs., Army Chemical Center, Md.
DEVELOPMENT OF THE CLOSURE, PROTECTIVE SHELTER, ANTIBLAST, 600 CFM, E19R1, PART I, by Frank G. Ort and Merton D. Mears. Jan 59, 72p. 5 refs. CWLR-2269.
Order from LC mi$4.50, ph$12.30 PB 143 718

This report covers the development of the Closure, Protective Shelter, Antiblast, 600 cfm, E19R1. The unit was designed for use in the inlet and exhaust ducts of CBR protective shelters to provide protection against blast effects for personnel, filter units, ducts, and installed equipment. The closure unit is applicable to flows other than the design flow capacity of 600 cfm. The E19 antiblast closure, and its improved version the E19R1, satisfactorily met the special and protective requirements established by the Bureau of Yards and Docks, Department of the Navy. Shock-tube tests on the units were conducted at APG and its successful performance in the field under conditions of an atomic exposure at the Nevada Proving Ground is described. A plan for further work to provide additional engineering design and performance data for this type of antiblast closure is given.

Naval Research Lab., Washington, D. C.
ALGAE AND SUBMARINE HABITABILITY: AN APPRAISAL, by John M. Leonard. 26 Aug 58, 9p. 17 refs. Rept. 5182.
Order from LC mi$1.80, ph$1.80 PB 134 259

The feasibility of using algae in submarine air purification has been explored through an examination of the scientific literature. Without minimizing the serious biological and engineering problems, the writer believes that the prospects warrant serious experimental investigations. An estimate of 300 to 440 kilowatts is offered as the power requirement of the system. Various possible sources of illumination are examined. The writer recommends the seeking out of algae of optimum properties, the search to include chemical- and radiation-induced mutants. Chemical growth-stimulators should be closely studied. Construction of a pilot-plant exchanger would furnish valuable engineering experience.

Naval Research Lab., Washington, D. C.
A SOLID-PROPELLANT PRESSURIZER FOR FIRE-EXTINGUISHING SYSTEMS IN POLAR REGIONS, by J. K. Musick and J. A. Grand. Final rept. 3 Aug 59, 29p. 8 refs. NRL rept. 5332.
Order from OTS $0.75 PB 151 737

A solid-propellant pressurizer with an automatic firing device for a 300-gallon sprinkler system has been developed. The unit is designed to operate from -65°F to room temperature. One 300-gallon sprinkler system can provide fire protection for two 20 x 48 ft buildings. The pressurizer employs the combustion gases of a double-base propellant to expel the extinguishant. The propellant is shaped into a hollow cylinder, 3-1/4 inches in diameter and 4-1/2 inches long. These cylinders, or grains, can be burned either singly or coaxially in groups of two or three. This feature, with the selection of suitable nozzles and other hardware, permits the use of different sizes of cartridges while retaining the advantages inherent in the use of a single propellant-grain design. The use of different sizes of cartridges is advantageous, since the volume of space to be pressurized varies widely as the operation of the sprinkler system proceeds. The cartridges are fired at the proper time and in the proper sequence by a battery-powered firing system which employs two pressure switches and a stepping relay, and which is triggered by pressure changes in the sprinkler tank and loop. To initiate operation, a supervisory pressure of 10 to 15 psi is maintained in the sprinkler loop. When this pressure is reduced to 5 psi by the opening of one or more sprinkler heads, the first cartridge is fired. The high pressure (about 100 psi) resulting from the combustion of the first cartridge arms the firing system preparatory to firing the second cartridge. When enough fluid has been expelled through the open heads to reduce the pressure in the system to a predetermined level (about 35 psi), the second cartridge is fired. The process is then repeated automatically until all the cartridges are fired or until the line switch is opened manually. It appears that four cartridges will be sufficient for a 300-gallon system, although the use of a greater number would not require any basic changes in design.

Ship Building

TOWING NONSELF-PROPELLED FLOATING STRUCTURES. 1 Oct 53, 74p. Technical Pub. NAVDOCKS TP-Pw-26.
Order from OTS $2.00 PB 161 255

This publication has been prepared as a technical guide for naval and civilian personnel concerned with the preparation for towing of all floating craft within the Bureau's area of technical responsibility. Presented herein are the technical criteria used in the design, planning, and installation of towing equipment.

Experimental Towing Tank, Stevens Inst. of Tech., Hoboken, N. J.
METHODS FOR ESTIMATING THE LONGITUDINAL AND LATERAL DYNAMIC STABILITY OF HYDROFOIL CRAFT, by Paul Kaplan, Pung N. Hu, and Stavros Tsakonas. Rept. on Contract Nonr-263(14). May 58, 86p. 23 refs. Rept. no. 691.
Order from LC mi$4.80, ph$13.80 PB 143 133

The equations of motion of tandem hydrofoil craft in both longitudinal and lateral modes, each mode having three degrees of freedom, are derived on the basis of the linear theory of small disturbances. Various stability derivatives appearing in the equations are determined in terms of the lift and drag forces acting at the foils, together with their derivatives with respect to angle of attack and depth. Various theoretical and experimental methods for determining these hydrodynamic quantities are discussed in the report. Stability criteria for both the longitudinal and lateral dynamic stability of hydrofoil craft also are presented. The results may be used for estimating the dynamic stability of hydrofoil craft while in the preliminary design stage, and it is expected that the equations are sufficiently accurate to indicate the trends in the degree of dynamic stability as changes are made in the design configuration.

FOOD, HANDLING, AND PACKAGING EQUIPMENT

Forest Products Lab., Madison, Wis.
DEVELOPMENT OF A CASE LINER FOR LONG-TERM OUTDOOR STORAGE (FOURTH-YEAR INSPECTION), by Louetta Dieruf and Donald J. Fahey. June 59, 32p. Rept. no. 55-2-4.
Order from LC mi$3.00, ph$6.30 PB 143 280

This is the fourth in a series of reports made after annual examinations of 10 boxes and their contents returned from each of 4 outdoor exposure sites. Results of this fourth-year examination indicate that, of the three species of pretreated wood considered for use as boxes, Douglas-fir best protected the liner and its contents, and red oak was the least effective. The liner of polyethylene film, foil, and scrim was still superior to the liners consisting of polyethylene film and kraft paper combinations. Of the four sites, Panama's high temperature and moisture had the most detrimental effect on boxes, liners, and contents.

Food

Alabama U., University.
FACTORS CONTRIBUTING TO FOOD MONOTONY, by Paul S. Siegel. Rept. no. 5 (Final) for 7 Feb 55-6 July 56 on Contract DA 19-129-qm-264. [1956] 19p. 5 refs.
Order from LC mi$2.40, ph$3.30 PB 143 782

The present study was specifically designed to generalize to other and different menus the finding that acceptance declines with repetition, to re-examine the relationship between acceptance decline and initial palatability, to evaluate two different psychological tests as possible predictors of susceptibility to monotony, and to assess certain selected dehydrated and frozen items with respect to monotony production. Additionally, opportunity was found to pursue several fresh leads or hypotheses.

California U., Berkeley.
CAROTENOID STABILITY OF CARROTS, by G. MacKinney. Rept. no. 1 (Final) for 3 June 55-31 Dec 56 on Contract DA 19-129-qm-420. [1956] 12p. QFCIAF File no. V-327.
Order from LC mi$2.40, ph$3.30 PB 143 777

Three main lines of research were followed: (1) Impregnation of the diced carrot with a suitable antioxidant prior to dehydration. (2) Use of an oxygen scavenger added to the container in which the dehydrated product was to be stored. (3) Use of high vacuum, 28.5-29 inches, as encountered in the coffee industry packs. Of the three procedures, the last mentioned was successful. Samples stored at 104, 122, 140° F (40, 50, 60° C, respectively) showed no change in carotene content after three months in the absence of oxygen. By contrast, results with the antioxidant, propyl gallate, showed only partial protection of the pigment. Tests with the oxygen scavenger made at the request of the Quartermaster Food and Container Institute were inconclusive for various technical reasons not subject to our control. In principle it would appear also to be a workable procedure for eliminating the oxygen from the container.

Cremer, H. D.
STUDIES AND INVESTIGATIONS ON THE REQUIREMENTS OF VITAMIN B_1 IN DIFFERENT DIETS, by H. D. Cremer. Final technical rept. for 1 Sep 58-31 Aug 59 on Contract DA 91-508-EUC-374. [1959] 19p. 13 refs.
Order from LC mi$2.40, ph$3.30 PB 143 449

The method as developed for thiamine determination in urine was proved on its accuracy and specifity as well as tested on its appropriatness of vitamin B_1-determination in food-stuffs. It was the purpose of these investigations to study if sorbitol administration improves the maintenance of thiamine in the human in a similar way as found in the rat. It is concluded from these studies that sorbitol administration in the human and in the rat effects a stimulation of the thiamine synthesis of the intestinal microorganisms. Since absorption in the lower digestive tract is decreased, the main part of the intestinal vitamin production can not be utilized in the human, while an utilization takes place in the rat by coprophagia.

Food and Drug Research Labs., Inc., Maspeth, N. Y.
THE DEVELOPMENT OF METHODS FOR THE MEASUREMENT OF VITAMIN A IN PACKAGED RATIONS, by Kenneth Morgareidge. Rept. nos. 10, 11, and 12 (Final) for 1 June 55-31 May 57 on Contract DA 19-129-qm-392. [1957] 26p. File no. N-1127.
Order from LC mi$2.70, ph$4.80 PB 143 780

Two satisfactory methods for the determination of Vitamin A in packaged rations have been developed. One employs a single magnesia-celite column for partial isolation of the vitamin from a hexane extract of the unsaponifiable fraction of the food. Vitamin A is estimated on the basis of its blue color reaction with antimony trichloride. The second method is a refinement of the first in that the eluate from the magnesia column is further purified by re-chromatographing on weakened alumina after which the vitamin A content is determined by ultraviolet spectrophotometry.

Illinois U., Urbana.
ISOLATION AND IDENTIFICATION OF THE STALE-FLAVOR COMPONENTS WHICH DEVELOP IN DRY WHOLE MILK (AS A RESULT OF RADIATION), by R. McL. Whitney. Rept. no. 5 (Final), 26 June 55-25 June 57, on Contract DA 19-129-qm-483. [1957] 35p. 21 refs. File no. D-319.
Order from LC mi$3.00, ph$6.30 PB 143 776

New or modified fractionation techniques were developed for concentrating the stale-flavor components, and the following information was secured concerning the chemical and physical properties of the stale flavor: (1) The stale-flavor components are soluble in butteroil, petroleum ether, alcohol, CCl_4, and CS_2 but are relatively insoluble in water or 50% aqueous alcohol. (2) They distribute themselves between the various fractions of stale reconstituted milk according to the amount of butteroil in the fractions. (3) They are apparently not acid or γ- and δ- decalactones. (4) They are volatile with steam or CCl_4-vapor at both atmospheric and reduced pressures, but their volatility varies with the particular material being investigated. (5) Seven p. p. m. of the pertoleum-ether-soluble fraction of the steam distillate is sufficient to produce a detectable stale flavor in fresh milk. (6) The infrared adsorption spectra of the CS_2 and CCl_4 extracts of the steam distillate of stale fats indicate that the stale-flavor components may contain the following groups: $-CH_3$; $-CH_2-$; ester or lactone C = O; aldehyde or ketone C = O; aliphatic ether $-\dot{C}-O-$; unsaturated ether -C-O-; and cis $-\dot{C}=\dot{C}-$ or $>C=CH_2$.

The storage study of the irradiated dried whole milk indicated that the irradiated products were always described by the judges as gluey, burnt, or scorched while the control samples were considered typically stale. Thus the two flavors were not the same or similar. The flavor of the irradiated samples did not change in character on storage but continued to increase in intensity throughout the storage period. Neither temperature of storage nor irradiation dosage appears to have a consistent effect upon the flavor of the irradiated samples.

Oregon State Coll. Agricultural Experiment Station, Corvallis.
RESISTANCE OF MICROORGANISMS TO IONIZING RADIATION APPLIED TO FOOD, by P. R. Elliker. Rept. no. 6 (Final) for 15 Aug 56-14 Aug 57 on Contract DA 19-129-qm-730. [1957] 33p. 1 ref. QFCIAF File no. S-547; AD-154 835.
Order from LC mi$3.00, ph$6.30 PB 138 804

Microbial examination of meat and poultry products revealed microorganisms that can survive radiation intensities considered to be in the sterilization range. Samples examined at 20 weeks' storage showed varying degrees of decomposition, either enzymatic or bacterial in nature. Combinations of irradiation and antibiotics may have some value if the irradiation level is less than 10^6 rep (930,000 rad) and the level of the antibiotic high enough to leave an effective residual quantity. Recent investigation has revealed that the antibiotics are destroyed at the proposed sterilization dosages and in some instances may actually offer some protection to the microorganisms. With the exception of salt none of the commonly used preservatives have shown promise in inhibiting growth of radiation-resistant bacteria because of the high levels required for the radioresistant cocci. It may be possible to inhibit the organisms with low levels of salt (sodium chloride). The combination of heat and radiation has not proven effective in sterilizing food material, unless both high temperature and high levels of radiation are used. Our results to date indicate that heat which will inactivate most enzymes does not destroy the sporeforming species.

Southern Research Inst., Birmingham, Ala.
STUDY OF FLAVOR AND CHEMICAL CHANGES IN FOODS DURING STERILIZATION BY IRRADIATION, by Robert E. Burks, Jr. Rept. no. 8 (Final), 1 Sep 56-31 Oct 57, on Contract DA 19-129-qm-740. 7 May 58, 44p. 16 refs. File no. S-530.
Order from LC mi$3.30, ph$7.80 PB 143 775

This is a summary report on work done to elucidate the chemistry of the characteristic flavor of irradiated beef. Gas-chromatography confirmed the conclusion that methylamine, ethylamine, ammonia, and other amines are produced by the irradiation of beef. Radiation lowers the respiration rate of beef. The total volatile-base content of irradiated beef definitely increased during storage. The changes in water-extractable carbonyls, hydrogen sulfide, and methyl mercaptan conformed less closely to a definite pattern. The deactivation of enzymes by heating had some benefit in improving the flavor of stored irradiated beef. Exhaustive lyophilization failed to deodorize beef, so much of the odor must be caused by large molecules or compounds which are constantly being released.

MACHINERY, FABRICATION, AND ACCESSORY EQUIPMENT

Rodman Lab., Watertown Arsenal, Mass.
EVALUATION OF ALLOY BINDER SYSTEMS IN CEMENTED CARBIDES, by James E. Mahaffy and William O. Woods. Feb 59, 28p. 5 refs. Rept. no. RPL-43/1.
Order from OTS $0.75 PB 161 122

Tungsten carbide prepared with alloy binders in the ranges investigated exhibits strength properties which are generally inferior to straight cobalt bonded tungsten carbide. Binder alloys of cobalt-iron and cobalt-iron-nickel would be suitable for applications where high hardness is a necessary critical requirement and high transverse rupture strength is of secondary importance.

Engines and Propulsion Systems

Army Transportation Research and Engineering Command, Fort Eustis, Va.
MULTIFUEL-DIESEL-ENGINE TRUCK, by Joseph T. Gurganious and Rodney L. Berriker. Final rept. on Project 9-47-16-000, Test MT-12. July 59, 31p. AD-214 496.
Order from OTS $1.00 PB 161 114

This report compares the capabilities of a multifuel diesel engine and a standard gasoline engine. Two Trucks, Tractor, 2-1/2-Ton, 6x6, M48, were tested: one was equipped with the multifuel diesel engine; the other retained the standard gasoline engine. Three test routes were selected. Each was traversed six times (five times with the multifuel-diesel-engine truck, each time using a different type of fuel, and one time with the standard M48 truck using Army gasoline). Results of the tests prove that the multifuel diesel engine has a remarkably lower fuel consumption, as well as a much higher performance rating, than the standard gasoline engine of comparable power.

Guggenheim Jet Propulsion Center, Calif. Inst. of Tech., Pasadena.
PERFORMANCE OF AXIAL COMPRESSORS WITH ASYMMETRIC INLET FLOWS, by Robert Katz. Final rept. on Contract AF 18(600)178. June 58, 158p. 16 refs. AFOSR-TR-58-89; AD-162 112.
Order from LC mi$7.50, lh$24.30 PB 144 039

Overall performance measurements and circumferential surveys of total pressures, velocities and flow angle were obtained in an axial compressor with inlet disturbances covering approximately 25 % of the inlet annulus area. Three configurations were tested to find the principal effects in a single rotor, a complete stage and a multi-stage machine. A two-dimensional linearized theory was developed which includes the effect of losses and leaving angle deviations in the blade rows.

James Forrestal Research Center, Princeton, N. J.
PROJECT SQUID. Semi-annual progress rept. for 1 Oct 57-31 Mar 58 on Contract Nonr-1858(25). 1 Apr 58, 128p. 82 refs. AD-147 921.
Order from LC mi$6.30, ph$19.80 PB 138 556

This study is concerned with the extension of theoretical and experimental methods for the analysis of nonsteady-flow problems. Theoretical investigations of such problems are frequently carried out by means of wave diagrams based on the method of characteristics, and experimental work is based on shock tube techniques. Various cases of boundary conditions in nonsteady flow have been studied. The effect of pressure waves on small regions where the density differs from that in the surrounding gas is also being investigated.

James Forrestal Research Center, Princeton, N. J.
PROJECT SQUID. Semi-annual progress rept. on Contract Nonr-1858(25). 1 Oct 58, 111p. 64 refs.
Order from LC mi$6.00, ph$18.30 PB 143 226

Contents:
Fluid Mechanics: Fundamental investigation of nonsteady flow; Investigation of turbulence; Structure of a detonation wave; Exhaust nozzle impedance to high-frequency longitudinal gas flow oscillations
Transport and Transfer Processes: Thermal conductivity and the viscosity of ammonia and hydrazine; Thermal conductivity of gases and liquids over a range of temperatures and pressures; Atomization, vaporization, and combustion of multicomponent fuel droplets; Dynamic conditions in a spray zone; Statistical properties of two-phase flow; Studies of heat transfer to gases and the mechanism of two phase flow
Chemical Kinetics: Reactions of oxygen atoms; High temperature reactions; Surface-catalyzed atom and free radical reactions;
Combustion Phenomena: Structure and burning mechanism of laminar flat flames; Research on high pressure combustion; Investigation of flame propagation and stability with particular reference to the interaction between flame and flow; Investigation of the basic problems associated with gaseous combustion; Burning velocity, flammability limits, and

ionization in flames; High output combustion; Ionization in detonation waves; Physical properties of various types of flames; Theory of detonations and flame propagation in Gases

Naval Civil Engineering Lab., Port Hueneme, Calif.
WINTERIZATION OF POLAR EQUIPMENT: INTAKE AIR PREHEATING FOR TWO-STROKE-CYCLE ENGINE, by E. J. Beck, Jr. Final rept. 15 Oct 59, 29p. 6 refs. Technical rept. 039.
Order from LC mi$2.70, ph$4.80 PB 143 904

This report deals with the results of the Laboratory's first experiments with supplying heat to the intake air of a two-stroke-cycle diesel engine in order to determine the heat requirement necessary to achieve adequate combustion at low ambient temperatures. Cold chamber tests, in which intake air was electrically heated to simulate engine waste heat input, were conducted at temperatures varying from Port Hueneme normal ambients to -32 F in steps of approximately 32 degrees Fahrenheit. Air preheating was found to markedly improve the operation of a two-stroke-cycle diesel engine. First, heat loss at moderate and low loads must be scrupulously avoided by use of suitable enclosures and intermittent fan operation. Second, relatively large amounts of heat to the intake air would be required to obtain optimum operation, at idle and low loads, but small to moderate amounts, considered to be available in a properly shrouded engine, will allow satisfactory operation. Relatively small amounts of heat to the intake air will be required when the engine is heavily loaded. Specific design approaches are proposed.

New York U. Coll. of Engineering, N. Y.
THERMAL STRESSES IN LONG CYLINDRICAL CASE-BONDED PROPELLANT GRAINS, by Eric E. Ungar and Bernard W. Shaffer. Rept. on Contract NOrd-16640. Sep 58, 31p. 6 refs.
Order from LC mi$3.00, ph$6.30 PB 143 604

Equations are presented by means of which one may compute the thermally induced stresses in a bond between a long cylindrical propellant grain and a case surrounding it. The general equations are simplified for assemblies with cases that are elastically stiff and thermally thin compared to the grain. An optimization study shows how the bond stress is affected by the assembly geometry and properties of the materials.

Plasmadyne Corp., Santa Ana, Calif.
FUNDAMENTAL INVESTIGATIONS OF ELECTRICAL POWER SOURCES. VOLUME I. MORPHOLOGY, by Emil J. Hellund. Rept. on Contract AF 49(638)332. 24 Apr 59, 31p. E-1FR049-332; AFOSR-TN-59-103.
Order from LC mi$3.00, ph$6.30 PB 144 009

A survey and classification is made of various types of power sources which might possibly be used in conjunction with propulsion systems for space vehicles. Codification of these types has been systematically developed with the objective in mind of providing a convenient classification by means of which a rapid evaluation of any "new" proposals can be made. A number of possible new power systems and propulsion systems have been brought out. The primary goal in evaluation of all systems is to obtain an unambiguous upper limit to performance, equivalent to that derived for heat engines on the basis of the Carnot cycle. It can be readily observed from the examples given that the basic conservation laws of physics are usually sufficient to settle the question of "feasibility" in regard to any proposal.

Plasmadyne Corp., Santa Ana, Calif.
FUNDAMENTAL INVESTIGATIONS OF ELECTRICAL POWER SOURCES. VOLUME III. DIRECT ELECTRICAL CONVERTERS, by Emil J. Hellund. Rept. on Contract AF 49(638)332. 24 Apr 59, 72p. 15 refs. E-3FR049-332; AFOSR-TN-59-429; AD-214 779.
Order from LC mi$4.50, ph$12.30 PB 143 998

A review of findings.

Plasmadyne Corp., Santa Ana, Calif.
FUNDAMENTAL INVESTIGATIONS OF ELECTRICAL POWER SOURCES. VOLUME IV. NUCLEAR FISSION REACTORS, by Emil J. Hellund. Rept. on Contract AF 49(638)332. 24 Apr 59, 127p. 17 refs. E4FR049-332; AFOSR-TN-59-428; AD-214 778.

FUNDAMENTAL INVESTIGATIONS OF ELECTRICAL POWER SOURCES. VOLUME VII. BIBLIOGRAPHIES, by Helen Fife. Rept. on Contract AF 49(638)332. 24 Apr 59, 45p. 379 refs. E-7FR049-332; AFOSR-TR-59-104.
Order from OTS $1.25 PB 161 117

The references listed here are arranged in accordance with the morphology described in our report E-TN088-332 also published under this contract. Briefly, this morphology arranges possible power sources according to whether they are (a) internal (wholly contained within the space vehicle) or external (utilize energy available outside the vehicle), (b) waste (utilize waste products from other functions) or direct storage, and (c) certain detailed categories. The array is presented graphically. The figures contained in brackets are used to form a code which classifies any particular power source. Since there are three levels of classification, each code number consists of these digits: n_1, n_2, n_3.

Machine Parts and Mechanisms

Alloyd Research Corp., Watertown, Mass.
BALL MOTION AND SLIDING FRICTION IN BALL BEARINGS, by A. B. Jones (Fafnir Bearing Co.) Rept. on Contract NObs-72203. [1957] 46p. AD-143 887.
Order from LC mi$3.30, ph$7.80 PB 138 494

A method is derived for determining the motion of the ball and the sliding friction in a high-speed, angular contact ball bearing under thrust load in terms of the inertia effects on the ball and frictional resistances resulting from interfacial slip at the contact area. The solution of eight, simultaneous equations involving double integrals for which closed form solutions cannot be found is required.

George Washington U., Washington, D. C.
A METHOD FOR DETERMINING THE MILITARY WORTH OF SPARE PARTS, by Henry Solomon, Joseph P. Fennell, and Marvin Denicoff. Rept. on Logistics Research Proj., Contract Nonr-761(05). Apr 58, 62p. 1 ref. Serial T-82/58.

Manufacturing Equipment and Processes

Aeronautical Materials Lab., Naval Air Material Center, Philadelphia, Pa.
ENDURANCE TESTS OF MAGNESIUM CASTING ALLOY DOW H CONTAINING VARIOUS GRADES OF TRANSVERSE AND LONGITUDINAL MICRO-SHRINKAGE, by Walter F. Worden. Final rept. on Proj. TED NAM AE 4132, pt. 3. 11 Sep 58, 29p. 6 refs. Rept. no. NAMC-AML-AE-1065.
Order from LC mi$2.70, ph$4.80 PB 138 705

It was established that the fatigue strength of Dow H magnesium casting alloy decreased as the quantity of radiographic defect indications increased, and that longitudinal microshrinkage was less detrimental to fatigue strength than transverse microshrinkage.

Armour Research Foundation, Chicago, Ill.
TIME-TEMPERATURE-TRANSFORMATION DIAGRAMS OF THE TITANIUM SHEET-ROLLING-PROGRAM ALLOYS, by L. E. Tanner. Rept. for 9 June 58-15 June 59 on Department of Defense Titanium Sheet-Rolling Program, Contract AF 18(600)1375. 19 Oct 59, 81p. 19 refs. DMIC rept. no. 46G.
Order from OTS $2.25 PB 151 075

The titanium alloys Ti-2.5Al-16V, Ti-4Al-3Mo-1V, Ti-6Al-4V, and Ti-13V-11Cr-3Al are being evaluated in the Department of Defense Titanium Sheet-Rolling Program. To assist in the determination of optimum heat treatments for these alloys, the kinetics of their transformations were studied for two heat-treatment cycles, and T T T diagrams were constructed. The T T T diagrams resulting from each heat-treatment cycle are shown on the following pages accompanied by a description of the important mechanistic features of the transformations of each alloy.

Carnegie Inst. of Tech. Graduate School of Industrial Administration, Pittsbrugh, Pa.
BUDGET CONTROL AND COST BEHAVIOR, by Andrew C. Stedry. ONR Research memo. no. 60 on Planning and Control of Industrial Operations, Contract Nonr-76001. 28 Feb 58, 44p. 6 refs.
Order from LC mi$3.30, ph$7.80 PB 143 569

This paper represents an investigation into some of the possible reactions which occur in response to a system of budget control. The research described here is a first step in a project whose aim is to establish decision rules which can be utilized in setting up and maintaining an integrated budget control system in an industrial firm. The preliminary work was carried on (1) to define the nature and scope of the problem, (2) to evaluate some of the techniques available for its solution and (3) to point out avenues for future research.

Detroit Arsenal, Center Line, Mich.
ARC WELDING OF ALUMINIZED MILD STEEL, by Donald E. Phelps. 8 Aug 58, 23p. Rept. no. 4225 (Final); AD-202 211.
Order from LC mi$2.70, ph$4.80 PB 143 828

Four different brand electrodes were employed to weld aluminized mild steel sheet 1/16-inch thick. Tests were conducted to determine the suitability of the electrodes, the effect of heat and the corrosion resistance on the welded joint.

Metcut Research Associates, Cincinnati, Ohio.
MANUAL ON THROW-AWAY TOOLING, by D. C. Kaufman, A. Dupuis, and M. Grider. Final technical engineering rept. for 19 June 58-30 June 59 on Contract AF 33(600)37479. 14 July 59, 96p. Wright Aeronautical Serial rept. no. MP. 00-193; AD-226 022.
Order from OTS $2.25 PB 161 276

This Manual describes the benefits that can be derived from a program which replaces brazed carbide cutting tools with throw-away type tooling. The approach used in instituting the throw-away tool conversion program and the steps taken in accomplishing a successful program are described. Graphs, charts, forms and photographs are incorporated to assist in the understandability of the program. Also described in the Manual are cost reduction programs that are directly associated with a throw-away tool conversion program or a natural outgrowth of such a program.

Rock Island Arsenal Lab., Ill.
EVALUATION OF ELECTRICAL-DISCHARGE MACHINING, by F. J. Daasch. Technical rept. 4 June 59, 36p. 5 refs. Rept. no. 59-1516; AD-217 044.
Order from OTS $1.00 PB 161 267

The electrical-discharge method was evaluated for suitability to perform Ordnance manufacturing and production work on the difficult-to-machine metals, machining hardened tool steels, high-speed steel and carbide tool materials. Tests were performed to evaluate the variables such as machining time, surface finish of the workpiece, loss of electrode material and other performance characteristics. Results are included for operations comparable to drilling, tapping and surface removal.

Rodman Lab., Watertown Arsenal, Mass.
MECHANICAL PROPERTIES AND PROCESSING TECHNIQUES FOR HIGH STRENGTH STEEL CASTINGS, by K. D. Holmes, J. Zotos and P. J. Ahearn. Apr 59, 23p. 11 refs. Rept. no. RPL 10/19; AD-220 591
Order from LC mi$2.70, ph$4.80 PB 143 625

Arc furnace and induction melted low-alloy steels were cast into test coupons and shaped castings, heat treated to high strength levels, and physically tested. The arc furnace cast steels exhibited mechanical properties superior to those of induction melted steels, at a strength level of 225,000 psi.

Rodman Lab., Watertown Arsenal, Mass.
PARTICLE COATING IN INVESTMENT CASTING MOLD MANUFACTURE UTILIZING SOLID FLUIDIZATION, by Francis Quigley and Eugene Deluca. Feb 59, 11p. 5 refs. Memo. rept. no. RPL-13/7.
Order from OTS $0.50 PB 161 098

The process of gas-solid fluidization was applied in the development of an improved technique for the application of particle coatings in the manufacture of investment casting molds. A unit was designed and built to accomplish fluidization of solid particle beds. Particle coating was effected by immersion of prewetted forms into the bed in its fluidized state.

Selskapet for Industriell og Teknisk Forskning ved Norges Tekniske Høgskole (Norway).
DISTRIBUTION OF HEAT AROUND FINITE MOVING SOURCES. Final technical rept. for 1 July 58-30 July 59 on Contract DA 91-508-EUC-378. 10 Sep 59, 59p. 28 refs.
Order from LC mi$3.60, ph$9.30 PB 143 836

Calorimetric measurements have been made of the net heat transferred to the work-piece in welding with the argon-arc, metal-arc, and SIGMA processes. A method is suggested for presenting the distribution of temperature around a point source in one diagram valid for all materials and operating condition. Measured temperatures outside the weld pool are in fair agreement with theory at a sufficient distance from the weld, but deviations are observed in regions closer to the weld. A procedure is outlined for the assessment of average bath temperatures from the measured temperature distribution in the parent-plate material. Exploratory measurements of liquid weld metal temperatures indicate temperatures in the order of 2000°C and 1500°C in the welding of steel and of aluminum, respectively.

Springfield Armory, Mass.
RECLAMATION OF DIAMONDS FROM MACHINE WIPING CLOTHS, by K. A. Jorczak. 23 Mar 59, 11p. SA-TR20-7003.
Order from OTS $0.50 PB 161 121

The most suitable method developed is based on washing the diamond-bearing cloths with a synthetic detergent in a washing machine which is fitted with a wire mesh screen over a false bottom. The recovered residue is treated by the flotation method similar to that used for diamond reclamation from grinding wheels and segregated swarf or sludge.

Transport, Traction and Hoist Facilities

California U., Los Angeles.
TECHNICAL STUDIES IN CARGO HANDLING. V. EFFECT OF COMMUNICATION ON A N-STAGE SHUTTLE PROCESS, by Maurice Pollack. Rept. on Contract Nonr-233(07). May 58, 28p. 5 refs. Dept. of Engineering rept. 58-43; AD-218 980.
Order from LC mi$2.70, ph$4.80 PB 138 840

By means of a simple model, it is shown that the effect of communication on a shuttle process is small. The link-node model of cargo handling developed by R. R. O'Neill is found to be a good representation of actual systems. The "effectiveness" of a shuttle process as predicted by this link-node model is well correlated with actual field data values of "balance allowance" given by R. Herbert. It is also possible to obtain the values of coefficient of variation which correspond to the balance allowances given by R. Herbert.

Goodrich, B. F., Aviation Products, Troy, N. Y.
EVALUATION OF B. F. GOODRICH 450°F AMBIENT TEMPERATURE BRAKE, by Carlos F. Afanador Rept. for May 57-Dec 58 on Contract AF 33(600)35046. June 59, 36p. WADC Technical rept. 59-198.
Order from OTS $1.00 PB 161 143

The purpose of this contract was to evaluate a B. F. Goodrich capsule-actuated disk brake operating from an ambient temperature of 450°F, and to determine the effects of forced air cooling. The assembly used in the test was designed, manufactured, and laboratory tested at the B. F. Goodrich Wheel and Brake Plant, Troy, Ohio. The brake successfully passed the required laboratory testing. Operation at the required ambient temperature was confirmed by the data presented herein. Further testing will be conducted at the WADC laboratory.

Southwest Research Inst., San Antonio, Tex.
INDUCTION SYSTEM ICING IN ORDNANCE AUTOMOTIVE VEHICLES: A LITERATURE SURVEY AND ANALYSIS. Final rept. on Contract DA 23-072-ORD-836, T.O. 4. Feb. 56, 78p. 122 refs.
Order from OTS $2.00 PB 131 844

Analysis of the icing problem in the induction system of Ordnance engines may be divided into three separate discussions of the water sources from which the ice is formed. The format of this report consists of three main headings covering the formation of ice caused by condensation and freezing of atmospheric water vapor, water in the fuel, and induction of entrained atmospheric solids, such as snow, in the charge air. Following these analyses, consideration is given to methods of indicating the presence of ice as well as anti-icer and deicer systems. A summary with conclusions also is presented regarding the overall induction system icing problem in Ordnance vehicles.

MATERIALS

Clapp, William F., Labs., Inc., Duxbury, Mass.
INVESTIGATION OF GLASS CLOTH OVERLAYS ON PLYWOOD AS PROTECTION AGAINST MARINE BORER ACTIVITY. Final rept. on Contract NObs-72139. 10 Jan 57, 8p. Rept. no. 10261; ITL no. 2007-J; AD-139 699.
Order from OTS $0.50 PB 151 998

The exposure of plywood panels covered with overlays of duck, duck with silica added, fiberglas cloth, as well as duck with less than normal resin content in the overlay to marine borer activity at Kure Beach, North Carolina for 39 months and at Daytona Beach, Florida, for 51 months revealed that no borers were able to penetrate the overlays with the exception of those overlays with reduced resin content. Marine fungi were found to be active in those overlays containing natural fibers. Paint adherence and effectiveness was relatively poor on all panels in the series. Adherence of the duck overlays to the wood, with and without silica added, was better than those with fiberglas cloth after the first 24 months exposure.

Danielson Mfg. Co., Conn.
DEVELOPMENT OF MOLDED NYLON SAMPLES, by William McKinlay. Final rept. for 1953-1958 on Contract DA 18-064-404-cml-22. 15 June 58, 108p.
Order from LC mi$5.70, ph$16.80 PB 143 333

The contract was successfully completed after considerable experimentation and a number of changes to the designs originally envisaged. The final approved samplers were molded of two types of nylon, "Zytel 101" supplied by E. I. duPont de Nemours & Company, and "Spencer 401" supplied by Spencer Chemical Company. Figures 3 and 4 show the designs finally adopted, figures 5, 6, 7 and 8 show photographs of the samples, and brochures 1 and 2 of Appendix B give the physical properties of the two nylons used.

Laboratory for Insulation Research, Mass. Inst. of Tech., Cambridge.
EVALUATION OF SOME METHODS OF NICKEL FERRITE FORMATION; EFFECT OF IRON OXIDE PARTICLE SIZE ON NICKEL FERRITE FORMATION; CURRENT PROBLEMS IN THE PRODUCTION OF MAGNETIC CERAMICS, by George Economos. Rept. on Contract Nonr-1841(10). Nov 58, 49p. 24 refs. Technical rept. nos. 129, 130, 131.
Order from LC mi$3.30, ph$7.80 PB 143 601

The extent of nickel ferrite formation, as affected by four preparatory techniques, was investigated by determining the magnetic moment of the reacted powder with a vibrating-coil magnetometer. The oxide, carbonate, hydroxide and oxalate methods were used. At low temperatures the hydroxide and oxalate techniques were found to give the greatest yield of ferrospinel. The hydroxide method yields a magnetic material by precipitation. Weight-loss measurements are correlated to the magnetic data. Five iron oxides of increasing particle-size distribution, mixed with nickel oxide of a constant-size range, were heated at various temperatures and time intervals. The extent of nickel ferrite formation, as influenced by particle size distribution of the iron oxide constituent, was measured with a compensating-coil magnetometer. Using the Jander relationship for this type of reaction, activation energies ranging from 54 to 70 kcal were computed for increasing particle size. These results are examined and compared with current procedures for the production of ferrite powders. Reproducibility of the electrical and magnetic properties while adhering to mechanical tolerances is still the main difficulty in quantity production of magnetic ceramics. This problem is discussed from a developmental viewpoint with suggestions for improving present methods.

Vitro Labs., West Orange, N. J.
INVESTIGATION OF THE HIGH INTENSITY ARC TECHNIQUE FOR MATERIALS TESTING, by Charles Sheer, C. Dudley Fitz and others. Rept. for Apr 57 to Mar 58 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)3669. Nov 58, 109p. 20 refs. WADC Technical rept. 58-142; AD-205 364.
Order from OTS $2.50 PB 161 265

Basic studies performed during the second year of a two-year program to evaluate the adaptability of the high intensity arc flame as a testing medium are described. A more stable and controllable configuration of arc operation, featuring a triple cathode, was developed. The pulse method of measuring tail flame velocity was improved, and the range of measurements extended by using a more powerful electronic pulsing device. Several flow visualization techniques were utilized to determine flow patterns of the arc plasma in the vicinity of solid objects. Direct and schlieren photography showed an abnormally thick boundry layer for the flow of plasma near the models; a possible explanation is offered. Finally, attempts were made to measure thermal diffusivities of copper, graphite, molybdenum, and tungsten by inserting appropriate specimens in the flame. Results indicate that the technique of measurement requires further development to obtain reliable measurements using a plasma flame.

Ceramics and Refractories

Minerals Research Lab., U. of California, Berkeley.
INTERNAL STRESSES IN MODEL CERAMIC SYSTEMS, by Richard M. Fulrath. Technical progress rept. no. 1 on Contract AF 49(638)4. 20 Mar 58, 31p. 1 ref. Series no. 119, issue no. 1.
Order from LC mi$3.00, ph$6.30 PB 138 927

Model ceramic systems of crystals and glass fabricated by vacuum hot compaction have been used to study methods of detection of internal stress on the crystalline phase. Effects of the volume fraction of the glass, compaction temperature and time, and crystal particle size in modifying induced internal stress are presented. These effects together with x-ray diffraction and wetting studies indicate that internal stress development is closely connected to wetting of the crystal by the glass and formation of a second crystalline phase.

National Bureau of Standards, Washington, D. C.
FACTORS CONTROLLING RESISTANCE TO DEFORMATION AND MECHANICAL FAILURE IN POLYCRYSTALLINE (GLASS-FREE) CERAMICS, by John B. Wachtman, Jr., Wayne E. Tefft and others. Rept. for 1 July 57-15 Dec 58 on Solid State Research and Properties of Matter, Contract AF 33(616)56-4. May 59, 83p. 35 refs. WADC Technical rept. 59-278.
Order from OTS $2.25 PB 161 112

The elastic moduli and internal friction of several refractory oxide materials were studied. The six elastic constants of sapphire were measured with particular care and the results were found to differ from previously accepted values for four of these constants. Young's modulus for single crystal sapphire was found to decrease linearly with increasing temperature above 100°C. As the temperature was decreased below 100°C, Young's modulus first rose above the extrapolated high temperature straight line and then tended to become constant. The internal friction of single crystal sapphire was found to vary from 5×10^{-5} to 3×10^{-6} at room temperature. Annealing below 500°C decreased the value in a specimen with initially high damping. An internal friction peak was found in polycrystalline alumina with 15% lanthanum oxide additive. Young's modulus of uranium dioxide was measured as a function of temperature. Two internal friction peaks were found in polycrystalline zirconium oxide stabilized with 5% calcium oxide. These results are discussed.

Rodman Lab., Watertown Arsenal, Mass.
PROPOSED BASIS FOR TESTS OF CEMENTED CARBIDES, by William O. Woods. May 59, 16p. 11 refs. Rept. no. RPL-43/2.
Order from OTS $0.50 PB 161 269

Based on data compiled from information obtained from industrial producers and other carbide investigators, an examination was made of the hypothesis that a linear relation exists between hardness and strength of cemented carbide materials. The study incorporates mathematical and graphic representations of the precepts involved in the investigation. Data reported by Kieffer and Hotop were chosen as representative for the extended examination.

Utah U. Coll. of Engineering, Salt Lake City.
THE IRREVERSIBLE COMPRESSIBILITY OF SILICA GLASS, by William B. Gogarty. Technical rept. no. 4 on Contract Nonr-1288(02). May 58, 32p. 7 refs, AD-161 491.
Order from LC mi$3.00, ph$6.30 PB 138 817

The compressibility of silica glass wafers was measured by means of density changes in small specimens.

Fuels, Lubricants, and Hydraulic Fluids

Atlantic Research Corp., Alexandria, Va.
INVESTIGATION TO DETERMINE BUILDUP OF A STATIC ELECTRIC FIELD CHARGE IN A ROLLING FLUID TRANSPORTER. Final rept., Phase 2 on Contract DA 44-177-tc-461. 15 June 59, 38p.
Order from LC mi$3.00, ph$6.30 PB 143 323

This is the final report of the Phase II work on an "Investigation to Determine Buildup of Static Electric Field Charge in a Rolling Fluid Transporter," and is a summary of the entire work of Phase II. The purpose of this program was to improve understanding of the phenomena involved in the generation and discharge of static electricity in the transporter. Results of tests made with JP-4 in the transporter simulating normal cold weather operating conditions gave positive evidence of static discharges. In the range tested the rate and intensity of discharges appeared to increase with increasing transporter speed and with decreasing transporter temperature, especially below 35°F. Rough roads and sharp turns also appeared to increase the rate and intensity of discharges. These results generally confirm those of Phase I of this work and, in addition, establish the importance of fuel temperature. In order to assess the relative hazards of the transporter and a standard fuel truck, an Air Force F-6 tank truck was tested for static discharges during cold weather. Static discharges were detected in a truck filled 40 per cent with JP-4 at 37°F and were especially intense when operation was over rough terrain. A conclusion that the relative hazards of the two devices are the same under similar operating conditions cannot be considered firm on the basis of this work. However, continued explosion-free operation of transporters with an explosive mixture in the vapor space would help support such a conclusion.

Coating and Chemical Lab., Aberdeen Proving Ground, Md.
DEVELOPMENT OF AN OPERATIONAL PRESERVATIVE HYDRAULIC BRAKE FLUID, by Charles B. Jordan. 26 Aug 59, 21p. 19 refs. Rept. no. CCL-81.
Order from OTS $0.75 PB 161 096

The object of this study was to develop a combination preservative and operational fluid for use in automotive hydraulic brake systems and components. Brake fluid components were selected which were known to have good preservative properties. Combinations of these components were subjected to tests outlined in Specification VV-H-910. The more promising fluids were stored with brake parts in warehouse and simulated vehicle storage. From the preliminary results received in the storage tests, a fluid combination was chosen. Different inhibitor combinations were tried until maximum corrosion protection and stability could be obtained. The fluid outlined in this report meets all requirements of Specification VV-H-910 except the sub-zero requirements. It is satisfactory with natur and SBR synthetic rubber cups. It tolerates up to 5% moisture. It performs satisfactorily in the stroking machine at 158°F. It has satisfactorily passed storage tests up to 30 months. A proposed specification has been written for the fluid.

Coating and Chemical Lab., Aberdeen Proving Ground, Md.
QUANTITATIVE DETERMINATION OF ETHYLENE GLYCOL IN COOLANT MEDIA BY INFRARED ANALYSIS, by Jules B. Counts. 5 Aug 59, 13p. 3 refs. CCL #79, AD-225 394.
Order from LC mi$2.40, ph$3.30 PB 143 328

This report describes the application of infrared analysis to the quantitative determination of ethylene glycol in a mixture of glycols. The method utilizes the base line technique in conjunction with a working curve. Two unique analytical features of the method are the saturation of the glycol mixtures with sodium chloride to prevent attack of the rock salt cell window by the small amounts of water normally present in glycol mixtures, and the use of dimethylformamide as a transparent solvent for the glycols. The dissolved ethylene glycol is treated as a minor constituent of the mixture and the absorp tion recorded differentially. A correction is made for the presence of diethylene glycol. It is recommended that this method be used for the analysis of ethylene glycol in glycol mixtures, and that the method be studied further for possible application to other constituents of coolant media.

Feltman Research and Engineering Labs., Picatinny Arsenal, Dover, N. J.
DEVELOPMENT OF T34 PROPELLANT: AN IMPROVED NITROGUANIDINE COMPOSITION, by Russell L. Trask and David J. Zauder. July 59, 40p. 7 refs. Technical rept. 2629.
Order from LC mi$3.00, ph$6.30 PB 143 285

A new nitroguanidine propellant which is ballistically and physically superior to standard M15 propellant and requires 50% less final mixing time has been developed. The new propellant has been found to have better ballistic uniformity than M15 over a wide range of test conditions; its temperature and pressure dependence are significantly less; and it produces less flash and is at least as smokeless as M15 propellant.

Frankford Arsenal, Philadelphia, Pa.
SOLID PROPELLANT CHEMICAL STABILITY: A SURVEY, by J. Quinlan. Sep 58, 22p. 55 refs. Technical rept. no. R-1465.
Order from LC mi$2.70, ph$4.80 PB 143 827

A survey has been made of the presently available literature in order to determine the relationship between the chemical stability of solid propellants and the variation in nitroglycerine content and the degree of nitration of the nitrocellulose. The decomposition mechanism of nitrocellulose and the effect of temperature and various additives upon propellant stability are presented. It is noted that the stability varies inversely as the nitroglycerine content and that, as the nitrocellulose nitrogen is increased, there is a tendency toward exponential chemical decomposition. When exudation of nitroglycerine occurs, it is promoted by the presence of diphenylamine, but no conclusion is reached upon the effect of nitrocellulose nitrogen on this phenomenon. The reliability of safe life tests made above 65.5° C is questionable.

Inland Testing Labs., Morton Grove, Ill.
THE BEHAVIOR OF FUELS AND LUBRICANTS IN DYNAMIC TEST EQUIPMENT OPERATING IN THE PRESENCE OF GAMMA RADIATION, by M. E. Krasnow, O. P. Reynolds and O. C. Wolford. Rept. for 31 Mar 58-31 Mar 59 on Chemical Propulsion Subsystems, Contract AF 33(616)3865. 31 Mar 59, 182p. 12 refs. WADC Technical rept. 58-264, Pt. 2, Preprint Copy.
Order from OTS $3.00 PB 161 127

This report summarizes work conducted on a program designed to evaluate fuels, lubricants, and hydraulic fluids for use in a nuclear-powered aircraft. During the performance period, April 1958 to March 1959, 52 fuels, 44 lubricating oils, 4 greases, 4 dry film lubricants, and 1 hydraulic fluid were investigated. The most promising fuels and lubricants are listed in the accompanying tables. These materials were selected on the basis of performance in dynamic test machinery operated in a radiation environment and predict useful performance characteristics of lubricants up to doses of 10^{10} ergs/gmC and of fuels up to 10^{9} ergs/gmC. (See also PB 151 701)

Jet Propulsion Lab., Calif. Inst. of Tech., Pasadena.
THE THERMAL DECOMPOSITION OF AMMONIUM NITRATE, by Russell N. Doescher. Rept. on Basic Research on Rocket Propellants, Contract W04-200-ORD-1482. 15 Mar 50, 12p. 28 refs. Progress rept. no. 9-43.
Order from LC mi$2.40, ph$3.30 PB 144 095

Interest has recently been stimulated in the use of ammonium nitrate in solid propellants for rockets, one of the principal factors being the recognition that it is possible to prepare smokeless mixtures with this compound. The burning of solid propellant charges containing ammonium nitrate is understood only incompletely, but it is believed that the thermal decomposition of the ammonium nitrate is an important step in the process. Accordingly a literature and experimental study of this decomposition was undertaken. The initial phase of the study has been completed, and the results are given in the present report. The contribution represented here consists of the development of a simple, rapid, and easily applied method of measuring the catalytic activity of a given solid substance in the thermal decomposition of ammonium nitrate and the partial coordination of pertinent knowledge presently available.

Ordnance Fuels and Lubricants Research Lab., Southwest Research Inst., San Antonio, Tex.
DEVELOPMENT OF A THERMAL-OXIDATION STABILITY TEST FOR GEAR LUBRICANTS, by Nelson T. Meckel. Rept. on Contract DA 23-072-ORD-1144. June 58, 128p. 1 ref.
Order from LC mi$6.30, ph$19.80 PB 138 780

An apparatus and procedure to determine thermal-oxidation stability of gear lubricants were developed. The objective of this work was to devise a thermal-oxidation test technique which would correlate with military field test results. A refined laboratory version was designed and a final test procedure was developed. The apparatus, procedure and test results are presented in this report.

Princeton U., N. J.
FURTHER STUDIES ON THE LIGHT SCATTERING TECHNIQUE FOR DETERMINATION OF SIZE DISTRIBUTIONS IN BURNING SPRAYS, I, by R. A. Dobbins. Technical rept. on Contract AF 18(600)1527. 10 Apr 59, 37p. 15 refs. Aeronautical Engineering Lab. rept. no. 463; AFOSR TN-59-700; AD-220 496.
Order from LC mi$3.00, ph$6.30 PB 143 022

Rocketdyne, Canoga Park, Calif.
EFFECTS OF GAS MOTION ON HETEROGENEOUS COMBUSTION; NATURAL CONVECTION, STEADY FORCED CONVECTION, STANDING ACOUSTIC WAVES, AND SHOCK WAVES, by William T. Webber. Final summary rept. on Contract AF 33(616)3556. Apr 59, 92p. 26 refs. WADC Technical rept. 59-50.
Order from OTS $2.25 PB 161 128

Two experimental techniques have been used to determine the effects of gas motion upon the combustion of liquid fuels under extremes of conditions resembling those found in liquid rocket combustion chambers. In the first technique methanol was burned as it flowed down a vertical quartz fibre mounted in a pressure vessel containing pure oxygen at pressures from 1.0 to 10.2 atmospheres. The combustion rate was determined under conditions of natural convection, with steady forced flow transverse to the fibre; and with the fibre held at the velocity loop of a very strong standing acoustic field. The application of conventional heat and mass transfer correlations for cylinders give theoretical values for combustion rate which are in fairly close agreement with the experimentally observed data. Reynolds number (based on fuel element diameter) was varied from 340.0 to 5300.0. Grashof number was varied from 1.3 million to 340.0 million. In the acoustic field the Reynolds number was derived from the mean gas particle velocity. The second technique was to burn sprays of liquid fuel in an oxygen atmosphere in the channel of a shock tube through which a pressure pulse was passed. Here the pressure, velocity, and temperature perturbations of the wave affect the combustion rate at the location of, and in the wake of the wave, and thus can act to sustain or augment the wave to the point where it resembles a detonation. Some experiments were conducted to determine which combinations of droplet size, initiating pulse amplitude, pulse duration, extent of combustion completed before introduction of the pulse, etc., cause the wave to grow to detonation strength, and which allow it to decay. Other experiments were conducted to quantitatively infer combustion rates as functions of wave strength, by measuring pressure histories at several positions along the tube. In these experiments, Reynolds numbers per centimeter ranged from about 150,000 to 1,500,000. Combustion rates increase with Reynolds number at about the proper slope to agree with classical correlations for heat and mass transfer up to Reynolds numbers per centimeter of about 450,000. Beyond this point there appears to be a sudden increase in rate.

Leather and Textiles

Fabric Research Labs., Inc., Dedham, Mass.
METHODS OF WITHIN-SECTION BLEND ANALYSIS, by Myron J. Coplan and William G. Klein. Technical rept. no. 6 on Contract Nonr-1422(00). 1 Dec 58, 31p. 10 refs.
Order from LC mi$3.00, ph$6.30 PB 143 610

Statistical implications of the Index of Blend Irregularity have been elaborated, with consequent improved utility of this measure. A more complete characterization of within-section blend distribution is now possible by two new techniques developed. Some new light is shed on the characteristics of fiber clustering and blend irregularity within the sections of woolen wool-nylon yarn.

Naval Supply Research and Development Facility, Bayonne, N. J.
DEVELOPMENT OF SOLUTION DYED RAYON FABRICS FOR FLIGHT DECK IDENTIFICATION CLOTHING, by Jack Naimer. 15 June 59, 13p. 3 refs. Research and Development rept. no. 31.
Order fromLC mi$2.40, ph$3.30 PB 143 504

Solution dyed rayon fabrics in six colors were developed for use in winter identification garments worn by flight deck personnel on aircraft carriers. The materials were evaluated in the laboratory for breaking strength (wet and dry), tear strength, cumulative shrinkage, fabrication properties and colorfastness. A cotton-back rayon satin was found to be more suitable for the intended end use than a similar all-rayon construction. Original report contains dyed specimens in color which will not reproduce.

Quartermaster Research and Engineering Center, Natick, Mass.
AN EVALUATION OF NEW FIBER BLENDS IN ARMY SUMMER UNIFORM FABRICS, by C. J. Monego and S. J. Kennedy. May 59, 72p. 16 refs. Textile Series rept. no. 108.
Order from LC mi$4.50, ph$12.30 PB 143 737

This report presents the results of a detailed laboratory and field study on nine tropical-type blended fabrics which were developed for this test through close cooperation between fiber producers and fabric manufacturers. The development of each fabric was based on the fabric manufacturer's previous experience with that particular blend on the civilian market, and only those blends which had achieved a marked consumer preference were considered. The results of this study show that the 60/40 polyester/wool blend performed well in laboratory tests and ranked higher than the other fabrics in field tests.

Textile Research Inst., Princeton, N. J.
EFFECTS OF CRIMP AND CROSS-SECTIONAL AREA ON THE MECHANICAL PROPERTIES OF WOOL FIBERS, by Joseph H. Dusenbury and James H. Wakelin. Technical rept. no. 17 on Contracts Nonr-090(00) and Nonr-090(01). 29 Apr 58, 45p. 22 refs.
Order from LC mi$3.30, ph$7.80 PB 138 584

Force-extension data for a large number of wool fibers of various types have been analyzed in detail by statistical methods in order to determine the effects of fiber crimp and cross-sectional area on mechanical behavior. The methods of crimp evaluation used indicate that (1) within a group of fibers taken from the same Rambouillet sheep the crimp level increases with increasing fiber diameter, and (2) among fibers taken from sheep of different breeds the crimp level decreases with increasing fiber diameter. It is also observed that the rupture properties, breaking stress and breaking extension, generally increase with increasing fiber diameter.

Paints and Finishes

Material Lab., New York Naval Shipyard, Brooklyn.
THE MATERIAL LABORATORY ICE SHEAR ADHESION APPARATUS AND TEST METHOD, by H. Lacks and M. Quatinetz. Final rept. 9 Aug 55, 17p 3 refs. Lab. Proj. 5284-3; AD-76 789.
Order from LC mi$2.40, ph$3.30 PB 144 325

The Material Laboratory is engaged in the development of ice-phobic paints for shipboard use, that is, paints to which ice will have little or no adhesion. This report describes the ice shear adhesion apparatus and test method employed in the project to measure the adhesion of ice to a surface and reviews the variables involved in such measurements. It also lists the other items of equipment used in the work.

Naval Civil Engineering Lab., Port Hueneme, Calif.
CATALOG OF INFRARED SPECTRA OF PAINTS AND DRYING OILS, by J. B. Crilly and R. J. McGowan. Interim rept. 7 Aug 59, 36p. 9 refs. Technical Compilation C-001; AD-214 883.
Order from LC mi$3.00, ph$6.30 PB 143 287

This report presents a catalog of infrared spectra of paint vehicles conforming to selected specifications and of drying oils used in paint formulations. It is intended to be used as a reference for inspection and identification of nonvolatile vehicles of paints. The spectra of 32 drying oils commercially treated in a variety of ways are presented. The spectra of 18 specification paint vehicles are also presented. Two samples of paint were found not to conform to the expected pattern. One of these has been identified.

Rubber and Elastomers

Frick Chemical Lab., Princeton U., N. J.
THE OXIDATIVE CROSS-LINKING REACTION IN POLYDIENE VULCANIZATES, by A. V. Tobolsky and A. Mercurio (Doctoral thesis). Rept. on Contract Nonr-1858(07). 15 Dec 58, 7p. 5 refs. ONR Technical rept. RLT-26.
Order from LC mi$1.80, ph$1.80 PB 143 854

Intermittent and continuous stress relaxation methods have been utilized to follow the oxidative degradation of vulcanizates of natural rubber and of synthetically prepared polybutadienes. Vulcanizates were prepared by exposing samples to high energy electrons. For natural rubber only oxidative scission reactions were detected, while emulsion polymerized polybutadiene and all cis 1, 4 polybutadiene exhibited both oxidative scission and oxidative cross-linking. With sulfur vulcanizates of the above there is superposed on the oxidation reactions a continued vulcanization caused by remaining curing agent.

Frick Chemical Lab., Princeton U., N. J.
OXIDATIVE STRESS RELAXATION OF RADIATION CROSSLINKED NATURAL RUBBER, by A. V. Tobolsky and A. Mercurio (Doctor thesis). Rept. on Contract Nonr-1858(07). 1 Dec 58, 14p. 16 refs. Technical rept. RLT-25; AD-207 292.
Order from LC mi$2.40, ph$3.30 PB 143 855

Evidence is presented which shows that oxidative scission at elevated temperatures is independent of the degree of cross-linking in radiation cross-linked natural rubber as studied by stress relaxation. The rate of scission in these vulcanizates is the same within 50 per cent as the rate of scission determined for unvulcanized rubber. These results demonstrate that scission in the vulcanizates occurs randomly along polyisoprene chains, not specifically at the cross-linked sites.

AGING OF UNSTRESSED ELASTOMERIC VULCANIZATES DURING OUTDOOR AND CONTROLLED HUMIDITY EXPOSURES, by E. W. Bergstrom. 9 July 58, 21p. 8 refs. Rept. no. 58-1808.
Order from LC mi$2.70, ph$4.80 PB 138 762

This report covers (1) the results of a seven year humidity aging program using vulcanizates based on copolymers of butadiene/styrene, isobutylene/isoprene, butadiene/acrylonitrile, and the homopolymer of chloroprene as well as inhibited (antioxidant) and uninhibited natural rubber vulcanizates and (2) the results of a six year outdoor aging program on all vulcanizates mentioned above except the uninhibited natural rubber. The effect of humidity on the physical properties of the vulcanizates was determined after they had been exposed indoors, unstressed, to relative humidity concentrations of 0, 50, 100 and a cycle of 0 and 100% for periods of one, three, five and seven years. The effect of outdoor weathering was determined after the vulcanizates had been aged outdoors, unstressed, for periods of one, two, three, four, five and six years. A statistical analysis of the data obtained from the humidity aging phase of this investigation showed that relative humidity was not a significant factor in the aging of the characteristics of the various vulcanizate types studied, which was to be expected. A comparison of the physical properties of the vulcanizates aged indoors with those aged outdoors showed that all the vulcanizates resisted aging less outdoors than indoors; the hevea and butadiene/styrene based vulcanizates showed the greatest differences in amount of deterioration (outdoor vs indoor) while the isobutylene/isoprene based vulcanizate showed the least difference.

TABLES AND SCHEMES FOR EVALUATING FOURIER COEFFICIENTS OF PERIODIC FUNCTIONS, by Kurt H. Haase. June 59, 93p. AFCRC-TR-59-154; AD-216 367.
Order from LC mi$5.40, ph$15.30 PB 143 968

This volume contains the tables and schemes required to solve practical problems by a new procedure for analyzing periodic functions, described in A Method for Numerical Evaluation of the Coefficients of Fourier Series, by Kurt H. Haase, AFCRC-TR-59-153. Tabulations are of the function

$$\sin\frac{\pi}{N/r}\cdot\frac{k}{r},$$

where k, r, and N are integers, and of the function

$$C_n(m)=\left[\frac{\sin \pi n/2n}{m/2n}\right]^2$$

where m is the sequence of positive integers and n is a parameter integer. The schemes are closely related to the particular method but the tables may also have use in other applications.

Carnegie Inst. of Tech., Pittsburgh, Pa.
NOTES ON THE ANALYSIS OF VARIANCE OF LOGARITHMS OF VARIANCES, by Robert E. Odeh and Edwin G. Olds. Rept. on Research on Transformations in the Analysis of Variance, Contract AF 33(616)3878. Mar 59, 53p. 15 refs. WADC Technical note 59-82; AD-211 917.
Order from OTS $1.50 PB 161 108

One of the assumptions needed in the Analysis of Variance is equality of within-cell variances. Often the validity of this assumption is investigated by the use of Bartlett's modification of the Neyman-Pearson L_1 test. The present report is concerned with the investigation of an alternative test which seems to have some more desirable properties. An example of the use of the proposed test is given. Some analytical results are derived. Tables of the approximate probability for the Type I error are given for the case when the sampled distribution is normal.

Electrical Engineering Research Lab., U. of Illinois, Urbana.
ON POSITIVE REAL FUNCTIONS, by Jack Leonard Goldberg, Doctoral thesis. Interim technical rept. no. 14 on Contract DA 11-022-ORD-1983. 27 Mar 59, 59p. 10 refs.
Order from LC mi$3.60, ph$9.30 PB 143 114

Functions which map the right half-plane into itself and take reals into reals - the so-called Positive Real functions - are studied by considering iterations of a transformation of P. Richards (A special class of functions with positive real part in a half-plane, Duke Mathematical Journal, Vol. 14, (1947), p. 779) which takes Positive Real functions into Positive Real functions.

Laboratory of Statistical Research, U. of Washington, Seattle.
UNBIASED ESTIMATION: FUNCTIONS OF LOCATION AND SCALE PARAMETERS, by Robert F. Tate. Technical rept. no. 31 on Contract Nonr-477(11). 16 Oct 58, 44p. 16 refs.
Order from LC mi$3.30, ph$7.80 PB 143 794

Lincoln Lab., Mass. Inst. of Tech., Lexington.
HAHN DECOMPOSITIONS AND HYPOTHESIS TESTS, by I. S. Reed, E. J. Kelly and D. H. Lyons. Rept. on Contract AF 19(122)458. 4 Mar 57, 7p. 2 refs. Technical rept. no. 152. AD-137 718.
Order from LC mi$1.80, ph$1.80 PB 144 045

The relation between hypothesis tests and Hahn decompositions of measure spaces is briefly discussed. Several theorems concerning Hahn sets are presented, making possible the direct application of this relation to denumerably infinite dimensional spaces.

Midwest Research Inst. [Kansas City, Mo.]
EXPANSION OF THE GAUSSIAN HYPERGEOMETRIC FUNCTION IN SERIES OF FUNCTIONS OF THE SAME KIND, by Richard L. Coleman and Yudell L. Luke. Rept. on Contract AF 49(638)66. 15 Aug 59, 16p. 7 refs. AFOSR Technical note 59-734; AD-225 713.
Order from LC mi$2.40, ph$3.30 PB 143 772

An expansion of the hypergeometric function ${}_2F_1(a,b;c;z)$ in series of hypergeometric functions with changed argument is derived. For special values of the parameters the expansion simplifies considerably and is especially advantageous due to the change in argument which yields more rapidly converging series. Known Chebyshev type expansions for the logarithm and arc tangent functions are derived. The Gauss transformation for the complete elliptic integral of the first kind is the special case $a = b = \frac{1}{2}$, $c = 1$. Finally, a rapidly converging expansion of the complete elliptic integral of the first kind is derived for modulus near 1.

Stanford Electronics Lab., Stanford U., Calif.
A DISCUSSION OF SAMPLING THEOREMS, by D. A. Linden. Rept. on Contract Nonr-225(24). 14 Nov 58, 30p. 8 refs. Technical rept. no. 1551-1.
Order from LC mi$2.70, ph$4.80 PB 143 487

The convolution theorem of Fourier analysis is a convenient tool for the derivation of a number of sampling theorems. This approach has been used by several authors to discuss first-order sampling of functions whose spectrum is limited to a region including the origin ("low-pass" functions). The present paper extends this technique to several other cases: second-order sampling of low-pass and band-pass functions, quadrature and Hilbert-transform sampling, sampling of periodic functions, and simultaneous sampling of a function and of one or more of its derivatives.

Virginia Agricultural Experiment Station, Blacksburg.
ON THE ANALYSIS OF PAIRED RANKED OBSERVATIONS, by Leo Lynch and John E. Freund. Technical rept. no. 32 on Contract DA 36-034-ORD-1527. Aug 57, 80p. 18 refs. AD-140 412
Order from LC mi$4.50, ph$12.30 PB 138 179

An extension is considered of the problem of deciding in the case of 2 k-variate populations whether several samples should be regarded as coming from the same population. The first approach is made by means of discriminant analysis. The ranked sample points are projected onto a vector giving maximum discrimination between the 2 samples, and the sample points are then reranked along this vector. The problem is reduced to a one-dimensional situation, but the standard one-dimensional nonparametric tests cannot be used so that this approach is unsatisfactory. The other approach is based on the Euclidean (or more general) distance between the centroids of the ranked samples. Several methods are suggested for constructing approximate tests of significance on the basis of such a distance.

Virginia Agricultural Experiment Station, Blacksburg.
TWO-WAY RANK SUM TESTS FOR VARIANCES, by John E. Freund and Abdur R. Ansari. Technical rept. no. 34 on Contract DA 36-034-ORD-1527. Aug 57, 13p. 1 ref. AD-140 410.
Order from LC mi$2.40, ph$3.30 PB 138 178

Two rank-sum procedures are developed for testing the null hypothesis that 2 samples come from populations with identical continuous distribution functions against the specific alternative that there is a difference in the population variances. The disadvantage of one procedure is that it can lose its sensitivity to detect differences between variances in the presence of differences between means. The other procedure, based on deviations from medians, poses the problem that the sampling distribution of the proposed statistic is not distribution-free under the usual randomization methods.

Computing Devices

David Sarnoff Research Center, Princeton, N. J.
SHIFT REGISTER TRANSISTOR, by J. T. Wallmark. Final rept. for 15 Feb 57-15 Apr 59 on Integrated Semiconductor Device Studies, Contract AF 19(604)1957. 31 May 59, 17p. 7 refs. AFCRC-TR-59-177; AD-220 315.
Order from LC mi$2.40, ph$3.30 PB 143 634

During the course of the contract work the ideas behind the shift register were broadened into a new contract - integrated electronics, the general idea being a "molding" or integration of several component functions, active as well as passive, into one piece of material, e.g. a solid. In the case of semiconductors one might talk of integrated semiconductor circuits or devices of which the shift register is an example. By applying the integrated electronics approach to other semiconductor structures a whole new class of integrated semiconductor devices using unipolar transistors was developed. The unipolar transistor, although inferior to the conventional bipolar transistor in high-frequency response and power capabilities, may offer advantages in noise and radiation tolerance under certain conditions. It has been shown possible to extend the integrated device approach also to tuned circuit functions, such as radio and communication circuits.

Digital Computer Lab., Mass. Inst. of Tech., Cambridge.
FERROELECTRICS FOR DIGITAL INFORMATION STORAGE AND SWITCHING, by Dudley Allen Buck. Master's thesis. Rept. on Contract [N5ori-60]. 5 June 52, 72p. 13 refs. Rept. R-212; ATI-174 582.
Order from LC mi$4.50, ph$12.30 PB 144 326

Materials have recently been discovered within which exist domains of permanent electric dipoles. These materials, named ferroelectrics, can be used to advantage in many electronic applications where ferromagnetic materials are currently used, often in circuits which are the duals of those of their ferromagnetic counterparts. Ferroelectrics can be made in the form of single crystals or rugged ceramics. Digital information can be stored in a matrix of ferroelectric condensers, and an efficient method of storage-element selection is available in the form of a two-coordinate, coincident-voltage scheme. The matrix can be made on a thin ferroelectric sheet by painting the coordinate rows on one side and the coordinate columns on the other. The information can be taken from the matrix via a simple mixing transformer.

Digital Computer Lab., Mass. Inst. of Tech., Cambridge.
A MAGNETIC MATRIX SWITCH AND ITS INCORPORATION INTO A COINCIDENT CURRENT MEMORY, by Kenneth H. Olsen. Rept. on Contract N5ori-60. 6 June 52, 104p. 7 refs. Rept. R-211; ATI-173898.
Order from LC mi$5.70, ph$16.80 PB 144 069

A multi-position switch, capable of handling pulses shorter than one microsecond, can be made from magnetic cores. Windings on the magnetic cores, when matrix-connected, control selection of the switch output. These windings can be excited with either direct current or pulses. This switch is capable of transmitting power efficiently, and the magnetic cores from which it is made are inexpensive and rugged, and promise reliability and long life. Two such switches pulse the 16 coordinate rows and the 16 coordinate columns of a coincident-current magnetic-core memory. The complete cycle-time of the memory, including the switch set-up time, reading of information, and re-writing of information, is less than 4 microseconds. Design of the magnetic-matrix switch is facilitated by an equivalent-circuit technique.

Eastman Kodak Co., Rochester, N. Y.
THE MINICARD INTERIM DEVELOPMENT PROGRAM, Technical rept. on Contract AF 30(602)1683. 28 May 59, 271p. 48 refs. RADC-TR-59-49; AD-213 582.
Order from LC mi$11.10, ph$42.60 PB 142 936

A serial scan code reader scheme has been proposed and compared with the present parallel scan code reader. Serial scan offers the following potential advantages: increased card code capacity, increased readout rate, broader film density tolerances, broader card positioning tolerances. It is proposed that the serial code reader use a flying spot scanner with edge following and binary pulse position modulation code. Block diagrams show how such a serial code reader might be developed. The questions of film wear and of x-radiation are examined in detail. An estimate is made of the size and complexity of a serial scan code reader.

Marine Physical Lab., Scripps Institution of Oceanography San Diego, Calif.
A SAMPLED DATA PROCESSOR, by R. A. Rasmussen. Rept. on Contracts NObsr-72512 and Nonr-2216(05). 12 Dec 58, 37p. SIO Reference 58-16.
Order from LC mi$3.00, ph$6.30 PB 143 613

This report describes a semi-automatic data sampler and computer accommodating two channels of information representing optically stored, magnetically stored, or direct electrical data in the form of time varying potentials. All data are converted to time modulated pulses and directed to a computer where a combination of analog and digital computer circuits can be adjusted to perform a variety of mathematical operations on the data with accuracies on the order of ±0.1 percent. Results of the computations are displayed numerically on decimal totalizers, the registered numbers being proportional to the computed functions.

Mellon Inst. of Industrial Research, U. of Pittsburgh, Pa.
COMPUTER COMPONENTS FELLOWSHIP NO. 347, by W. J. Kirkpatrick and C. H. T. Wilkins. Final rept. for 1 Oct 53-30 Sep 56 on Contract AF 19(604)943. 20 Sep 57, 99p. 5 refs. AFCRC-TR-56-165; AD-98 803.
Order from LC mi$5.40, ph$15.30 PB 137 656

Small, light, low-cost, mass producible computer components were sought for performing one or more of the functions of switching, storage, selection, amplification, comparison and arithmetic or other operation on information pulses. Nonlinear resistors, saturable transformers, electroluminescence, and the effect of RF fields on gas diodes were investigated for application to electronic digital computer components. Work on nonlinear resistors resulted in adder circuits formed by printing conducting circles on opposite sides of bonded sheets of Si carbide grain. The circles were connected by printed conducting lines into matrices. Saturable transformers were used in the construction of gating circuits. A hard vacuum tube was made with a photocathode and a phosphor anode which was bistable and was triggered by light pulses. Ways were sought to make passive electronic components capable of continuous service from 200° to -60°C. It was almost impossible to print solid areas of uniform density by xerography. Conductors, capacitors, inductors, and resistors were successfully made by vacuum evaporation deposition and screen printing. The vacuum evaporation excelled for uniform thin films of metal, but SiO-SiO_2 was the only dielectric successfully deposited by this method. Chemically formed films of semiconductors appear promising because of the very low temperature coefficient of resistance in their extrinsic range.

Naval Radiological Defense Lab., San Francisco, Calif.
X Y PLOTTING WITH THE IBM MODEL 026 PRINTING CARD PUNCH, by R. Ehat and R. A. Taylor. 15 July 58, 45p. 1 ref. Research and Development technical rept. USNRDL-TR-258.
Order from LC mi$3.30, ph$7.80 PB 143 092

An IBM Model 026 Printing Card Punch has been adapted to operate into a Mosely Model 30A card Translator and a Mosely Model 2 Recorder. The design permits the plotting of IBM card information on an XY Plotter (Mosely Model 2) without disabling the normal card punching and card duplicating functions of the IBM Model 026 Printing Card Punch.

Naval Research Lab., Washington, D. C.
DIGITALIZED PICKOFF DISPLAY CONVERTER, by F. R. Fluhr. Interim rept. 11 Mar 59, 5p. Rept. 5281.
Order from LC mi$1.80, ph$1.80 PB 138 311

As Naval Data Handling Systems become larger and more complex, data processing becomes more efficient when accomplished by digital methods. Most such systems require manual monitoring and override capabilities in data insertion, detection, tracking, and computing functions. One means by which an operator can insert and correct target track data as displayed on a radar plan-position indicator is through the use of the Pickoff Display Converter. A digitalized PDC can convert an operator's positioning of an inserted marker displayed on the PPI with the radar video into the digit values representing the marker coordinates. The positioning of the marker is accomplished by positioning a probe on the surface of a conducting-glass PPI overlay. When the operator lifts the probe, the marker coordinate values are transferred to the main computer. The proposed digitalized PDC can be made to operate so that the probe will move the PPI marker in a direct 1:1 relationship or in a vernier-differential relationship.

Naval Research Lab., Washington, D. C.
SOLUTION OF SYSTEMS OF SIMULTANEOUS LINEAR EQUATIONS ON THE NAREC, by Benjamin Lepson and Janet P. Mason. Interim rept. 23 Oct 59, 16p. 1 ref. NRL Rept. 5372; NAREC ref. no. 20.
Order from LC mi$2.40, ph$3.30 PB 140 974

The solution of large systems of simultaneous linear equations is a necessary part of many research, development, and design projects. Although several methods are known for obtaining such solutions, the amount of computation necessary may be quite large. One of the standard methods, usually referred to as Gaussian elimination, has been adopted for high-speed computation and programmed for the NAREC. This can be used to solve, in a few minutes, systems of equations with as many as fifty-four unknowns. Several versions of this program are described in detail with instructions for their use.

Naval Research Lab., Washington, D. C.
SYMBOLIC ADDRESS-SYMBOLIC OPTIMUM PROGRAMS FOR A DRUM-MEMORY COMPUTER, by J. K. Russell. Interim rept. 23 Oct 59, 42p. Rept. no. 5377.
Order from OTS $1.25 PB 151 999

Because of the man-hours involved, lengthy computer programs are rarely time-optimized. It is found that the optimizing process for a computer with magnetic drum memory is itself a computable process. A program for the Royal McBee LGP-30 has been developed which performs the optimizing process on a data program written in a simple symbolic language (memory locations symbolized rather than specified). Although the data program is lengthened 2 to 5 times, it is 1/4 to 1/3 faster. Because of the length and lack of sequence in the resultant program, it is felt that an additional program is necessary to translate the symbolic language directly to unoptimized computer language (memory locations specified), for ease in troubleshooting. Such a program has also been developed. Examples of the symbolic language are given as well as the results of processing by the two programs.

MECHANICS

Armour Research Foundation, Chicago, Ill.
DEVELOPMENT OF A METHOD TO DETERMINE PLASTIC STRAINS AND STRESSES USING BRITTLE COATINGS, by Kenneth E. Hofer, Jr. and A. J. Durelli. Final rept. on Contract DA 11-022-ORD-2346. June 59, 90p. 39 refs.
Order from LC mi$4.80, ph$13.80 PB 143 624

The experimental stress analysis method, of brittle coatings is used to determine the directions of the principal stresses in a plastically yielded specimen. A device for measuring the strain sensitivities of low sensitivity brittle coatings was constructed. This device was used to determine the strain sensitivity of several grades of "Stresscoat". Various resinous and ceramic coatings are used to detect Lueders' lines and their qualities are compared with each other.

Brown U. Div. of Applied Mathematics, Providence, R. I.
NUMERICAL CALCULATION OF SLIP-LINE FIELDS, by Thomas M. Downie. Technical rept. no. 45 on Contract Nonr-562(10). Nov 58, 65p. 15 refs. C11-45.
Order from LC mi$3.90, ph$10.80 PB 143 411

This paper is concerned with the quantitative values of slip-line fields in plane plastic flow. In particular, the coordinates of slip-line fields determined by two circular arcs are calculated. There are many problems in plasticity where the field is determined by two circular arcs of equal radii. An example is the extrusion of metal through a square die.

Brown U. Div. of Applied Mathematics, Providence, R. I.
NUMERICAL SOLUTIONS FOR ELASTIC-PLASTIC BEAMS BY METHOD OF CHARACTERISTICS, by R. C. Alverson. Technical rept. no. 46 on Contract Nonr-562(10). Dec 58, 106p. 32 refs. C11-46.
Order from LC mi$5.70, ph$16.80 PB 143 612

This report is concerned with the solution of problems of impact or dynamic loading of a beam such that extensive plastic deformation takes place. The main purpose of the present work is to explore the usefulness in such problems of a numerical treatment based on the Timoshenko beam equations in the elastic sections, and using integration techniques of the method of characteristics. The beam is assumed to obey laws of ideal plasticity; effects of strain-hardening, of rate of strain, and of shear force on the plasticity condition are neglected. A particular type of impact problem was solved numerically for several combinations of the load and beam parameters, and the computed results are contrasted with experimental results and with those of simple plastic-rigid analyses.

Brown U. Div of Applied Mathematics, Providence, R. I.
ON THE PROPAGATION OF STRESS IN A HALF-SPACE, by J. W. Craggs. Technical rept. no. 44 on Contract Nonr-562(10). Oct 58, 31p. 9 refs. C11-44.
Order from LC mi$3.00, ph$6.30 PB 143 785

The purpose of the present exposition was to develop a method of solution for elastic problems which is, in principle, capable of extension to the plastic-elastic case. However the solution for the elastic half-space proves to supplement previous solutions in certain respects, emphasising the importance of Rayleigh waves, and giving the stress and velocity components without complicated contour integration. The solution is therefore presented by itself for its own intrinsic interest.

Brown U. Div. of Engineering, Providence, R. I.
THE FRACTURE OF BRITTLE AND QUASI-BRITTLE MATERIALS: A SURVEY, by J. Gurland. Rept. on Contract DA 19-020-ORD-4888. Aug 59, 58p. 63 refs. DA-4888/1.
Order from LC mi$3.60, ph$9.30 PB 143 627

This survey summarizes some of the prevalent views on the theory, behavior, testing and design of brittle materials, with the absence of plastic deformation and the origin of fracture, and the problems of testing and the characteristic features of brittle behavior.

Harvard U. Div. of Engineering and Applied Physics, Cambridge, Mass.
PLASTICS STRESS CONCENTRATION AT A CIRCULAR HOLE IN AN INFINITE SHEET SUBJECTED TO EQUAL BIAXIAL TENSION, by Bernard Budiansky and O. L. Mangasarian. Technical rept. no. 3 on Contract Nonr-1866(02). Dec 58, 26p. 8 refs.
Order from LC mi$2.70, ph$4.80 PB 143 609

With the use of J_2 deformation theory, the stress-concentration factor at a circular hole in an infinite sheet of strain-hardening material subjected to equal biaxial tension at infinity is found for a variety of representative materials. The analysis exploits a transformation which permits the calculation of the stress-concentration factor without determining the stress distribution in the sheet. Subsequent calculations reveal, that for a monotonically increasing applied stress, the stress-history at all points in the sheet is nearly radial.

Institute of Flight Structures, Columbia U., New York.
ON A DYNAMICAL SAINT-VENANT PRINCIPLE, by Bruno A. Boley. Technical rept. no. 12 on Contract Nonr-266(20). Dec 58, 20p. 7 refs. CU-12-58-ONR266(20)-CE.
Order from LC mi$2.40, ph$3.30 PB 143 618

The dynamic behavior of a simple mechanical model composed of two Timoshenko beams connected by springs is studied. The accuracy of a quasi-static solution and of Saint-Venant's principle is studied for various rates of load application.

Massachusetts Inst. of Tech., Cambridge, Mass.
ELASTIC-PLASTIC TORSION OF A CIRCUMFERENTIALLY NOTCHED BAR, by J. B. Walsh and A. C. Mackenzie. Rept. on Contract AF 18(600)957. [1958] 26p. 10 refs. AFOSR-TN-59-710.
Order from LC mi$2.70, ph$4.80 PB 143 677

The elastic-plastic torsion of a cylindrical bar with a circumferential notch is investigated. Theoretical predictions of angle of twist and notch root strain are compared with experimental values.

Massachusetts Inst. of Tech., Cambridge.
ON NOTCH SENSITIVITY, by Frank A. McClintock. Rept. on Contract AF 18(600)957. 9 May 59, 33p. 23 refs. AFOSR-TN-59-712; AD-225 364
Order from LC mi$3.00, ph$6.30 PB 143 676

Experiments on pure aluminum are in agreement with the fully plastic theory. Experiments on 7075 aluminum alloy and 4140 steel show a notch sensitivity, with a crack behavior and size effect similar to that predicted from elastic-plastic analysis.

Massachusetts Inst. of Tech., Cambridge.
THE SINGLY-GROOVED, PLANE STRAIN TENSILE TEST, by Frank A. McClintock. Rept. on Contract AF 18(600)957. [1959] 27p. 14 refs. AFOSR-TN-59-713.
Order from LC mi$2.70, ph$4.80 PB 143 675

The distributions of stress and strain around a single groove in a plane strain specimen subject to fully plastic tension are found theoretically. The distinguishing features of this configuration are the lack of triaxiality and the constant strain pattern as the specimen separates. The transition temperature is lower than in the Charpy test, and a shear lip is absent.

Minnesota U., Minneapolis.
STEADY STATE UNDAMPED VIBRATIONS OF A CLASS OF NONLINEAR DISCRETE SYSTEMS, by P. R. Sethna, B. E. Fristedt, and V. G. Harvester. Rept. for Jan 58-Jan 59 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)2803. Aug 59, 37p. 10 refs. WADC Technical rept. 59-141.
Order from OTS $1.00 PB 161 129

Steady state vibrations of a class of nonlinear discrete systems with an arbitrary number of degrees of freedom are studied. The coordinates of the system are first transformed to the principal coordinates corresponding to the linear part of the system. A perturbation scheme is used to obtain the solutions. Some special effects of the ratios of the linear natural frequencies on the qualitative nature of the solutions are demonstrated. Solutions are obtained for some specific problems and the results are checked against those obtained from an analog type computer.

Naval Research Lab., Washington, D. C.
NOTES ON DYNAMICS OF LINEAR ELASTIC STRUCTURES, by G. J. O'Hara. Interim rept. 23 Oct 59, 19p. 10 refs. NRL rept. 5387.
Order from OTS $0.50 PB 151 933

Normal-mode theory is a recognized method of calculating the dynamic response of linear elastic structures. This report gathers together many of the important theorems, some of which have not been previously published in NRL reports, and explains and discusses them. Included is a section on Duhamel integrals for a linear simple oscillator exhibiting many of the important forms which are rarely seen. Characteristic shape or normal load theorems are also discussed, and a more exact method of stress-checking a structure is proposed.

Pennsylvania State U., University Park.
CORRELATIONS BETWEEN TRANSVERSE AND TORSIONAL SHEAR CREEP DEFORMATIONS, by Joseph Marin. Rept. for Mar-Dec 57 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)2729. June 59, 35p. 5 refs. WADC Technical rept. 57-755; AD-226 375.
Order from OTS $1.00 PB 161 258

The creep deformation of a rivet subjected to transverse shear depends, among other factors, upon the rivet diameter and rivet length. This influence of size means that each particular rivet configuration must be tested to obtain the transverse shear-creep deformation. A more basic approach would be to predict the transverse shear-creep of a rivet in terms of the more fundamental case of pure shear as represented by torsion. A theory is developed for predicting the transverse shear-creep deformation of a rivet in terms of pure torsional shear-creep. The correlation of transverse shear and pure torsion shear is made, based on both the torsion of a solid circular bar and the torsion of a thin-walled circular tube. From the theory developed, it is also possible to obtain the creep deflection of a rivet from the creep constants in pure shear or simple tension.

Space Research Labs., Litton Industries, Beverly Hills, Calif.
RESEARCH PROGRAM ON HIGH VACUUM FRICTION. Final rept. on Contract AF 49(638)343. 30 Mar 59, 159p. 71 refs. Pub. no. 1023; AFOSR-TR-59-97.
Order from OTS $3.00 PB 161 116

The principal test condition studied was that of the linear motion between two dry, clean, unlubricated, flat surfaces. Microscopic examination of sliding contact between two clean, machined surfaces led to the conclusion that each individual contact area was largely point-to-plane. Models could be loaded to yield pressures, and under certain conditions could be made to slide with abnormally low friction forces and without microscopic evidence of wear or surface distortion. A theory of friction has been postulated, based principally on the analysis of these tests.

Utah U., Salt Lake City.
A SPECIAL CASE OF CONTACT ELASTICITY, by W. Komkov. Technical rept. no. 5 on Contract Nonr-1288(02). Nov 58, 42p. 27 refs.
Order from LC mi$3.30, ph$7.80 PB 143 472

The purpose of this study was to determine the distribution of stresses in the piston and in the body of the material subjected to the high pressure due to the action of the piston throughout the elastic range and to determine the planes of formation of the plastic condition. The problem is reduced to a determination of elastic stress conditions in a three-dimensional axially symmetrical case. The main problem of contact elasticity which is treated in this paper is closely related to the so called Boussinesq problem. An extensive literature exists in this field and this complexity of theoretical approach may be judged by the array of famous names in the field of mathematics and engineering, directly connected with the closely related problems of three-dimensional elasticity.

Yale U., New Haven, Conn.
EXPERIMENTAL DETERMINATION OF CORNERS IN THE YIELD SURFACE, by Aris Phillips and George A. Gray. Technical rept. no. 5 on Contract Nonr-609(12). Dec 58, 67p. 16 refs.
Order from LC mi$3.90, ph$10.80 PB 143 848

Combined stress tests with variable stress ratios on annealed commercially pure aluminum made on a combined tension-torsion testing machine of a dead load type. The experiments indicate that the form of the yield surface at a considerable distance from the stress increment vector agrees much better with the prediction of the slip theory than it does with the prediction of the Mises theory.

ON THE AEROELASTIC CHARACTERISTICS OF LOW ASPECT RATIO WINGS WITH CHORDWISE DEFORMATIONS, by John Dugundji and John D. C. Crisp. Rept. on Contract AF 49(638)219. July 59, 205p. 61 refs. ASRL Technical note 74-3; OSR Technical note no. 59-787.
Order from LC mi$9.30, ph$31.80 PB 143 960

An investigation is made into the nature of chordwise flutter and divergence characteristics of low aspect ratio wings. To this end, two simple low aspect ratio configurations are examined in considerable detail. The first is a cantilever rectangular wing possessing a bending, a torsion, and a first chordwise bending mode. The second is a free-free delta wing of sufficiently low aspect ratio so that spanwise deformations can be neglected. Some effects of aerodynamic heating and longitudinal accelerations on these planforms are also examined. Simple closed form solutions are developed for the flutter and divergence characteristics wherever appropriate. The general trends revealed by these analyses may prove to be of interest to persons involved in the interpretation of aeroelastic analyses of such surfaces. Among the more interesting trends indicated was the role played by mass density ratio for the delta wings. At the lower mass density ratios, more chordwise modes had to be included in the modal type analyses. Also, for high mass density ratios, the flutter characteristics became dependent on dynamic pressure q and independence of the mass density ratio.

Aeronautical Accessories Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
DATA REDUCTION TECHNIQUES FOR FLIGHT VIBRATION MEASUREMENTS, by D. C. Kennard, Jr. and C. E. Thomas. Rept. on Environmental Criteria for Flight Vehicles and Related Equipment. Feb 59, 23p. 2 refs. WADC Technical note 59-44; AD-210 478.
Order from LC mi$2.70, ph$4.80 PB 144 204

The system used at Wright Air Development Center for recording and analyzing flight vibration data is described. It has made possible a significant increase in the quantities of raw data which can be acquired to define the vibration and sound environments in various aircraft. To reduce the large quantities of data to usable form, processing techniques have been evolved based upon the use of standard business machines and the ERA 1103 Computer. These techniques are described and methods are illustrated for presenting

data to define spectral and statistical qualities of the sound and vibration environment. A proposed system to provide still further automation of the data reduction process is described briefly. It is concluded that these recent advances in state-of-the-art make possible the acquisition of sufficient data to eliminate eventually the present inexact methods of estimating sound and vibration environments of aircraft and missiles.

Air Force Flight Test Center, Edwards AFB, Calif.
STANDARDIZATION OF TAKE-OFF PERFORMANCE MEASUREMENTS FOR AIRPLANES, by Kenneth J. Lush. [1948] 102p. 1 ref. Technical note R-12.
Order from LC mi$5.70, ph$16.80 PB 144 149

Formulae are derived by which take-off performance measurements may be standardized. These formulae are easy to use and they apply, with suitable numerical constants, to airplanes with any type of propulsive system, including mixed types and types using part-time assistance or boost. Numerical constants are proposed for use with these formulae. Experimental data available support these constants, but are insufficient to check them completely.

Air Force Missile Development Center, Holloman AFB, N. Mex.
GRAVITY SURVEY OF THE HOLLOMAN TRACK, by Ray L. Larkins and Frank J. Calkum. July 59, 25p. 3 refs. AFMDC-TR-59-31.
Order from LC mi$2.70, ph$4.80 PB 143 183

Tests of inertial guidance systems on the Holloman track require a precise knowledge of the gravity force. This report describes the instrument used, the evaluations of the measurements, and tabulates theoretical gravity, observed gravity, free-air anomaly, and Bouguer anomaly along the seven miles of the Holloman track.

Arnold Engineering Development Center [Tullahoma, Tenn.]
USE OF PERFORATED WALLS FOR SHOCK CANCELLATION AT SUPERSONIC SPEEDS, by H. Ramm and M. Jones. Rept. on ARO, Inc. Contract AF 40(600)800. Aug 59, 97p. 8 refs. AEDC-TR-59-15.
Order from LC mi$5.40, ph$15.30 PB 143 276

Tests have been conducted in the 1-Foot Supersonic Model Tunnel of the Propulsion Wind Tunnel Facility, AEDC, to determine shock cancellation characteristics of perforated walls at supersonic Mach numbers up to 3.15. The test section wall configurations investigated included walls with holes drilled normal to the wall surface and with holes slanted 60 deg to obtain differential resistance for inflow and outflow. Theoretical considerations helped to separate the influences that tend to make the wall characteristics nonlinear in an undesirable sense. These influences were found to be the ratio of the boundary layer thickness to hole diameter and the pressure recovery in the holes. Tests with two and three-dimensional models showed the feasibility of satisfactory shock cancellation for at least moderate model blockage values. Models with more than 4 percent blockage may require special means of improving the cancellation of the expansion waves following the bow wave compression.

Bell Aircraft Corp. [Buffalo, N. Y.]
CHEMICAL NON-EQUILIBRIUM EFFECTS IN THE LAMINAR HYPERSONIC BOUNDARY LAYER, by George R. Inger. Doctoral thesis. Rept. for June-Oct 58 on Contract AF 49(638)380. 30 Mar 59, 139p. 22 refs. Rept. no. 7010-6; AFOSR-TN-59-237; AD-212 007.
Order from LC mi$6.90, ph$21.30 PB 143 588

In view of the importance of dissociation-recombination chemistry of a flowing air mixture to the accurate calculation of aerodynamic design data, such as heat transfer, real gas dynamics research has focused attention on the theoretical study of the chemical non-equilibrium laminar boundary layer. The present report is concerned with the basic foundations of such studies - in particular, some new theoretical representations of a dissociating air mixture and a new method of non-equilibrium boundary layer solution are presented.

Bureau Technique Zborowski, Brunoy (France).
THEORETICAL INVESTIGATION AND EXAMINATION BY MEASURING TESTS IN WHAT A DEGREE THE ECONOMY OF FLYING VEHICLES IS INFLUENCED BY PRE-CAMBERED SKELETONS OF AIRFOILS CLOSED IN THEMSELVES. Final Technical rept. for 1 July 58-31 July 59 on Contract DA 91-508-EUC-393. 10 Aug 59, 68p. 17 refs.
Order from LC mi$3.90, ph$10.80 PB 143 446

The economy of high-speed flying vehicles depends not only on the choice of adequate profiles and wing dimensions as aspect ratio and span, but also and even more on the possibility of flight with reduced velocities at still acceptable lift-drag ratios as well as on good manoeuvring properties without risk of stall. Although ring airfoils present, in this domain, well-known advantages over plane wings, as e.g. lower induced-drag values for equal lift and aspect ratio and less inclination to stall phenomena, it seems worth while to apply to them the same devices as utilized in plane-wing theory by MALAVARD, i.e. precambering of the wing center-lines to guarantee a favorable behavior of the airfoil at a particularly interesting lift value ("adaptation" value).

California U., Berkeley.
VECTOR POLAR METHOD FOR SHOCK INTERACTIONS WITH AREA DISTURBANCES, by A. K. Oppenheim and P. A. Urtiew. Technical note no. DR 4 on Contract AF 49(638)166. July 59, 157p. 29 refs. AFOSR-TN-59-701.
Order from LC mi$7.50, ph$24.30 PB 143 670

The application of the vector polar method to the study of interactions between plane traveling shock waves and area disturbances involves the introduction of steady flow polars. The solutions obtained by the vector polar method are shown to compare favorably with analytical and experimental results obtained by

other investigators who studied the interactions of shocks with a variety of obstacles, such as grids and gauzes, in shock tubes.

Carnegie Inst. of Tech., Pittsburgh, Pa.
STUDIES RELATING TO CONDENSATION TRAILS. Final rept. on Contract AF 19(604)1944. July 59, 72p. 15 refs. AFCRC-TR-59-257; AD-217616
Order from LC mi$4.50, ph$12.30 PB 143 658

Three studies of importance in the analysis and understanding of condensation trail phenomena have been made. The first is an experimental determination of the effect of hygroscopic nuclei on the size and concentration of water drops in a contrail. The second is an analysis of the numerical evaluation of the equations of drop growth. In the third, a new theory of nuclei growth is presented, based on the kinetic theory of gases.

David Taylor Model Basin, Washington, D. C.
CONTRIBUTION TO THE THEORETICAL INVESTIGATION OF BLOWING AT THE TRAILING EDGE OF A WING PROFILE (Contribution a l'Etude Theoretique du Soufflage au Bord de Fuite d'un Profil d'Aile), by L. Malavard, tr. by S. T. de los Santos. July 55, 46p. ONERA Note Technique 4/1727 A; DTMB Aero rept. 879.
Order from LC mi$3.30, ph$7.80 PB 138 994T

AERODYNAMIC STUDIES: THE FORCES ACTING IN AN AIR VEHICLE: A REVIEW OF THE LITERATURE [PART 22] by M. Z. Krzywoblocki. Rept. for Apr-June 57 on Scientific and Engineering Research Investigations in Flight Dynamics, Contract AF 33(616)5689. Aug 59, 311p. 1438 refs. WADC Technical note 56-360, Part 22, [AD-227 136]
Order from OTS $5.00 PB 161 140

This work is an annotated bibliography of the scientific literature pertaining to methods of calculating the aerodynamic forces acting on an air vehicle in flight. The present segment of the work includes material reviewed by the author in the period April 1957 through June 1957. The more interesting papers and reports (from the viewpoint of the aerodynamicist) are discussed briefly; others are listed without comment. (See also PB 161 000-001).

Institute of Engineering Research, U. of California, Berkeley.
LIFT AND DRAG ON CONE CYLINDERS, by T. Nark. (Doctoral thesis). Rept. on Contract Nonr-222(45). 30 Dec 57, 43p. 10 refs. Rept. no. HE-150-154; Series no. 20, issue no. 117; AD-155 159.
Order from LC mi$3.30, ph$7.80 PB 138 634

The normal and axial forces were measured on a cone-cylinder body of revolution in a supersonic, rarefied gas flow at a Reynolds number of 4050 and Mach number of 4.0. The angle of attack was varied to a maximum of sixteen degrees. The final results, plotted in coefficient form, were compared to Newtonian hypersonic theory for an inviscid fluid. The test was conducted at such low Reynolds numbers that the Newtonian theory did not adequately represent the axial forces, but when a skin friction correction was applied to the theory, the experimental data are within 15 percent of the predicted values. The normal force coefficient was adequately predicted by the Newtonian theory, with the maximum error above 8 degrees being 10 percent.

Just, W.
A PRELIMINARY AERODYNAMIC STUDY OF THE HIGHSPEED-LONGRANGE-VTOL "JIFFY" OF MR. E. LAGELBAUER, by W. Just and H. Georgi. Final technical rept. no. 1 15 Mar-15 July 59, on Contract DA 91-591-EUC-1083, OI-1307-59. [1959] 82p. 2 refs.
Order from LC mi$4.80, ph$13.80 PB 143 602

This paper deals with the investigation into the capacities of the vertical-take-off-aircraft "Jiffy" suggested by E. Lagelbauer, during hovering, at vertical climbing, as well as in horizontal flight at low speeds, employing fixed rotors with unvariable blade angles of pitch. Following an introductory chapter as to layout, abbreviations, and design parameters the rotor coefficients are computed for hovering, vertical climbing, and horizontal flight, and the performance calculations are executed. The results of these calculations are shown on diagrams. The result of this aerodynamical investigation of the rotor has shown that, with the project proposed of a vertical-take-off-aircraft, satisfactory flight characteristics can be obtained only by employing a tiltable wing whereby the wing must be tilted by about 25° to 40° (with, and without, flap displacement), depending on whether the aircraft is operating in its state as helicopter or convertiplane. In its structural design, the aircraft thus resembles a tilting wing aircraft whereby, however, additional difficulties will have to be overcome on account of the shutting-off of the rotors. From the aerodynamical point of view this project can be realized. The definite acceptability of this project, however, can be established only through additional extensive investigations.

Laboratorio di Meccanica Applicata del Politecnico di Torino (Italy).
EFFECTS OF AIR DISSOCIATION AND IONIZATION AT HYPERSONIC SPEED, by Gianna Jarre. Technical note 14 on Contract AF 61(514)1124. July 59, 37p. 8 refs. AFOSR-TR-59-119.
Order from LC mi$3.00, ph$6.30 PB 143 910

This paper deals with the problem of dissociation and ionization of air components at the high temperatures produced by hypersonic speed, either behind a strong normal shock wave or at the wall of an adiabatic flat plate. The state of chemical equilibrium is studied with the aid of a thermodynamic chart of atmospheric air and using simplified schemes of real flows. The dynamic problem of relaxation is also investigated but only in the field of oxygen dissociation. Simplified methods for calculating the length of the relaxation processes are developed, discussed and applied to numerical examples.

National Research Labs., Ottawa (Canada).
APPROXIMATE METHOD FOR DETERMINING THE POTENTIAL FLOW ABOUT AN ARBITRARY AEROFOIL SECTION IN A TWO-DIMENSIONAL FINITE STREAM WITH PARTICULAR REFERENCE TO LARGE STREAM DEFLECTIONS, by D. G. Gould. Aug 59, 43p. 8 refs. Aeronautical rept. LR-260.
Order from LC mi$3.30, ph$7.80 PB 143 576

The flow about and on the surface of an aerofoil section in a finite stream and that about and on the surface of the same aerofoil section in an infinite symmetrical cascade are compared. It is shown that, for most cases of practical interest, the differences are small for stream deflection angles up to 90 degrees. Thus, the approximate flow about an arbitrary aerofoil section in a two-dimensional finite stream may be obtained by using the methods existing for the determination of the flow about an arbitrary section in a cascade. The procedure, as applied to the finite stream approximation, is given using the interference method of cascade theory.

National Research Labs., Ottawa (Canada).
METHODS OF MEASUREMENT OF AIRCRAFT DYNAMIC STABILITY DERIVATIVES, by K. Orlik-Rückemann. July 59, 57p. 217 refs. Aeronautical rept. LR-254.
Order from LC mi$3.60, ph$9.30 PB 143 578

The numerous methods available for determination of dynamic stability derivatives of aircraft are presented and grouped according to a convenient classification system. Both free flight and wind tunnel methods are considered. The basic aspects of each method are described in the text and illustrated by a schematic drawing. Detailed information can be obtained from a rather extensive bibliography, arranged according to the same classification system.

Naval Ordnance Lab., White Oak, Md.
TEMPERATURE RECOVERY FACTORS ON A 40-DEGREE CONE CYLINDER WITH TURBULENT BOUNDARY LAYER AT MACH NUMBERS 4.1 AND 4.8, S. M. Dmohoski. 20 Aug 57, 26p. 20 refs. Aerodynamics Research rept. 22; NAVORD rept. 5763.
Order from LC mi$2.70, ph$4.80 PB 143 309

Temperature recovery factors have been measured on the cylindrical surface of a 40-degree cone cylinder with turbulent boundary layer. The measurements were made with and without a turbulence promoter immediately upstream of the nozzle in the NOL Continuous 40 x 40 cm Aeroballistics Wind Tunnel No. 2 at Mach numbers 4.1 and 4.8. Though turbulent recovery factors have been studied extensively at lower Mach numbers, only isolated investigations have been reported at Mach numbers of 4 and above. However, the results of the present experiments demonstrate essentially the same effects observed at lower Mach numbers, i.e., the turbulent recovery factor is approximately equal to the cube root of the Prandtl number.

Princeton U., N. J.
EXPERIMENTAL STUDIES AT MACH NUMBERS 12 TO 19 OF CONICAL AND BLUNTED BODIES AT ZERO ANGLE OF ATTACK, by S. M. Bogdonoff and I. E. Vas. Rept. on Contract AF 18(600)498. Sep 58, 63p. 8 refs. Rept. no 435; AFOSR-TN-58-841; AD-203 181.
Order from LC mi$3.90, ph$10.80 PB 143 655

An experimental study on conical and blunted bodies was carried out at Mach numbers between 12 and 19 using the Princeton University Helium Hypersonic Tunnel. Pressure distributions and Schlieren photographs were obtained for bodies with cone half angles varying from 10° to 45°. Comparison with the theoretical inviscid and Newtonian pressures corrected for normal shock losses were made. The pressures on a body without corners can be predicted quite well. A corner at the junction of the nose section and conical afterbody results in large variations between the measured values and predicted ones. The pressures on the conical bodies were not affected by the nose shape for that part of the body downstream of a station located at 1 1/2 times the nose bluntness diameter.

Rensselaer Polytechnic Inst., Troy, N. Y.
NONEQUILIBRIUM FLOW IN GAS DYNAMICS, by T. Y. Li. Rept. on Contract AF 18(600)1591. May 59, 57p. 35 refs. TR AE 5901; AFOSR-TN-59-389; AD-213 893.
Order from LC mi$3.60, ph$9.30 PB 143 516

The present paper consists mainly of three parts. The first part deals with general concepts which include (1) the fundamental equations and boundary conditions in problems of steady adiabatic inviscid flow of a reacting mixture of perfect gases and (2) a general study of the chemical relaxation in a gaseous system. The second part deals with the steady one dimensional nozzle flow with nonequilibrium chemical reactions. An important nondimensional parameter is used to classify the nozzle flow into (1) equilibrium flow (2) nonequilibrium flow and (3) frozen flow. Significant departure from equilibrium flow in a hypersonic shock tunnel nozzle would lead to frozen flow further downstream. The third part presents a numerical method whereby the inviscid adiabatic flow of a reacting mixture of perfect gases past a blunt body may be calculated. Numerical examples show that significant changes in the flow conditions of the shock layer region can be attributed to the chemical nonequilibrium effects.

Hydrodynamics, Hydraulics, and Hydrostatics

Applied Mathematics and Statistics Lab., Stanford U., Calif.
WAVE GENERATION BY OSCILLATION OF SUBMERGED BODIES, by Harold Levine. Technical rept. no. 79 on Contract Nonr-225(11). 19 Nov 58, 39p. 3 refs.
Order from LC mi$3.00, ph$6.30 PB 143 408

This paper deals with some two-dimensional hydrodynamic problems of an ideal, incompressible fluid.

The fluid is assumed infinitely deep and to possess a horizontal free surface when a state of equilibrium in the field of gravity prevails. A steady motion of the fluid will result if there is a submerged contour which oscillates periodically, and waves are generated on the free surface. The large wave motions pose a formidable calculation, and it is therefore customary to assume that the oscillations of the contour and hence the wave amplitudes are infinitesimal. Then the problem is one of potential theory, with linear boundary conditions imposed at the fixed, equilibrium positions of the free surface and immersed contour.

David Taylor Model Basin, Washington, D. C.
CENTROID AND MOMENT OF INERTIA OF A SUPERCAVITATING SECTION, by W. B. Morgan. Aug 57, 20p. 6 refs. Rept. no. 1193.
Order from LC mi$2.40, ph$3.30 PB 138 642

Equations are derived by numerical integration for the ordinate of the centroid and moment of inertia about the x_0-axis of Tulin's SC section with the TMB modified thickness distribution. These equations are evaluated for a flat face section and for a section with a given relationship between design lift coefficient and design angle of attack. The results are plotted in a form convenient for propeller blade stress analysis.

David Taylor Model Basin, Washington, D. C.
THE DESIGN AND ESTIMATED PERFORMANCE OF A SERIES OF SUPERCAVITATING PROPELLERS, by A. J. Tachmindji and W. B. Morgan. July 58, 58p. 26 refs.
Order from LC mi$3.60, ph$9.30 PB 143 563

This paper outlines the procedure which has been developed for the design of supercavitating propellers and the possible range of application in which such propellers can be used. This design method has been used to predict the performance characteristics of a series of supercavitating propellers and compared with specific experimental results.

David Taylor Model Basin, Washington, D. C.
OPTIMUM SUPERCAVITATING SECTIONS by W. B. Morgan. Aug 57, 23p. 9 refs. Rept. C-856; AD-145 538.
Order from LC mi$2.70, ph$4.80 PB 138 643

If both the cavitation and friction drag of a supercavitating (SC) section are considered, a minimum drag-lift ratio occurs at a specific lift coefficient. This lift coefficient is mainly dependent on the type of SC section being considered.

David Taylor Model Basin, Washington, D. C.
A PHASE-COMPONENT MEASUREMENT SYSTEM, by R. G. Tuckerman. Apr 58, 25p. 3 refs. Rept. 1139.
Order from LC mi$2.70, ph$4.80 PB 144 206

This report describes an instrumentation system developed to indicate directly the first-order Fourier coefficients of the heaving force and pitching moment acting on a ship model when it is forcibly displaced. Provision is made for indicating the coefficients of the second or the third harmonics when desired. Direct recording of the force and moment signals is also provided. The report includes schematic diagrams, photographs, and operating instructions.

Experimental Towing Tank, Stevens Inst. of Tech., Hoboken, N. J.
THE FORCE CHARACTERISTICS OF SURFACE-PIERCING FULLY VENTILATED DIHEDRAL HYDROFOILS, by Peter Ward Brown. Rept. on Contract Nonr-263(20). Oct 58, 68p. 10 refs. Rept. no. 698.
Order from LC mi$3.90, ph$10.80 PB 143 209

Results of a theoretical and experimental investigation of the characteristics of surface-piercing, fully ventilated dihedral hydrofoils are presented. A range of dihedral angles from 20 to 40 degrees is covered in the experimental investigation. Good agreement between experiment and theory is obtained, the theory being applicable to surface-piercing, fully ventilated dihedral hydrofoils of zero sweep, taper and twist. The report includes experimental evidence and an analysis of cambered sections with partially attached flow to the upper surface.

Iowa Inst. of Hydraulic Research, Iowa City.
THE IOWA TOWING TANK, by Milton Martin. Rept. on Contract Nonr-1611(01). 1 Nov 58, 10p.
Order from LC mi$1.80, ph$1.80 PB 143 473

The towing tank of the Iowa Institute of Hydraulic Research at the State University of Iowa has now been in operation for approximately one year. It is being used for research in both naval and hydraulic problems. The design and construction of this new facility involved some novel features which should be of interest to other designers. A detailed discussion of these features will be included.

Rensselaer Polytechnic Inst., Troy, N. Y.
FINITE CAVITY CASCADE FLOW, by Hirsh Cohen and C. D. Sutherland. Rept. on Contract Nonr-591(08). 2 Apr 58, 30p. 13 refs. RPI Math Rep no. 14.
Order from LC mi$2.70, ph$4.80 PB 139 211

The problem considered in this paper is the steady flow of incompressible, non-viscous fluid past an infinite array of lifting foils under such conditions that fully-developed cavities appear on the foil surfaces. The discussion here will be limited to two dimensional flow past foils set at small angle of attack. Such cavitating cascade flows are of interest in many types of internal and external flow machines - axial compressors, propellers, and other multi-bladed devices.

Wichita U. [School of Engineering] Kans.
CONTRIBUTIONS TO JET PUMP THEORY, by H. B. Helmbold. Rept. on Contract Nonr-201(01). Sep 57, 105p. 4 refs. Rept. no. 294, supersedes Engineering Studies 105, 106, 107, 118, 137, 145.
Order from LC mi$5.70, ph$16.80 PB 138 959

Contents:
Part I. Comparison of ideal mixing processes
Part II. Integral relations on mixing processes
Part III. Simplified theory of mixing-zone spreading
Part IV. Approximate theory of jet diffusion in a constant-pressure mixing tube
Part V. Simplified theory of the plate jet in a parallel stream under constant pressure
Part VI. Perfect mixing processes in subsonic jet pumps

METALLURGY

Birmingham U. (Gt. Brit.)
RESEARCH ON STRAIN-AGING, HARDENING, AND SOFTENING OF METALS BY FATIGUE, by G. W. J. Waldron and J. M. Summerton. Technical summary rept. for Sep 57-Feb 59 on Contract AF 61(514)1182. [1959] 128p. 56 refs. AFOSR-TN-59-774; AD-219 717.
Order from LC mi$6.30, ph$19.80 PB 143 959

Increasing magnesium content reduces the width of slip marks which occur during fatigue, and the amount of surface cracking is also reduced. Experiments at -196°C have shown hardening and softening effects which it is suggested are due to interactions of vacancies and solute atoms with dislocations. A technique is outlined for growing large seeded zinc crystals of any desired orientation, and a method of acid machining gauge lengths in these crystals is described.

Cornell U., Ithaca, N. Y.
DENSITY MEASUREMENTS OF SOME THIN COPPER FILMS, by N. Wainfan, Nancy J. Scott and L. G. Parratt. Technical rept. no. 1 on Contract AF 49(638)402. 1 Dec 58, 21p. 12 refs. AFOSR-TN-58-1024; AD-162 289.
Order from LC mi$2.70, ph$4.80 PB 138 511

Density measurements on copper films, vacuum-deposited onto optically flat pyrex substrates, in the thickness range between 50 and 1000A. For a film thickness in excess of 120A the film density was found to be equal to the bulk density to within the limits of the experimental accuracy. Comparison of the x-ray method of measuring film thickness with an optical interference method.

Metals Research Lab., Carnegie Inst. of Tech., Pittsburgh, Pa.
FIELD EMISSION MICROSCOPY OF METAL CRYSTAL NUCLEATION, by K. L. Moazed and G. M. Pound. Final rept. on Oxidation, Vapor Nucleation and Surface Diffusion of Metals and Alloys, Contract AF 18(600)1572. 15 Sep 59, 114p. 56 refs. AFOSR-TR-59-131; AD-225 717.
Order from LC mi$6.00, ph$18.30 PB 143 829

A field emission microscopic investigation of the heterogeneous nucleation of metal vapors on metallic substrates. Nucleation of silver on tungsten was observed to occur when the population of adsorbed silver atoms reached a critical value at preferred sites on the substrate surface. Qualitative observations were also made on the evaporation and desorption of silver from a tungsten emitter tip.

Ferrous Metals

Curtiss-Wright Corp., Caldwell, N. J.
INVESTIGATION OF FATIGUE PROPERTIES AT ROOM TEMPERATURE OF HIGH STRENGTH STEELS HAVING HIGH TEMPERING TEMPERATURES, by Harold N. Cummings, Foster B. Stulen, and William C. Schulte. Rept. for 1 May 58-30 Apr 59 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)5182. Sep 59, 105p. 8 refs. WADC Technical rept. 59-227.
Order from OTS $2.50 PB 161 144

High strength steels exhibiting some promise of good fatigue strength at temperatures up to about 1000°F were investigated. The tests reported herein were made at room temperature, as preliminary to later testing, under temperature, of the steels studied or modifications of them as suggested by the test results. Steels for (1) general structural use, (2) use for springs, (3) use for the surface of space vehicles, and (4) use for bearings, were investigated. Possibilities of improved fatigue performance were indicated provided the inclusion content could be lowered and the inclusion size restricted to below half a thousandth of an inch.

Engineering Materials Research Lab., Brown U., Providence, R. I.
ENERGY VERSUS STRESS THEORIES FOR COMBINED STRESS. A FATIGUE EXPERIMENT USING A ROTATING DISC [AND] BASIC RESEARCH ON FATIGUE FAILURES UNDER COMBINED STRESS, by W. N. Findley, P. N. Mathur and others. Technical rept. no. 7 (Final) on Contract DA 19-020-ORD-3520. Dec 58, 25p. 8 refs. EMRL-13.
Order from LC mi$2.70, ph$4.80 PB 143 069

An experiment in which the strain energy at the critical location for fatigue failure is maintained constant while the stresses on a given plane of the material at the same location are caused to fluctuate. Apparatus developed to produce this condition consisted of a circular disc with a wide-flanged rim which was loaded along a diameter by means of pivot-pad bearings. The disc was then rotated under a constant load.

Ingersoll Kalamazoo Div.; Borg-Warner Corp., Mich.
INVESTIGATION AND EVALUATION OF ULTRA STRENGTH STEEL FOR MISSILE BOOSTERS, by Arnold O. Moelk and R. A. Patterson. Rept. on Contract NOrd-15719. 10 Jan 58, declassified 17 Oct 58, 31p. 1 ref. Project rept. SPDIR-18; AD-155 241.
Order from LC mi$3.00, ph$6.30 PB 144 056

Three materials, SAE 4142, SAE 4340 and SAE 6140 were evaluated to determine the possibilities of finding a material that has the potentialities of developing a yield strength of 240,000 psi in the heat treated condition. A material designated as MBMC #1 was developed.

Material Lab., New York Naval Shipyard, Brooklyn, N. Y.
CHEMICAL METHODS OF DETERMINING SULFUR IN LOW ALLOY AND CARBON STEELS, by Walter L. Miller. Final rept. 14 Aug 51, 28p. Lab. Proj. 4933-A-5.
Order from LC mi$2.70, ph$4.80 PB 143 905

As a part of the program for standardization of chemical test methods, seven Naval Laboratories have completed a collaborative test of two methods for determining sulfur in low alloy steels or carbon steels. The methods tested and the results are included. On the basis of results obtained and convenience of the method, a combustion-titration method was found to be the better method. This method has been rewritten in a form suitable as a standard method.

Minerals Research Lab., U. of California, Berkeley.
HIGH TEMPERATURE HEAT CONTENTS OF SOME BINARY IRON ALLOYS, by Weston B. Kendall, Raymond L. Orr, and Ralph Hultgren. Technical note no. 2 on Contract AF 49(638)83. 1 July 59, 16p. 3 refs. Series no. 137, issue no. 2; AFOSR-TN-59-524; AD-216 258.
Order from LC mi$2.40, ph$3.30 PB 143 672

Measurements of the heat capacity at elevated temperatures for ferrochromium, ferromanganese, ferrosilicon, and ferrocobalt alloys.

Naval Weapons Plant, Washington, D. C.
FLAME HARDENING OF MODULAR CAST IRONS, by F. A. Caudle and V. DePierre. 14 Aug 59, 28p. 55 refs. NAVORD rept. 6505; NWPW-T-16-59; AD-226 028.
Order from LC mi$2.70, ph$4.80 PB 143 886

A flame-hardening procedure consisting of multiple flame passes followed by water quenching is described for surface hardening ferritic nodular irons, MIL-I-17166, to a surface hardness of Rockwell C 50-58, with 0.03 to 0.07 inch case depths. A preliminary literature survey on flame hardening cast irons and laboratory tests used for establishing the flame-hardening procedure are reported.

Naval Weapons Plant, Washington, D. C.
NOTCH TOUGHNESS OF SPHEROIDAL GRAPHITIC HIGH DUCTILITY IRON CASTINGS, by Vincent DePierre and Shingo Inouye. 10 Sep 59, 51p. 24 refs. NWPW-T-3-59; NAVORD rept. 6493.
Order from OTS $1.50 PB 161 120

Data from a literature survey of notch toughness of spheroidal graphitic iron castings and test results obtained in the U. S. Naval Weapons Plant were used to show the effect of material variables and external test factors on the notch toughness of spheroidal graphitic cast iron. Material variables consist of chemical composition, microstructure, and susceptibility to temper brittleness. External factors cover test temperature, specimen dimensions, speed of loading, and stress concentration. An equation correlating the nil ductility temperature with material variables and external test factors was obtained for spheroidal graphitic cast iron from literature and test data.

Rock Island Arsenal Lab., Ill.
A COMPARISON OF PHOSPHATE COATINGS FOR USE IN THE COLD SHAPING OF STEEL, by D. R. Johnson. 4 Feb 58, 43p. 12 refs. Rept. no. 58-248; AD-204 335.
Order from LC mi$3.30, ph$7.80 PB 144 053

Coatings produced in the room temperature zinc phosphate solution were compared to those produced in the chlorate-nitrate and nitrate-nitrite accelerated zinc phosphate solutions. The room temperature zinc phosphate solution produced coatings whose draw characteristics were comparable to those produced in the chlorate-nitrate and the nitrate-nitrite accelerated solutions. Steel grit blasting was found to be slightly superior in draw properties to pickling as a pretreatment.

Watertown Arsenal Labs., Mass.
NOTCH TOUGHNESS OF DUCTILE CAST IRON AS A FUNCTION OF COMPOSITION, by S. V. Arnold. Dec 57, 19p. Technical rept. WAL TR 330/17; AD-149 956.
Order from LC mi$2.40, ph$3.30 PB 138 581

The compositions tested show the effect of individual alloying elements or specific combinations of elements upon mechanical properties. Silicon contents commensurate with maximum toughness in the as-cast and annealed conditions are 3.17% and 2.15% respectively. Maximum rupture energies for as-cast and annealed irons were 12 and 14 ft-lbs respectively.

Light Metals

Armour Research Foundation, Chicago, Ill.
DEVELOPMENT OF TITANIUM-BASE ALLOYS FOR ELEVATED TEMPERATURE APPLICATION, by Frank A. Crossley, William F. Carew, and David W. Levinson. Rept. for 1 Jan 56-31 Mar 57 on Metallic Materials, Contract AF 33(616)2853. Nov 57, 66p. 6 refs. WADC Technical rept. 54-278, Pt. 4; AD-142 147.
Order from OTS $1.75 PB 131 593

Evaluation of 7Al-3Mo-Ti alloy: Studies of the effect of forging and heat treatment variations on the mechanical properties of this alloy met with several difficulties. Material used initially was discarded because of low ductility; this was attributed to the 0.2% oxygen content. Substitute material was also low in ductility for undetermined reasons. Significant conclusions were that (1) in heat treating, increasing

the solution treating temperature followed by water quenching increases the time required for overaging, (2) the Widmanstatten structure had about 10,000 psi greater rupture strength at 1000°F than the equiaxed structure, and (3) forged specimens had lower creep-rupture strength at 1000°F than machined specimens. Evaluation of 6Al-3Nb, 6Al-3Mo-2Ge, and 6Al-3Mo-4Ge Ti alloys: These alloys were evaluated by tensile, creep-rupture, and stability tests. Tensile properties were determined at room temperatures, 570°, 800°, and 1020°F. The 6Al-3Nb alloy was stronger than the 6Al-3Mo alloy at room temperature but had marginal ductility. Both Ge-bearing alloys were much stronger than the 6Al-3Mo alloy. The 6Al-3Mo-4Ge alloy had very low ductility. The 6Al-3Mo-2Ge alloy lost ductility in the stability tests. (See also PB 121 467)

Titanium Metallurgical Lab., Battelle Memorial Inst., Columbus, Ohio.
DEPARTMENT OF DEFENSE TITANIUM SHEET-ROLLING PROGRAM: STATUS REPORT NO. 2, by C. R. Simcoe. 25 Sep 57, 52p. 30 refs. TML rept. no. 46B; AD-153 855.
Order from OTS $1.50 PB 121 630

The objectives of this research program were: (1) To determine the effect of forging and heat treatment variables on the mechanical properties of the Ti-7Al-3Mo alloy. Evaluations were made of tensile specimens, both machined from bar stock and cut from plate fabricated in such a manner as to simulate compressor blade forging practice. The purpose of this dual evaluation was to determine what effect the forged skin had on mechanical properties. (2) To determine the effect of sponge quality on mechanical properties of 7Al-3Mo alloys. (3) To evaluate the tensile, creep-rupture and stability properties of the alloys Ti-6Al-3Nb, Ti-6Al-3Mo-2Ge and Ti-6Al-3Mo-4Ge.

Watertown Arsenal Labs., Mass.
THE HOT HARDNESS OF TITANIUM AND TITANIUM ALLOYS, by F. R. Larson. July 58, 39p. 9 refs. Technical rept. WAL TR 401/300; AD-200 193.
Order from LC mi$3.00, ph$6.30 PB 138 582

Low alloy heats lose their hardnesses at a fairly high even rate. High alloy heats hold their hardnesses well up to about 1100°F, and then the hardness drops offf very sharply with increasing temperature. The influence of alloying elements in promoting resistance to softening was evaluated at 900°F. Iron was found to be the most effective with the other elements being arranged in order of decreasing effect, as follows: manganese, molybdenum, aluminum, zirconium, and chromium.

Structural Metallurgy and Corrosion

Aeronautical Materials Lab., Naval Air Material Center, Naval Air Experiment Station, Philadelphia, Pa.
THE EFFECTS OF NAPHTHENIC ACIDS ON THE CORROSION BEHAVIOR OF ALUMINUM ALLOYS IN FUEL TANKS, by H. Paige and S. J. Ketcham. Rept. for 17 Mar 50-10 Mar 51. 13 Apr 51, 30p. 5 refs. Rept. no. AML NAM AE411049, Pt. 1.
Order from LC mi$2.70, ph$4.80 PB 144 096

The effects of fuels on metals and alloys used in naval aircraft have been investigated by means of weight loss measurements after immersion in quiescent fuel samples and by means of corrosion studies of aluminum alloys exposed to aqueous extracts of the fuels in the presence of other metals. Total immersion tests indicate that the presence of up to 0.2% naphthenic acid in the fuels has no appreciable effect on any of the metals tested, with the exception of lead. In water extracts of the fuels, 52S aluminum alloy suffered consistent pitting corrosion when coupled to brass, copper or lead. Less severe pitting also occurred on uncoupled 52S aluminum alloy specimens in water extracts as well as in distilled water, when lead or copper were present under certain conditions. Small amounts of naphthenic acids in the water extracts possessed a tendency to decrease the corrosion reactions on aluminum alloys. This inhibiting effect was more pronounced in uncoupled tests and in water extracts of fuels containing toluene.

California Inst. of Tech., Pasadena.
CATHODIC PROTECTION IN CAVITATION DAMAGE: TESTS OF MILD STEEL IN A SALT SOLUTION, by M. S. Plesset, B. C. Bass and R. Hickling. Rept. on Contract Nonr-220(28). Nov 58, 26p. 11 refs Engineering Div. rept. no. 85-10.
Order from LC mi$2.70, ph$4.80 PB 143 619

Tests on mild steel specimens subjected to cavitation attack in a 3 per cent salt solution. Cathodic currents reduced the damage rate as the current level was increased. It seems reasonable to ascribe reduction in the cavitation damage to a cushioning effect by the hydrogen.

Curtiss-Wright Corp., Caldwell, N. J.
QUALITATIVE ASPECTS OF FATIGUE OF MATERIALS, by Harold N. Cummings. Rept. for 1 May 58-30 Apr 59 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)5182. Sep 59, 263p. 323 refs. WADC Technical rept. 59-230.
Order from OTS $4.00 PB 161 145

This report discusses qualitatively the variables that affect the fatigue life and strength of structural metals. Although the table of contents purports to list variables separately, the text reveals the fact that many variables are themselves functions of other variables. This requires that extrapolation, from effects discussed under any set of circumstances to those that might occur under different circumstances, be done with extreme caution. Some of the theories of the mechanism of fatigue are discussed briefly at the end of the report.

Illinois Inst. of Tech., Chicago.
AN INVESTIGATION OF FATIGUE PHENOMENA IN METALS BY MEANS OF A RECRYSTALLIZATION TECHNIQUE, by J. L. Peterson and N. H. Polakowski. Technical rept. no. 1 (Final) on Contract AF 18(603)68. Apr 59, 67p. 31 refs. AFOSR-TR-59-91; AD-220 924.
Order from LC mi$3.90, ph$10.80 PB 143 621

Experiments were conducted to determine the effect of combined static cold working and fatigue on the recrystallization behavior of several polycrystalline metals as indicated by the annealed grain size. A hypothesis based on possible polygonization and substructure formation in statically deformed metals under cyclic stress was advanced to account for the different effects of fatigue softening on mechanical properties on one hand and the recrystallization capacity on the other.

Naval Research Lab., Washington, D. C.
CORROSION OF METALS IN TROPICAL ENVIRONMENTS. PART 4. WROUGHT IRON, by C. R. Southwell, B. W. Forgeson, and A. L. Alexander. Interim rept. 13 Oct 59, 20p. 11 refs. NRL rept. 5370.
Order from OTS $0.50 PB 151 852

Aston-process wrought iron was exposed for eight years in the following environments: fresh and sea water continuous immersion, mean tide, and inland and marine atmospheres. In the underwater tests, wrought iron was most heavily corroded when continuously immersed in sea water. Only after eight years was the wrought iron weight loss in all three environments less than that for steel. When coupled with wrought iron, under specific conditions, corrosion of steel was reduced by about one-half. Exposure to the marine atmosphere resulted in 1.6 times more corrosion weight loss than the inland atmosphere. However, all four steels used were less heavily corroded than the wrought iron.

Naval Research Lab., Washington, D. C.
HYDROGEN-EMBRITTLEMENT SUSCEPTIBILITY OF SOME STEELS AND NONFERROUS ALLOYS, by J. E. Srawley. Final rept. 19 Oct 59, 28p. 12 refs. NRL rept. 5392.
Order from OTS $0.75 PB 151 937

A number of steels and nonferrous alloys have been tested to determine their comparative susceptibilities to hydrogen embrittlement. The criterion used was the ratio of the lowest nominal stress at which a hydrogen-charged notched tensile specimen fractured within 100 hours (the "static-fatigue limit") to the notched tensile strength of the uncharged material. Severe conditions of electrolytic charging were used (24 hours at 0.5 amp per square inch) so that a very slight degree of susceptibility might be detected. All steels examined, except cold-rolled AISI type 304 stainless steel, were susceptible in some degree. Hardenable steels harder than Rockwell C-30 were very susceptible, except AISI 1020, which was only moderately susceptible. AISI type 410 stainless was very susceptible at a hardness as low as Rockwell C-21. Of the nonferrous alloys examined, none showed marked susceptibility. It was found that beta brass was susceptible to delayed fracture under constant load, whether charged with hydrogen or not.

Northwestern U. [Evanston, Ill.]
CONTRIBUTION OF DISLOCATION LINE TENSION AND THE DENSITY OF THE SOLUTE ATMOSPHERE TO THE YIELD POINT IN STRAIN AGED INGOT IRON, by J. O. Brittain and T. Mura. Rept. on Contract AF 18(600)1598. 7 Aug 59, 25p. 11 refs. AFOSR-TN-59-760; AD-225 736
Order from LC mi$2.70, ph$4.80 PB 143 620

An investigation of the 77°K yielding behavior of ingot iron specimens that had been prestrained and aged while under stress at 303°K. The sharpness and magnitude of the yield point at both 303° and 77°K increased with an increase in the aging time and or an increase in the stress which was maintained upon the specimen during the aging treatment. The observations of the effect of the aging time and aging stress are discussed in terms of the contribution of the dislocation line tension and solute atmosphere density along the dislocation.

Owens-Corning Fiberglas Corp., Newark, Ohio.
INVESTIGATION OF GLASS-METAL COMPOSITE MATERIALS, by H. B. Whitehurst. Annual progress rept. no. 3, 15 Mar 57-15 Mar 58, on Contract NOrd-15764. [1958] 32p. 1 ref.
Order from LC mi$3.00, ph$6.30 PB 144 282

Process variables which can affect the tensile strength of glass-reinforced aluminum composites have been systematically investigated. Increasing the fluidity of the aluminum alloy resulted in better tensile strength.

Owens-Corning Fiberglas Corp., Newark, Ohio.
INVESTIGATION OF GLASS-METAL COMPOSITE MATERIALS, by H. B. Whitehurst. Quarterly progress rept. no. 10, 15 Mar-15 June 58, on Contract NOrd-15764. [1958] 26p. 2 refs.
Order from LC mi$2.70, ph$4.80 PB 144 283

The most promising method appeared to be an adaptation of some of the techniques which have proved successful for making powdered metal objects. Mixing the glass fibers uniformly throughout a bed of powdered metal, compressing the mixture to insure positive contact between the individual particles, and heat treating, or sintering, in order to achieve maximum strength and density. Sample bars were carried through the first two steps with powders of nickel, copper, stainless steel, chromium and brass; and either fused silica or the standard "E" composition glass. (See also PB 144 282)

Owens-Corning Fiberglas Corp., Newark, Ohio.
INVESTIGATION OF GLASS-METAL COMPOSITE MATERIALS, by H. B. Whitehurst. Quarterly progress rept. no. 11, 15 June-15 Sep 58, on Contract NOrd-15764. [1958] 30p. 2 refs.
Order from LC mi$2.70, ph$4.80 PB 144 281

Tests conducted using samples of powdered nickel, copper, stainless steel, chromium and brass reinforced with ceramic fibers to produce a high temperature analogue of glass fiber reinforced aluminum.

Pitman-Dunn Labs. Group, Frankford Arsenal, Philadelphia, Pa.
TIN-ZINC ALLOY (72-28) ELECTRODEPOSITS, by E. MacNamara. Aug 58, 14p. 7 refs. Memo. rept. no. MR-685.
Order from LC mi$2.40, ph$3.30 PB 138 829

Electrodeposits of zinc, cadmium and tin-zinc (72-28) were made on low carbon, cold-rolled steel panels. With respect to corrosion resistance, the tin-zinc alloy was better than zinc, but not as good as cadmium. Solderability of the tin-zinc alloy was comparable to that obtained with zinc and cadmium, using 50-50 solder.

Watertown Arsenal Labs., Mass.
AN EVALUATION OF THE "SPATH METHOD" FOR PLOTTING FATIGUE TEST DATA, by Norbert H. Fahey. May 58, 22p. 3 refs. Technical rept. WAL TR 731/410; AD-158 459.
Order from LC mi$2.70, ph$4.80 PB 138 583

The resultant value for endurance limit, obtained by the "Spath Method" was found to be in error by as much as 12,000 psi or approximately 40% when compared with that obtained from the Wohler diagram. Although this method is quick and inexpensive to use, the results are not consistent enough to justify its use.

Watertown Arsenal Labs., Mass.
THE SPECTROPHOTOMETRIC DETERMINATION OF COPPER IN TITANIUM AND OTHER METALS WITH DICYCLOHEXANONE OXALYDIHYDRAZONE, by William K. Murray. May 58, 12p. 7 refs. Technical rept. WAL TR 401/299; AD-158 456.
Order from LC mi$2.40, ph$3.30 PB 138 591

Dicyclohexanone oxalyldihydrazone has been applied to the determination of copper in titanium alloys and other metals. This reagent reacts in alkaline solution with copper to form an intense blue colored complex which exhibits maximum absorption at a wave length of 600 mmu. The molar absorbancy of the complex is approximately 16,000. Other metals do not form colored complexes, thus allowing the direct determination of copper without extraction or preliminary separations. Ethanol stabilizes the complex in the presence of nickel, cobalt, and other metals.

K$^-$-NUCLEON SCATTERING LENGTHS AND THE K$^-$-d SCATTERING REACTIONS, by T. B. Day, G. A. Snow, and J. Sucher. Rept. on Contracts AF 49(638)24 and AT (40-1)2504. July 59, 17p. 14 refs. Physics Dept. Technical rept. no. 142; AFOSR-TN-59-772; AD-220 579.
Order from LC mi$2.40, ph$3.30 PB 144 038

The K$^-$-d elastic and total cross sections are calculated, using a model which includes multiple scattering effects. The scattering lengths which Dalitz and Tuan [Phys. Rev. Lett. 2:425(1959)] find as fits to the K$^-$-p data are used in an attempt to distinguish between the 4 possible solutions. The impulse approximation fails to give sensible results in this problem.

Stanford Research Inst., Menlo Park, Calif.
A FEASIBILITY STUDY: SCATTERING OF ELECTRONS BY IONS, ATOMS, AND MOLECULES, by Donald C. Lorents and Charles J. Cook. Scientific rept. no. 2 on Contract AF 19(604)3475. 17 Sep 59, 29p. 22 refs. AFCRC-TN-59-473; AD-226 316.
Order from LC mi$2.70, ph$4.80 PB 143 684

The experimental determination of electron differential scattering cross sections is considered in the light of recently developed experimental techniques. The techniques should be applicable to the study of a broad field of low energy electron interactions with atomic systems.

Nuclear Engineering and Power

Alco Products, Inc., Schenectady, N. Y.
CORROSION OF FUEL ELEMENTS MATERIALS FOR A LOW ENRICHMENT POWER REACTOR. Rept. on Contract DA 44-009-eng-2868. 1 Aug 56, declassified 3 July 57. 173p. APAE Memo. 44.
Order from LC mi$8.10, ep$28.80 PB 136 475

Alco Products, Inc., Schenectady, N. Y.
PREASSEMBLY AND TESTING STUDY OF AN APPR TYPE SYSTEM. Rept. on Contract DA 44-009-eng-3371. 31 Oct 57, 92p. APAE No. 22.
Order from LC mi$5.40, ph$15.30 PB 143 330

The primary objective of this study was the development of revisions in design, changes in equipment types, or changes in installation methods that will result in reduced overall costs, installation costs, and/or installation labor. These developments were primarily for the betterment of future APPR type plants. Where it is practical, the specific application of any improvements to APPR-1a was intended.

Naval Research Lab., Washington, D. C.
NAVAL RESEARCH LABORATORY RESEARCH REACTOR. PART 10. SOME REACTIVITY MEASUREMENTS, by K. W. Marlow, E. I. Nowstrup, and R. H. Vogt. Final rept. 21 Oct 59, 23p. 7 refs. NRL rept. 5389.
Order from OTS $0.75 PB 151 956

Reactivity measurements have been made on the modified swimming-pool nuclear reactor at the U. S. Naval Research Laboratory. The reactivity effect was measured for a change from a configuration with three sides of the core reflected by water and three sides reflected by graphite to a configuration with all sides water reflected. Other reactivity effects measured include those due to movement of beam-port plugs, adjustment of control and safety rods, addition and subtraction of fuel, power changes, exposure thimbles at the edge of the core, and cadmium and gold in the center of the core. (See also PB 151 058)

Nuclear Development Corp. of America, White Plains, N. Y.
A PROGRAM FOR THE DEVELOPMENT OF A FIELD EXPEDIENT SHIELD DESIGN MANUAL, by R. Schamberger. Rept. on Contract DA 44-192-eng-3. 6 Feb 59, 25p. 56 refs. NDA 2281-1.
Order from LC mi$2.70, ph$4.80 PB 143 116

In the design of field expedient secondary shields the radiation emitted by the reactor and primary shield combination must first be specified. It is shown that the reactors under consideration will emit a moderated fission neutron spectrum in addition to a variable gamma ray spectrum. The intensity of the neutron and gamma ray leakage, and the energy distribution of the gamma rays must be determined for each reactor.

Vitro Corp. of America, New York.
CONCEPTUAL DESIGN OF 2 Mw NUCLEAR HEATING PLANT, by F. Corio, R. Epstein, and J. E. Colgan. Rept. on Contract DA 44-009-eng-2861. 1 Nov 56 (Addendum 2 Jan 57) declassified 3 July 57. 218p. 31 refs. KLX-1768; KLX-1768A.
Order from LC mi$9.60, ph$33.30 PB 143 554

A conceptual design has been prepared for a nuclear heating plant to produce 7,300 lb/hr of steam at 150 psia and 358°F. This steam will supply a heat exchanger whose secondary steam is to be used for space heating and other low temperature applications. The thermal output of the reactor is 2,000 kw. The fuel plates consist of highly enriched (93.5%) uranium alloyed with an aluminum-nickel alloy and clad with aluminum-nickel alloy. Purified light water is used as the moderator and coolant. Boiling heat transfer is utilized. The reactor, when loaded with 6.84 kg of U-235, provides 2 Mw-yr of power before refueling. In order to reduce the reactivity excursion and facilitate control a burnable poison, in the form of boron, is incorporated in the fuel elements. The estimated capital investment, not including the uranium, is $675,800. The cost of operation is $267,620 per year of 15.3 mils/kw hr$_h$.

Radioactivity

Air Force Cambridge Research Center, Bedford, Mass.
ARTIFICIAL RADIOACTIVITY FROM NUCLEAR TESTS UP TO NOVEMBER 1958, by E. A. Martell. Sep 59, 22p. 31 refs. GRD Research notes no. 19; AFCRC-TN-59-444.
Order from OTS $0.75 PB 161 150

The production of fission products, carbon-14 and tritium in all United States, United Kingdom, and Soviet nuclear tests up to the end of 1958 is summarized and discussed. Major features of the atmospheric-mixing history and world-wide distribution of fallout are outlined. Some major differences between United States and Soviet tests are pointed out. Nuclear tracer experiments which will contribute to better understanding of atmospheric circulation and fallout are briefly described.

Convair, Fort Worth, Tex.
SPECTRAL AND ANGULAR DISTRIBUTIONS OF AIR SCATTERED Co^{60} GAMMA RAYS: SUPPLEMENT I, by B. S. Burton, Jr. Rept. on Contract AF 33(600)32054. 5 Mar 59, 14p. MR-N-168-1; NARF-59-10T.
Order from LC mi$2.40, ph$3.30 PB 142 900

This supplement presents all the raw data upon which MR-N-168 (PB 139 022) was based and gives certain corrections to be made to that report.

[Defense Atomic Support Agency] Washington, D. C.
GAMMA SPECTRA OF URANIUM-235 FISSION PRODUCTS AT VARIOUS TIMES AFTER FISSION, by P. J. Dolan. Mar 59, 75p. 6 refs. AFSWP-524.
Order from LC mi$4.50, ph$12.30 PB 144 105

Calculated gamma spectra produced by Uranium-235 fission are tabulated for various times after fission. Similar tabulations are given omitting certain volatiles and portions of their daughter products.

Lockheed Aircraft Corp., Marietta, Ga.
CONVERSION OF RADIATION DATA TO COMMON DENOMINATORS, by W. T. Harper. Rept. on Contract AF 33(600)32055. Oct 58, 28p. 3 refs. Nuclear rept. -45.
Order from LC mi$2.70, ph$4.80 PB 144 065

This report provides a detailed procedure with sample calculations for converting radiation data to units useful for comparing data obtained at different facilities. Gamma radiation data are converted to units of carbon gamma dose (erg g^{-1}), and neutron data are converted to water neutron dose (erg g^{-1}).

Naval Radiobiological Defense Lab., San Francisco, Calif.
A FALLOUT FORECASTING TECHNIQUE WITH RESULTS OBTAINED AT THE ENIWETOK PROVING GROUND, by E. A. Schuert. 3 Apr 57, 47p. 5 refs. Research and Development Technical rept. USNRDL-TR-139; AD-133 541.
Order from LC mi$3.30, ph$7.80 PB 144 150

A technique which was developed for rapid fallout forecasting not only satisfied the needs of the fallout program but also was accurate enough to allow a comparison between the meteorological aspects of model work and the results obtained from surface measurements. The technique is restricted to describing quantitatively the perimeter of the fallout, the axis of the hot line, and to determining the time of arrival of fallout throughout the pattern. No attempt was made to quantitate the expected levels of γ activity or to develop radiation contour lines. The method employs a simplified cloud model and distribution of particles in the cloud based on parameters which were obtained from previous weapons tests and from theory. The particles are tracked to the earth's surface by considering their falling speeds and effects of the winds existing aloft. Tracking is simplified by using a plotting device.

Naval Research Lab., Washington, D. C.
MEASUREMENTS OF THE AIR CONCENTRATION OF GROSS FISSION PRODUCT RADIOACTIVITY DURING THE IGY, JULY 57-DECEMBER 58, by L. B. Lockhart, Jr., R. L. Patterson, Jr., and W. L. Anderson. Interim rept. 18 Sep 59, 17p. 8 refs. Rept. 5359.
Order from LC mi$2.40, ph$3.30 PB 140 821

Measurements of the gross fission product radioactivity in the air at 21 sites along the 80th meridian and 4 sites in the North Pacific area are reported for the period July 1957-December 1958. The activity levels at the various sites are related both to the stratospheric deposition of nuclear debris and to the direct introduction of radioactive material into the troposphere upwind of the collecting sites. The fission product radioactivity of the air on the Northern Hemisphere increased markedly as the result of the extensive series of tests carried out during this period. Fission products, however, still contribute only a small fraction of the total radioactivity of the ground-level air. Radioactive debris injected into the troposphere at any particular site spreads rather rapidly throughout the same hemisphere but rarely crosses the equator in any quantity. An exception of this occurred during the Hardtack series in the Pacific when massive quantities of activity were transported to the Southern Hemisphere by winds in the upper troposphere. It is again shown that periods of heavy rainfall, such as occur during the rainy season in Panama, cause a general decrease in the concentration of fission products in the air.

Naval Research Lab., Washington, D. C.
RADIOCHEMICAL ANALYSES OF AIR-FILTER SAMPLES COLLECTED DURING 1958, by L. B. Lockhart, Jr., R. A. Baus and others. Interim rept. 23 Oct 59, 25p. 15 refs. NRL rept. 5390.
Order from LC mi$2.70, ph$4.80 PB 142 489

A number of radioisotopes formed in high-yield by nuclear explosions have been determined quantitatively in the gross fission product conglomerate collected by air filters at sites along the 80th meridian during 1958. This period of measurement is of particular interest since, during this time, the Soviet Union carried out two intensive test programs with high-yield weapons, primarily in the Arctic, and the United States carried out one such program at the Pacific Proving Grounds. Some of the debris from tests of the latter series were tagged with W^{185}, produced through the reaction W^{184} (n, γ) W^{185}. The presence of W^{185} in one case, and its absence in another, proved that debris from two nuclear tests of the Hardtack Series crossed that Equator. Save for the period of gross contamination in the troposphere by these debris, the average age of the fission product conglomerate in the air has been consistently older in the Southern than in the Northern Hemisphere. Furthermore, the Sr^{90} content of the air has shown a general pattern of maxima in the region between 20 and 40°N and 20 and 40°S latitudes and a minimum in the equatorial region. The maximum in the north, during early 1958, averaged about 7 times that in the south.

University of Southern California, Los Angeles.
SEMIANNUAL REPORT, by H. H. Forster. Rept. on Contract Nonr-1160(00). Dec 58, 3p. 2 refs.
Order from LC mi$1.80, ph$1.80 PB 143 931

Plans for the future are outlined. The previous experiments are designed for the purpose of measuring the relative magnitudes of the coupling constants in beta interactions and to test for time reversal invariance.

PERSONNEL SUPPLIES AND PERSONAL EQUIPMENT

Human Resources Research Office, George Washington U., Washington, D. C.
THE EFFECTS OF WEARING THE CBR PROTECTIVE MASK UPON THE PERFORMANCE OF SELECTED INDIVIDUAL COMBAT SKILLS, by William E. Montague, Robert D. Baldwin, and Andrew H. McClure. June 59, 41p. Technical rept. 57.
Order from LC mi$3.30, ph$7.80 PB 143 538

One-Hour Effects of Masking. Wearing the protective mask tended to lower performance on all tests. The average masking losses ranged from 1 per cent on the test requiring detection of human targets by unaided vision and on one measure of firing shoulder weapons (rifle hits), up to 36 per cent for unaided voice communication at the 90-yard range. Five-Hour Effects of Masking. With one exception, all tests again showed mean differences indicating loss in performance due to masking. The average losses ranged from 2 per cent on the tests requiring detection of human targets by unaided vision and on radio communication, up to 41 per cent for unaided voice communication at the 90-yard range.

Naval Supply Research and Development Facility, Bayonne, N. J.
PROPERTIES AND POTENTIAL CLOTHING USES OF CELLULAR FORMS, by Lionel Weinstock. 23 Oct 59, 23p. 7 refs. Clothing and Textile Division rept. no. 34.
Order from OTS $0.75 PB 161 260

A cellular foam was first used in Navy cold weather clothing in 1942. This clothing was used by submariners early in World War II but was discontinued due to excessive weight and the shortage of rubber. Cellular foam elastomers, now available in a range of lower densities, were introduced in Western Europe and, more recently, in the United States as insulating materials for clothing. This report discusses the laboratory evaluation of three types, polyvinylchloride, neoprene and polyurethane, and notes the characteristics important to this end use.

Naval Supply Research and Development Facility, Bayonne, N. J.
SHIPBOARD EVALUATION OF EXPERIMENTAL WINTER FLIGHT DECK IDENTIFICATION CLOTHING, by Frank Merz, Jr. Rept. on Shipboard Combat and Occupational Clothing. 20 June 59, 12p. 4 refs. Research and Development rept. no. 32.
Order from LC mi$2.40, ph$3.30 PB 143 533

This identification garment, which represents a complete departure in design from the standard item, was evaluated on a comparative basis to determine whether visibility, functionability, and durability were improved. A description of the test and the results obtained are included in the report.

Quartermaster Research and Engineering Center, Natick, Mass.
WORLD GUIDE TO FIELD CLOTHING REQUIREMENTS, by Merle E. Sprague and Carl W. Ross. July 59, 44p. 57 refs. Technical rept. EP-115.
Order from LC mi$3.30, ph$7.80 PB 143 719

Present methods for determining the type and amount of clothing required for seasonal wear in a given world area are time-consuming, a more rapid method for obtaining such information has been developed and is presented in this Guide. The world has been classified into nine types of field clothing requirement areas. It has been determined that four distinct ensembles are required to protect troops adequately against all types of natural environments encountered in these nine areas. Maps and tables comprising the Guide (1) indicate the general amount of clothing required as protection against natural environmental conditions in all world areas, (2) prescribe the assortment of field clothing required for environmental protection in each place in each season, and (3) designate camouflage requirements for the issue of hot-weather assortments and overwhites.

PHYSICS

Army Chemical Warfare Labs., Army Chemical Center, Md.
STABILITY OF PYRIDINE-2-ALDOXIME METHIODIDE (2-PAM). I. MECHANISM OF BREAKDOWN IN AQUEOUS ALKALINE SOLUTION, by Robert I. Ellin. Oct 58, 15p. 10 refs. CWLR-2251; AD-207 511.
Order from LC mi$2.40, ph$3.30 PB 138 274

Pyridine-2-aldoxime methiodide (2-PAM, 2-formyl-1-methyl-pyridinium iodide oxime) has been found to be an effective chemical for overcoming the neuromuscular block that occurs in nerve gas poisoning. As part of a program leading to the development of a stable and effective therapeutic formulation of 2-PAM, the mechanism of the deterioration of 2-PAM in aqueous solutions of pH values ranging from 7 to 13 has been studied. The results given in this report show that at the indicated pH values 2-PAM breaks down to N-methyl-alpha-pyridone. A mechanism is given which suggests that the breakdown occurs in three steps: first, the formation of 2-cyanopyridine methiodide; second, the formation of 2-hydroxypyridine methiodide; and third, the rearrangement of the latter to N-methyl-alpha-pyridone. The postulated mechanism may account for three observations made in this laboratory: (1) the presence of traces of cyanide ion in 2-PAM even after three recrystallizations from ethyl alcohol; (2) the presence of a green color in commercial preparations of 2-PAM, since N-methyl-alpha-pyridone turns green on exposure to light; and (3) the formation of two spots when commercial samples were chromatographed on paper.

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
COMPARISON OF THE PAIR THEORY AND THE QUASI-PARTICLE METHOD FOR THE EVALUATION OF THE PROPERTIES OF AN INTERACTING BOSE SYSTEM, by J. Peretti. Rept. on Contract AF 18(600)1315. Aug 59, 15p. 5 refs. Technical note BN-182; AFOSR-TN-59-850.
Order from LC mi$2.40, ph$3.30 PB 143 153

We investigate the connection existing between the theories of Lee, Huang and Yang on one hand and of Boboliubov on the other for the interacting Bose systems. We perform the comparison in such a way that any physical quantity calculated in one of the two formalisms can be transcribed very easily in the other. This allows us in each case to evaluate any physical quantity with the formalism which seems the more appropriate for this purpose.

National Research Labs., Ottawa (Canada).
THE FREEZING AND MELTING TIMES OF SLABS AND CYLINDERS, by D. C. Baxter. Feb 59, 47p. 14 refs. Mechanical Engineering rept. MK-1.
Order from LC mi$3.30, ph$7.80 PB 142 878

General results for the time required to freeze or melt slabs or circular cylinders of a pure substance initially at the fusion temperature and exposed to a constant ambient temperature have been obtained on the PACE analogue computer. A six-lump model was used. The results for slabs agree with previously published results, while those for the cylinder with finite convection rates have not been available before.

Stanford Research Inst., Menlo Park, Calif.
EFFECTS OF NUCLEAR RADIATION ON MAGNETIC AND FERROELECTRIC MATERIALS AND QUARTZ: A LITERATURE SURVEY, by S. I. Taimuty. Scientific rept. no. 2 on Contract AF 19(604)4141. 28 July 59, 27p. 66 refs. AFCRC-TN-59-563.

Acoustics

Aero Medical Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
BIBLIOGRAPHY OF RESEARCH REPORTS AND PUBLICATIONS ISSUED BY THE BIO-ACOUSTICS BRANCH (1947-1957) by Anita Boes. Sep 57, 26p. 164 refs. AD-140 501.
Order from LC mi$2.70, ph$4.80 PB 143 944

This bibliography is a tabulation of publications considered to be of lasting interest as a result of research activities. The 164 references are listed under 12 subject headings pertaining to specific areas in physical and biological acoustics. Technical reports and notes, memorandum reports, and the more important journal publications are included.

California U., Los Angeles.
GRAZING INCIDENCE SOUND PROPAGATION OVER AN ABSORBING BOUNDARY, by Robert W. Lawhead. Technical rept. no. 2 on Contract N6onr-275(07). Feb 51, 121p. 33 refs.
Order from LC mi$6.30, ph$19.80 PB 143 104

California U., Los Angeles.
MOLECULAR ABSORPTION OF SOUND IN CARBON DIOXIDE, by Donald E. Chandler. Technical rept. no. 11 on Contract Nonr-233(48). May 58, 73p. 17 refs.
Order from LC mi$4.50, ph$12.30 PB 143 243

Very pure carbon dioxide was tested as well as the same gas with varying but accurately measured amounts of specified impurities. The apparatus is described and techniques are discussed. The equipment has been found to be an excellent apparatus for investigating the acoustical behaviour of highly absorptive gases in the temperature range from room temperature to 100° C and pressure ranges from a few millimeters of mercury to about one half of atmospheric, allowing measurement at any equivalent frequency (ratio of frequency to pressure) between 10 and 1000 kilocycles.

Electronics Research Lab., Northeastern U., Boston, Mass.
SPEECH ANALYSIS, by S. H. Chang, C. R. Howard and others. Final rept. on Contract AF 19(604)3465. 31 Aug 59, 71p. 18 refs. AFCRC-TR-59-187. AD-226 291
Order from LC mi$4.50, ph$12.30 PB 143 660

Chapter I describes several experiments designed to evaluate the importance of the Formoder parameters in the analog forms. Chapter II describes the performance of the Formoder when its parameters are time quantized and digitized by means of delta modulation. It is found that the articulation score on phonetically-balanced word lists averages nearly 70 percent for several male voices using only 1750 binits per second for the parametric transmission rate. Chapter III describes some recent instrumentation for the Formoder system. This includes a novel

R-C active filter for low frequencies, a plan for the digitization of the frequency parameters and the redesign of the Formoder synthesizer.

Navy Underwater Sound Reference Lab., Orlando, Fla.
DEVELOPMENT OF USRL TYPE J9 TRANSDUCER, by Claude C. Sims. 20 Mar 59, 16p. 4 refs. USRL Research rept. no. 49; AD-219 716.
Order from LC mi$2.40, ph$3.30 PB 143 331

Underwater sound transducers for the audio-frequency range have always been unsatisfactory in many respects: They are heavy and large; they cover a narrow frequency range; they have unstable and irregular frequency responses; and they are difficult to repair. The reasons for these difficulties are discussed in this report, and a new transducer free of these difficulties is described. The new transducer, USRL type J9, has a smooth response at frequencies from about 40 cps to about 20 kc, it is small and lighweight, and it is easier to repair than earlier audio-frequency transducers.

Research Lab. of Heat Transfer in Electronics, Mass. Inst. of Tech., Cambridge.
THE EFFECT OF HIGH INTENSITY STATIONARY AND PROGRESSIVE SOUND FIELDS ON FREE CONVECTION FROM A HORIZONTAL CYLINDER, by R. M. Fand and J. Kaye. Rept. on Contract AF 33(616)3157. Mar 59, 138p. 62 refs. WADC Technical note 59-18; AD-209 532.
Order from OTS $2.75 PB 161 076

This study consists of an experimental investigation of the rate of convective heat transfer to air from a horizontal cylinder, 3/4" in diameter, under the following four different test conditions: free convection in the absence of sound; free convection with superposed plane stationary transverse sound fields, cylinder located at antinodes; free convection with superposed simple-harmonic plane stationary transverse sound fields, cylinder not at antinodes; and free convection with superposed simple-harmonic plane progressive transverse sound fields.

Electricity and Magnetism

California U., Los Angeles.
AN EXPERIMENT IN MAGNETOELASTICITY, by Robert A. Willett. Technical rept. no. 9 on Contract N6onr-275(07). July 57, 57p. 15 refs.
Order from LC mi$3.60, ph$9.30 PB 143 213

Ecole Nationale Supérieure de Chemie de Strasbourg (France).
CHEMICAL REACTIVITY NEAR CURIE POINTS, by H. Forestier. Final status rept. for 1 July 58-30 June 59 on Contract DA 91-508-EUC-395. [1959] 15p. 10 refs.
Order from LC mi$2.40, ph$3.30 PB 143 451

The chemical reactivity is discontinuous, not only near the ferromagnetic Curie point of an alloy, but besides near the Curie point of the pure ferromagnetic component (magnetogen component). The anomaly of reactivity near the Curie point of the magnetogen metal should be limited to primary solid solutions and connected with the possibility of ferromagnetism.

Franklin Inst. Labs. for Research and Development, Philadelphia, Pa.
MAGNETIC ANALYSIS OF THE PRECIPITATION OF IRON FROM BETA BRASS, by Ami E. Berkowitz and Philip J. Flanders. Rept. on Contract AF 49(638)159. Aug 59, 30p. 31 refs. Interim rept. I-A2026-2; AFOSR-TN-59-762; AD-226 492.
Order from LC mi$2.70, ph$4.80 PB 143 830

Single crystals of beta brass containing 0.07 weight percent iron were annealed at 300 and 400°C to precipitate the iron. Magnetic data were analyzed in terms of the concepts of fine particle ferromagnetism to derive size and shape distributions of the iron precipitate particles and the orientations of their crystallographic and shape symmetry axes.

Michigan State U. [East Lansing]
ELECTRICAL RESISTIVITY OF THIN METALLIC WIRES, by H. G. Satz. Rept. on Contract AF 49(638)70. 25 July 59, 49p. 26 refs. AFOSR-TN-59-639.
Order from LC mi$3.30, ph$7.80 PB 143 671

Measurements on thin indium wires at low temperatures have demonstrated that not only the residual but also the temperature dependent part of the resistivity increases as the wire diameter decreases. Electron-phonon scattering and Electron-electron scattering processes lead to a size and temperature dependent contribution to the total resistivity of thin wire.

Navy Underwater Sound Lab., Fort Trumbull, New London, Conn.
ELECTROMECHANICAL EVALUATION OF MAGNETROSTRICTIVE CYLINDERS BY RESONANCE-ANTIRESONANCE MEASUREMENTS, by Ralph S. Wooliett. 15 Dec 53, 16p. 9 refs. USL Research rept. no. 225.
Order from LC mi$2.40, ph$3.30 PB 144 113

While the electromechanical coupling coefficient of piezoelectric crystals is commonly determined by measuring the resonant and antiresonant frequencies of the electrical impedance of the crystals, this method has had little use in evaluations of magnetostrictive material. To enable the advantages of this method to be exploited in magnetostrictive work, an analysis is presented in this report which shows the application of resonance-antiresonance measurements to magnetostrictive cylindrical-shell vibrators. Formulas are derived for the determination of the effective electromechanical coupling coefficient and mechanical Q, and the results are applied to the calculation of equivalent-circuit parameters. Dissipation is neglected in most of this analysis, but corrections are applied for leakage inductance. Formulas

are presented for determining fundamental material constants from data for short, thin cylinders, and a comparison of the resonance-antiresonance method with the impedance-circle method is made. The results of this analysis are particularly useful for the evaluation of magnetostrictive ferrites.

Swarthmore Coll., Pa.
TABLES OF THE INTERNAL MAGNETIC SOURCE FUNCTIONS U_n FOR THICK SOLENOIDS AND DISK COILS: n=3 TO n=17, TO COSINE ARGUMENTS, 8 TO 5 DECIMALS, WITH SECOND DIFFERENCES. WITH A SHORT TABLE OF THE EXTERNAL SOURCE FUNCTIONS W_n AND NUMERICAL EXAMPLES OF SOME APPLICATIONS OF THE FUNCTIONS, WITH NOTES, EQUATIONS, AND AUXILIARY TABLES, by Milan Wayne Garrett. Tables of U_n computed on UNIVAC by Joseph D. Rutledge, Milton D. Fisher and Winifred J. Goldberg (Remington Rand, Inc.) Rept. on Contract DA 36-034-ORD-594. Oct 53, 95p. 4 refs.

PREPARATION OF MnBi BY REACTION OF FINELY DIVIDED POWDERS, by A. Goldman and G. I. Post. Rept. on Magnetic Phenomena of Matter, Contract AF 33(616)309. Mar 59, 26p. 12 refs. WADC technical note 59-205.
Order from OTS $0.75 PB 161 149

The process for producing manganese bismuthide by a low temperature reaction of manganese and bismuth powders has been studied with the purpose of obtaining reproducibly high purity MnBi. The most important factors in the preparation of the material were found to be the inertness of atmosphere, particle size, and state of agglomeration of reactants. A series of experiments showed that optimum size reduction could be obtained by ball milling, for at least 65 hours, a mixture of the elements which had previously been hammer milled. When packing occurred during ball milling, the cause was traced to the characteristics of the bismuth. If the particle size was small (~/u), the approach to reaction temperature could be quite rapid. Manganese-bismuthide of 90% purity was obtained with finely ground reactants. This material had a considerable amount of leeway in the type of reaction used in alloying and was reproducible. Tumbling the reactants while heating was not possible due to packing. Neither compression of the powders before reaction nor seeding it with MnBi appeared to improve the yield. Runs were tried with chemically precipitated bismuth, but explosion of the tubes always occurred.

CALCUATED PHASE VELOCITY OF LONG END-FIRE UNIFORM DIPOLE ARRAYS, by F. Serriocchioli and C. Lewis. Rept. on Contract DA 36-039-sc-70174. 13 Apr 59, 30p. 12 refs. Rept. 662-24.
Order from LC mi$2.70, ph$4.80 PB 143 353

Surface waves have been applied recently to the study of endfire arrays. An important step in the theory of surface-wave antennas is the calculation of the local phase velocity of the surface wave from the antenna geometry. While experimental work has been done along this line, no adequate theoretical solution seems to be available. In this report a mathematical procedure is presented for obtaining an approximate value of the phase velocity for long end-fire uniform dipole arrays, as a function of the antenna geometry. Results have been reported for a number of geometrical parameters and curves plotted to facilitate the analysis and design of arrays. The results have been compared with experimental measurements and an explanation has been given for the discrepancies found, and finally a criterion for correcting the results has been outlined.

Cruft Lab., Harvard U., Cambridge, Mass.
LINEAR ARRAYS: CURRENTS, IMPEDANCES AND FIELDS, I, by Ronald King. Scientific rept. no. 1, series 2, on Contract AF 19(604)4118. 1 May 59, 55p. 11 refs. AFCRC-TN-59-357; AD-217 409.
Order from LC mi$3.60, ph$9.30 PB 143 397

The radiation field of dipoles is usually expressed in the form of a product of a field factor and one or more arrays factors. Actually, such a formulation depends on the implicit assumption that the distributions of current along all elements are the same regardless of the location in the array or differences in driving conditions. Since this is a satisfactory approximation only when the elements are near a half-wavelength long, a study of the fields of arrays of longer elements in terms of the actual distributions of current is indicated.

EMISSION OF DIFFUSE BANDS OF SODIUM BEHIND SHOCK FRONTS (I). MOLECULE FORMATION IN INERT GASES (II) by H. Takeyama and A. Guttman. Technical rept. no. 10 on Contract AF 18(603)02. Aug 59, 21p. 4 refs. AFOSR-TN-59-822; AD-225 671.
Order from LC mi$2.40, ph$3.30 PB 143 522

A diffuse emission band, centered near the resonance lines of sodium and attributed to van der Waals molecules Na_2, has been observed in a shock tube. A small quantity of finely-ground sodium salt (e.g., NaCl, NaBr or Na_2CO_3) was placed at the end of the low-pressure section of a shock tube containing an argon atmosphere. Spectra were recorded photographically with a 1.5 m grating spectrograph. Microwave absorption spectra on inert gases (He, Ne, A, Kr, Xe) or inert gas mixtures at low temperatures can probably be used to determine the interaction parameters required for the calculation of transport properties. This conclusion is reached from a study of predicted molecular spectra based on a determination of the Morse interaction potential through a second-order fit to the known Lennard-Jones potential.

Guggenheim Jet Propulsion Center, Calif. Inst. of Tech., Pasadena.
RELATIONS BETWEEN MOLECULAR GAS ABSORPTIVITIES AND EMISSIVITIES, by S. S. Penner, D. Olfe, and A. Thomson. Technical rept. no. 29 on Contract Nonr-220(03). Oct 58, 30p. 11 refs.
Order from LC mi$2.70, ph$4.80 PB 143 242

Theoretical expressions have been derived for the relations between gas absorptivities and emissivities for the limit of zero optical depth and for various models of vibration-rotation bands. Representative results for selected band models have been described elsewhere. The present research contains an exhaustive review and extension of the earlier work, with the limitation that the temperatures used for making the studies had to be sufficiently close to justify the assumption that neither the spectral line shape nor the band model are changed in character. Theoretical relations for important band models are derived. Correlations are developed to cover experimental data for CO_2, H_2O and CO and in terms of suitable theoretical expressions.

Institute of Optics, U. of Rochester, N. Y.
ULTRAVIOLET ABSORPTION IN THALLOUS HALIDES, by Simpei Tutihasi. Rept. on Contracts AF 49(638) (432, 433). July 59, 15p. 16 refs. AFOSR-TN-59-753.
Order from LC mi$2.40, ph$3.30 PB 143 635

The ultraviolet absorption in TlCl and TlBr has been measured on thin films and fused samples as a function of temperature. The effect of excessive chlorine or thallium on the optical absorption of TlCl has been studied. The experiments of Vysochanskii are discussed in the light of our observations. The first absorption band in TlCl, which peaks at 3.44 ev at -185° C, is absent in films condensed on a cold substrate of KCl and appears after annealing. It seems that the crystal structure of evaporated films of TlCl changes from the NaCl-type to the CsCl-type.

Instituto de Optica, Madrid (Spain).
INFRA-RED C=O BAND INTENSITY OF ACETIC ACID DERIVATIVES AND CHEMICAL ACTIVITY, by Jose R. Barcelo and Juana Bellanato. Final technical rept. no. 1, July 58-July 59, on Contract DA 91-508-EUC-357. [1959] 41p. 25 refs. AD-225 534.
Order from LC mi$3.30, ph$7.80 PB 143 452

The intrinsic intensity of the C=O infra-red band has been measured for various acetic acid derivatives, these measurements being carried out in carbon tetrachloride solutions of these substances. Twelve substances were studied, none of which were halogenated derivatives of acetic acid. All the chlorinated and fluorinated derivatives were studied and likewise two brominated and one iodinated derivative. For reference purposes, formic and acetic acids were studied. A deuterated compound was also studied -dichloroacetic acid with the carboxylic hydrogen substituted by deuterium. The method followed to measure the intensity was Wilson and Wells's and the correction used for the "wings" was that given by Ramsay.

Kansas State U., Manhattan.
THE SPECTRA OF NITROGEN OXIDES. I. THE SPECTRUM OF N_2O_4, by I. C. Hisatsune. Scientific rept. no. 1 on Contract AF 19(604)2255. [1959] 66p. 56 refs. AFCRC-TN-59-453.
Order from LC mi$3.90, ph$10.80 PB 143 667

A brief review of the structural and spectroscopic data on the known nitrogen oxides has been made in order to gain an overall picture of the present status of research on these molecules. A detailed discussion on N_2O_4, the first molecule investigated in this laboratory, is then given. This discussion includes results obtained from the experimental studies of the infrared spectra of the liquid and solid, the Raman spectra in the liquid and solid phases, the assignment of the spectra, the calculation of heat capacities and entropy of the solid, and the normal coordinate analysis using a modified valence force field. Experimental evidence showing the existence of isomers of N_2O_4 is also given.

Klyne, W.
OPTICAL ROTATORY DISPERSION OF ORGANIC COMPOUNDS, by W. Klyne. Final technical rept. no. 1, 1 May 58-30 Apr 59, on Contract DA 91-508-EUC-308. 25 May 59, 40p. 16 refs.
Order from LC mi$3.00, ph$6.30 PB 143 292

The general purpose of the work has been to explore the use for structural purpose of rotatory dispersion measurements on compounds which do not absorb light within the spectral range studied (600-280 mμ). The results show that much less information can be obtained from the rotatory dispersion of non-absorbing compounds than from that of absorbing compounds. However, the plain dispersion curve of a non-absorbing compound is worth more than a single point at one wave-length. No complex mathematical analysis of the curves has been carried out. Several different simple treatments of the data are considered. Much of the work has been concentrated on steroid alcohols and their derivatives. Results for these derivatives: (RR':C:N.NH.CO.NH_2) are generally disappointing.

Mallinckrodt Chemical Lab., Harvard U., Cambridge, Mass.
MICROWAVE SPECTRUM, INTERNAL BARRIER, STRUCTURE, EQUILIBRIUM CONFIGURATION, AND DIPOLE MOMENT OF METHYL MONOFLUOROSILANE, by Louis Pierce. Rept. on Contract N5ori-1866, T. O. 14. [1957] 22p. 11 refs; AD-153 018.
Order from LC mi$2.70, ph$4.80 PB 138 448

The microwave spectrum of methylmonofluorosilane was investigated between 18 and 38 kmc. Several transitions of the isotopic species CH_3SiH_2F and CH_3SiD_2F were split into doublets because of coupling internal and over-all rotation; these splittings gave a barrier to internal rotation of 1559±30 cal/mol. The form of the potential barrier was assumed to be $V = 1/2V_3(1-\cos 3\alpha)$, where V_3 is the barrier height, and α is the angle which gives the relative orientation of the rotor and the framework. V_3 may be calculated in 2 ways. One method is to calculate a value of V_3 from each splitting; the results of such analysis are given for CH_3SiH_2F and CH_3SiD_2F. The over-all spread in V_3 for 9 transitions was 2%. An alternate method for determining V_3 is to adjust the rotational constants to give the best possible fit of the entire spectrum; the resulting values of Δa and Δb can be used to determine V_3. The observed and calculated transition frequencies and splitting for CH_3SiH_2F and CH_3SiD_2F are given. The best fit, was at V_3 = 1562 and 1556 cal/mol for CH_3SiH_2F, and CH_3SiD_2F, respectively. The splittings in the excited state were constant with the barrier as determined from ground state observations. Rotational constants were also determined for $C^{13}H_3SiH_2F$, CD_3SiH_2F, and CH_3SiDHF.

Microwave Lab., Stanford U., Calif.
THE PARAMAGNETIC RESONANCE SPECTRUM IN SINGLE CRYSTALS OF BARIUM TITANATE, by John Edwin Maling. Technical rept. on Contract Nonr-225(18). Dec 58, 100p. 36 refs. ML Rept. no. 563.
Order from LC mi$5.40, ph$15.30 PB 143 841

Structure of barium titanate as a basis for understanding the symmetry analysis of the single-crystal paramagnetic resonance spectrum. Experimental and theoretical evidence is presented showing the presence of energy "gaps" in the energy-level system where crossings occur.

Missouri U., Columbia.
THERMOELECTRIC PROPERTIES OF POROUS SEMICONDUCTORS, by Eugene B. Hensley. Technical rept. no. 24 on Contract Nonr-2296(01). 1 Dec 58, 22p. 9 refs.
Order from LC mi$2.70, ph$4.80 PB 143 928

The properties of a class of porous semiconductors known as pore conductors are re-evaluated with regard to the possible application of these materials for thermoelectric power conversion. In general, the results appear very pessimistic as far as any prospect of high conversion efficiences are concerned.

Oslo U. (Norway).
INVESTIGATION OF MOLECULAR STRUCTURES, by O. Hassel. Technical scientific note no. 1 on Contract AF 61(052)71. 30 June 59, 41p. 10 refs. AFOSR-TN-59-916.
Order from LC mi$3.30, ph$7.80 PB 143 638

Contents:
Crystal structure of the addition compound 1,4-dioxan-chlorine.
Crystal structure of the addition compound benzene-chlorine (1:1).
Crystal structure of the addition compound 1,4-dioxan-sulphuric acid.
Charge transfer compounds with a halogen atom linked to carbon, halogen being the electron acceptor.
Crystal structure of the compound $CHI_3 \cdot 3$ Quinoline.
Crystal structure of the 1:1 addition compound formed by acetone and bromine.

EFFECT OF TEMPERATURE ON CARBONYL AND NITRILE STRETCHING FREQUENCIES IN SOLUTION, by E. Fishman and N. Krascella. Technical rept. on Contract AF 49(638)3. 1 July 59, 21p. 12 refs. AFOSR TN-59-660.
Order from LC mi$2.70, ph$4.80 PB 143 169

The present study of the effect of wide temperature variations on particular bond frequencies in solution was undertaken with the objective of seperating the effect of temperature dependent dipole-dipole interactions from other intermolecular forces causing frequency shifts. The results of the present investigation show that it is unlikely that any simple theory involving the physical properties of solvent and solute will have general applicability.

Technical U., Copenhagen (Denmark).
OPTICAL ROTATORY DISPERSION OF TRANSITION METAL COMPLEXES, by Flemming Woldbye. Final Technical rept. no. 1 for 1 Oct 57-31 May 59 on Contract DA 91-508-euc-246. 30 June 59, 64p. 37 refs.
Order from LC mi$3.90, ph$10.80 PB 143 117

A review of current theory observed leads to a set of criteria by which compounds for a fundamental study of optical activity may be selected. The octahedral complexes of the metals in the first transition group appear to be well suited to this purpose. The principle and the operation of the Keston Model D Polarimetric Unit by means of which most of the measurements reported herein have been performed are accounted for. The principle, construction and performance of a recording spectropolarimeter (based on the Cary MS-11 Recording Spectrophotometer) which has been developed in the course of this work are described in detail. A number of robust complexes have been prepared and resolution has been attempted. Solutions containing equilibrium complexes of Ni(II), Cu(II) and Co(II) with I-pn have been shown to exhibit Cotton effect within their visible absorption bands. Absorption spectra and rotatory dispersion curves in the range 750-375 mμ of 16 different complexes of the two types are reported. A few theoretical comments on the rotatory dispersion curves are made and the absence of a pronounced solvent effect is demonstrated in the case of $[Co(tn)_3]^{+++}$.

Texas U. [Austin].
SPECTROSCOPIC EVIDENCE FOR LONG-RANGE REPULSIVE, INTERMOLECULAR FORCES, by W. W. Robertson and A. D. King, Jr. Rept. on Contract AF 49(638)35. [1959] 18p. 17 refs. AFOSR-TN-59-688.
Order from LC mi$2.40, ph$3.30 PB 143 021

Experimental results are presented on the shift of wave-length of absorption of benzene, naphthalene, pyrene and phenanthrene with density of the diluents helium and nitrogen. Arguments are presented to show that the blue shift observed in the benzene ^1L_b spectrum in helium are neither due to short-range repulsive forces nor to long-range dispersive forces. It is presumed that there are weak, long-ranged, non-dispersive forces present in the benzene-helium interaction that have the character of repulsive forces.

AN EXPERIMENTAL STUDY OF X-RAY ATTENUATION COEFFICIENTS, 8-30 kev, by Richard D. Deslattes. Final rept. on Contract AF 18(603)64. 1958, 97p. 24 refs. AFOSR-TN-58-784; AD-202 009.
Order from LC mi$5.40, ph$15.30 PB 138 270

Precise values for the total attenuation coefficients have been obtained at approximately 1 kv. intervals from 8 to 30 kv. for 15 pure elements using a two-crystal spectrometer of high resolving power. These span the range of atomic numbers from 12 to 79. (Possibly disturbing effects of small-angle scattering were investigated.) The resulting values of μ for some elements may be assigned an average standard deviation of 0.2 percent.

Institute of Mathematical Sciences, New York U., N. Y.
ANNUAL SUMMARY REPORT. Rept. for 1 Dec 57-30 Nov 58 on Contract Nonr-285(25). [1958] 4p. 5 refs.
Order from LC mi$1.80, ph$1.80 PB 143 469

This report outlines the work done in exploring the exploitation of persistent internal polarization (p. i. p.) in phosphors for information storage. (See also PB 136 750)

Institute of Research, Lehigh U., Bethlehem, Pa.
USE OF WHITE LIGHT IN THE MEASUREMENT OF GAS DENSITY BY OPTICAL INTERFEROMETRY, by C. W. Curtis. Technical rept. no. 9 on Contract N7onr-39302. 15 Feb 58, 18p. 3 refs. AD-162 605.
Order from LC mi$2.40, ph$3.30 PB 138 254

The form of white light fringe patterns is derived for 2 symmetrical spectral distributions of intensity, and the effects of dispersion in the gas are computed. The shift of fringes through the maximum of the envelope of intensity for white light fringes is given in terms of coefficients in the Cauchy dispersion formula. Experiment verifies the applicability of the formula in nitrogen gas where the maximum intensity of a white light pattern is displaced about one fringe for a monochromatic (5460A) fringe shift of 15.

Laboratoire D'Infra Rouge Technique et Applique, Gif Sur Yvette (France).
CONSTRUCTION OF AN INFRA RED SOURCE OF HIGH LUMINANCE. Final technical rept. for May 58-May 59 on Contract DA 91-508-EUC-312. [1959] 22p. 3 refs; AD-225 643.
Order from LC mi$2.70, ph$4.80 PB 143 279

During the year 1958-1959 we have investigated the construction of a point source of radiation, with a modulated output and a high intensity in the far red and the near infra-red. The gun itself has been constructed with its focussing system enclosed in a vacuum-tight container, together with a motor which is also vacuum-tight. The conventional method for the preparation of luminescent screens has been modified to fit the particular case of cadmium sulphide. A large number of samples of copper, or silver, activated powders have been prepared.

Michigan U. Research Inst., Ann Arbor.
A SINGLE-CRYSTAL PHOTOCONDUCTIVE TELLURIUM DETECTOR, by G. Suits and P. Rice. Rept. on Project Michigan, Contract DA 36-039-sc-52654. Feb 58, 10p. 4 refs. 2144-240-T.
Order from LC mi$1.80, ph$1.80 PB 138 802

The special properties of tellurium detectors make them appear particularly promising for the following applications: (1) Two-color infrared scanning systems, (2) Scanning systems using matched linear arrays of detectors, and (3) Infrared sensors which operate under conditions of high atmospheric attenutation.

[Physical] Research [Labs.] Boston U., Mass.
A COLLECTION OF GRAPHS CONCERNING ATMOSPHERIC TRANSMISSION, NATURAL ILLUMINATION AND REFLECTANCE OF TERRAIN. Rept. on Contracts W33-038-ac-14075 and AF 33(038)15615. 1 July 52, declassified 26 Sep 55, 52p. 34 refs. BUORL Technical note no. 87; AD-489.
Order from LC mi$3.60, ph$9.30 PB 144 265

Curves and a tabulation of their sources are given for microwave, IR, and visual-light transmission; reflectance of several materials, water vapor and zone concentrative; rainfall distributions; sky brightness; and spectral distributions.

Ramo-Woolridge, Los Angeles, Calif.
INFRARED BACKGROUND INVESTIGATION, by R. E. Eisele. Scientific rept. no. 1, 15 Mar 58-15 Apr 59, on Contract AF 19(604)3473. 30 June 59, 59p. 6 refs. C20-9U9; AFCRC-TN-59-843; AD-220 027.
Order from LC mi$3.60, ph$9.30 PB 143 106

The contract was issued to measure the radiant intensity of the infrared sky background and to measure the amplitude of the frequencies distributed in the sky gradient. The data would be obtained through the use of an instrument known as the radiometer-gradient meter.

Syracuse U., N. Y.
WASHOUT EFFECT IN INFRARED BACKGROUND STUDIES, by W. R. Fredrickson, N. Ginsburg, and R. Paulson. Scientific rept. no. 1 on Contract AF 19(604)3908. June 59, 18p. 2 refs. AFCRC-TN-59-445, AD-220 724.
Order from LC mi$2.40, ph$3.30 PB 143 193

In the investigations of the spectral distribution of background radiation in the infrared, it was found that there was, in general, ready distinguishability between various objects at any one time. Such discrimination has been reported by us in a previous report and by the Ohio State group. It was found, however, that at certain times, this distinguishability disappeared. This effect is called washout. It has also been reported by various other investigators in the field, whose work is classified. In this report, the results of our efforts to determine the time and weather condition in which the washout effect might become apparent are given.

Solid State Physics

Armour Research Foundation, Chicago, Ill.
EFFECTS OF NUCLEAR RADIATION ON SOLID CATALYSTS, by Robert H. Bragg, Fred L. Morritz and others. Rept. for 15 June 58-30 Apr 59 on Contract AF 33(616)5896. June 59, 77p. 31 refs. WADC Technical rept. 59-286.
Order from OTS $2.00 PB 161 130

Both gamma ray and fast neutron irradiation causes changes in the electrical characteristics of single crystals and powders of zinc oxide. The two major effects of fast neutrons on single crystals are an enhanced conductivity when the irradiation is begun and a subsequent decrease as the irradiation is continued up to doses of 10^{15} nvt. Hydrogenation of ethylene occurs readily at 30°C over calcined zinc oxide powder, and a marked increase in activity is observed after further calcination in vacuo at temperatures up to 615°C. After irradiation to a dose of 10^{13} nvt the catalytic activity is decreased. In-pile experiments on the hydrogenation of ethylene over zinc oxide catalyst show that during irradiation the rate of the reaction is increased compared to the rate observed with the freshly calcined material without irradiation. Rather extensive irradiation experiments have been performed on mixtures of hydrogen and ethylene in the absence of a catalyst.

Armour Research Foundation, Chicago, Ill.
EXCESS NOISE IN SEMICONDUCTORS. Final rept. for 15 Nov 57-15 Nov 58 on Contract Nonr-1800(00). 10 Nov 58, 77p. 34 refs.
Order from LC mi$4.50, ph$12.30 PB 143 463

In a study of 1/f noise in single crystal silicon and germanium it is found that crystalline imperfections reduce the noise level. Naturally occurring

imperfections, those produced by plastic deformations and those generated by fast neutron bombardment all act in the same fashion. The results may be quantitatively explained by accounting for the decrease in minority carrier lifetime by crystalline imperfections. An experiment which allows an effective surface to volume change in the same sample has shown that surfaces dominate as the origin of 1/f noise. Using the field effect to alter occupancy of surface states it has been determined that the noise level decreases as the surface barrier is reduced. There is some evidence for a noise minimum when the surface fermi level matches that of the bulk, but this needs further confirmation. A search for critical fluctuations in solids has discovered the existence of such a phenomena at the curie point in single crystal $BaTiO_3$. Experiments on critical point fluctuations at the superconducting transition of single crystal tin are also in progress.

Armour Research Foundation, Chicago, Ill.
PRESSURE EFFECTS AND CONFIGURATION COORDINATE MODELS OF KCl(Tl) by L. Reiffel. Technical note no. 3 on Contract AF 49(638)113. 24 July 59, 8p. 9 refs. AFOSR-TN-59-761.
Order from LC mi$1.80, ph$1.80 PB 143 523

Since a straightforward extension of the Williams and Johnson configuration coordinate curves for the first excited state of KCl(Tl) coupled with their assumption of thermodynamic equilibrium requires very large changes in the emission ratio, these results do not lend support to their model. It appears that alternatives of the sort considered by Patterson and Klick and Knox may be better able to describe the actual situation. These latter suggestions can be arranged to predict small changes in intensity ratio due to pressure.

Brown U. Div. of Applied Mathematics, Providence, R. I.
SINGLE CRYSTAL PLASTICITY: A SURVEY. PART III. THEORIES OF PLASTIC DEFORMATION OF SINGLE CRYSTALS, by Robert C. Meacham. Rept. on Contract N7onr-358, T. O. I. 15 Aug 48, 161p. 72 refs. A11 S-3, ATI-143 136.

A summary including a list of technical papers.

Carnegie Inst. of Tech., Pittsburgh, Pa.
THEORY OF SHALLOW ACCEPTOR STATES IN SILICON AND GERMANIUM, by Daniel Schechter. Technical rept. no. 4 on Contract Nonr-760(13). 7 Mar 58, 137p. 48 refs. AD-207 307.
Order from LC mi$6.90, ph$21.30 PB 138 559

A qualitative discussion is presented of shallow impurity states in Si and Ge, with emphasis on the acceptor states. The experimental data concerning the bound acceptor states is summarized. The valence band structure in Si and Ge in the vicinity of the band maxima is reviewed. The derived effective mass equations have the form of a system of coupled equations, but due to the complexity of these equations exact solution was impossible for Si and Ge. The standard variation method for calculation of energy levels was followed. Trial functions were obtained for the ground state and the first 4 excited states using group theoretic considerations. The energies of these states were then calculated in the extreme limits of zero and infinite spin-orbit coupling. Corrections were made to these energy levels to take account of the actual spin-orbit coupling. When the results were compared with experiment, the agreement was found to be only qualitative. Possible reasons for this are discussed.

Colorado State U., Fort Collins.
STUDIES, RESEARCH AND INVESTIGATIONS OF THE OPTICAL PROPERTIES OF THIN FILMS OF METALS, SEMI-CONDUCTORS AND DIELECTRICS, by Lawrence N. Hadley, Jr. Final rept. for 16 Feb-13 Aug 58 on Contract DA 44-009-eng-3410. 13 Sep 58, 20p. 4 refs.
Order from LC mi$2.40, ph$3.30 PB 143 448

Cornell U., Ithaca, N. Y.
MICROWAVE STUDIES OF COLOR CENTERS IN BARIUM OXIDE, by J. W. Carson, D. F. Holcomb, and H. Ruchardt. Technical rept. no. 3 on Contract Nonr-401(15). 20 Nov 58, 19p. 16 refs: AD-207 203.
Order from LC mi$2.40, ph$3.30 PB 143 470

Electron spin resonance absorption measurements have been made at 9300 mc/sec on BaO crystals with excess barium. No spin resonance is observed which can be associated with the imperfection responsible for the optical absorption band at 2.0 ev. Large non-resonant microwave losses are also observed in the colored crystals. The present measurements are unable to distinguish between conduction in colloidal barium particles and electronic conduction in crystalline BaO itself as the source of the large losses.

Cornell U., Ithaca, N. Y.
SECONDARY POSITIVE ION EMISSION FROM METAL SURFACES, by Richard C. Bradley. Technical rept. no. 8 on Theoretical and Experimental Investigations of the Atomic Phenomena Occurring

on and near the Surfaces of Solids, Contract AF 18(600)674. 1 Sep 58, 33p. 11 refs. AFOSR-TN-58-642; AD-162 174.
Order from LC mi$3.00, ph$6.30 PB 138 503

Secondary positive ions ejected from surfaces of Mo, Ta, and Pt under bombardment by inert gas ions of low energy ($<$ 1000 ev) have been studied in high vacuum ($\leq 10^{-8}$mm of Hg of background gases) using a mass spectrometer. Quantitative analyses based on abundance ratios of the ions are unreliable. Application of the technique to the investigation of surface kinetics seems highly promising.

Cornell U., Ithaca, N. Y.
THALLIUM TUNGSTEN BRONZE; A NEW DEFECT STRUCTURE, by M. J. Sienko. Rept. on Contract AF 49(638)191. 1 July 59, 21p. 7 refs. AFOSR-TN-59-504; AD-215 929.
Order from LC mi$2.70, ph$4.80 PB 143 000

Thallium tungsten bronzes, Tl_xWO_3, have been prepared ranging in composition from $x = 0.19$ to $x = 0.36$. Preparation methods included: (1) heating Tl_2WO_4, WO_3, and W; (2) vapor phase reaction of Tl and WO_3; (3) electrolysis of Tl_2CO_3 and WO_3 mixtures.

Diamond Ordnance Fuze Labs., Washington, D. C.
FREQUENCY SHIFT CAUSED BY FERRITE SPHERE IN A RECTANGULAR COAXIAL CAVITY, by John E. Tompkins. 20 Jan 58, 8p. 8 refs. TR-549.
Order from LC mi$1.80, ph$1.80 PB 138 894

A frequency-shift expression is obtained for a rectangular-coaxial cavity containing a small magnetized ferrite sphere, utilizing a method of characteristic impedance due to Magnus and Oberhettinger.

Electrical Engineering Research Lab., U. of Illinois, Urbana.
EFFECT OF HEAVY DOPING ON THE DIFFUSION OF IMPURITIES IN SILICON, by Michael Francis Millea. Technical note no. 3 on Contract AF 49(638)417. 15 July 59, 50p. 27 refs. AFOSR-TN-59-460; AD-215 265.
Order from LC mi$3.30, ph$7.80 PB 143 673

The diffusivities of P, Sb, Sn and In in heavily doped n-type (5×10^{19} atoms/cm^3), and heavily doped p-type (2×10^{20} atoms/cm^3) silicon have been measured to obtain information on diffusion. The measured diffusivities of P and Sb in n-type are twice their values in intrinsic silicon; their diffusivities in p-type are one half those in intrinsic silicon. Possible diffusion mechanisms for substitutional impurities in silicon are discussed in the light of these and other data.

General Electric Research Lab., Schenectady, N. Y.
ION DRIFT IN AN N-P JUNCTION, by E. M. Pell. Scientific rept. no. 1 on Contract AF 19(604)5551. 14 Aug 59, 39p. 21 refs. AFCRC-TN-59-586. AD-225 984.
Order from LC mi$3.00, ph$6.30 PB 143 361

If a reverse bias is applied to an np junction at a sufficiently elevated temperature to give either the donor or the acceptor ions appreciable mobility, the ions will drift in the electric field of the junction to produce an intrinsic semiconductor region between the n and p regions. Such ion drift offers a simple and straightforward method for investigating diffusion constants, as well as chemical interactions within the host lattice which affect this diffusion. Preliminary results indicate its feasibility for measuring the diffusion constant of Li in Si to as low as 10^{-18} cm^2/sec and also for measuring the effect of Li-oxygen and Li-acceptor interactions in decreasing the diffusion rate.

Illinois U., Urbana.
PHOTOCONDUCTIVE HALL EFFECT IN SILVER BROMIDE, by Dwight C. Burnham. Rept. on Contract AF 18(600)662. June 59, 225p. 84 refs. AFOSR-TN-59-717; AD-226 402.
Order from LC mi$9.90, ph$34.80 PB 143 598

Using techniques developed by Kobayashi and Brown, the Hall mobility of electronic carriers in silver bromide was investigated in the low-temperature range. Other features of the transient photoconductivity of silver bromide were studied. Two of the samples used in the Hall effect studies were cut from an ingot purified by zone-refining techniques. Zone-refining procedures and results are described.

Illinois U., Urbana.
THE SELF ENERGY OF A HELICAL DISLOCATION, by Ronald de Wit, Doctoral thesis. Rept. on Contract Nonr-1834(12). Nov 58, 131p. 31 refs.
Order from LC mi$6.90, ph$21.30 PB 143 435

A review of dislocation theory is given, which includes Kröner's "continuum theory of dislocations and internal stresses." This theory leads to an energy expression for a dislocation in terms of a double line integral along the dislocation line. For the isotropic case this expression is used to find the self energy of straight, circular, cylindrical and helical dislocations. The connection with magnetostatics is pointed out. The helical dislocation is assumed to have a uniform shape with the Burgers vector along its axis. The axial length of the helix is large compared to its radius and the radius is large compared to the dislocation "cross section", which is of the order of a Burgers vector. For a helix of many turns and arbitrary pitch an expansion in a Fourier cosine series is used. The self energy is found in terms of elementary functions and Kapteyn series of Bessel functions.

Institute of Mathematical Sciences, New York U., N. Y.
ELECTROLYTIC CONTACTS FOR PHOTOCONDUCTIVITY MEASUREMENTS, by H. Kallman and M. Pope. Technical rept. on Contract Nonr-285(25). 4 Dec 58, 5p.
Order from LC mi$1.80, ph$1.80 PB 143 846

A cell was made which provided simultaneous electrical and optical access to an anthracene single crystal, facilitating photoconductivity studies. The cell

and electrolyte transmitted more than 90 per cent of the incident radiation at 3650 A. The results of A. C. and D. C. photoconductivity measurements made with this cell will be published in a forthcoming article.

Maryland U., College Park.
VIBRATIONAL THERMODYNAMIC PROPERTIES OF LATTICES WITH DEFECTS, by Jagadishwar Mahanty. Rept. on Contract AF 49(638)399. Aug 59, 100p. 34 refs. Dept. of Physics. Technical rept. no. 145; AFOSR-TN-59-758.
Order from LC mi$5.40, ph$15.30 PB 143 680

Techniques have been developed for evaluating the changes in the vibrational properties of a lattice due to the presence of defects, and they have been applied to the study of the effect of defects on some lattice models. Methods for extending the applicability of these techniques to the case of more complicated lattices are indicated and the discrete frequencies that arise due to an isotope defect in lattices with coupled displacement components are computed.

Massachusetts Inst. of Tech., Cambridge.
THE DUCTILE FRACTURE OF METALS, by Walter A. Backofen, Merrill L. Ebner, and Donald H. Avery. Technical rept. no. 7 on Contract Nonr-1841(25). 1 May 58, 61p. 20 refs; AD-161 847.
Order from LC mi$3.90, ph$10.80 PB 142 905

Contents:
Hardening characteristics of polycrystalline copper under fatigue loading
Fatigue in single crystals of copper
Electroshaping of copper single crystals

Massachusetts U., Amherst.
GEOMETRIC RELATIONSHIPS FOR X-RAY DIFFRACTION FROM ORIENTED FILMS OF POLYETHYLENE, by Richard S. Stein. Technical rept. no. 8 on Contract Nonr-2151(00). 13 Nov 58, 12p. AD-207 348.
Order from LC mi$2.40, ph$3.30 PB 143 475

An automatic x-ray diffractometer employing geiger counter or scintillation counter scanning has been constructed. The geometric relationships involved in determining the distribution of crystal orientations of polyethylene with this diffractometer are developed.

Microwave Lab. [Stanford U.] Calif.
PROPERTIES OF FERROELECTRIC CRYSTALS AT HIGH FREQUENCIES, by E. T. Jaynes. Final rept. for 1 Nov 54-31 Dec 58 on Contract Nonr-225(18). [1958] 3p. ML Rept. no. 565.
Order from LC mi$1.80, ph$1.80 PB 143 842

New York State Coll. of Ceramics, Alfred U.
PHOTOCONDUCTIVITY IN CADMIUM TELLURIDE, by Clyde Emerson McNeilly. Rept. on Contract Nonr-1503(01). July 58, 98p. 59 refs. AD-202 407.
Order from LC mi$5.40, ph$15.30 PB 144 263

Single crystals of cadmium telluride with an impurity concentration of about 10^{17} cc^{-3} have been prepared. Vacuum plated indium electrodes were used on n-type crystals while gold deposited from gold chloride solution was used on p-type. Thermal activation energy measurements indicate an intrinsic activation energy of 1.5 eV in the temperature range 350° - 20°C. The wavelength for maximum intrinsic photoconductivity is given by the expression:

$$\lambda(\text{Å}) = 8100 + 2.06\ T.$$

Pennsylvania State [U.] Mineral Industries Experiment Station [University Park].
HYDROTHERMAL CRYSTAL STUDIES, by Rustum Roy, R. C. DeVries and others. Rept. no. 4 for 1 July 51-30 June 52 on Contract DA 36-039-sc-5594. 15 July 52, 150p. 41 refs.
Order from LC mi$7.20, ph$22.80 PB 143 125

Studies on phase equilibrium in the systems $KF-MgF_2$ and $AgF-ZnF_2$, structural relations among the mixed oxides of the trivalent elements, and the crystal structure of $Y(OH)_3$ and $La(OH)_3$. Phase equilibrium studies in the system $K_2O-Al_2O_3-SiO_2-H_2O$ have been undertaken to define the pressure, temperature and composition limits for the synthesis of muscovite. (See also PB 140 448)

Pennsylvania State [U.] Mineral Industries Experiment Station [University Park].
INVESTIGATIONS CONCERNING SYNTHETIC LAYER LATTICE SILICATES. I. THE SERPENTINE-AMESITE JOIN IN THE SYSTEM $MgO-Al_2O_3-SiO_2-H_2O$ AND CLASSIFICATION OF THE CHLORITE MINERALS, by B. W. Nelson and Rustum Roy. Technical rept. no. 9 (Quarterly progress rept. no. 9), 1 July-30 Sep 53, on Hydrothermal Crystal Studies, Contract DA 36-039-sc-5594. 5 Oct 53, 79p. 45 refs.
Order from LC mi$4.50, ph$12.30 PB 143 128

The two-layer and four layer silicate structures are being studied with respect to limits of ionic substitution. The formation and stability of the brittle micas is also being studied. New areas of work include anion and cation substitution in the silica structures especially quartz, and the attempts to make more inverse, semi-inverse and partial semi-inverse perovskite structures. (See also PB 140 192)

Pennsylvania State [U]. Mineral Industries Experiment Station [University Park].
MULTIPLE ION SUBSTITUTION IN THE PEROVSKITE LATTICE [AND] PHASE EQUILIBRIA IN THE SYSTEM $BaTiO_3-CaTiO_3$, by Rustum Roy and R. C. DeVries. Technical rept. nos. 10-11 (Quarterly progress rept. no. 11) 1 Jan-31 Mar 54, on Hydrothermal Crystal Studies, Contract DA 36-039-sc-5594. 8 Apr 54, 53p. 15 refs.
Order from LC mi$3.60, ph$9.30 PB 143 127

A fairly large number of new oxide phases typified by such compositions as $KLaTi_2O_6$, Sr_2CrTaO_6, $Ba_3NiNb_2O_9$ and $BaKTiNbO_6$ have been synthesized and shown to have the perovskite structure. Anion substitution successfully yields compounds with this structure only when it is complete - no mixed-anion perovskites were encountered. Very few perovskites with anions other than O^{2-} or F^- have been found. Phase equilibria in the system $BaTiO_3$-$CaTiO_3$ have been investigated by quenching, thermal analysis and pellet-melting methods. The system is characterized by extensive solid solution with a minimum at 17% $CaTiO_3$, 1585 ± 5°C. The extent of the hexagonal $BaTiO_3$ phase region toward $CaTiO_3$ is less than 1%. The temperature of the tetragonal-cubic $BaTiO_3$ inversion is lowered gradually by additions of $CaTiO_3$ to 88°C. Due to the small temperature range of the $BaTiO_3$ ss + liquid regions a wide range of compositions are satisfactory for crystal growing in this system.

Syracuse U. Research Inst., N. Y.
ELECTRON SPIN LATTICE RELAXATION IN PHOSPHORUS DOPED SILICON, by A. Honig and E. Stupp. Technical rept. no. 1 on Contract AF 18(603)50. 30 June 59, 48p. 18 refs. AFOSR TN-59-715.
Order from LC mi$3.30, ph$7.80 PB 143 023

Electron spin - lattice relaxation in phosphorus doped silicon has been investigated over a magnetic field range of 0 - 11,000 oersteds, a temperature range of 1.25°K. to 4.2°K. Three distinct relaxation mechanisms have been identified, and their functional dependence on magnetic field, temperature and concentration have been determined.

Uppsala U. (Sweden).
BORIDES AND SILICIDES OF THE PLATINUM METALS, by Bertil Aronsson, Jan Aselius and Erik Stenberg. Technical note no. 5 on Contract AF 61(052)40. 3 July 59, 6p. 7 refs. AFOSR TN-59-414; AD-214 561.
Order from LC mi$1.80, ph$1.80 PB 142 971

Three new structure types (tentatively notated as Ru_7B_3-, RhB- and IrB-1-2-types) are discussed briefly.

Uppsala U. (Sweden).
THE CRYSTAL STRUCTURE OF $SnCl_4.2SeOCl_2$, by Yngve Hermodsson. Technical note no. 6 on Contract AF [61](052)43. 20 Aug 59, 15p. 25 refs. AFOSR-TN-59-723.
Order from LC mi$2.40, ph$3.30 PB 143 636

The crystal structure of the addition compound $SnCl_4.2SeOCl_2$ has been determined and refined from three-dimensional X-ray data.

Uppsala U. (Sweden).
THE CRYSTAL STRUCTURE OF $(TiCl_4.POCl_3)_2$, by Carl-Ivar Branden and Ingvar Lindqvist. Technical note no. 7 on Contract AF 61(052)43. 20 Aug 59, 13p. 17 refs. AFOSR-TN-59-722; AD-226 387.
Order from LC mi$2.40, ph$3.30 PB 143 918

The crystal structure of $(TiCl_4.POCl_3)_2$ has been determined from three-dimensional X-ray data. The structure is built up of dimeric molecules $(TiCl_4.POCl_3)_2$ with double chlorine-bridges between the two titanium atoms of the dimer. The coordination around the titanium atom is octahedral. The oxygen atom in $POCl_3$ functions as donor atom. The approximately tetrahedral structure of $POCl_3$ is preserved. The nature of the acceptor-donor interaction in addition compounds where oxychlorides function as donor molecules is discussed.

Uppsala U. (Sweden).
AN X-RAY STUDY OF PHOSPHIDES OF THE PLATINUM METALS, by Stig Rundqvist. Technical note no. 7 on Contract AF 61(052)40. 29 July 59, 5p. 11 refs. AFOSR-TN-59-656.
Order from LC mi$1.80, ph$1.80 PB 143 919

The present author has started an X-ray powder and single-crystal investigation of phosphides of the platinum metals in order to establish the compositions of the phases and to determine the crystal structures. A preliminary report of the work is given.

Westinghouse Electric Corp., East Pittsburgh, Pa.
MAGNETO-OPTICAL EFFECTS IN FERROMAGNETIC OXIDES, by P. Bailey. Scientific rept. no. 1, 15 Mar-15 June 59, on Contract AF 19(604)5529. 15 June 59, 17p. 11 refs. AFCRC-TN-59-395; AD-225 [illegible]
Order from LC mi$2.40, ph$3.30 PB 143 629

The Faraday rotation exhibited by magnetized sections of yttrium and gadolinium iron garnets was measured in the wavelength range 1 - 15μ. Measurements made on α-Fe_2O_3 in the visible and near infra-red at room temperature indicated absorption peaks.

Willow Run Labs., U. of Michigan, Ann Arbor.
RESONANCE ABSORPTION OF PARAMAGNETIC IONS WITH SPIN 5/2: $CaCO_3$:Mn, by Chihiro Kikuchi. Technical memo. on Proj. Michigan, Contracts AF 49(638)68 and DA 36-039-sc-78801. Aug 59, 39p. 12 refs. 2616-10-R; AFOSR-TN-59-220; AD-211 802.
Order from LC mi$3.00, ph$6.30 PB 143 181

The theory of the paramagnetic resonance absorption of ions with S=5/2 in crystalline fields of trigonal symmetry is presented using manganous ions in calcite as an example. It is shown that the experimental results observed by Hurd, Sachs, and Hershberger can be accounted for by assuming that the manganous ions occupy the two nonequivalent Ca^{++} sites at random. Much of the theory presented here is also applicable to Al_2O_3:Fe, which is a potential material for a zero-field maser.

Theoretical Physics

Avco Research Lab., Everett, Mass.
THE PRODUCTION AND STUDY OF HIGH SPEED SHOCK WAVES IN A MAGNETIC ANNULAR SHOCK TUBE, by Richard M. Patrick. Rept. on Contract

AF 49(638)61. July 59, 42p. 15 refs. Research rept. 59. AFOSR-TN-59-845; AD-225 292.
Order from LC mi$3.30, ph$7.80 PB 143 155

A magnetic annular shock tube has been used to produce magnetically driven shock waves with very high velocities. Experiments were carried out with this device with two magnetic field configurations ahead of the shock front. The first configuration had a magnetic field ahead of the shock front in the direction of motion of the shock. In the second configuration the magnetic field ahead of the shock had its principal component in the plane of the shock front and a small component in the direction of motion of the shock. The continuum radiation emitted by the shock-heated plasma was measured with photomultipliers. The use of probes to measure the change in the local magnetic field in the shock front was investigated. With the second configuration shock velocities in excess of 4×10^7 cm/sec were measured in hydrogen. For these high speed shock waves, a shock thickness was obtained from measured rise times of the emitted visible radiation. These shock thicknesses are thinner than the mean free path in the shock-heated plasma, an observation which agrees with a theoretical prediction.

Avco Research Lab., Everett, Mass.
THEORY OF THE FLOW IN THE MAGNETIC ANNULAR SHOCK TUBE, by Nelson H. Kemp and Harry E. Petschek. Rept. on Contract AF 49(638)61. July 59, 37p. 7 refs. Research rept. 60; AFOSR-TN-59-846; AD-225 774.
Order from LC mi$3.00, ph$6.30 PB 143 521

This paper gives a theoretical description of the properties of the gas flow in the magnetic annular shock tube. This shock tube uses a magnetic field to drive a shock wave through an annular region, producing a very high temperature plasma. It is shown that this particular configuration allows a fairly precise calculation of the flow parameters. Numerical calculations of the significant flow properties for a complete range of the initial field strength and orientation have been made and are presented graphically.

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
THE WAVE MOTIONS OF SMALL AMPLITUDE IN RADIATION-ELECTRO-MAGNETO-GAS DYNAMICS, by S. I. Pai and A. I. Speth. Rept. on Contract AF 49(638)401. July 59, 23p. 8 refs. Technical note BN-180; AFOSR-TN-59-879; AD-225 691.
Order from LC mi$2.70, ph$4.80 PB 143 387

The fundamental equations of radiation-electromagneto-gas dynamics are first discussed. These equations are linearized under the condition there exists an externally applied uniform magnetic field. Wave motions of infinitesimal amplitude which may be divided into a transverse wave and a longitudinal wave, are analyzed. Radiation phenomena exert influence only on the longitudinal wave while the transverse wave is independent of the radiation field. The radiation effect is characterized by introducing a radiation parameter which is the ratio of radiation pressure to the gasdynamic pressure. For ideal plasma, it may be expressed in terms of an effective radiation sound speed. Various simple cases of this wave motion of small amplitude in radiation electro-magneto-gas dynamics have been discussed. The condition where the radiation effect becomes important is also discussed.

Microwave Physics Lab., Sylvania Electric Products, Inc., Mountain View, Calif.
IMPROVED MICROWAVE TECHNIQUES FOR MEASURING PLASMA PARAMETERS, by Jaan Kannelaud and Romayne F. Whitmer. Scientific rept. no. 1 on Investigation of Non-Linear Phenomena Associated with Ionized Plasmas, Contract AF 19(604)4083. 22 July 59, 39p. 9 refs. AFCRC-TN-59-578, AD-225 405.
Order from LC mi$3.00, ph$6.30 PB 143 494

A study is made of microwave methods for performing measurements of plasma characteristics. A discussion is given of the assumptions made in the theoretical analysis and of means for satisfying these conditions experimentally. An experimental arrangement was designed and tested in an attempt to determine the relative importance of experimentally satisfying the various assumptions. It was found that the phase shift measurements (which yield the electron density in the plasma) were relatively insensitive to many of the analytical conditions. However, the plane wave--infinite medium assumption imposes serious restrictions on the manner in which attenuation measurements (which yield the electron-neutral particle collision frequency) are performed.

Rome Air Development Center, Griffiss AFB, N. Y.
THE STATUS OF MICROWAVE PLASMA PHYSICS, by Daniel J. Kenneally. Summary rept. Aug 59, 34p. 105 refs. RADC-TN-59-200; AD-217 680.
Order from LC mi$3.00, ph$6.30 PB 143 907

An attempt is made to determine the present status of those aspects of plasma physics which are mainly concerned with the interaction of microwave signals with plasma media. The basic equations are presented. Typical methods of plasma generation and shock simulation are presented. Certain recommendations are shown to be appropriate with respect to facilities and technical manpower presently available. In particular, the study and exploitation of hot plasma interactions is shown to be worthy of further effort. In addition, a cold plasma as a microwave network element is shown to be an extremely desirable and technically feasible area for unique exploitations.

Thermodynamics

Air Force Missile Development Center, Holloman AFB, N. Mex.
CALCULATION OF THE CONCENTRATION OF THE SOLAR RADIATION THROUGH THE FOCAL SPOT OF A PARABOLIC MIRROR ON THE BASIS OF A NON-UNIFORM SUN, by Alfred W. Simon. Sep 59, 17p. 5 refs. AFMDC TN-59-23.
Order from LC mi$2.40, ph$3.30 PB 143 186

The concentration of energy through the focal spot of a parabolic mirror is calculated on the basis of data given by Abetti on the variation of intensity across the face of the image of the solar disc as a function of the radius of the point considered. The result is 66,078 cal/cm^2/minute on the basis of a value of the solar constant of 1.76 cal/cm^2/minute. The value agrees closely with that of Jose obtained on the basis of an empirical formula.

Air Force Missile Development Center, Holloman AFB, N. Mex.
SOLAR FURNACE SUPPORT STUDIES, VOLUME II. 1959, 292p. 38 refs. AFMDC-TR-59-15; AD-213 260.
Order from LC mi$11.10, ph$44.10 PB 143 633

Contents:
Design of a solar furnace and the calculation of concentration using spherical-mirror elements
Aerodynamic stability of a heliostat structure
Oscillations of a rigid heliostat mirror caused by fluctuating wind
Studies on thermal effects on solar furnace mirrors
A radiation fluxmeter for high intensity applications
Instrumentation for the 108-foot diameter cloudcroft solar furnace
The proof of certain laws of optics used in solar furnace calculations
The design of a heliostat mirror for a solar furnace
The design of the condenser of a solar furnace using non-parabolic elements
The flux through a focal spot of a solar furnace
Calculation of the concentration of energy at points outside the focal spot of a parabolic condenser

Armour Research Foundation, Chicago, Ill.
THE MECHANICAL PROTECTION OF THE W/Ir THERMOCOUPLE, by Gary Steven and Walter C. Troy. Rept. no. 21. 13 Aug-5 Sep 49. 9 Sep 49, 11p. NEPA 1153-ARM-22; AD-206 714.
Order from LC mi$2.40, ph$3.30 PB 138 456

The installation of a gas-fired muffle furnace was completed. Constructional details as well as data on the furnace operation are included in this report. The performance of the furnace was checked during a 12-hour run at a temperature of 1950° to 1980°C. During this high temperature run, an unprotected Ir/60% Rh, 40% Ir thermocouple was operated satisfactorily inside the furnace muffle.

Arnold Engineering Development Center [Tullahoma, Tenn.]
A METHOD OF FORMING CONTINUOUS EMPIRICAL EQUATIONS FOR THE THERMODYNAMIC PROPERTIES OF AIR FROM AMBIENT TEMPERATURES TO 15,000°K, WITH APPLICATIONS, by Martin Grabau. Rept. on ARO, Inc. Contract AF 40(600)800. Aug 59, 37p. 7 refs. AEDC-TN-59-102.
Order from LC mi$3.00, ph$6.30 PB 143 920

This work relates generally to automatic data reduction for arcdriven, hotshot-type wind tunnels which operate at high stagnation temperatures. Pressure and density are used as the simplest independent variables.

Brown U. Div. of Engineering, Providence, R. I.
THE ELECTROPLASTIC THICK-WALLED SPHERE SUBJECTED TO RISING TEMPERATURE GRADIENTS, by G. R. Cowper. Technical rept. no. 9 on Contract Nonr-562(20). Nov 58, 30p. 8 refs. Nonr-562(20)9; AD-207 361.
Order from LC mi$2.70, ph$4.80 PB 143 412

An exact solution is obtained for the behavior of an ideal elastoplastic hollow sphere subjected to a monotonically increasing temperature gradient. An approximate rigid-plastic solution is also developed and compared with the exact solution. A technique for improving the approximate solution is indicated. Finally, the extension of the analysis to the case in which yield stress depends on temperature is discussed.

Cryogenic Engineering Lab., National Bureau of Standards, Boulder, Colo.
CRYOGENIC DATA BOOK, by Dudley B. Chelton and Douglas B. Mann. Mar 59, 155p. WADC Technical rept. 59-8; AD-208 155.
Order from OTS $3.00 PB 151 837

A compilation of the physical properties of several liquefied gases and a number of structural and thermal insulating materials in the temperature region of liquefied gases are presented. Specifically, the liquefied gases treated are helium, hydrogen (para and ortho), hydrogen deuterids, deuterium, nitrogen, oxygen and air. The data is presented in the English system of units.

THE THERMAL CONDUCTIVITY OF SOLIDS AT HIGH TEMPERATURES: A BIBLIOGRAPHY, by W. T. K. Johnson. 1 June 59, 71p. 474 refs. TM-59-4.
Order from OTS $2.00 PB 161 118

A total of 474 references is given. Most of the references since 1940 are accompanied by a brief description of content. This information has been compiled in connection with studies on thermoelectric generators.

Electrical Engineering Research Lab., U. of Texas [Austin].
APPARENT TEMPERATURES OF SOME TERRESTRIAL MATERIALS AND THE SUN AT 4.3 MILLIMETER WAVELENGTHS, by C. W. Tolbert, C. O. Britt, and A. W. Straiton. Rept. on Contract Nonr-375(01). 1 July 57, 37p. 6 refs. Rept. no. 93.
Order from LC mi$3.00, ph$6.30 PB 138 960

This report describes the 4.3 millimeter radiometer and its operational characteristics, the temperature of various terrestrial materials, the attenuation through the atmosphere and the temperature of the sun. The

temperatures of the terrestrial materials were measured for vertical and horizontal polarization over an angular range from normal incidence to near grazing. The attenuation vertically through the atmosphere ranged between 1.6 and 2.3 decibels during the measurement program. The sun of optical disk size was found to be between 10^4 and 1.2×10^4 degree Kelvin on May 3 and June 17 of 1957. Since the apparent temperature of the materials measured is dependent upon their reflectivity, a measure of the reflecting characteristics of water, wood, metal, grass, asphalt, gravel and asbestos at 4.3 millimeter wavelengths was obtained.

Franklin Inst. Labs. for Research and Development, Philadelphia, Pa.
DEVELOPMENT OF THERMOCOUPLES FOR USE ON THERMOELECTRIC GENERATORS. Final rept. for 30 Apr 47-30 Sep 50 on Contract W36-039-sc-33654. [1950] 48p. Rept. no. F-1992-13; ATI-89 883.
Order from LC mi$3.30, ph$7.80 PB 144 088

The development of Zn-Sb alloys, properties of PbS, and the design and construction of an experimental thermoelectric generator. Thermoelectric properties have been investigated most thoroughly for PbS and the intermetallic compound Zn-Sb.

Illinois U. [Urbana].
A GENERAL INVESTIGATION OF THERMAL STRESSES IN SHELLS, by H. L. Langhaar and A. P. Boresi. Technical rept. no. 1 on Contract Nonr-1834(14). Oct 57, 63p. 14 refs. T & AM rept. no. 124.
Order from LC mi$3.90, ph$10.80 PB 138 898

A general theory of thermal stresses in shells is developed. The equations for small deflections of any shell are generalized to include the effects of a temperature distribution that is an arbitrary function of the curvilinear coordinates (x, y, z) of the shell. Additionally, the strain energy expression for any elastic isotropic shell is developed for an arbitrary temperature distribution.

Institute of Flight Structures, Columbia U., New York.
UPPER BOUNDS AND SAINT-VENANT'S PRINCIPLE IN TRANSIENT HEAT CONDUCTION, by Bruno A. Boley. Technical rept. no. 13 on Contract Nonr-226(20). Dec 58, 8p. 7 refs. CU-13-58-ONR266(20)-CE.
Order from LC mi$1.80, ph$1.80 PB 143 608

An investigation is carried out on transient heat-conduction problems with prescribed surface temperature, and the validity of Saint-Venant's principle in parabolic boundary-value problems is discussed.

James Forrestal Research Center, Princeton, N. J.
THERMAL CONDUCTION IN LIQUIDS, by William J. Scheffy. Rept. on Contract Nonr-1858(25). Oct 58, 105p. 86 refs. Proj. Squid Technical rept. PR-85-R.
Order from LC mi$5.70, ph$16.80 PB 143 293

A study of heat conduction in pure liquids has been undertaken from the point of view that the primary problem is that of prediction of the thermal conductivity of a liquid at any conditions which may happen to be of interest to the engineer. The experimental, empirical approach has been taken, since the more rigorous theories of liquids are not yet of practical value for liquids more complex than argon. Prediction must be based on measured values for a variety of polyatomic liquids. An apparatus was constructed to measure the thermal conductivities of liquids over a wide temperature range. The various simplified theoretical approaches are discussed and the prediction equations to which they lead are criticized. Recommendations are made regarding the calculation of thermal conductivity at temperatures near the critical.

Little, Arthur D., Inc., Cambridge, Mass.
THE IGNITION OF GASES BY ELECTRICALLY HEATED WIRES, PART I, by Leland E. Ashman and William E. Gordon. Rept. on Contract AF 18(603)109. 19 Jan 58, 23p. 2 refs. AFOSR-TN-58-1010; AD-206 153.
Order from LC mi$2.70, ph$4.80 PB 143 595

If a 1-1/2-cm length of 2-mil tungsten wire is heated in a period of about 100 microseconds, such as by the discharge of a condenser, at the end of the heating period, the temperature distribution along the wire is essentially flat. This fact is used in the investigation of the ignition of gases by electrically heated wires. Since the temperature distribution is flat, the current to maintain the center of the wire at a constant temperature is a measure of the heat flux from the wire to the gas. A theoretical analysis of the heat flow shows that the temperature of the center of the wire is independent of end losses for about 100 milliseconds. A general formulation of the problem is applicable to wires of any length and diameter.

Little, Arthur D., Inc., Cambridge, Mass.
THE IGNITION OF GASES BY ELECTRICALLY HEATED WIRES, PART TWO, by Leland E. Ashman and William E. Gordon. Rept. on Contract AF 18(603)109. 19 Jan 58, 24p. 17 refs. AFOSR-TN-58-1011; AD-206 154.
Order from LC mi$2.70, ph$4.80 PB 143 594

Experimental studies have been conducted on the ignition of gases with constant temperature wire ignition sources. Some effects of wire size, wire composition, and gas pressure on the ignition delay have been investigated for the case of the hydrogen-air mixture. For a given wire temperature, the ignition delay increases when either the diameter of the wire or the gas pressure is reduced. The magnitude of this reduction in ignition delay agrees, at least to a first approximation, with theoretical considerations of the effect of wire size and gas pressure on ignition delay. (See also PB 143 595)

Massachusetts Inst. of Tech., Cambridge.
HEAT TRANSFER IN DISSOCIATED COMBUSTION GASES, by John C. Cutting, James A. Fay and others Rept. on Contract AF 49(638)375. July 59, 49p. 25 refs. AFOSR-TR-59-78.
Order from LC mi$3.30, ph$7.80 PB 143 150

This report outlines a series of experiments and theoretical calculations performed to determine the rate of heat transfer from gases in detonation waves.

Minerals Research Lab., U. of California, Berkeley.
ARC IMAGE FURNACE, by D. O. Horning and Earl R. Parker. Final rept. on Contract AF 18(603)123. May 59, 30p. 28 refs. Series 141; AFOSR-TR-59-88.
Order from LC mi$2.70, ph$4.80 PB 143 622

The design details, optical calibration, and operating conditions of the high temperature research facility known as the Arc Image Furnace are discussed. Initial operating conditions are given and some observed data are explained.

Naval Ordnance Test Station, China Lake, Calif.
TENSORS AND THERMODYNAMICS, by A. S. Filler. 12 Sep 56, 134p. 6 refs. NOTS-1581; NAVORD rept. 5331; AD-157 058.
Order from LC mi$6.90, ph$21.30 PB 138 561

The basic principles of thermodynamics and their expression as the first and second laws are examined using tensor analysis. The required tensor methods are those of pure vector geometry and are developed in the report. Several aspects of tensor analysis which are particularly important for physical applications are emphasized. These, in turn, call attention to certain conceptual difficulties in thermodynamics, which are discussed in some detail.

Naval Research Lab., Washington, D. C.
INTERACTION BETWEEN ELECTROMAGNETIC WAVES AND FLAMES. PART 6. THEORETICAL PLOTS OF ABSORPTION, PHASE SHIFT, AND REFLECTION, by W. W. Balwanz. Interim rept. 23 Sep 59, 31p. 7 refs. Rept. 5388.
Order from LC mi$3.00, ph$6.30 PB 142 454

Theoretical studies which attempt to follow the motion of an average particle under a Lorentz force provide expressions for the attenuation of electromagnetic waves in ionized media. The resulting equations are fairly complicated, particularly near the critical (plasma-resonance) frequency of interest in flame studies. As a consequence, graphical presentations are utilized to provide for the interpretation of experimental results. The curves are plotted as a single family in a three-dimensional space, thus simplifying the graphical presentation over the usually presented. This single family may be expanded into the usual series of families by relabeling coordinates. The influence of the magnetic field is ignored, since it is normally a negligible factor in flame studies.

Naval Research Lab., Washington, D. C.
RADIANT HEATING FROM ROCKET EXHAUSTS, by D. C. Rohlfs and W. W. Balwanz. Interim rept. 20 Aug 58, 24p. 4 refs. Rept. 5174.
Order from LC mi$2.70, ph$4.80 PB 133 234

Radiant energy from the exhaust of a static-fired 11-pound-thrust rocket motor has been measured as a function of simulated altitude. Liquid oxygen and RP-1 were used as propellants. The radiant energy was measured with aneroid calorimeters. The exhaust is assumed to have constant total radiated energy, to be non-self-absorbing, and to be homogeneous with cylindrical symmetry. Experimental and theoretical results are in rough qualitative agreement. The effect of conduction currents in the closed chamber was minimized by proper placement of the calorimeters, but the accuracy in evaulating the effect of these currents limits the comparison between theory and experiment. Impingement temperature of the exhaust on a steel plate was also measured as a function of altitude. Experiment shows that the impingement heating becomes more concentrated toward the center of the exhaust with increasing altitude.

Padova U. (Italy).
NUCLEAR RESONANCE IN CONDENSED SYSTEM AT LOW TEMPERATURES. Final technical rept. for 15 May 57-15 May 59 on Contract DA 91-508-EUC-187. 15 June 59, 13p. 6 refs.
Order from LC mi$2.40, ph$3.30 PB 143 109

A program on experimental study of nuclear resonance in condensed systems was initiated to understand some microscopic features of the atomic movements. The apparatus needed to accomplish this investigation consists essentially of the following components. (1) The electromagnet, (2) The electronics, (3) The gas manifold system, (4) The cryostat.

Plasmadyne Corp., Santa Ana, Calif.
A CONTINUOUS HIGH TEMPERATURE GAS FLOW FACILITY FOR MAGNETOHYDRODYNAMIC STUDIES, by Vernon H. Blackman. Rept. on Contract AF 49(638)334. 26 June 59, 37p. 7 refs. T-1TN069-334; AFOSR-TN-59-681; AD-225 412.
Order from LC mi$3.00, ph$6.30 PB 143 163

In order to study phenomena which require both a long testing time and high temperature it would be most desirable to combine the steady state flow characteristics of a wind tunnel with the high gas temperature capabilities of a shock tube. This report will describe an attempt to accomplish such a union. The facility to be described was set up in order to study the steady state Hall effect in an ionized gas flow and as a convenient arrangement to look at fluctuations introduced into a flow by means of an electric arc heater. It has also proven to be useful for preliminary experimental studies of the steady acceleration of an ionized gas flow by means of crossed electric and magnetic fields.

Vitro Labs., West Orange, N. J.
ROTATIONAL "TEMPERATURE" MEASUREMENTS OF THE HIGH INTENSITY ARC TAIL FLAME, by A. W. Diniak, C. Roth and others. Technical note no. 4 on Contract AF 18(603)3. 7 Aug 58, 16p. 11 refs. KLX-10113; AFOSR-TN-58-735; AD-201 351.
Order from LC mi$2.40, ph$3.30 PB 143 936

Rotational temperatures in the tail flame of the high intensity arc at atmospheric and at reduced pressures are determined by measuring the radiation

intensity distribution of the rotational fine structure of the C_2 (0, 0) Swan band at λ 5165, and of the OH (0, 0) ultraviolet band at λ 3064. A comparison is made between temperatures obtained from the C_2 species, and those obtained from the OH species by both the fundamental and the iso-intensity methods. A discussion of the rotational temperature results obtained is included.

Wave Propagation

Air Force Cambridge Research Center, Bedford, Mass.
TROPOSPHERIC AND IONOSPHERIC SCATTER PROPAGATION IN THE TRANSITION ZONE, by Frank A. Pivarunas. Apr 59, 37p. 15 refs. AFCRC-TR-59-136; AD-214 498.
Order from LC mi$3.00, ph$6.30 PB 143 721

There is a zone of receiver distances in which a transition from tropospheric to ionospheric scatter propagation for the received signals can and does take place for frequencies generally used for ionospheric scatter propagation (between about 35 and 60 Mcps). The diurnal and seasonal variations of the median signal levels in each mode determine when and where the signal levels of both modes are within a few db of each other so that the transition region can occur. Since the fading rates peculiar to the ionospheric scatter mode are different from those of the tropospheric scatter, the transition region is readily recognized by the superimposed fading rates on signal level recordings. The scatter volumes for the transition zone are in the stratosphere for the "tropospheric" scatter mode. This may account for some of the changes in tropospheric scatter signal characteristics as distance increases to reach the transition zone. A mode diversity system to improve reception of signals in this zone by using optimum beamwidths and orientations of the antennas used in transmitting and receiving has been proposed.

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
EQUIPMENT FOR CONTINUOUS ECHO AMPLITUDE RECORDING, by Murray E. Sherry. Technical rept. no. 24 on Contract DA 36-039-sc-56748. 1 July 55, 19p. 1 ref. Research rept. EE 251; AD-70 609.
Order from LC mi$2.40, ph$3.30 PB 138 547

A logarithmic amplifier and a pulse shaper were added to the sounder at the Cornell Ionosphere Laboratory in order to take measurements of the amplitude of reflected pulses from the ionosphere as a continuous function of frequency. Details of the construction and diagram are presented here.

Franklin Inst. Labs. for Research and Development, Philadelphia, Pa.
INVESTIGATION OF SUPERSONIC PHENOMENA UNDER EXPLOSIVE CONDITIONS, by W. Philippoff. Final rept. for 28 Feb 58-27 Feb 59 on Contract DA 36-034-ORD-2627. [1959] 38p. 1 ref. F-A2142.
Order from LC mi$3.00, ph$6.30 PB 143 456

We were concerned with the measurement of the propagation of shock waves in transparent materials. Instantaneous photography of the stress pattern in polarized light was used. A number of cases were found that suggested supersonic propagation of stress waves in glass. As the verification of such propagation could be of interest, it was decided to sponsor research to ascertain the existence, nature and behavior of this new kind of wave.

Institute of Aerophysics, U. of Toronto (Canada).
BLAST FROM A PRESSURIZED SPHERE, by D. W. Boyer, H. L. Brode and others. Rept. on Contract Nonr-2335(00). Jan 58, 100p. 20 refs. Rept. no. 48; AD-162 002.
Order from LC mi$5.40, ph$15.30 PB 142 915

Numerical solutions are given for the variation of all flow quantities, as functions of time and space, for the 2-inch diameter air and helium sphere cases. Schlieren photographs of the corresponding experimental blasts are in good qualitative agreement with the theoretical wave diagrams and a quantitative comparison of the 2-inch diameter air sphere blast with theory shows fair agreement. The schlieren and shadowgraph flow records show that the main spherical shock wave is formed by a process of overtaking and coalescing compression waves in a manner somewhat similar to the development of a plane shock wave in a conventional shock tube. Differences between the theoretical and experimental flows are principally due to the finite bursting time of the glass spheres in practice.

Institute of Mathematical Sciences, New York U., N. Y.
BOUNDS ON THE ELEMENTS OF THE EQUIVALENT NETWORK FOR SCATTERING IN WAVEGUIDES. I. THEORY, by Larry Spruch and Ralph Bartram. Rept. on Contract AF 19(604)5238. Apr 59, 33p. 14 refs. Research rept. no. EM-132; AFCRC-TN-59-187. AD-215 064.
Order from LC mi$3.00, ph$6.30 PB 142 811

For a few particular waveguide problems, standard variational expressions have previously been shown to be upper or lower bounds on the quantities of interest. However, bounds have not previously been obtained for any truly three dimensional problem, that is, where the fields cannot be derived from a single scalar potential. An example is a three dimensional obstacle which contacts only one waveguide surface. As one consequence, no straightforward procedure exists for improving the approximations. Recently, Kato devised a rather general method for bounding the cotangent of the phase shift for a given angular momentum in a quantum mechanical central potential scattering problem. This method should be applicable whenever a system can be analyzed in terms of uncoupled standing waves each characterizable by one real phase shift. The method is here adapted to waveguides, including truly three dimensional problems. The obstacle must be symmetric about a plane perpendicular to the waveguide axis, with certain exceptions only one mode should propagate, and the system should be lossless. Analysis is then possible in terms of η_e and η_o, the real uncoupled phase shifts associated with the even and odd

standing waves, respectively. The bounds obtained on $\cot\eta_e$ and $\cot\eta_o$ determine bounds on the equivalent network elements.

Michigan U. Coll. of Engineering, Ann Arbor.
TRANSVERSE WHISTLER PROPAGATION, by C. O. Hines, W. C. Hoffman, and H. Weil. Final rept. on Contract AF 19(604)5553. June 59, 38p. 21 refs. 2894-1-F; AFCRC TR-59-180, AD-226 123.
Order from LC mi$3.00, ph$6.30 PB 143 019

Transpolar propagation of ion-electron whistler modes is investigated and shown, with the help of numerically computed rays, not to be useful for transmitting information. The first two sections of the report comprise a summary of whistler phenomena and theory to provide a background for the present investigation. In Section III a specific ion-electron density distribution is introduced and applied to the appropriate Haselgrove ray tracing equations. In Section IV the numerical results for transpolar propagation are presented.

Naval Research Lab., Washington, D. C.
EFFECT OF DIELECTRIC CONSTANT ON CERTAIN CHARACTERISTICS OF PLANE ELECTROMAGNETIC WAVES IN NONMAGNETIC CONDUCTIVE MEDIA, by L. S. Bearce and R. W. Zeek. Final rept. 19 Oct 59, 10p. Rept. 5381.
Order from LC mi$1.80, ph$1.80 PB 142 452

The error resulting from omission of the dielectric constant as a factor in expressions for the rate of attenuation, the phase velocity, and the wavelength of plane electromagnetic waves in nonmagnetic media has been considered. The variation of these quantities as a function of frequency for water of various conductivities has been calculated, with special attention given to the case of sea water. Universal curves applicable to any nonmagnetic media are presented for use in propagation studies.

Naval Research Lab., Washington, D. C.
PROPAGATION MEASUREMENTS IN THE 5-MILLIMETER REGION, by K. M. Decker and R. C. Dodson. Final rept. 19 Oct 59, 15p. 7 refs. Rept. 5385.
Order from LC mi$2.40, ph$3.30 PB 142 453

The atmospheric absorption of electromagnetic radiation in the region of 5 to 6 mm has been measured and has been found to vary from 14.1 db/km at 5.08 mm to 1.02 db/km at 5.66 mm for dry air at a temperature of 68°F and a pressure of 29.92 in. Hg. Corrections for temperature and pressure, as determined theoretically by previous investigators, have been assumed correct, whereas the corrections due to uncondensed water vapor were determined experimentally and were found to vary from 0.05 db/km at 5.6 mm to 0.09 db/km at 5.08 mm for each gram of uncondensed water vapor per cubic meter.

Radiation Lab., Johns Hopkins U., Baltimore, Md.
BACK-SCATTERING CHARACTERISTICS OF THE SEA IN THE REGION FROM 10 TO 50 KMC, by J. C. Wiltse, S. P. Schlesinger, and C. M. Johnson. Rept. on Contract Nord--11299. May 56, 70p. 5 refs. RL/JHU/TR-35; AD-156 438.
Order from LC mi$3.90, ph$10.80 PB 138 595

Measurements of back scattering from the ocean have been made over the frequency range from 10 to 50 kMc by means of several CW doppler microwave systems operating simultaneously. The systems were mounted on the bow of a ship and various antenna depression angles from 0° (horizontal) to 90° were used. Data were obtained for vertical, horizontal, and circular polarization, and for the cross-polarized component of vertically polarized radiation. Horn antennas of 20 db gain were used at each frequency of operation, and, in addition, higher and lower gain antennas were used at certain selected frequencies. Signals recorded from a variety of sea conditions have been used to calculate the back-scattering cross section per unit area, σ^o. These calculations indicate that σ^o is nearly constant with microwave frequency and increases as the antenna depression angle is increased. The doppler frequency characteristics of the returned signals have also been obtained from the measurements. A comparison is made between the results obtained and those predicted theoretically from simple scattering mechanisms.

Stanford Electronics Labs., Stanford U., Calif.
AIR MOTIONS AND THE FADING DIVERSITY AND ASPECT SENSITIVITY OF METEORIC ECHOES, by L. A. Manning. Technical rept. no. 50 on Contract Nonr-225(24). 10 Dec 58, 33p. 14 refs.
Order from LC mi$3.00, ph$6.30 PB 143 844

A theory is presented that relates those properties of meteoric echoes that depend on distortion of the trail by winds. It is shown that existing results concerning the delay in the start of echo fading (Greenhow), the delay in echo appearance with aspect (McKinley and Millman), the spectral composition of the received signal (Manning, Villard, and Peterson), and the regularity of the fading pattern, are quantitatively explicable. In addition, the theory predicts that the ensemble average rate of echo fading should rise characteristically with time, and should then drop precipitously at the end of the ensemble echo; moreover, it predicts that the correlation of fading patterns at two ground receivers should be a Gaussian function of the product of receiver spacing and echo fading cycle-number. Experimental results are given confirming these predictions, and making possible the determination of the principal properties of the wind profile.

Stanford Electronics Labs., Stanford U., Calif.
THEORY OF RADAR STUDIES OF THE CISLUNAR MEDIUM, by V. R. Eshleman, R. C. Barthle, and P. B. Gallagher. Scientific rept. no. 5 on Contract AF 19(604)2193. 8 July 59, 25p. 13 refs. AFCRC-TN-59-381.
Order from LC mi$2.70, ph$4.80 PB 143 199

In two of the methods described here, the full average-power capability of an h-f transmitter can be used without regard to high stability or precise lunar range. In one method, three equally-spaced

frequencies are sent in the form of an amplitude-modulated wave. Thus a reference quantity is, in effect, sent with the measuring quantities. The relative phases, and hence the character of the modulation, are changed due to dispersion in the cislunar medium. For example, a direct measure of the integrated ion density would be the value of the modulating frequency at which an amplitude-modulated signal is changed to a frequency-modulated echo. In another method an h-f and a vhf transmitter are modulated by the same audio signal. The difference of the audio phase in the simultaneously-recorded echoes should be a measure of the integrated ion density.

A list of words, with frequencies, occurring in a Russian physics text of 73,364 running words, was taken from the Zhurnal Eksperimental'noy i Teoreticheskoy Fiziki (Journal of Experimental and Theoretical Physics), and alphabetized from right to left. The list provides raw data for a morphological analysis of compound words and derivational and inflectional suffixes.

Zator Co., Cambridge, Mass.
A PROGRESS REPORT ON MACHINES TO LEARN TO TRANSLATE LANGUAGES AND RETRIEVE INFORMATION, by R. J. Solomonoff. Rept. on Contract AF 49(638)376. Oct 59, 21p. 4 refs. ZTB-134; AFOSR-TN-59-646.
Order from OTS $0.75 PB 161 263

This paper discusses theoretical work which makes it possible for a machine to be programmed to learn to translate between two simple, synthetic languages, after it has been given a large set of correct examples in a suitable training situation. The limitations of the methods are discussed. A system is described in which a machine would learn to assign descriptors or other search indices to documents, after having been given a large set of documents and the search indices that have been assigned to them by humans. Some of the problems that must be solved before such a system can be realized are discussed. A unified method is proposed for resolving the difficulties of both the information retrieval and the mechanical translation routines.

The following is a description of a mechanically operated camera in which glass photographic plates may be rapidly exposed and shifted to a light-tight storage chamber. The camera will hold fifty 2-1/4 by 3-1/4 plates and the entire load may be run through the camera in approximately one minute.

International Telemeter Corp., Los Angeles, Calif.
DISC PROCESSING. Technical rept. no. 19 on [Contract AF 30(602)1566] 12 Nov 57, 12p. RADC-TN-58-9; AD-148 542.
Order from LC mi$2.40, ph$3.30 PB 144 031

The disk, after exposure to the various films, will be located emulsion side down on the platen in the top of the film-to-disk camera. In the center hole of the disk is a plastic bushing, and the disk holder rests on the disk. A disk processing procedure is outlined which includes unloading of the camera, chemical processing, and washing. In this connection, it appeared most practical to keep the developer always at 70°F. A survey of imperfections in the films and disks indicated 2 types of imperfections with regard to nature and origin: dirt and electromechanical difficulties.

SOCIAL SCIENCES

Columbia U., New York.
LIST OF SAMPLE PARAMETERS OF QUANTITATIVE PROPERTIES OF LANDFORMS: THEIR USE IN DETERMINING THE SIZE OF GEOMORPHIC EXPERIMENTS, by Mark A. Melton. Technical rept. no. 16 on Contract N6onr-271, T. O. 30. 1958, 20p. 19 refs. AD-206 831.
Order from LC mi$2.40, ph$3.30 PB 144 147

Considerable time, money, and effort in conducting experiments of a statistical nature can be saved by planning the size of an experiment in accordance with chosen values for (1) the probability of incorrectly accepting or rejecting the null hypothesis, and (2) the minimum difference in population parameters to be detected. For student's tests and analyses of variance, estimates of population variances are necessary. Investigations into quantitative properties of landforms are made difficult by scarcity of such estimates. The list of sample parameters presented provides estimates of variance, means, and coefficients of variation for populations that were studied. Brief descriptions of the geologic and climatic environments from which each sample was drawn allow selection of the sample most nearly like the experimental material.

National Bureau of Standards, Washington, D. C.
DISTRIBUTION OF MAIL BY DESTINATION AT THE SAN FRANCISCO, LOS ANGELES AND BALTIMORE POST OFFICES, by Norman C. Severo and Arthur E. Newman. Dec 59, 55p. Technical note 27.
Order from OTS $1.50 PB 151 386

This report presents the results of the application of the sampling method presented in a paper by Norman C. Severo and Arthur E. Newman entitled "A statistical chain-ratio method for estimating relative volumes of mail to given destinations", to appear in NBS Journal of Research 64C, No. 1 (Jan.-Mar. 1960) These studies were made at the San Francisco, Los Angeles, and Baltimore Post Offices.

Princeton U., N. J.
ON THE MAGNIFICATION OF DERIVED DEMAND, by R. G. Davis and W. G. Mellon. Research memo. no. 4 on Econometric Research Program, Contract Nonr-1858(16). 12 Nov 58, 24p. 12 refs.
Order from LC mi$2.70, ph$4.80 PB 143 570

Stanford U., Calif.
WELFARE ECONOMICS AND EXISTENCE OF AN EQUILIBRIUM FOR A COMPETITIVE ECONOMY, by Takashi Negishi. Technical rept. no. 62 on Contract N6onr-25133. 9 Dec 58, 10p. 9 refs.
Order from LC mi$1.80, ph$1.80 PB 143 843

It is proven that a competitive equilibrium is the maximum of a social welfare function which is a linear combination of utility functions of consumers, with the weight in the combination being in inverse proportion to the marginal utility of income.

MISCELLANEOUS

Naval Research Lab., Washington, D. C.
REPORT OF NRL PROGRESS, Jan 60.
Order from OTS $1.25, $10.00/year PB 161 277

Contents:
Articles:
A Co^{60} source for radiation chemistry research, by V. J. Linnenbom, C. H. Cheek, and J. M. Frame
Electron spin resonance line shape of diphenyl-picryl-hydrazyl dissolved in benzene, by J. I. Kaplan
Scientific Program:
Applications Research: Naval data handling system communication facilities
Astronomy and Astrophysics: Critical analysis of measurements of the gross fission product activity in the air at ground level
Chemistry: Shipboard studies of fuel-vapor ignition by radio-frequency arcs. Study of the processes occuring during the spontaneous ignition of the hexane isomers. The adhesion of ice to lubricated surfaces. Protection from ignition by radiant heat by means of water mists
Electricity: Linear transformer rectifier power supplies
Metallurgy and Ceramics: Effects of environment on the high-temperature properties of metals. The structure of $CbZn_3$. Determination of zirconium in columbium. Explosion test performance of small-scale submarine hull weldments. Notch toughness evaluations of modified HY-80 steel in heavy-gage plates. Effect of some composition variables on the performance of zinc anodes for cathodic protection in sea water
Nuclear and Atomic Physics: A compact low-field gaussmeter. Rise-time characteristics of hydrogen thyratrons
Radio: Thermionic properties of uranium monocarbide cathodes
Solid-State Physics: Mechanism for coloration of alkali halides at low temperatures. Compensation of impurity scattering in copper

ATOMIC ENERGY COMMISSION REPORTS

Reports may be purchased in accordance with instructions on the inside front cover of the U. S. GOVERNMENT RESEARCH REPORTS. As PB numbers are not indicated, order by series and number. These reports may also be consulted at any AEC Depository Library. A list of these libraries may be obtained from the U. S. Department of Commerce, Office of Technical Services, Washington 25, D. C.

Reproduction in whole or part of any report listed herein is encouraged by the U. S. Atomic Energy Commission, subject to the approval of authors or originating sites. General inquiries from the industrial press about AEC-developed information should be directed to the Industrial Information Branch, Atomic Energy Commission, Washington 25. D. C.

Biology and Medicine

Radium and mesothorium poisoning and dosimetry and instrumentation techniques in applied radioactivity. Annual progress report, by Robley D. Evans. U. S. Atomic Energy Commission, Division of Biology and Medicine, Oak Ridge, Tenn. May 59. Contract AT(30-1)-952. 164p. Order from OTS. $3.00. AECU-4285

The development of chelating agents for enhancing the urinary excretion of strontium. Period covered: September 1, 1958 to September 1, 1959, by Harry Kroll and others. Montefiero Hospital, New York. Sep 59. Contract AT(30-1) 2094. 44p. Order from LC. Mi $3.30, ph $7.80. AECU-4322

The metabolism and toxicology of strontium-90 in the rat. Rationale, experimental procedures, pilot experiments, by L. W. Tuttle, R. C. Baxter, M. Goldman, and W. F. Bale. University of Rochester. Atomic Energy Project, Rochester, N. Y. Sep 59. Contract W-7401-eng-49. 28p. Order from OTS. $1.00. UR-424

Field studies of fission product inhalation. Part III: Fission product field release test series one (EPERT-I), by Robert G. Thomas and Robert H. Wilson. University of Rochester. Atomic Energy Project, Rochester, N. Y. Oct 59. Contract W-7401-eng-49. 145p. Order from OTS. $2.75. UR-555

Metabolism in the rat studied by isotope techniques. II. The body burden of mercury after single and multiple injections, by A. Rothstein and A. Hayes. University of Rochester. Atomic Energy Project, Rochester, N. Y. Oct 59. Contract W-7401-eng-49. 17p. Order from OTS. 50 cents. UR-556

Deposition of a radioactive aerosol in excised guinea pig lungs, by F. R. Gibb, Paul E. Morrow, and Lucien Dautrebande. University of Rochester. Atomic Energy Project, Rochester, N. Y.. Nov 59. Contract W-7401-eng-49. 18p. Order from OTS. 75 cents. UR-560

Proceedings of the second annual meeting on bioassay and analytical chemistry, November 3 and 4, 1958, by T. Kwasnoski and others. University of Rochester. Atomic Energy Project, Rochester, N. Y. Sep 59. 153p. Order from OTS. $3.00. WASH-1023

A review of potential radionuclides produced in weapons detonations, by Alfred W. Klement, Jr. U. S. Atomic Energy Commission, Division of Biology and Medicine, Washington, D. C. July 59. 111p. Order from OTS. $1.00. WASH-1024

Chemistry—General

Nuclear magnetic resonance spectra of nitrogen-1 in ruthenium nitrosyl complexes, by B. B. Murray. E. I. du Pont de Nemours & Co. Savannah River Laboratory, Analytical Chemistry Division, Aiken, S. Car. June 59. Contract AT(07-2)-1. 8p. Order from OTS. 50 cents. DP-391

Determination of deuterium, oxygen, and nitrogen in helium by gas chromatography, by D. L. West. E. I. du Pont de Nemours & Co. Savannah River Laboratory, Analytical Chemistry Division, Aiken, S. Car. Sep 59. Contract AT(07-2)-1. 8p. Order from OTS. 50 cents. DP-392

Power reactor fuels reprocessing progress report on corrosion studies, by R. F. Maness. Hanford Atomic Products Operation, Chemical Research and Development Operation, Richland, Wash. Aug 59. Contract AT(45-1)-1350. 61p. Order from OTS. $1.50. HW-61662

Analytical program for processing stainless steel uranium dioxide reactor fuel elements, by G. A. Huff. Phillips Petroleum Co. Atomic Energy Division, Idaho Falls, Idaho. Sep 59. Contract AT(10-1)-205. 20p. Order from OTS. 75 cents. IDO-14493

Quantitative gamma-ray spectrometric analysis of nuclide mixtures consecutive standard sources nullification, by D. G. Olson. Chemical Processing Plant. Operated by Phillips Petroleum Co. Atomic Energy Division, Idaho Falls, Idaho. Oct 59. Contract AT(10-1)-205. 23p. Order from OTS. 75 cents. IDO-14495

Observations on creep of tantalum, by G. Murphy and R. E. Uhrig. Iowa State University of Science and Technology. Ames, Laboratory, Ames, Iowa. Aug 59. Contract W-7405-eng-82. 29p. Order from OTS. $1.00. IS-26

A method of specimen corrosion protection for high temperature creep testing, by J. R. Bohn, R. E. Uhrig and G. Murphy. Iowa State University of Science and Technology. Ames Laboratory, Ames, Iowa. Oct 59. Contract W-7405-eng-82. 16p. Order from OTS. 50 cents. IS-48

Phase diagrams of nuclear reactor materials, by R. E. Thoma. Oak Ridge National Laboratory, Reactor Chemistry Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 206p. Order from OTS. $3.50. ORNL-2548

Thermodynamic estimate of the reaction of hydrogen with oxygen-bearing impurities in Salado salt at elevated temperatures, by W. D. Bond and W. E. Clark. Oak Ridge National Laboratory. Chemical Technology Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 24p. Order from OTS. 75 cents. ORNL-2600(Deleted)

The configurational relationship of 1, 2, 2-triphenylethylamine and 1, 2, 2-triphenylethanol, J. B. Christie. Oak Ridge National Laboratory. Chemistry Division, Oak Ridge, Tenn. Oct 59. Contract W-7405-eng-26. 79p. Order from OTS. $2.25. ORNL-2786

Electrolytic disintegration of Zircaloy-2 in nitric acid solutions, by W. E. Clark and S. Peterson. Oak Ridge National Laboratory. Chemical Technology Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 18p. Order from OTS. 75 cents. ORNL-2824

Micro-electrophoretic determination of the zeta potential of thorium oxide, by C. M. Boyd, H. P. House and O. Menis. Oak Ridge National Laboratory. Analytical Chemistry Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 24p. Order from OTS. 75 cents. ORNL-2836

Hydroclimatology and surface hydrology of San Clemente Island, by J. B. Knox and H. Zodtner. University of California. Lawrence Radiation Laboratory, Livermore, Calif. Oct 59. Contract W-7405-eng-48. 22p. Order from OTS. 75 cents. UCRL-5709

Bio-organic chemistry quarterly report, March, April, May 1959, by G. Tollin, D. R. Kearns and others. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. June 59. Contract W-7405-eng-48. 80p. Order from OTS. $2.25. UCRL-8848

The crystal structures of several organic compounds, by F. J. Strieter. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Sep 59. Contract W-7405-eng-48. 41p. Order from OTS. $1.50. UCRL-8906

The recovery of uranium from reduction residues by semicontinuous ion exchange, by N. J. Setter, J. M. Googin, and G. B. Marrow. Union Carbide Nuclear Co. Division of Union Carbide Corp., Y-12 Plant, Oak Ridge, Tenn. Oct 59. Contract W-7405-eng-26. 21p. Order from OTS. 75 cents. Y-1257

Chemistry—Separation Processes for Plutonium and Uranium

Characterization of surfactants in aluminum-uranium fuel reprocessing solutions, by R. D. Cannon. Phillips Petroleum Co. Atomic Energy Division, Idaho Falls, Idaho. Oct 59. Contract AT(10-1)-205. 17p. Order from OTS. 75 cents. IDO-14489

Recovery of uranium and plutonium from sulfuric acid decladding solutions, by D. E. Horner and C. F. Coleman. Oak Ridge National Laboratory. Chemical Technology Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 46p. Order from OTS. $1.50. ORNL-2830

Controlled Thermonuclear Processes

Proceedings of symposium on magnetic field design in thermonuclear research held at Gatlinburg, Tennessee, December 11 and 12, 1958. Oak Ridge National Laboratory, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 90p. Order from OTS. $2.25. ORNL-2745

Cross sections for the dissociation of H_2^+ and D_2^+ by a vacuum carbon arc, by R. G. Alsmiller, Jr. Oak Ridge National Laboratory. Neutron Physics Division, Oak Ridge, Tenn. Oct 59. Contract W-7405-eng-26. 19p. Order from OTS. 75 cents. ORNL-2766

Coherent radiation from a plasma, by E. G. Harris and A. Simon. Oak Ridge National Laboratory. Neutron Physics Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 11p. Order from OTS. 50 cents. ORNL-2803

Diffusion of plasma particles across a magnetic field, by A. Isihara and A. Simon. Oak Ridge National Laboratory. Neutron Physics Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 10p. Order from OTS 50 cents. ORNL-2826

Critical current for burnout in an OGRA-type device, by A. Simon. Oak Ridge National Laboratory. Neutron Physics Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 50p. Order from OTS. $1.50. ORNL-2831

Proceedings of a conference on the theoretical aspects of controlled fusion research held at Gatlinburg, Tennessee, April 27-28, 1959. Oak Ridge National Laboratory, Oak Ridge, Tenn. Nov 59. 22p. Order from OTS. $3.00 TID-7582

A theory on a homopolar device, by C. C. Chang and T. S. Lundgren. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Sep 59. Contract W-7405-eng-48. 23p. Order from OTS. 75 cents. UCRL-8877

Criticality Studies

An empirical interpretation of annuli critical mass data, by C. L. Schuske and G. H. Bidinger. The Dow Chemical Co. Rocky Flats Plant, Technical Section, Denver, Colo. Oct 59. Contract AT (29-1)-1106. 25p. Order from OTS. 75 cents. RFP-149

Critical measurements on near-homogeneous BeO-moderated, oralloy-fueled systems, by F. A. Kloverstrom, R. M. R. Deck, and A. J. Reyenga. University of California Lawrence Radiation Laboratory, Livermore, Calif. July 59. Contract W-7405-eng-48. 14p. Order from OTS. 50 cents. UCRL-5369 Pt. 1

Geology and Mineralogy

Induced polarization. A study of its causes and magnitudes in geologic materials, by T. R. Madden and D. J. Marshall. Massachusetts Institute of Technology, Cambridge, Mass. June 59. Contract AT(05-1)-718. 71p. Order from OTS. Order from OTS. $2.25. RME-3160

Health and Safety

Fisson product release from uranium heated in air, by R. K. Hilliard. Hanford Atomic Products Operation, Chemical Effluents Technology, Chemical Research and Development Operation, Richland, Wash. Aug 59. Contract AT(45-1)-1350. 36p. Order from OTS. $1.25. HW-60689

Evaluation of fallout data, by A. A. Jarrett. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Dec 59. Contract AT(11-1)-GEN-8. 16p. Order from OTS. 50 cents. NAA-SR-3972

Radiation accidents: Dosimetric aspects of neutron and gamma-ray exposures, by G. S. Hurst and R. H. Ritchie. Oak Ridge National Laboratory, Health Physics Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 120p. Order from OTS. $2.75. ORNL-2748

Health Physics Division annual progress report for period enging July 31, 1959, by K. Z. Morgan. Oak Ridge National Laboratory, Oak Ridge Tenn. (nd). Contract W-7405-eng-26. 221p. Order from OTS. $3.50. ORNL-2806

Instruments

Development of remote metallographic equipment for the ANL Metallurgy Division, by S. H. Paine and F. L. Brown. Argonne National Laboratory, Metallurgy Division, Lemont, Ill. Nov 59. Contract W-31-109-eng-38. 29p. Order from OTS. $1.00. ANL-5364

A cladding thickness tester for zirconium over uranium, by A. P. Holt. E. I. du Pont de Nemours & Co. Explosives Department, Atomic Energy Division, Technical Division, Savannah River Laboratory, Aiken, S. Car. Sep 59. Contract AT(07-2)-1. 12p. Order from OTS. 50 cents. DP-408

An aural alpha-beta-gamma monitor, by W. G. Spear and G. D. Crouch. Hanford Atomic Products Operation. Instrument Research and Development, Physics and Instrument Research and Development Operation, Richland, Wash. May 59. Contract W-31-109-Eng-52. 22p. Order from OTS. 75 cents. HW-56128 REV

A stack effluent radioisotope monitor, by R. A. Harvey. Hanford Atomic Products Operation. Instrument Research and Development, Physics and Instruments Research and Development Operation, Richland, Wash. Oct 58. Contract W-31-109-Eng-52. 36p. Order from OTS. $1.25. HW-56151 REV

A null balance x-ray absorption instrument for chemical process monitoring, by B. E. Dozer. Hanford Atomic Products Operation. Chemical Research and Development Operation, Richland, Wash. June 59. Contract W-31-109-Eng-52. 62p. Order from OTS. $1.75. HW-60898

Dose and flux measurements on Godiva radiation effects experiments, by P. S. Harris, E. F. Montoya, and W. H. Schweitzer. University of California. Los Alamos Scientific Laboratory, Los Alamos, N. Mex. Nov 59. Contract W-7405-ENG-26. 16p. Order from OTS. 75 cents. LA-2355

Instrumentation and controls division annual progress report for the period ending July 1, 1959, by C. J. Borkowski and C. S. Harrill. Oak Ridge National Laboratory, Oak Ridge, Tenn. 1959. Contract W-7405-eng-26. 160p. Order from OTS. $3.00. ORNL-2787

A magnetic core circuit for the reliable production of single pulses from contacts, by R. J. Klein. Oak Ridge National Laboratory. Instrumentation and Controls Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 47p. Order from OTS. $1.50. ORNL-2794

A versatile instrument camera with a microsecond electronic shutter, by C. H. Schalbe. Oak Ridge National Laboratory. Instrumentation and Controls Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 52p. Order from OTS. $1.50. ORNL-2804

Single-channel gamma ray spectrometer, model G-1, by J. R. Mann. The Dow Chemical Co. Rocky Flats Plant, Health Physics Department, Denver, Colo. Nov 59. Contract AT(29-1)-1106. 32p. Order from OTS. $1.00. RFP-162

Inflatable gasket for the 72-inch bubble chamber, by L. R. Lucas and H. P. Hernandez. University of California. Laboratory, Berkeley, Calif. July 59. Contract W-7405-eng-48. 50p. Order from OTS. $1.50. UCRL-8526Rev

Production leak rate detection systems, by H. S. Corey, III. Union Carbide Nuclear Co. Division of Union Carbide Corp., Y-12 Plant, Oak Ridge, Tenn. Nov 59. Contract W-7405-eng-26. 26p. Order from OTS. $1.00. Y-1275

Determination of metallic impurities in uranyl nitrate solutions by X-ray fluorescence, by R. E. Sladky. Union Carbide Nuclear Co. Division of Union Carbide Corp., Y-12 Plant, Oak Ridge, Tenn. Dec 59. Contract W-7405-eng-26. 25p. Order from OTS. 75 cents. Y-1276

Optimizing the ratio of time constant to radiation level for precision count-rate meters, by A. H. Fowler and R. A. McLean. Union Carbide Nuclear Co. Division of Union Carbide Corp., Y-12 Plant, Oak Ridge, Tenn. Dec 59. Contract W-7405-eng-26. 18p. Order from OTS. 75 cents. Y-1278

Metallurgy and Ceramics

Hanford experience in the nondestructive testing of nuclear process vessels and process piping, by R. B. Socky. Hanford Atomic Products Operation, General Electric Co., Richland, Wash. Oct 58. 68p. Order from OTS. $2.00. AECU-4274

Some aspects of the beta to alpha transformation in uranium: Metallographic structure and orientation relationships, by H. H. Chiswick and L. T. Lloyd. Argonne National Laboratory, Metallurgy Division, Lemont, Ill. Nov 59. Contract W-31-109-eng-38. 22p. Order from OTS. 75 cents. ANL-5777

Corrosion of aluminum-uranium alloys in high-temperature water, by W. E. Ruther and J. E. Draley. Argonne National Laboratory, Metallurgy Division, Lemont, Ill. Nov 59. Contract W-31-109-eng-38. 8p. Order from OTS. 50 cents. ANL-6053

Solubility limits of yttrium and the lanthanide rare-earth elements in chromium and chromium-iron alloys, by S. G. Epstein, A. A. Bauer, and R. F. Dickerson. Battelle Memorial Institute, Columbus, Ohio. Sep 59. Contract W-7405-eng-92. 16p. Order from OTS. 75 cents. BMI-1376

Progress relating to civilian application during August, 1959, by R. W. Dayton and C. R. Tipton, Jr. Battelle Memorial Institute, Columbus, Ohio. Sep 59 Contract W-7405-eng-92. 99p. Order from OTS. $2.50. BMI-1377

Progress relating to civilian application during September, 1959, by R. W. Dayton and C. R. Tipton, Jr. Battelle Memorial Institute, Columbus, Ohio. Oct 59. Contract W-7405-eng-92. 95p. Order from OTS. $2.50. BMI-1381

A study of the effects of fabricating conditions on some properties of sintered uranium monocarbide, by A. B. Tripler, Jr., M. J. Snyder, and W. H. Duckworth. Battelle Memorial Institute, Columbus, Ohio. Oct 59. Contract W-7405-eng-92. 15p. Order from OTS. 75 cents. BMI-1383

The solid solubility and constitution of yttrium in iron-20 to 40 w/o chromium alloys, by M. S. Farkas and A. A. Bauer. Battelle Memorial Institute, Columbus, Ohio. Oct 59. Contract W-7405-eng-92. 22p. Order from OTS. 75 cents. BMI-1386

A visual study of the corrosion of defected Zircaloy-2-clad fuel specimens by hot water, by E. F. Stephan, P. D. Miller, and F. W. Fink. Battelle Memorial Institute, Columbus, Ohio. Oct 59. Contract W-7405- eng-92. 31p. Order from OTS. $1.00. BMI-1387

Mechanical properties of uranium plate, by G. R. Caskey, Jr. E. I. du Pont de Nemours & Co., Explosives Department, Atomic Energy Division, Technical Division, Savannah River Lab., Aiken, S. Car. June 59. Contract AT(07-2)-1. 22p. Order from OTS. 75 cents. DP-376

Interim report on the hydrostatic destructive testing of Zircaloy-2 pressure tubing, by V. E. Kahle. Hanford Atomic Products Operation. Richland, Wash. Oct 59. Contract AT(45-1)-1350. 51p. Order from OTS. $1.50. HW-61272 REV

Corrosion of Inconel in 600°F static water, by G. E. Galonian and H. L. Tymchyn. General Electric Co. Knolls Atomic Power Lab., Schenectady, N. Y. May 59. Contract W-31-109-Eng-52. 25p. Order from OTS. 75 cents. KAPL-2047

Terminal status report for the processing refabrication experiment, by D. I. Sinizer, K. L. Mattern, E. G. Kendall and others. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Nov 59. Contract AT(11-1)-GEN-8. 202p. Order from OTS. $3.50. NAA-SR-3269

Hot-pressure bonding of OMR fuel plates, by G. V. Alm, M. H. Binstock, and E. E. Garrett. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Nov 59. Contract AT(11-1)-GEN-8. 61p. Order from OTS. $1.75. NAA-SR-3583

Casting development for uranium-molybdenum alloy shapes, by M. H. Binstock and J. A. Stanley. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Nov 59. Contract AT(11-1)-GEN-8. 28p. Order from OTS. 75 cents. NAA-SR-4030

Fused silica for reactor applications. Progress report no. 1, project no. B-153 for November 14, 1958 to August 15, 1959, by J. D. Fleming and J. W. Johnson. Georgia Institute of Technology, Atlanta, Georgia. Nov 59. Contract AT-(40-1)-2483. 65p. Order from OTS. $1.75. ORO-209

Thoria-urania pellet preparation, by H. Shapiro and R. M. Powers. Sylvania-Corning Nuclear Corp., Bayside, Long Island, N. Y. Aug 59. Contract AT-30-GEN-366. 34p. Order from OTS. $1.00. SCNC-290

Recoil range of fission fragments in zirconium, by E. R. Smith and P. W. Frank. Westinghouse Electric Corp. Bettis Atomic Power Laboratory, Pittsburgh, Pa. Nov 59. Contract AT-11-1-GEN-14. 8p. Order from OTS. 50 cents. WAPD-TM-198

Cost of blending uranium of two different U^{235} isotopic enrichments. {Values of uranium from the "USAEC unclassified pricing list"). Union Carbide Nuclear Company. Division of Union Carbide Corp., Process Analysis Department, Y-12 Plant, Oak Ridge, Tenn. Dec 59. Contract 7405-eng-26. 270p. Order from OTS. $4.00. Y-1258

Physics and Mathematics

Flow through microporous media vapor transfer through barriers, by L. O. Rutz and K. Kammermeyer. State University of Iowa. Department of Chemical Engineering, Iowa City, Iowa. July 59. Contract AT(11-1)-237. 59p. Order from OTS. $1.75. AECU-4328

Variable metric method for minimization, by W. C. Davidon. Argonne National Laboratory, Lemont, Ill. Nov 59. Contract W-31-109-eng-38. 21p. Order from OTS. 75 cents. ANL-5990 Rev.

Analytic solution of the steady-state wave equation in three dimensions and in irregularly shaped domains with an application to a reactor with partially inserted control rods, by E. J. Betinis. Argonne National Laboratory, Lemont, Ill. Sep 59. Contract W-31-109-38. 99p. Order from OTS. $2.50. ANL-6051

High-flux heat transfer studies: An analytical investigation of laminar film boiling, by P. W. McFadden and R. J. Grosh. Argonne National Laboratory, Lemont, Ill. Oct 59. Contract W-31-109-eng-38. Sub-contract 31-109-38-704. 59p. Order from OTS. $1.75. ANL-6060

Particle escape from the ends of cylindrical tubes, by J. R. Terrall. General Electric. Atomic Products Division, Aircraft Nuclear Propulsion Department, Cincinnati, Ohio. Mar 58. Contracts AT(11-1)-171 and AF 33(600)-38062. 35p. Order from OTS. $1.00. APEX-525

Uranium-235 fission product activity and energy as a function of decay time for a specific irradiation time and thermal flux, by C. B. Magee. General Electric. Atomic Products Division, Aircraft Nuclear Propulsion Department, Cincinnati, Ohio. Apr 59. Contracts AT(11-1)-171 and AF 33(600)-38062. 20p. Order from OTS. 75 cents. APEX-530

IBM 704 program report, aircraft nuclear propulsion shielding program 09-0, by J. W. Haffner, J. J. Loechler, and J. E. MacDonald. General Electric. Atomic Products Division, Aircraft Nuclear Propulsion Department, Cincinnati, Ohio. Dec 58. Contracts AT(11-1)-171 and AF 33(600)-38062. 32p. Order from OTS. $1.00. APEX-533

Elastic scattering of alpha particles by N^{15}, by H. H. Smotrich. Columbia University. Department of Physics, New York, N. Y. Apr 59. Contract AT(30-1)-Gen-72. 106p. Order from OTS. $2.50. CU-188

Optical spectra excited in the noble gases at high pressures by polonium alpha particles, by W. R. Bennett, Jr. Columbia University. Department of Physics, New York, N. Y. May 59. Contract AT(30-1)-GEN-72. 81p. Order from OTS. $2.25. CU-195

The determination of photoneutron thresholds, by W. S. Rawls and L. J. Laslett. Iowa State College. Ames Laboratory, Ames, Iowa. Mar 59. Contract W-7405-eng-82. 94p. Order from OTS. $2.25. ISC-1173

Thermal cycling test of type 347 stainless steel in-pile tubes, by S. Bigelow. General Electric Co. Knolls Atomic Power Laboratory, Schenectady, N. Y. Mar 59. Contract W-31-109-Eng-52. 24p. Order from OTS. $1.00. KAPL-2009

On some mathematical problems suggested by biological schemes, by C. Luehr. University of California. Los Alamos Scientific Laboratory, Los Alamos, N. Mex. Nov 59. Contract W-7405-ENG-36. 24p. Order from OTS. $1.00. LAMS-2356

Equations of state of liquid and gaseous normal hydrogen and the application of multiple regression techniques to curve fitting, by R. H. Sherman and others. University of California. Los Alamos Scientific Laboratory, Los Alamos, N. Mex. Oct 59. Contract W-7405-ENG-36. 32p. Order from OTS. $1.00. LAMS-2357

Convergence of the S_N method for thermal systems, by E. Blue and H. P. Flatt. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Nov 59. Contract AT(11-1)-GEN-8. 37p. Order from OTS. $1.25. NAA-SR-4058

Perturbation theory and reactor analysis, by E. Blue and J. W. Zink. Atomics International. A Division of North American Aviation, Inc., Canoga Park, Calif. Nov 59. Contract AT(11-1) GEN-8. 15p. Order from OTS. 50 cents. NAA-SR-4351

Calculation of the effective resonance integral of U^{238}, by A. R. Vernon. Atomics International. A Division of North American Aviation, Inc. Canoga Park, Calif. Nov 59. Contract AT(11-1)-GEN-8. 22p. Order from OTS. 75 cents. NAA-SR-4418

Energy and angular distribution of the particles resulting from the collision of a 15 Bev proton with a nucleon at rest, by W. Smith. Midwestern Universities Research Association, Madison, Wis. Sep 59. Contract AT(11-1)-384. 36p. Order from OTS. $1.00. MURA-530

Bevatron operation and Development. XX. November, December 1958, January 1959, by W. D. Hartsough. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Sep 59. Contract W-7405-eng-48. 23p. Order from OTS. 75 cents. UCRL-8834

Construction of a high-power RF window, by K. C. Crebbin and D. F. Mosier. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Sep 59. Contract W-7405-eng 48. 15p. Order from OTS. 50 cents. UCRL-8874

Radiation Effects on Materials

Effects of high neutron and gamma fluxes on the transmission characteristics of some optical glasses, by J. L. Colp and H. N. Woodall. Sandia Corporation. Albuquerque, N. Mex. Nov 59. 12p. Order from OTS. 75 cents. SCR-127

Radioactive Waste

Procedures for decontamination of plutonium from various surfaces, by E. L. Christensen. University of California. Los Alamos Scientific Laboratory, Los Alamos, N. Mex. Nov 59. Contract W-7405-ENG-36. 25p. Order from OTS. $1.00. LAMS-2319

Reactors—General

Terminal report on the Mighty Mouse high-flux research reactor project, by L. E. Link and others. Argonne National Laboratory, Lemont, Ill. Sep 59. Contract W-31-109-eng-38. 225p. Order from OTS. $3.50. ANL-5928

Prototype boiling water reactor, by J. M. Harrer. Argonne National Laboratory, Lemont, Ill. Oct 59. Contract W-31-109-eng-38. 76p. Order from OTS. $2.25. ANL-6019

Design and hazards report for the Argonne Fast Source Reactor (AFSR), by G. S. Brunson and others. Argonne National Laboratory, Lemont Ill. June 59. Contract W-31-eng-38. 64p. Order from OTS. $1.75. ANL-6024

Isotopic abundance and the variation of N in irradiated nuclear fuels consisting initially of combinations of Th^{232}, U^{238}, and U^{235}, by J. C. Carter and R. C. Howard. Argonne National Laboratory, Lemont, Ill. Oct 59. Contract W-31-109-eng-38. 71p. Order from OTS. $2.00. ANL-6067

Reactors—Power

Boiling water reactor with internal superheater; Pathfinder Atomic Power Plant final feasibility report. Allis-Chalmers Manufacturing Co. Atomic Energy Division, Milwaukee, Wis. Aug 59. Contract AT(11-1)-589. 86p. Order from OTS. $2.25. ACNP-5917

Fluid-bed conversion of uranium tetrafluoride to uranium hexafluoride, by G. J. Vogel and W. J. Mecham. Argonne National Laboratory, Chemical Engineering Division, Lemont, Ill. Oct 59. Contract W-31-109-eng-38. 25p. Order from OTS. 75 cents. ANL-6054

Lecture notes on heat extraction from boiling water power reactors, by P. A. Lottes, M. Petrick, and J. F. Marchaterre. Argonne National Laboratory, Lemont, Ill. Oct 59. Contract W-31-109-eng-38. 167p. Order from OTS. $3.00. ANL-6063

Construction materials for various head-end processes for the aqueous reprocessing of spent fuel elements, by C. L. Peterson, P. D. Miller, J. D. Jackson, and F. W. Fink. Battelle Memorial Institute, Columbus, Ohio. Aug 59. Contract W-7405-eng-92. 127p. Order from OTS. $2.75. BMI-1375

Continuous solvent washing - Hydraulic operating characteristics of a large-scale continuous solvent washer, by A. A. Kishbaugh. E. I. du Pont de Nemours & Co. Explosives Dept., Atomic Energy Division, Technical Division, Savannah River Lab., Aiken, S. Car. Apr 59. Contract AT(07-2)-1. 16p. Order from OTS. 50 cents. DP-333

Electrodeposition of plutonium at a mercury cathode, by J. A. Porter and others. E. I. du Pont de Nemours & Co. Explosives Dept., Atomic

The ORNL four-linear-element package analog computer (FLEPAC) instruction manual, by F. P. Green. Oak Ridge National Laboratory, Instrumentation and controls Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 32p. Order from OTS. $1.00. ORNL-2727

Generalized heat conduction code for the IBM-740 computer, by T. B. Fowler and E. R. Volk. Oak Ridge National Laboratory, Reactor Experimental Engineering Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 66p. Order from OTS. $1.75. ORNL-2734

Fission products poisoning data, by N. J. Pattenden. Oak Ridge National Laboratory, Physics Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 28p. Order from OTS. $1.00. ORNL-2778

A study of alpha particle ionization in argon mixtures, by F. W. Sanders, G. S. Hurst, and T. E. Bortner. Oak Ridge National Laboratory. Health Physics Division, Oak Ridge, Tenn. Oct 59. Contract W-7405-eng-26. 58p. Order from OTS. $1.75. ORNL-2807

Scintillation spectroscopy measurements of gamma-ray energies from sources of Y^{88}, Mn^{54}, and Zn^{65}, by R. W. Peelle and T. A. Love. Oak Ridge National Laboratory, Neutron Physics, Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 33p. Order from OTS. $1.00. ORNL-2790

Tables for a semi-infinite circular current sheet, by N. B. Alexander and A. C. Downing. Oak Ridge National Laboratory. Mathematics Panel, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 181p. Order from OTS. $3.00. ORNL-2828

Neutron Physics Division annual progress report for period ending September 1, 1959, by E. P. Blizard and others. Oak Ridge National Laboratory. Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 237p. Order from OTS. $4.00. ORNL-2842

Studies of the spherical harmonics method in neutron transport theory. III. Distribution of the roots of the characteristic equation in the case of anisotropic scattering, by W. Kofink. Oak Ridge National Laboratory, Physics Division, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 32p. Order from OTS. $1.00. ORNL-2850

High-energy particle data. Volume I, by B. H. Willis and C. V. Stableford. University of California. Radiation Laboratory, Berkeley, Calif. Nov 56. Contract W-7405-eng-48. 88p. Order from OTS. $2.25. UCRL-2426(rev.)

Proceedings of the second symposium on advances in fast-pulse techniques for nuclear counting held at the Lawrence Radiation Laboratory, February 12 and 13, 1959. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. 1959. 132p. Order from OTS. $3.00. UCRL-8706

S-wave $\bar{K}$-N scattering amplitudes, by U. Kruse and M. Nauenberg. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Sep 59. Contract W-7405-eng-48. 15p. Order from OTS. 50 cents. UCRL-8888

Physics Division semiannual report November 1958 through April 1959. University of California. Lawrence Radiation Laboratory, Berkeley, Calif. Aug 59. Contract W-7405-eng-48. 46p. Order from OTS. $1.25. UCRL-8936

TUT-T5 - A two-dimensional Monte Carlo calculation of capture probabilities for the IBM-704, by J. Spanier, H. Kuehn and W. Guilinger. Westinghouse Electric Corp., Bettis Atomic Power Laboratory, Pittsburgh, Pa. Nov 59. Contract AT-11-1-GEN-14. 40p. Order from OTS. $1.25. WAPD-TM-125

TKO - A three-dimensional neutron-diffusion code for the IBM-704, by W. R. Cadwell. Westinghouse Corp. Bettis Atomic Power Laboratory, Pittsburgh, Pa. Oct 59. Contract AT-11-1-GEN-14. 44p. Order from OTS. $1.25. WAPD-TM-143

Progress Reports

Quarterly progress report April 1 - June 30, 1959. Brookhaven National Laboratory, Associated Universities, Inc., Upton, N. Y. 1959. 77p. Order from OTS. $2.25. BNL-564 (S-51)

Particle Accelerators and High-Voltage Machines

Effects of radial straight sections on the betatron oscillation frequencies in a spiral sector FFAG accelerator, by R. A. Dory and P. L. Morton. Midwestern Universities Research Association, Madison, Wis. Sep 59. Contract AT(11-1)-384. 10p. Order from OTS. 50 cents. MURA-514

Energy Division, Technical Division, Savannah River Lab., Aiken, S. Car. June 59. Contract AT(07-2)-1. 13p. Order from OTS. 50 cents. DP-388

Roughening of heat transfer surfaces as a method of increasing the heat flux at burnout. Progress report no. 1, by W. S. Durant and S. Mirshak. E. I. du Pont de Nemours & Co. Explosives Dept., Atomic Energy Division, Technical Division, Savannah River Lab., Aiken, S. Car. July 59. Contract AT(07-2)-1. 20p. Order from OTS. 75 cents. DP-380

Heavy water moderated power reactors. Progress report for May and June 1959, by L. Bernath and L. Isakoff. E. I. du Pont de Nemours & Co., Explosives Dept., Atomic Energy Division, Technical Division, Wilmington, Dela. Sep 59. Contract AT(07-2)-1. 55p. Order from OTS. $1.50. DP-395

Apparatus for solvent extraction of milliliter quantities of highly radioactive solutions, by R. M. Wallace and H. Pollock. E. I. du Pont de Nemours & Co. Explosives Dept., Atomic Energy Division, Technical Division, Savannah River Laboratory, Aiken, S. Car. Sep 50. Contract AT(07-2)-1. 10p. Order from OTS. 50 cents. DP-411

Heavy water components test reactor. Savannah River Plant. plans and estimate. E. I. du Pont de Nemours & Co. Explosives Dept., Atomic Energy Division, Technical division, Wilmington, Dela. Oct 59. Contract AT(07-2)-1. 31p. Order from OTS. $1.00. DP-412

Stable Isotope Separation

Isotope separation and isotope exchange. A bibliography with abstracts, by G. M. Begun. Oak Ridge National Laboratory, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 242p. Order from OTS. $3.50. ORNL-2852

Technology—Feed Materials

Removal of chloride from nitric acid by oxidation with permanganate, by G.P. Lang and others. Mallinckrodt Chemical Works. Uranium Division, Weldon Spring, Mo. Nov 59. Contract W-14-108-Eng-8. 25p. Order from OTS. 75 cents. MCW-1436

Pilot plant development of a sulfuric-acid solvent treatment process, by J. T. Krieg, N. G. Holloway, and N. Simecek. Mallinckrodt Chemical Works. Uranium Division, Weldon Spring, Mo. Nov 59. Contract W-14-108-Eng-8. 16p. Order from OTS. 75 cents. MCW-1438

Technology—Raw Materials

Solvent extraction recovery of vanadium (and uranium) from acid liquors with di(2-ethylhexyl) phosphoric acid, by D. J. Crouse and K. B. Brown. Oak Ridge National Laboratory, Oak Ridge, Tenn. (nd). Contract W-7405-eng-26. 81p. Order from OTS. $2.25. ORNL-2820

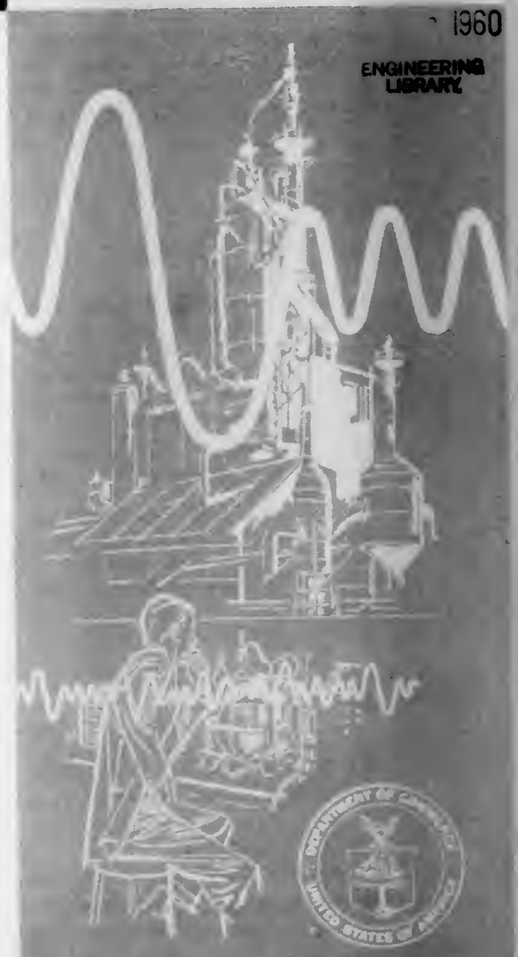
RESEARCH REPORTS



In this issue:

Development of a Method to Accomplish Aluminum Deposition by Gas Plating

High-Speed, Electromechanical Goggle

Basic Research in the Navy

Techniques for Application of Electron Tubes in Military Equipment

Ratproofing of Ships

Emergency Escape Capsule Studies

Cryogenic Materials Data Handbook

Some Notes on Safe Handling Practices for Beryllium

Electronic Designer's Shock and Vibration Guide for Airborne Applications

Complete list of printed reports begins on page 231

U. S. DEPARTMENT OF COMMERCE
BUSINESS AND DEFENSE SERVICES ADMINISTRATION
Office of Technical Services

The PB Reports . . .

announced in this publication have just been released, usually by agencies of the U. S. Government, for dissemination to the public. In most instances they result from Government or Government-sponsored research.

The Office of Technical Services is responsible, under Public Law 776, 81st Congress, for the collection and distribution of these technical reports in the interest of American science and industry.

The more important reports are reprinted for sale to the public by OTS. Many of the reports are so specialized that the demand for them does not warrant reproduction of printed copies; originals of these documents are deposited at the Library of Congress. There they may be inspected in the Annex Reading Room, or copies may be ordered from the Library in either photocopy or microfilm.

PB reports of special interest to smaller businesses are abstracted in OTS's monthly *Technical Reports Newsletter*, available from the Superintendent of Documents, Washington 25, D. C., at $1 a year domestic, $1.50 foreign.

Since 1945 thousands of business firms have used PB reports in their research programs. These reports now constitute one of the world's largest collections of non-confidential technical information, numbering over 250,000 items. OTS has published catalogs of related reports in more than 300 areas of industrial interest. For further information relative to any of its activities, you are invited to write OTS, U. S. Department of Commerce, Washington 25, D. C.

Except to the extent indicated by acknowledgment of authorship, OTS does not edit PB reports, nor does it accept responsibility for the information and conclusions contained in them. If copyrighted material appears, permission for its use should be requested from the copyright owners. Any national security restrictions that may have applied to these reports have been removed. Patents may cover the subject matter of any report, and the reader is advised to make patent searches before developing applications based on the reports.

How To Order

ALWAYS USE COMPLETE TITLE AND PB NUMBER of each report ordered. The letter "s" accompanying some PB numbers means "supplement," "t" means "translation," and "r" means a partial or complete revision. These letters should be included as part of the PB number. Prepayment is required.

TO ORDER FROM LC • Address your order to Library of Congress, Photoduplication Service, Publications Board Project, Washington 25, D. C. Make check or money order payable to Chief, Photoduplication Service, Library of Congress. State whether report is desired in microfilm or photocopy. Microfilm copies are in 35 millimeter film and require special reading equipment; if you do not have such a machine you may be able to use one at a library in your area.

TO ORDER FROM OTS • Address your order to Office of Technical Services, U. S. Department of Commerce, Washington 25, D. C. Make check or money order payable to OTS, Department of Commerce. Reports available from OTS may also be ordered through Department of Commerce field offices.

TO ORDER FROM OTHER SOURCES • When an agency other than OTS or LC is the source, use the full address included in the abstract of the report. Make check or money order payable to that agency.

U.S. GOVERNMENT RESEARCH REPORTS

U.S. DEPARTMENT OF COMMERCE
Frederick H. Mueller, *Secretary*

BUSINESS AND DEFENSE SERVICES ADMINISTRATION
William A. White, Sr., *Administrator*

Office of Technical Services
John C. Green, *Director*

Issued monthly. Annual subscription $9 ($2.50 additional for foreign mailing). Single copy $1. Make remittance payable to Superintendent of Documents and mail either to a Department of Commerce field office or to Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C. Address changes should be sent to Superintendent of Documents.

Contents may be reprinted freely. Mention of source will be appreciated.

Use of funds for printing this publication approved by the Director of the Bureau of the Budget, July 18, 1958

Printed Reports Available From OTS Announced in This Issue

Page

BEHAVIORAL SCIENCES

Comparison of one-, two-, and three-man control units under various conditions of traffic input rate. June 59. 22p. (PB 161 045) 75 cents 236
Effect of team size and intermember communication on decision-making performance. Apr 59. 16p. (PB 151 967) 50 cents 238

BIOLOGICAL SCIENCES

Pulmonary blood volume and circulatory alterations in dogs exposed to compensated high intrapulmonary pressures. Apr 59. 18p. (PB 151 966) 50 cents 240
Sustained operant behavior in mice; a model for behavioral research in biosatellites. Aug 59. 14p. (PB 161 298) 50 cents 239

CHEMISTRY

Ion exchange and other chemical methods for beryllium base alloys. Sep 59. 41p. (PB 161 295) $1.25 246

EARTH SCIENCES

The ARDC model atmosphere, 1959. Aug 59. 151p. (PB 161 305) $2.75 256

ENGINEERING

Cryogenic materials data handbook: Master graphs. Dec 59. 36p. (PB 161 093-2) $1.00 276
Design study of an aircraft cargo-handling system for high-floor aircraft. June 59. 118p. (PB 161 294) $2.50 258
Development of low alloy steel compositions suitable for high strength steel castings. June 59. 116p. (PB 161 044) $2.50 257
Electronic designer's shock and vibration guide for airborne applications. Dec 58. 260p. (PB 161 299) $4.00 271
Emergency escape capsule studies. Phase I. Preliminary laboratory flotation studies. June 59. 21p. (PB 161 042) 75 cents 257
Future application trends for titanium and steel in military aircraft. May 59. 7p. (PB 161 167) 50 cents 258
Investigation of impulse-voltage breakdown in polyethylene. Dec 59. 58p. (PB 151 955) $1.50 269
Operation of pilot plant LTV evaporator at Wrightsville Beach, North Carolina. July 59. 98p. (PB 161 290) $2.75 260
Ratproofing of ships. July 59. 73p. (PB 161 019) $1.50 279
Techniques for application of electron tubes in military equipment (tube types other than receiving tubes). Dec 58. 206p. (PB 151 979) $3.50 264
Techniques for application of electron tubes in military equipment (tube types other than receiving tubes). June 59. 189p. (PB 161 088) $3.00 264

MACHINERY, FABRICATION, AND ACCESSORY EQUIPMENT

Evaluation of protective coatings for molybdenum nozzle guide vanes. June 59. 47p. (PB 151 912) $1.25 280
Review of electrical machining methods. Aug 59. 14p. (PB 161 178) 50 cents 281
Spindle shaping of titanium sheet. July 59. 4p. (PB 161 176) 50 cents 281

Page

MATERIALS

Glass-bonded refractory coatings for iron- or nickel-base alloys. Apr 59. 19p. (PB 161 166) 50 cents ... 283
Investigation of liquid nitric oxide as a rocket oxidizer. May 59. 29p. (PB 161 300) 75 cents ... 285
Mass transfer cooling of parachute materials. Sep 59. 97p. (PB 161 293) $2.25 ... 285
Statistical evaluation of data from fatigue and creep-rupture tests. Part I. Fundamental concepts and general methods. Sep 59. 80p. (PB 161 297) $2.00 ... 282
Thermal conductivity of lubricating oils and hydraulic fluids. July 59. 32p. (PB 161 040) $1.00 ... 284

MECHANICS

Aerodynamic studies: The forces acting on an air vehicle: A review of the literature. Dec 58. 105p. (PB 151 819) $2.50 ... 298
Mathematical example displaying features of turbulence. Mar 59. 75p. (PB 151 969) $2.00 ... 300

METALLURGY

Availability and properties of rhenium. May 59. 12p. (PB 161 169) 50 cents ... 305
Band sawing of titanium and titanium alloys. July 59. 15p. (PB 161 173) 50 cents ... 303
Belt grinding of titanium sheet and plate. Mar 59. 8p. (PB 161 161) 50 cents ... 303
Development of a method to accomplish aluminum deposition by gas plating. June 59. 64p. (PB 151 923) $1.75 ... 300
Effect of prior creep on short-time mechanical properties of 17-7 PH stainless steel (RH 950 condition compared to TH 1050 condition). Oct 59. 91p. (PB 161 296) $2.25 ... 302
Effect of high strain rates and rapid heating on the tensile properties of titanium alloys. Dec 58. 33p. (PB 161 155) 50 cents ... 303
Effects of inelastic action on the resistance to various types of loads of ductile members from various classes of metals. Part XI. Photoelastic analysis of I-beams with elliptic-type web cutouts. Sep 59. 27p. (PB 161 303) 75 cents ... 307
Elevated-temperature mechanical properties and oxidation resistance of columbium and its alloys. Feb 59. 12p. (PB 161 159) 50 cents ... 305
Fabrication of 17-7 PH and PH 15-7Mo stainless steel by bend rolling, deep drawing, and spinning. May 59. 5p. (PB 161 168) 50 cents ... 302
Hacksawing of titanium and titanium alloys. July 59. 13p. (PB 161 174) 50 cents ... 303
Implications of rhenium research in the design of refractory alloys. Feb 59. 4p. (PB 161 158) 50 cents ... 306
Influence of sheet thickness on tensile properties of metal sheet. Jan 59. 19p. (PB 161 156) 50 cents ... 307
Joining of beryllium. Mar 59. 28p. (PB 161 163) 50 cents ... 303
Machining of beryllium. June 59. 16p. (PB 161 171) 50 cents ... 304
Materials-property-design criteria for metals. Part 8. The creep behavior of selected materials in the range up to 1 per cent net creep strain and 1000 hours. Sep 59. 30p. (PB 161 302) 75 cents. ... 306
Nitriding of titanium. Aug 59. 13p. (PB 161 179) 50 cents ... 304
Physical and mechanical properties of molybdenum and the Mo-0.5 Ti alloy. Apr 59. 23p. (PB 161 164) 50 cents ... 306
Physical and mechanical properties of tantalum. Aug 59. 19p. (PB 161 182) 50 cents ... 304
Preparation and analysis of titanium-hydrogen standard samples. Feb 59. 14p. (PB 161 160) 50 cents ... 304
Profile milling titanium and its alloys. July 59. 4p. (PB 161 175) 50 cents ... 304
Properties of magnesium-thorium alloys. May 59. 29p. (PB 161 170) 50 cents ... 306

Page

METALLURGY (con.)

Recent advances in titanium technology. Oct 58. 34p. (PB 161 154) 50 cents ... 304
Research on strain aging effects in titanium. Sep 59. 70p. (PB 161 304) $1.75 ... 306
Routing of titanium sheet. June 59. 6p. (PB 161 172) 50 cents ... 305
Some metallurgical considerations in forging molybdenum, titanium, and zirconium. Mar 59. 43p. (PB 161 162) 50 cents. ... 301

BIBLIOGRAPHY OF REFERENCES RELATED TO HYDRO-SKI LOADS, by L. Kaplan. Rept. on Contract NOas 56-376-c. 16 Feb 59, 82p. 622 refs. Rept. no. 4438; AD-216 363.
Order from LC mi$4.80, ph$13.80 PB 144 303

The references listed are the result of a survey of hydro-ski literature, including reports on model, full scale and theoretical data. Since it was felt that some of the experience acquired in the development of hull seaplanes would be useful to the objectives of the subject contract, this bibliography contains a number of listings related to hull seaplane investigations.

ON THE VELOCITY OF METEORS DURING THEIR EVAPORATION, by F. Verniani. Technical note no. 1 on Contract AF 61(052)227. June 59, 9p. 5 refs. AFCRC-TN-59-575.
Order from LC mi$1.80, ph$1.80 PB 143 976

From Herlofson's equations for meteoric evaporation, it is deduced that part of the meteors cannot evaporate completely, owing to their excessive loss in speed; moreover, it is shown that the flight of all meteors is considerably retarded during the entire process of evaporation.

Flower [Astronomical] Observatory [Philadelphia] Pa.
W URSAE MAJORIS SYSTEMS, by L. Binnendijk. Final rept. on Contract Nonr-2320(00). [1958] 9p.

ON THE MECHANISMS OF METEORIC ABLATION, by Sin-I Cheng. Rept. on Contract AF 18(600)498. Apr 58, 37p. 14 refs. Rept. no. 427; AFOSR-TN-58-649; AD-162 181.
Order from LC mi$3.00, ph$6.30 PB 144 042

The deceleration of the meteor and the presence of a molten layer over the meteoric body results in an unstable liquid-gas interface that leads to the direct loss of mass as liquid droplets flying away from the meteoric surface. The feasibility of this mechanism is analytically shown and demonstrated with typical examples. By incorporating the present mechanism, the irregularity of the meteoric luminosity when compared with the calculated results of Opik's theory may be qualitatively explained and the occasional burst or flare of some meteors may be visualized. Several other observations of the meteoric phenomena also tend to verify the plausibleness of the proposed mechanism. (Portions of this report are illegible)

University of Southern California. Engineering Center, Los Angeles.
PRODUCTION OF CARBON IN THE UPPER ATMOSPHERE, by K. P. Chopra. Technical note on Contract AF 18(603)95, 31 July 59, 11p. 10 refs. USCEC rept. 56-208; AFOSR-TN-59-902.
Order from LC mi$2.40, ph$3.30 PB 144 474

This technical note describes a process by which penetrating cosmic rays may produce atomic carbon in the upper atmosphere. High energy cosmic ray particles bombard the atoms and molecules of the upper atmosphere and release neutrons along with other products of disintegration. Some of these neutrons escape outwards and undergo a natural free decay. Some others may collide with nitrogen atoms and produce atomic carbon with the release of a proton. These carbon atoms are radio-active and decay back into atomic nitrogen with the release of a high energy electron. But the fairly long lifetime (5569 years) ensures a copious supply of carbon atoms in the upper atmosphere. The other products of this process, viz. protons and electrons, may get trapped in the earth's magnetic field, and hence contribute to the formation of the inner radiation belt.

A SET OF DISCRIMINABLE SURFACE COLORS ANI SYMBOLS FOR CODING IN ANIMATED TRAINING PANELS, by Milton W. Horowitz and Robert Fromer. Rept. on Contract N61339-294. 5 May 59, 22p. 4 refs. Technical rept. NAVTRADEVCEN 20-OS-52.
Order from LC mi$2.70, ph$4.80 PB 143 821

This study, developed a simple reliable experiment to measure color discriminability, and also identified 15 colors and 10 symbols each of which is easily differentiated from the others. While alternate sets of colors might be found which are also highly discriminable, the 15 present colors should prove extremely useful to the equipment designer.

Laboratory of Aviation Psychology, Ohio State U. Research Foundation, Columbus.
A COMPARISON OF ONE-, TWO-, AND THREE-MAN CONTROL UNITS UNDER VARIOUS CONDITIONS OF TRAFFIC INPUT RATE, by J. S. Kidd. Rept. on Contract AF 33(616)3612. June 59, 22p. 20 refs. WADC Technical rept. 59-104; AD-225 965.
Order from OTS $0.75 PB 161 045

The performance of various sized pattern-feeder approach control teams was compared under three conditions of input load in a simulated air traffic control situation. Conditions in which either one, two, or three men operated the system were compared. Input loads were 90 sec, 60 sec, or 30 sec average interval between aircraft arrivals. Nine laboratory-trained controllers participated in a total of 54 problems. Results indicated a consistent decrement in performance as a function of increased input load. Crew augmentation led to only moderate facilitation of performance when the input load to the system was held constant and the number of controllers was increased. When input load was increased proportionately to the size of the control unit, there was a marked decline in system performance. It was concluded that simple crew augmentation imposes coordination demands that interfere with primary task activities. Maximum autonomy of system operators was recommended.

POSITION CHOICES AND CAREERS: ELEMENTS OF A THEORY, by David V. Tiedeman, Robert P. O'Hara (Boston Coll.) and Esther Matthews (Newton High School). Rept. no. 8 on Harvard Studies in Career Development, Technical rept. no. 4 on Contract Nonr-1866(31). 12 Dec 58, 53p. 61 refs. AD-217 191.
Order from LC mi$3.60, ph$9.30 PB 144 464

An attempt is made to organize, in a preliminary manner, previous writing in the field of vocational psychology relating to perceptions of self and of work as variables intervening between prior circumstances and career decisions.

Human Resources Research Office, George Washington U., Washington, D. C.
SOME PROBLEMS IN THE ANALYSIS OF TROUBLE SHOOTING BEHAVIOR, by Paul G. Whitmore (Army Air Defense Human Research Unit) Research rept. 2 on Contract DA 49-106-qm-1. Oct 59, 27p. 7 refs.
Order from LC mi$2.70, ph$4.80 PB 144 234

Data from three previous HumRRO studies (RADAR IV, RADAR VI, and ACHILLES) were pooled and analyzed to identify problems of maintenance and maintenance training. The data consisted of (1) observations of maintenance activities made during the administration of job-sample proficiency tests to M33 and NIKE AJAX fire control system maintenance technicians, and (2) responses to multiple-choice items on a written test given to NIKE AJAX fire control system maintenance technicians. The set of coded categories used in recording activities did not meet the requirements for describing the technician's trouble shooting procedures; consequently, the technician's knowledges and skills could not be clearly inferred. It was not possible to isolate "knowledge" classes for the written test items related to over-all proficiency. The generalization of modifications introduced into the M33 FCS experimental training programs to NIKE AJAX IFC training was supported at a very gross level of analysis.

Human Resources Research Office, George Washington U., Washington, D. C.
WHAT HumRRO IS DOING, JANUARY 1956-JUNE 1957. Dec 57, 56p. 19 refs. Research Bulletin 4; AD-158 174.

Psychology

Army Medical Research Lab., Fort Knox, Ky.
PERCEPTION OF RELATIVE FREQUENCY AS A FUNCTION OF THE NUMBER OF STIMULUS AND RESPONSE CATEGORIES, by R. A. Gardner, J. B. Forsythe and others. Rept. on Psychophysiological Studies. 7 Apr 58, 18p. 7 refs. Rept. no. 328.
Order from LC mi$2.40, ph$3.30 PB 144 221

A prediction response was used to study the perception of relative frequencies of serially presented stimulus-events when the only predictable property was relative frequency. The number of stimulus-event categories was varied from two to eight. Each stimulus-event category was associated with a different response category. The relative frequency of the response to the most frequently presented category was a function of the number of categories. Asymptotic response levels were reached, if at all, only very late in the series of 420 trials. For the last 140 trials all groups with more than three categories were responding at frequencies significantly different from those of the presented stimulus-event categories.

[Behavior Research Lab., Washington U., St. Louis, Mo.]
THE EFFECT OF ELECTROCONVULSIVE SHOCK ON MALE ALBINO RATS WITH EXPERIMENTALLY INDUCED SENSORY DEFICITS, by John A. Stern and David McDonald. Progress rept. on Contract Nonr-816(06). 31 Dec 58, 17p. 41 refs.
Order from LC mi$2.40, ph$3.30 PB 144 182

The major hypothesis of this experiment is that if ECS animals are more reactive to environmental stimuli, then if one makes them blind, deaf, or anosmic, they will behave more like normal controls. The experimental design constitutes, in the opinion of the author, a clear-cut test of this hypothesis.

Bureau of Applied Social Research, Columbia U., New York.
GROUP AND INDIVIDUAL PERFORMANCE IN PROBLEM SOLVING RELATED TO PREVIOUS EXPOSURE TO PROBLEM, LEVEL OF ASPIRATION, AND GROUP SIZE, by Irving Lorge and Herbert Solomon. Technical rept. no. 3 on Contract Nonr-266(43). 15 Dec 58, 32p. 5 refs.
Order from LC mi$3.00, ph$6.30 PB 144 179

The experiment reported here was designed to test the hypothesis that previous exposure with the problem would significantly affect the proportion of individual solutions and, hence, the proportion of group solutions. Perhaps the variance of proportions of group solutions developed in this paper under the assumption that the ability model is operating may be helpful in choosing among several explanations of group performance.

Institute of Educational Research, Indiana U., Bloomington.
A CATALOG OF TROUBLE SHOOTING TESTS (SURVEY OF TESTS DEVELOPED TO DECEMBER 1956) by Nicholas A. Fattu. Research rept. no. 1 on Contract Nonr-908(07). Dec 56. 136p. 148 refs. AD-153 754.
Order from LC mi$6.90, ph$21.30 PB 144 377

The trouble-shooting tests include (1) on-the-job measures, (2) performance tests, (3) mockup or simulator tests, (4) automatic recording of checks (ARC) or tab-type tests, and (5) pencil-paper and oral-interview tests. The first section considers the measures that were taken on the job under normal operating conditions. Those measures differ from the trouble-shooting performance tests in that the latter structure and control both the tasks and the situations in which they occur. The simulator tests tend to have the same kinds of tasks as those used in the performance tests. The ARC type tests attempt to translate some of the features of the simulator tests into pencil-paper form. The examples of the trouble-shooting tests were located mainly in bibliographic sources and publications by the Department of Defense.

Institute of Psychiatry, Maudsley Hospital, London (Gt. Brit.)
RATE OF TEMPORAL AND SPATIAL INHIBITION IN HYSTERIA AND BRAIN DAMAGE IN NORMAL, NEUROTIC AND BRAIN-DAMAGE SUBJECTS. Final technical rept. for 1 May 58-30 Apr 59 on Contract DA 91-508-EUC-311. [1959] 35p. 36 refs.
Order from LC mi$3.00, ph$6.30 PB 143 837

Section 1. Introduction; Section 2. Selection and description of subjects; Section 3, A detailed consideration of the tasks used.

Laboratory for Research in Social Relations, U. of Minnesota, Minneapolis.
THE EFFECT OF STATUS ON ABILITY TO INFLUENCE GROUP SOLUTIONS OF PROBLEMS, by Henry W. Riecken. Technical rept. no. 1 on Research Studies on the Relation Between Cognition and Behavior, Contract N8onr-662(16). Jan 58, 16p. 5 refs.
Order from LC mi$2.40, ph$3.30 PB 138 292

An experiment in which 32 four-man groups discussed "human relations problems" provided an opportunity to test a finding of Bales and others that the discussant who talked the most contributed most to the solution of the problem. By providing a hint about a uniquely good, insight solution to one problem, and by differentially locating that hint in the hands of either the highest or the lowest talker in the group, an opportunity was afforded to assess both the perceived and the actual contribution of the "top man" compared to the "bottom man." The results show that top men are almost uniformly perceived as contributing more, and that they are in fact more influential in getting the "elegant solution" (contained in the hint) accepted by the group. Further data suggest that the differential ability of top men to exert influence is related more to their ability to win attention and support from the group than it is to their ability to reduce opposition. Personal characteristics of top men that may lead to their achieving that position are only suggested by our data, but there is some reason to believe that clarity and fluency of expression are important factors, but that measured intelligence is not.

[Laboratory for Research in Social Relations] U. of Minnesota, Minneapolis.
RESEARCH ON COHESIVE AND DISRUPTIVE TENDENCIES IN COALITION TYPE GROUPS, by Ben Willerman. Final technical rept. on Contract N8onr-662(16). 1957, 7p. 6 refs.
Order from LC mi$1.80, ph$1.80 PB 138 288

This final report is a summary of some aspects of cohesive and disruptive tendencies in coalition-type groups which have emerged from our research. The conclusions of studies of individual attraction to group activity relative to individual activity are presented. Some by-products of the research are briefly described.

Laboratory of Aviation Psychology, Ohio State U. Research Foundation, Columbus.
THE EFFECT OF TEAM SIZE AND INTERMEMBER COMMUNICATION ON DECISION-MAKING PERFORMANCE, by Robert G. Kinkade and J. S. Kidd. Rept. on Contract AF 33(616)3612. Apr 59, 16p. 10 refs. WADC Technical rept. 58-474.
Order from OTS $0.50 PB 151 967

The performance of single individuals, two-man teams without intercommunication, and two-man teams with intercommunication was compared in a complex decision-making task. The task was an operational "game" derived from radar approach control. Forty-eight students participated. The experimental design utilized a subject x conditions balanced Latin square having six independent replications. Two-man team performance was superior to that of single individuals, but not proportionately so. Interpretation of the data in terms of productivity per person showed the person working alone to be significantly superior to the person working in a two-man team. Teams with communication were slightly superior to teams having no communication. The explanation of the results of the individual vs. individuals in a team comparison is hypothesized to lie in the diversion of time and productive capacity in the team situation away from the prime task and into integrative and coordinative behavior.

Princeton U., N. J.
THE ROLE OF THREE PROCESSES IN DETERMINING RESPONSES TO INTERPERSONAL DISAGREEMENT, by Harold M. Schroder and David E. Hunt (Yale U.). Technical rept. no. 5 on Contract Nonr-[1858(12)] and Public Health Grant M-955. Jan 59, 127p. 52 refs.
Order from LC mi$6.30, ph$19.80 PB 144 273

The present report will propose three conceptual processes as units for mediating dispositional and situational effects. The general characteristics of a process will be described in Section II. Although our major consideration in developing these processes was the coordination of dispositional and situational factors, we also believe that such processes should be congruent with developmental determinants. Therefore in addition to describing the specific processes in Section III, we will also discuss the relationship of each process to a specific set of child-rearing antecedent conditions. The remaining sections are then given over to several studies aimed at evaluating the construct validity of the viewpoint.

School of Aviation Medicine, Brooks AFB, Tex.
FACT AND FANCY IN SENSORY DEPRIVATION STUDIES, by Jerrold L. Wheaton. Aug 59, 62p. 211 refs. Aeromedical Review no. 5-59.
Order from LC mi$3.90, ph$10.80 PB 144 225

This discussion is not intended to be exhaustive, and more detailed information can be obtained from the cited references (202, 203, 206, 208). The broader issues, in which the problem has been studied, are outlined in chapter III, entitled "The Nature of Isolation." Chapters IV and V consist of summaries of published reports, first, of the autobiographic, anecdotal, and clinical literature, and then, of the experimental literature. The final chapters consist of a summary of the present knowledge of isolation effects on human behavior and a discussion of probable military implications.

Yale U., New Haven, Conn.
AN EXPLORATION OF THE INTERRELATIONS AMONG SOME NON-INTELLECTUAL PREDICTORS OF ACHIEVEMENT IN PROBLEM SOLVING, by Paul C. Berry. Technical rept. no. 4 on Contract Nonr-609(20). Dec 58, 50p. 19 refs. AD-218 598.
Order from LC mi$3.30, ph$7.80 PB 143 856

In considering the interrelations among non-intellectual variables and achievement in problem solving, particularly the sex role, the following hypotheses were tested: (1) compared to women, men are more favorable in attitude toward analytic thinking, less likely to conform, less field dependent, less anxious, and more masculine; (2) each of these nonintellectual variables is correlated with achievement in problem solving among men and women; (3) each of these correlations between a nonintellectual variable and problem solving remains significant even though the effects of mathematical and verbal aptitudes are partialled out; (4) whatever variance these non-intellectual variables have in common with problem solving but not in common with verbal and mathematical aptitude, they have in common with each other; (5) the concept of sex role may be used to account for the variance which is common to problem solving and to these other non-intellectual variables, but not to verbal and mathematical aptitude; and (6) to significant sex differences in problem solving remain when the effects of differences in sex-role identification are controlled. Analysis of data from 20 problems together with 8 different tests administered to 55 men and 49 women confirmed the first, second and sixth hypotheses (except with respect to tendency to conform), rejected the fourth and fifth hypothesis, and gave partial confirmation to the third.

BIOLOGICAL SCIENCES

Detroit Arsenal, Center Line, Mich.
AN INVESTIGATION OF THE PAPER CHROMATOGRAPHY TECHNIQUE FOR DETERMINING THE UTILIZATION OF SACCHARIDES BY FUNGI, by C. Bruce Lee. 1 May 58, 54p. 9 refs. Rept. no. 4135 (Final).
Order from LC mi$3.60, ph$9.30 PB 143 912

Object was to determine the applicability of paper chromatography as a research technique in the utilization of certain saccharides by selected species of fungi. Investigations were conducted on representative examples of monosaccharides, disaccharides and trisaccharides. Estimations of fungus utilization of saccharides were accomplished by changes in the rf values of the saccharides on filter paper strips compared with rf values of the saccharides with the standards also on filter paper strips. Conclusions regarding saccharide utilization were derived using standardized solvents, developing agents and standard testing conditions and

equipment. Paper chromatography techniques revealed that many of the more complex saccharides were altered by exposure to fungus action.

Maryland U., College Park.
STUDIES ON PARASITIC ACARINA AT NAMRU NO. 3, by G. W. Wharton and Conrad E. Yunker. Final rept. for 1 Sep 55-31 Dec 57 on Contract Nonr-1809(00). 31 Dec 57, 3p. 7 refs. AD-150 762.
Order from LC mi$1.80, ph$1.80 PB 138 203

Descriptions were found in the literature for over 350 species of parasitic mites of Egypt. Over 700 collections of parasites from hosts in various Egyptian localities were obtained. Nine cultures of endemic laelapid and dermanyssid mites were initiated and successfully maintained in the laboratory. The natural host of Ophionyssus natricis was found. An investigation of the nasal mites of Egyptian amphibians showed that over 95% of the toads were infected. Over 800 specimens of East African animals were examined. Among the parasitic mites which were collected were chiggers in the nasal cavities of a number of genera of rodents, and a new genus and species of ewingid mite from pagurid crabs. On the basis of material collected in East Africa, the sequence of infection and pathological picture of knemidokoptic mange in parakeets was determined. Results of an ecological study of rodent-mite population in the deserts and semidesert areas near Cairo indicated that: (1) the great daily extremes of the general climate are not reflected in the climate of the burrows, this microclimate being vastly more stable and essentially different than that of the exterior: (2) the burrow and host represent the entire effective environment of the mite populations, while the ticks are subject to the excesses of the external environment as well; (3) no seasonal variations in mite populations, which could be separated from the influence of other factors, could be demonstrated, while the ticks exhibit a definite seasonal variation reflecting the influence of the environment external to the burrows; (4) the host is probably the most important environmental factor in the abundance and distribution of mite populations; (5) area (desert of semidesert) plays a determining role in the variability of these populations.

Pittsburgh U., Pa.
BIOPHYSICAL INVESTIGATIONS ON BACTERIOPHAGES, by Irwin J. Bendet and Max A. Lauffer. Technical rept. no. 6, 1 Jan-31 Dec 58, on Contract Nonr-624(03). [1958] 4p. 2 refs.
Order from LC mi$1.80, ph$1.80 PB 144 259

During the past year this laboratory has continued to work on the following problems: (1) explanation of the dual sedimentation phenomenon manifested by T2 bacteriophage; (2) determination of the hydration of Escherichia coli, Southern bean mosaic virus, and a few other representative viruses. (See also PB 138 645)

Aerospace Medical Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
SUSTAINED OPERANT BEHAVIOR IN MICE; A MODEL FOR BEHAVORIAL RESEARCH IN BIOSATELLITES, by Frederick H. Rohles, Jr. and Marvin E. Grunzke. Rept. on Human Performance in Advanced Systems; figures drawn by U. of Dayton on Contract AF 33(616)6264. Aug 59, 14p. 3 refs. WADC Technical note 59-299.
Order from OTS $0.50 PB 161 298

A male C-57 BL mouse was trained to respond on a fixed-ratio-100 operant reinforcement schedule for 20 minutes out of every 6 hours. The subject was isolated and performed on this schedule for food reward for 96 hours. The feeder in the operant chamber was disconnected and performance was observed under extinction conditions without food for an additional 96 hours. The results of the study showed that the response rate during the 96-hour reinforced session was high and consistent from work period to work period. Meaningful performance data were also obtained under extinction conditions. The study illustrates a potential method of obtaining meaningful behavioral information from animals in orbital flight.

Army Medical Research Lab., Fort Knox, Ky.
DERIVATION OF 'SUBJECTIVE VELOCITY' FROM ANGULAR-DISPLACEMENT ESTIMATES MADE DURING PROLONGED ANGULAR ACCELERATIONS: ADAPTATION EFFECTS, by S. J. Ceran and F. E. Guedry, Jr. Rept. on Psychophysiological Studies. 20 Feb 59, 24p. 20 refs. Rept. no. 376.
Order from LC mi$2.70, ph$4.80 PB 144 222

Subjective estimates of angular displacement of a target light fixed with respect to the observer were made during prolonged constant angular acceleration of the entire body in a dark room. These estimates provided an indication of subjective velocity throughout the course of the vestibular reaction. Results obtained from 10 subjects indicated that subjective velocity rises and then declines during the course of a constant angular acceleration. Within the range of stimuli applied (0.5 deg/sec^2 to 2.0 deg/sec^2) 'rise' time to maximum subjective velocity appears constant regardless of stimulus magnitude. The maximum attained and the rate of change of subjective velocity up to this maximum are directly related to the magnitude of the angular acceleration. However, after about thirty seconds of constant angular acceleration, the subjective velocity declines even though the angular acceleration remains constant. Implications of

certain characteristics of the results for the torsion pendulum theory are discussed.

Army Medical Research Lab., Fort Knox, Ky.
EFFECT OF CHANGES IN RENAL BLOOD FLOW RATE AND VASCULAR INTRALUMINAL PRESSURE UPON RENAL VASCULAR RESISTANCE, URINE AND LYMPH FLOW RATES, by F. Haddy, J. Scott and others. 27 Jan 58, 74p. 24 refs. Rept. no. 323; AD-151 369.
Order from LC mi$4.50, ph$12.30 PB 138 333

Renal artery pressure change above 80 mm Hg results in active change in vessel geometry due to a direct effect of variation in transmural pressure upon vascular smooth muscle. Vein pressure change is followed by active vasomotion invoked reflexly over nonlocal sympathetic nerves and passive vasomotion induced by variation in transmural pressure dependent upon stromal rigidity. The peculiar changes in urine flow and glomerular filtration rates which follow variation of veni and artery pressures likely are related to these resistance controlling mechanisms.

Hofstra Coll., Hempstead, N. Y.
AUDITORY PAIN THRESHOLDS FOR INTERMITTENT, "BEAT", AND STEADY TONES, by Robert Plutchik. Rept. on Contract Nonr-2252(01). Dec 58, 31p. 21 refs.
Order from LC mi$3.00, ph$6.30 PB 143 926

The major findings were as follows: (1) Individual pain thresholds varied from about 100 db to over 130 db. Unpleasantness thresholds averaged about 8 to 10 db below pain thresholds. This difference turns out to be the same as that required for a half-loudness judgement as reported in the literature. (2) The 2500 cps tone, irrespective of whether it is presented as a series of pulses, a series of beats, or as a steady tone, is reacted to as "unpleasant" or as "painful" at a slightly, but consistently lower intensity level than the corresponding 1000 cps tone. (3) At each frequency used, intermittent tones are judged as "unpleasant" or "painful" at lower intensity levels than steady tones. The differences are slight but consistent. (4) Repetition rates of 3 pulses or beats per second are fairly consistently found to have a lower unpleasantness and pain threshold than either 6 or 15 per second. Each of these findings was found to be consistent with various reports in the literature.

Institut für Animalische Physiologie der J. W. Goethe Universität (West Germany).
INVESTIGATIONS ON THE FLOW OF BLOOD IN CAPILLARIES, by Rudolf K. Zahn. Final technical status rept. for 1 Oct 58-30 Sep 59 on Contract DA 91-591-EUC-921. [1959] 22p. 20 refs.
Order from LC mi$2.70, ph$4.80 PB 144 253

A method for simultaneous recordings of (1) heart rate, (2) ECG amplitude, (3) speed of blood flow and (4) haematocrit has been developed for the tranquilised frog. Different tranquilisation pharmaca have been investigated. MS 222 and Curarine proved to be of limited value, whereas Succinylic choline seems to be by far the best. The better the oxygen supply the shorter the tranquillisation time. There is a slow steady drop with time in heart rate and ECG amplitude, in tranquilised animals. No direct dependance of capillary flow on temperature change and/or heart action could be established. Ultra violet (UV) irradiation of small areas of the swimming skin does not influence heart action.

International Research Associates, New York.
EXPECTATIONS AND PERCEPTIONS WITH RESPECT TO THE MARINE CORPS RESERVE (GROUND). Technical rept. no. 7 on Training Problems on the Marine Corps Reserve, Contract Nonr-1654(00). July 57, 23p. AD-135 458.
Order from LC mi$2.70, ph$4.80 PB 138 233

An inquiry is made into the reservists' motivations to participate in the Marine Corps Reserve. A questionnaire was administered to 1048 reservists in the metropolitan New York area divided into a low-ranking group of privates, privates-first class, and corporals, and a high-ranking group of the higher noncommissioned officers and commissioned officers. The respondents were given a list of 22 positive and negative qualities which they were to attribute to the Army, Navy, Air Force, and Marine Corps as they believed applicable. The term "undemocratic" was applied very few times to any of the reserves. The Marine Corps Reserve was credited with each of the positive attributes more often than the other reserves except that "modern" was applied more often to the Air Force Reserve. The dominant distinguishing elements of the Marine Corps Reserve image were "tough discipline" "makes a man out of you"; and "very traditional." The negative attributes which distinguish the other Reserves from the Marine Reserve are that the others "don't know how to wear uniforms"; "have no discipline"; and "for just ordinary guys." "Good military training" was attributed most often to the Marines and "very democratic" least. Of the 10 attributes most frequently applied to the Air Force Reserve, 5 were positive. The Navy Reserve is the second most favored; 7 out of the 10 attributes most frequently applied were positive. The Army is at the lowest end of the spectrum of esteem; 9 of the 10 attributes most frequently applied were negative. The one positive attribute was "patriotic." The criticisms recorded for the Marine Corps Reserve were chiefly lax discipline, poor work organization, and low caliber of reserve training. None of the reservists were so dissatisfied that they would drop out.

Iowa State U., Iowa City.
PULMONARY BLOOD VOLUME AND CIRCULATORY ALTERATIONS IN DOGS EXPOSED TO COMPENSATED HIGH INTRAPULMONARY PRESSURES, by Jack Williams and Steven M. Horvath. Rept. on High Altitude Physiology, Contract AF 33(616)5173. Apr 59, 18p. 34 refs. WADC Technical rept. 58-471; AD-215 622.
Order from OTS $0.50 PB 151 966

Dogs were placed in full pressure suits and helmets and exposed to pressures from 4 to 230 mm. Hg for periods ranging from 2 to 300 minutes. The measured cardiovascular alterations increased with prolonged exposure times. Pulmonary blood volume increased while the animal was breathing 100% oxygen at 4 to 8 mm. Hg pressure. The pulmonary blood volume began to decrease at a pressure of 140 mm. Hg. All increased pressures caused a decreased cardiac index and increased systemic resistance. The pressure suit used in these studies does not offer complete and prolonged protection to the animal exposed to compensated high breathing pressures.

Minnesota U., Minneapolis.
A DISCRIMINANT ANALYSIS OF THE APTITUDES AND INTERESTS OF ENLISTED MEN IN ELEVEN NAVAL AVIATION GROUPS, by Diane R. Albitz. Technical rept. no. 9 on Contract Nonr-710(17). Dec 58, 103p. 60 refs.
Order from LC mi$5.70, ph$16.80 PB 144 480

The present study carried out a complete discriminant analysis of the aptitudes and interests of enlisted men in eleven Naval aviation groups. Three questions were considered: 1) what are the distances that separate any two of the groups under study; 2) what are the directions in which these groups differ; and 3) can an individual known to be a member of one of these groups be assigned to that group. Thus, both the problem of testing significance and the problem of estimation were investigated. The results of this study indicate the usefulness of including measured interests with aptitude test scores in a discriminant analysis of occupational groups. The contribution of the interest scales in the linear discriminant scores used for classifying individuals into their group of cluster of membership provides evidence of the predictive validity of measured interests. Increased confidence in the utility of interest scales has been generated by the evidence this study presents for their predictive validity.

Quartermaster Research and Engineering Center, Natick, Mass.
SOUTHWEST ASIA: ENVIRONMENT AND ITS RELATIONSHIP TO MILITARY ACTIVITIES, by Austin Henschel. July 59, 85p. 9 refs. Technical rept. EP-118.
Order from LC mi$4.80, ph$13.80 PB 144 176

The environment of Southwest Asia, relationships between the environment and the soldier, and relationships between the environment and materiel are shown on maps and graphs. Most of the military problems of the region are caused by excessive heat and aridity, although the combination of heat and high humidity near the Persian Gulf and the Red Sea cause extreme discomfort at times in these particular areas. In much of the region, summer heat causes impairment of man's ability to work and increases his water requirements. The environment also causes storage and operating difficulties.

School of Aviation Medicine, Brooks AFB, Tex.
HUMAN EXPERIMENTATION IN THE SPACE CABIN SIMULATOR. DEVELOPMENT OF LIFE SUPPORT SYSTEMS AND RESULTS OF INITIAL SEVEN-DAY FLIGHTS, by George R. Steinkamp, Willard R. Hawkins and others. Aug 59, 89p. 5 refs. Rept. 59-101.
Order from LC mi$4.80, ph$13.80 PB 144 171

The evolvement of the simulator, as currently used, is described. The protocol of the design of the experiments is discussed, and pretesting and posttesting methods are presented. Results of a study of five subjects committed to 7-day periods in this small cabin and on a 4:4 work-rest schedule are shown and discussed from the standpoint of the physical, physiologic, psychophysiologic, and nutritional implications.

Tufts [U.] Medford, Mass.
A CHEMICAL AND PHYSIOLOGICAL STUDY OF THE GROWTH HORMONE OF THE ANTERIOR PITUITARY, by E. B. Astwood and M. S. Raben. Final rept for 1 May 52-31 July 58 on Contracts Nonr 789(00) and 1292(00). 22 Dec 58, 5p. 22 refs.
Order from LC mi$1.80, ph$1.80 PB 144 178

In summary, it might be stated that the work carried out on Growth Hormone under this contract has materially extended our knowledge of this important subject and has set the stage for extensive work, now being actively pursued in many laboratories, on the effects of growth hormone in man, work which heretofore was impossible and only now made feasible by the recognition of species differences, and by the availability of methods for the preparation of the primate hormone.

Biochemistry

Army Medical Research Lab., Fort Knox, Ky.
BLOOD COAGULATION: A CONCEPT OF THROMBIN FORMATION, by H. Jensen. Rept. on Environmental Physiology, Proj. 6-64-12-028. 22 Dec 58, 35p. 65 refs. Rept. no. 370.
Order from LC mi$3.00, ph$6.30 PB 144 032

A review of experimental data supports the concept of a four-stage mechanism of thrombin formation. The first stage involves the formation of a prothrombin activator from various precursory factors either by means of an intrinsic or an extrinsic mechanism or possibly by both. The second stage is the conversion of prothrombin to thrombin by the prothrombin activator in the presence of calcium ions. This represents the slow phase of thrombin elaboration. The third stage consists of the conversion of plasma accelerator-globulin by thrombin to the more active serum accelerator-globulin. The fourth stage of thrombin elaboration involves acceleration of prothrombin conversion by the prothrombin activator in the presence of serum accelerator-globulin and calcium ions; this represents the fast phase of thrombin elaboration. It is assumed that the final prothrombin-converting complex, thrombokinase, consists of a prothrombin activator and serum accelerator-globulin.

POST-OPERATIVE METABOLIC RESPONSE. Final technical rept. for 1 Oct 58-30 Sep 59 on Contract DA 91-591-EUC-920. [1959] 11p.
Order from LC mi$2.40, ph$3.30 PB 144 252

Animal experiments have been with the object of determining how far the changes in nitrogen, sodium and potassium excretion classically associated with injury are due to (a) purely local changes consisting of cell damage and/or presence of extravasated blood, (b) more general metabolic changes initiated by local damage. The picture emerging suggests that some of the sodium and potassium lost after trauma comes from extravasated blood, some comes from other tissues, and that oligaemia is an important factor. Continued work in human subjects suggests that the major metabolic changes following trauma can occur without alteration in the secretion of adrenal hormones, which are merely permissive. Further light on the movements of water (and electrolytes) after trauma will be given by studies of the excretion of "free" water. Preliminary survey work for this is now almost completed. As a by-product important observations have been made on the water, bicarbonate, sodium and potassium excretion in hyperparathyroidism and after administration of parathyroid hormone. Further work in this field may be expected to help in clarifying the mechanism of the parathyroid hormones.

New York Psychiatric Inst.
METABOLISM OF GLUTATHIONE, GLUTAMINE, AND ASPARAGINE, by Heinrich Waelsch. Annual progress rept. for 1 Jan-31 Dec 58 on Contract Nonr-369(00). 24 Dec 58, 4p. 7 refs.
Order from LC mi$1.80, ph$1.80 PB 144 232

(See also PB 125 642)

KINETICS AND MECHANISM OF HYDROLYSIS OF AMMONIUM CARBAMATE, by George Gorin. Technical note no. 3 on Studies on Urease, Contract AF 18(603)135. July 59, 13p. 7 refs. AFOSR-TN-59-775.
Order from LC mi$2.40, ph$3.30 PB 144 018

This note presents some results which were obtained in the course of a brief investigation of the rate of hydrolysis of ammonium carbamate in sodium hydroxide solution. The investigation was pursued only to a limited extent, and the results are not precise. Approximate rate constants have been determined for the hydrolysis of ammonium carbamate in 0.05, 0.10, and 0.25 M sodium hydroxide at 25°, and on the basis of these data, some conclusions regarding the mechanism have been drawn. In addition, some measurements have been made in dilute aqueous solution.

Pittsburgh U., Pa.
A STUDY OF THE MECHANISM OF PHOTOSENSITIZATION IN PHOTOSYNTHESIS, by Jerome L. Rosenberg. Annual progress rept. for 1 May-31 Dec 58 on Contract Nonr-624(08). 28 Jan 59, 3p.
Order from LC mi$1.80, ph$1.80 PB 144 236

School of Aviation Medicine, Randolph AFB, Tex.
SEASONAL VARIATION IN HUMAN AMINO ACID EXCRETION, by Henry B. Hale, James P. Ellis and Donald D. Van Fossan. June 59, 9p. 26 refs. Rept. 59-80.
Order from LC mi$1.80, ph$1.80 PB 144 218

Amino acid excretion was studied in young, healthy men during summer, fall, and winter months in a location in southwestern United States. Both random and timed urine samples were employed. The amino acids determined were alanine, arginine, cysteine, glutamic acid, glutamine, glycine, histidine, lysine, methyl histidine, serine, threonine, and valine. Supplemental determinations included urine volume, creatinine, uric acid, urea, sodium, and potassium. Using random samples, and expressing values as ratios with creatinine, significant seasonal variation was found for alanine, arginine, cysteine, glutamic acid, glycine, lysine, serine, urea, and uric acid. Although there was no significant variation in urine volume, both creatinine excretion and the urinary Na/K ratio varied significantly with season. These effects are interpreted as the result of changes in glomerular filtration and tubular reabsorption rates.

Washington U., Seattle.
ENZYMATIC DEGRADATION AND MODIFICATION OF PROTEOLYTIC ENZYMES, by Hans Neurath. Annual progress rept. for 1 Jan-31 Dec 58 on Contract Nonr-477(04). [1959] 4p. 3 refs.
Order from LC mi$1.80, ph$1.80 PB 144 231

The nature of the molecular changes accompanying the activation of trypsinogen and chymotrypsinogen has been investigated by chemical, physical and enzymatic methods. A study of the reaction of trypsin with diisopropylphosphofluoridate (DFP) with trypsin has been carried out in order to determine the nature of the peptide sequence involved in the combination between the enzyme and this organic phosphate. Kinetic and spectrophotometric measurements of the reaction between chymotrypsin and trypsin, respectively, and p-nitrophenylphosphate (NPA) and related compounds have suggested the formation of an acetyl-N-imidazole intermediate in the reaction of these proteolytic enzymes with acylating agents.

Medical Specialties and Equipment

Army Medical Research Lab., Fort Knox, Ky.
A CINEFLUOROGRAPHIC UNIT, by Lyle B. Deem, Olavi Weir and others. 5 Mar 58, 14p. 12 refs. Rept. no. 333; AD-153 647.
Order from LC mi$2.40, ph$3.30 PB 138 341

A unit for use in cinefluorographic studies is described. Pulsed x-rays are obtained by the controlled firing of two thyratron tubes (placed in primary circuit of x-ray generator) by an electronic triggering circuit incorporated between camera and primary circuit. Synchronization between camera and triggering mechanism was required to obtain good quality cinefluorographs.

Ohio State U. Research Foundation, Columbus.
RESEARCH ON THE PRODUCTION OF CLINICAL RADIOGRAPHS BY MEANS OF COMPACT, LOW-ENERGY AND HIGH-INTENSITY RADIOACTIVE SOURCES, by H. D. Spangenberg and M. L. Pool. Technical rept. no. 1, 1 June-31 Dec 58, on Contract Nonr-495(17). Jan 59, 37p.
Order from LC mi$3.00, ph$6.30 PB 144 198

On the evaluation of the properties characteristic to various possible radioactive sources that may be suitable for clinical dental radiography. Two parallel and independent approaches are made to improve the sensitivity of radiation measurements. One is the slow but gradual increase in photographic film sensitivity and the other is the new and promising light amplifiers. Many sources that cannot be made sufficiently intense for film work may be very satisfactory if light amplifiers become perfected.

School of Aviation Medicine, Randolph AFB, Tex.
THE EFFECTIVENESS OF A TOPICAL APPLICATION OF STANNOUS FLUORIDE IN A PREVENTIVE DENTISTRY PROGRAM: A REVIEW OF THE LITERATURE, by Norman O. Harris and Warren R. Hester. Sep 58, 19p. 72 refs. Aeromedical Reviews 2-59; AD-205 618.
Order from LC mi$2.40, ph$3.30 PB 138 432

Contents:
Requirements for a successful preventive dentistry program
Efforts of research to reduce caries incidence
Therapeutic effect of sodium fluoride mouthwashes, troches, and pastes
Beneficial effects of fluoridation of communal water supplies
Effects following topical application of sodium fluoride to teeth of juveniles and adults
Effectiveness of stannous fluoride in laboratory experimentation
Reduction of carious lesions following use of stannous fluoride toothpastes
Superiority of topically applied stannous fluoride over sodium fluoride in reducing caries among children
Effectiveness of topical applications of stannous fluoride in reducing caries in adults
Method of topical application of stannous fluoride
Possible contraindications for the use of topically applied stannous fluoride

Pathology

Army Chemical Warfare Labs., Army Chemical Center, Md.
AIR BLAST STUDIES WITH ANIMALS, by R. S. Anderson, Fred W. Stemler and others. July 59, 23p. 6 refs. CWLR-2288; AFSWP-1110.
Order from LC mi$2.70, ph$4.80 PB 144 036

Goats, rabbits, and mice have been exposed to air blasts in a shock tube. Translation seemed to be the major cause of injury except for damage in the ears. Correlations have been made between the air pressure, velocity, and distance traversed by the animals.

Army Chemical Warfare Labs., Army Chemical Center, Md.
A COMPARISON OF THE BURN-PRODUCING EFFECTIVENESS OF TWO INCENDIARY AGENTS, 4.2% M1 AND 4% E10, by Matthew J. Wargovich. Aug 59, 40p. 3 refs. CWLR 2298; AD-225 614.
Order from LC mi$3.00, ph$6.30 PB 143 913

The burn-producing effectiveness of two incendiary agents, 4.2% M1 and 4% E10, was tested on rabbits using the triple response as a criterion for determining the extent of skin damage produced by fires lasting from 5 to 60 seconds (in 5-second intervals). All burns were classified as subthreshold, threshold, or suprathreshold, depending on the responses elicited. All burns were defined microscopically as well as grossly. Rabbit tissue burned with 4% E10 took from 2 to 8 days longer to heal than did tissue burned with 4.2% M1 under similar conditions. Per given volume and burning time, 4% E10 produces a larger and deeper burn than 4.2% M1 under similar conditions.

Connecticut Coll., New London.
A COMPARISON OF DISCRIMINATION THRESHOLDS FOR BRIGHTNESS AND SATURATION IN DEUTERANOPIC, DEUTERANOMALOUS, AND NORMAL OBSERVERS, by Jane W. Torrey. Final project rept. on Evaluation of Color Vision Test, Contract Nonr-996(03). Dec 58, 38p. 9 refs.
Order from LC mi$3.00, ph$6.30 PB 144 181

Chromaticity discrimination was measured along two dimensions on the I. C. I Diagram, both passing through the neutral center of the diagram so that differences on either side of the center were differences of saturation. One line approximated the dimension of maximum confusion for deutans, bluish red and bluish green; the other was nearly perpendicular to it and should represent minimum confusion, blue and yellow. The more severe the color defect, the higher were the discrimination thresholds. The trend was most striking on the red-green dimension, where it was fully expected. On blue-yellow and brightness discrimination the differences according to degree of color defect were not as clear but it seemed possible from these results that they may exist. Tests of reliability of the measurements from day to day indicate that there are uncontrolled sources of variability in the apparatus which are too large to permit any more exact calibration of the system of classifying color defect. While the differences between sessions were not enough to vitiate entirely the differences between observers, it is clear that the next step in this research would have to be a redesigning of the apparatus to permit more consistent measurements.

School of Aviation Medicine [Brooks] AFB, Tex.
AN INTRODUCTION TO THE STOCHASTIC THEORY OF EPIDEMICS AND SOME RELATED STATISTICAL PROBLEMS, by A. T. Bharucha-Reid (Columbia U.). Dec 57, 81p. 55 refs. Rept. 58-40; AD-153 786.
Order from LC mi$4.80, ph$13.80 PB 144 172

In this monograph an attempt is made to give an account of the stochastic theory of epidemics and related statistical problems that will be useful to the epidemiologist, medical statistician, and applied probability theorist who may be interested in problems of this nature. Chapters I and II are intended to serve as an introduction to the theory of discrete and continuous branching stochastic processes. In Chapter II a review and discussion of stochastic models in epidemic theory is presented. In Chapters IV and V some statistical problems associated with branching stochastic processes, and their applications to epidemic situations are considered.

Wallace, A. B.
STUDIES IN THE POST TRAUMATIC PATIENT: SODIUM BALANCE STUDIES, NITROGEN UTILISATION, FAT ABSORPTION, ASCORBIC ACID REQUIREMENT, by Anne B. Sutherland, Christine G. Colver and others. Annual technical status rept. for 1 Sep 58-31 Aug 59 on Contract DA 91-508-EUC-354. 1 Sep 59, 82p.
Order from LC mi$4.80, ph$13.80 PB 144 180

The studies detailed in this report have been performed on patients admitted to Plastic Surgery Service. With one exception, the patients have been under the age of twelve years, and all patients had sustained moderate to severe burning injury. Techniques have been adapted, or improved, in the light of experience. A broad picture emerges of the response of children to this type of injury.

Pharmacology and Toxicology

Army Chemical Warfare Labs., Army Chemical Center.
AN ESTIMATION OF THE PER CENT MILITARY EFFECTIVENESS OF SOLDIERS WITH VARIOUS DEGREES OF INCAPACITATION FROM GB VAPOR IN VARIOUS TACTICAL SITUATIONS, by Charles H. Trask, Milton K. Christenson and others. Aug 59, 11p. 7 refs. Technical rept. CWLR-2294; AD-225 136.
Order from LC mi$2.40, ph$3.30 PB 144 033

Estimates of the frequency of poisoning by various Ct exposures to GB vapor in men are presented for mild, moderate, severe, very severe, and lethal effects. The per cent military effectiveness in four tactical situations is estimated for soldiers with these degrees of poisoning.

Army Chemical Warfare Labs., Army Chemical Center, Md.
THE INFLUENCE OF BODY WEIGHT ON INHALATION TOXICITY OF GB VAPOR TO DOGS EXPOSED FOR TWO MINUTES, by William S. Koon, Francis P. McGrath, and Fred W. Oberst. Rept. for 24 Sep 53-7 Dec 54 on Toxicology of CW Agent Vapor. Oct 58, 14p. 13 refs. CWLR 2247.
Order from LC mi$2.40, ph$3.30 PB 144 169

No significant differences in LC50 of GB vapor or in times to incapacitation were found between three different weight groups of dogs, where t = 2 minutes. However, a significant difference was noted between the death times of the large and small dogs. The medium-sized dogs exhibited a mean death time which could not be shown to differ significantly from those of either the large or small dogs.

Medical Coll. of Virginia, Richmond.
GASOMETRIC DETERMINATIONS OF HYDRAZINO COMPOUNDS, by Herbert McKennis and Allen Yard. Rept. on Contract DA 18-108-cml-5750. Nov 57, 16p. 18 refs. CWL Special pub. 2-4.
Order from LC mi$2.40, ph$3.30 PB 143 914

Previous reports contain discussion of the nature of the reaction of iodate with hydrazine compounds, and the use of this reaction in investigating the biological effects of hydrazine compounds. In keeping with the increase in emphasis on the study of other materials not related to hydrazine the work on the gasometric determination of hydrazine compounds has been concluded. This report summarizes the results and discusses the general principles which have been delineated.

School of Aviation Medicine, Brooks AFB, Tex.
PAROTID FLUID, SERUM, AND URINE 17-HYDROXYCORTICOSTEROIDS FOLLOWING THE INTRAMUSCULAR ADMINISTRATION OF REPOSITORY CORTICOTROPIN, by Ira L. Shannon, John R. Prigmore and others. Aug 59, 4p. 11 refs. Rept. 59-92.
Order from LC mi$1.80, ph$1.80 PB 144 173

In healthy young adult males, the intramuscular administration of 40 I.U. of corticotropin produced the expected alterations in serum and urine 17-hydroxycorticosteroids. The parotid steroid pattern very closely paralleled that of the serum. The results of the present study strengthen the premise that free 17-OHCS levels in parotid fluid may well be utilized in evaluating adrenocortical status. The use of this method makes possible continuous sampling of a completely nonstressful nature, and, even in extremely close quarters where blood sampling is impossible, the subject can be easily taught to carry out the sampling procedure upon himself.

Sterling Labs., Arlington, Va.
DIPROPARGYL ETHER: ORAL LD_{50} - MALE RATS; PRIMARY SKIN IRRITATION - RABBITS; EYE IRRITATION - RABBITS. 1.6 HEPTADIYNE: PRIMARY SKIN IRRITATION - RABBITS; EYE IRRITATION - RABBITS. Rept. on Contract Nonr-2727(00). [1958] 12p.
Order from LC mi$2.40, ph$3.30 PB 144 271

Report consists of tabulated results.

Radiobiology

Army Medical Research Lab., Fort Knox, Ky.
THE PROPHYLACTIC INFLUENCE OF CYSTEINE ON THE SPLEEN OF RATS EXPOSED TO WHOLE BODY X-IRRADIATION, by W. H. Parr, T. A. O'Neill, and R. Korson. 23 Jan 58, 23p. 22 refs. Rept. no. 281; AD-151 366.
Order from LC mi$2.70, ph$4.80 PB 138 332

A sequential comparative study of spleen weights was made from rats exposed to 600 r, 720 r, 880 r, and 720 r pretreated with cysteine. In the group pretreated with cysteine, the results suggested a possibility of cysteine-influenced protective action. However, statistically significant differences between the spleen weights of the 720 groups were found only on the 3rd, 6th, and 8th days. Histological studies of these spleens (720 r and 720 r pretreated with cysteine) also show little differences in cellular response.

Michael Reese Hospital of Chicago, Ill.
STUDY OF SOME PHYSICAL AND BIOLOGICAL ASPECTS OF THE ACTION OF HIGH ENERGY ELECTRONS ON MICROORGANISMS, by E. M. Uhlmann and J. Ovadia. Rept. no. 2 (Final) 29 Mar 57-31 Jan 58, on Contract DA 19-129-qm-916. [1958] 74p. 37 refs. QFCIAF File no. S-565.
Order from LC mi$4.50, ph$12.30 PB 143 835

Various factors affecting dose distributions produced by 25 Mev electrons in unit density material have been investigated and are discussed. Depth dose curves for a 10 x 10 cm beam at energies varying from 10 to 40 Mev are presented. The variation of penetration of 25 Mev electrons for different beam sizes is also reported. Satisfactory methods of obtaining a uniform distribution throughout a volume 8 inches thick are described. Serious difficulties in adequately monitoring an electron beam scanning a food package after the large magnetic deflection required to irradiate it from opposite side are discussed in the light of experience obtained with the accelerator at this installation. The health hazards at the irradiation site arising chiefly from the 20 minute Carbon 11 activity was calculated for assumed irradiation schedules. The health hazard arising from ingestion of radioactive food is also calculated and discussed. Only preliminary phases of the biological program were completed. Experience in synchronization of bacterial cells is discussed.

School of Aviation Medicine, Randolph AFB, Tex.
OBSERVATION OF LATENT EFFECTS FOLLOWING TOTAL-BODY GAMMA RADIATION IN THE BURRO, by U. S. G. Kuhn, III, Roy E. Kyner and others. June 59, 9p. 2 refs. Rept. 59-76.
Order from LC mi$1.80, ph$1.80 PB 144 465

The results of continued observation of burro survivors of sublethal doses of total-body gamma-ray irradiation are reported. Five deaths occurred during the observation period of this project, 3.6 years from November 1954 to May 1958. In four decedents cause of death was associated with irradiation experience. The survivors seemed to make an early clinical and hematologic recovery and now appear to enjoy normal health and condition. Within two years after irradiation blood elements and weights were observed to be within values exhibited by nonirradiated controls.

CHEMISTRY

Army Engineer Research and Development Labs., Fort Belvoir, Va.
HYDRAZOIC ACID AND THE METAL AZIDES (A LITERATURE SURVEY), by Hyman Rosenwasser. 28 Oct 58, 77p. 437 refs. Rept. 1551-TR; AD-208 892.
Order from LC mi$4.50, ph$12.30 PB 144 106

This report covers a literature survey of unclassified literature published since 1934 on HN_3 and the metal azides. The report is divided into 9 chapters: Hydrazoic acid; Alkali metal azides; Emission and absorption of ultraviolet radiation; Ammonium azide and the alkaline earth azides; Lead azides; Silver, thallium, and gold azides; Copper azides and complex azide compounds; Azides of Be, Mg, B, Al, Ga, Si, P, and Cd; and Thermochemistry and microchemistry.

Purdue Research Foundation, Lafayette, Ind.
SYMPOSIUM ON THE CHEMISTRY OF THE LESS FAMILIAR ELEMENTS, by James W. Cobble. Final rept. on Contract AF 49(638)233. Aug 59, 44p. 1 ref. AFOSR-TR-59-101; AD-226 190.
Order from LC mi$3.30, ph$7.80 PB 143 887

On April 14 - 16, the Air Force Office of Scientific Research and the American Chemical Society Division of Inorganic Chemistry held a joint symposium on the "Chemistry of the Less Familiar Elements at the National American Chemical Society Meeting in San Francisco, California. Twenty-nine papers, including those by eight foreign speakers from five countries were presented. This report includes a program, list of speakers, list of foreign participants, and copies of the abstracts of the papers. Titles of the papers follow Recent advances in inorganic chemistry and metallurgy of the rare earth elements; The properties of the actinide metals; Absorption and fluorescence spectra of actinide elements; Absorption spectra of actinide compounds in solution; Thermodynamic and kinetic properties of some rare earth oxide-oxygen systems; Hydrocarbon derivatives of the transition metals; Advances in aromatic-metal compounds; Recent advances in organo-metallic chemistry; Light scattering studies on aqueous gallium perchlorate solutions; The polymerization of chromic ion in aqueous solution; Hydrolytic polymerization of metal alkoxides, Equilibrium ultracentrifugations of hydrolytic polymers; On the formation of polynuclear complexes in aqueous solutions; The phosphinic nitrides - a family of inorganic polymers; Preparation of metastable and low-stability inorganic solids by high temperature techniques; Chemical reactions of free radicals at low temperature; Application of the floating zone technique for growing GaAs single crystals; Recent developments in the alkali metal hydride synthesis of diborane and borohydrides, Synthesis and reactions

of organo-boron halides and oxides; The preparation and properties of some binary borides; The ammonia addition compounds of diborane and tetraborane. Diboron tetrachloride; Bonding problems in the molecular addition compounds of boron; Addition compounds formed by the trihalides of boron and gallium. The determination of the formulas of aqueous ruthenium (III) species by means of ion exchange resin: Ru^{+3}, $RuCl^{+2}$ and $RuCl_2^{+}$. The chlorides of niobium and tantalum. Results of the last ten years; Spectrophotometric examination of certain oxidation states of rhenium and technetium; Acceptor pi-bonding in transition metal compounds; The nature of Ru(IV) in dilute perchloric acid.

Analytical Chemistry

Belcher, R.
SUBMICRO METHODS FOR THE ANALYSIS OF ORGANIC COMPOUNDS: DETERMINATION OF CHLORINE AND HYDROGEN. Annual technical rept. for 1 Oct 58-30 Sep 59 on Contract DA 91-591-EUC-902. 30 Oct 59, 15p. 17 refs.
Order from LC mi$2.40, ph$3.30 PB 144 470

The main objective of this programme is to provide a complete system of analysis for organic compounds in the submicro-scale. There remained two common organic elements (chlorine and hydrogen) for which methods had to be developed.

Ledoux and Co., Teaneck, N. J.
ION EXCHANGE AND OTHER CHEMICAL METHODS FOR BERYLLIUM BASE ALLOYS, by Silve Kallman, Robert Liu, and Hans Oberthin. Rept. for May 58-May 59 on Contract AF 33(616)5743. Sep 59, 41p. 6 refs. WADC Technical rept. 59-325.
Order from OTS $1.25 PB 161 295

While individual elements in association with beryllium can be determined by conventional chemical methods, ion exchange procedures are extremely useful when beryllium is combined with a number of alloying constituents. Procedures are described in this report involving both cation and anion exchange resins which allow the determination of all elements in successive steps using one sample portion. The elements covered in the range of 0.1 to 10% are copper, aluminum, iron, nickel, cobalt, cerium, silver, gold and palladium.

Naval Ordnance Test Station, China Lake, Calif.
A THERMISTORIZED APPARATUS FOR DIFFERENTIAL THERMAL ANALYSIS, by Jack M. Pakulak, Jr. and Guy William Leonard. 19 June 58, 20p. 4 refs. NOTS 1920; NAVORD rept. 5829; AD-203 260.
Order from LC mi$2.40, ph$3.30 PB 144 157

The application of differential thermal analysis for the study of organic compounds is becoming increasingly important. Since the characteristic portions of the thermograms for most organic compounds lie in the 20 - 300°C range, a simple and very sensitive apparatus, using thermistors in place of thermocouples, is described which has proved to be reliable and accurate in the temperature range covered. The applicability of this apparatus is shown by the determination of thermograms for certain inorganic and organic compounds.

California U., Los Angeles.
MOLECULAR ORBITAL STUDY OF IONIZATION POTENTIALS OF ORGANIC COMPOUNDS, by Andrew Streitwieser, Jr. Rept. on Contract AF 49(638)1212. 27 Aug 59, 109p. 123 refs. AFOSR [TN] 59-893, 59-(912-915).
Order from LC mi$5.70, ph$16.80 PB 144 168

Contents:
Part I. Radicals and Non-Alternant Hydrocarbons, AFOSR-TN-59-893
Part II. Methyl Compounds, AFOSR-TN-59-912
Part III. Saturated Hydrocarbons, AFOSR-TN-59-913
Part IV. Acetylenes and Allenes, AFOSR-TN-59-914
Part V. Chlorine, Oxygen and Nitrogen Compounds, AFOSR-TN-59-915

Diamond Ordnance Fuze Labs., Washington, D.C.
HEAT OF POLYMERIZATION OF PHENYL GLYCIDYL ETHER AND OF AN EPOXY RESIN, by C. H. Klute and W. Viehmann. 28 Aug 59, 33p. 12 refs. TR-758; AD-226 590.
Order from LC mi$3.00, ph$6.30 PB 143 948

A differential thermal analysis apparatus was designed and constructed for the accurate measurement of heats of polymerization. With this apparatus the mean value for three determinations of the heats of polymerization of epoxy resins or of phenyl glycidyl ether could be measured to within a standard error of 0.37 kcal per mole. Primary amine curing agents released about 26 kcal per mole, tertiary amines and boron trifluoride-ether complex each released about 22 kcal per mole and mixed type curing agents which could react in part as tertiary amines and in part as primary amines released intermediate amounts of heat.

North Dakota U. [Grand Forks].
ORGANOMETALLIC COMPOUNDS OF TRANSITION METALS, by Lawrence Summers, David C. Hampton, and David Y. L. Liu. Technical rept. no. 6 (Final), 1 June 57-31 Mar 58, on Contract Nonr-582(00). 30 Jan 59, 22p.
Order from LC mi$2.70, ph$4.80 PB 144 141

The last previous report described the continuation of investigations on bis(cyclopentadienyl) compounds of titanium, and the extension of this investigation to zirconium and chromium compounds. Of the transition metals of the 3d series, the remaining one of interest was vanadium. Studies were made of reactions of vanadium chlorides with active cyclopentadienyl-metal derivatives.

Queen's U., Belfast (North Ireland)
MECHANISMS OF THE OXIDATION OF ORGANIC AMINES BY OXYGEN AND BY FREE RADICAL OXIDIZING AGENTS, by H. B. Henbest. Annual technical rept. for 5 July-30 Sep 59 on Contract DA 91-508-EUC-389. [1959] 46p. 25 refs.
Order from LC mi$3.30, ph$7.80 PB 144 250

Covers the following subjects: Oxidation of Amines with Oxygen, Oxidation of Amines with Alkoxyl Radicals, Reactions of Amines in Aqueous Solution with Oxidants undergoing One-Electron Transfer.

Texas U., Austin.
DECOMPOSITION OF VINYLACETYLENE AND DIACETYLENE AND THEIR INTERACTION WITH ACETYLENE, by J. D. Frazee and R. C. Anderson. Technical note 6 on Contract AF 18(603)142. Aug 59, 44p. 26 refs. AFOSR-TN-59-934.
Order from LC mi$3.30, ph$7.80 PB 144 384

Vinylacetylene and diacetylene are possible intermediates in the thermal decomposition of acetylene. The present experiments were, therefore, undertaken to study the decomposition of these and their interaction with other gases such as acetylene or hydrogen. The reactions were studied in a flow system at temperatures of 400-900°, using vapor-liquid chromatography to analyze the gaseous products. Reaction is rapid enough so that experiments were limited to mixtures containing 20% or less or the reagent in an inert diluent.

Aerosciences Lab., General Electric Co., Philadelphia, Pa.
THE EFFECTS OF ELECTRODE CONTAMINATION ON THE PROPERTIES OF AIR-ARC PLASMAS, by Harold Y. Wachman, Milton J. Linevsky and John H. McGinn. Rept. on [Contract AF 04(647)269]. 21 Sep 59, 26p. 11 refs. Technical Information Series R59SD427.
Order from LC mi$2.70, ph$4.80 PB 144 133

The plasma test environments originating from arcs are usually contaminated with material from the arc electrodes. Carbon electrodes contribute appreciable quantities of vapor which alter the chemical composition and thermodynamic properties of the jet and cooled copper electrodes contribute trace quantities of vapor which, as expected, alter the character of the electrical discharge. In this work, the chemical composition and thermodynamic properties of air are compared to those of air-carbon gaseous mixtures containing 1-30% carbon by weight. The comparison of the different environments is made over the temperature range 4000-10,000°K and pressures between 0.1 and 100 atmospheres. The effects of trace amounts of copper on the electrical conductivity and power dissipated in the air arc column are calculated.

Atlantic Research Corp., Alexandria, Va.
FLAME STABILIZATION, by Arch C. Scurlock and John H. Grover. Rept. on Contract Nonr-1858(25). Jan 59, 62p. 8 refs. Proj. Squid Technical rept. ARC-5-R; AD-226 180.
Order from LC mi$3.90, ph$10.80 PB 144 332

An investigation was made of the mechanism of flame stabilization behind bluff bodies in high-velocity gas streams. Blow-off velocity data were obtained by using (1) rod-shaped flameholders in a rectangular combustion chamber which, in effect, produced a 2-dimensional flame, and (2) spherical flameholders in a circular chamber which produced a 3-dimensional flame. The fuels used were natural gas, propane, and hydrogen. The results showed that such variables as the molecular diffusivity of the fuel, flow Reynolds number, and laminar flame velocity and quenching distance of the gas had a large effect on stability. Two-dimensional stabilizer (rods) had better stability than did 3-dimensional stabilizers (spheres) of the same characteristic dimension. However, neither the rod nor sphere data were completely free of the influence of the apparatus. Hydrogen had the best stability of the 3 fuels studied; propane had better stability than natural gas (88% methane). Measurements of pressure distribution in the chamber indicated that the presence of the flame greatly alters the flow pattern in the vicinity of the flame.

California U., Berkeley.
THE PERTURBATION OF MOLECULAR DISTRIBUTION FUNCTIONS BY CHEMICAL REACTION, by Bruce H. Mahan. Rept. on Contract AF 49(638)01. 21 Sep 59, 12p. 9 refs. AFOSR-TN-59-990.
Order from LC mi$2.40, ph$3.30 PB 144 017

A collision cross-section for radial combination reactions is derived which indicates that translationally hot free radicals combine faster than the average thermal radicals. The cross-section is used to calculate the disturbance of the equilibrium distribution of velocities by radical combination reactions. It is concluded that the equilibrium assumption of chemical kinetics is justified for photochemical systems where the radical concentrations are low, but may be violated in systems where free radical concentrations approach 0.1 mole fraction.

California U., Berkeley.
SPECTROSCOPIC STUDY OF THE PHOTOLYSIS OF DIAZOMETHANE IN SOLID NITROGEN, by Theodore D. Goldfarb and George C. Pimentel. Rept. on Contract AF 49(638)01. 25 Sep 59, 13p. 7 refs. AFOSR-TN-59-991.
Order from LC mi$2.40, ph$3.30 PB 144 016

Diazomethane or partially deuterated diazomethane was suspended in solid nitrogen at 20° K and photolyzed with filtered light and a spectroscopic study was extended from the ultraviolet (2300 A) through the infrared (to 650 cm^{-1}). An unstable substance is stored which produces ethylene after diffusion is permitted. This ethylene precursor is lost, as are visible-ultraviolet absorptions at 4182, 3968, and 3050-3300 A, when the photolyzing radiation includes only wavelengths longer than 3400 A. Absorption at 2620 A was detected only in experiments at high concentrations (low M/R), making it extremely unlikely that this absorption is caused by CH_2. Finally, an absorption at 2470 A not caused by diazomethane was present before photolysis. This could be the tautomeric compound, isodiazomethane.

[Chicago U., Ill.].
REVIEW OF WORK. Final rept. on Contract N6ori-02026. [1958] 12p. 23 refs.
Order from LC mi$2.40, ph$3.30 PB 144 444

The final report will take the form of a review of the principal results of the research done under contract. The work can conveniently be discussed under three general subject headings: (1) Mechanisms of Redox Reactions (2) Constitution of Complex Ions (3) Mechanisms of Substitution Reactions of Complex Ions. Research done under the contract and published in the chemical literature is cited in footnotes; related work, not done under the contract but relevant to this review, is cited in the body of the report. Not all the papers published under contract auspices are included in the references.

Cornell U., Ithaca, N. Y.
A STUDY OF EVAPORATED ALUMINUM FILMS BY X-RAY TOTAL REFLECTION, by R. C. Duncan and L. G. Parratt. Technical rept. no. 13 on Contract AF 18(600)300. 21 Aug 58, 108p. 45 refs. AFOSR-TN-58-680; AD-162 212.
Order from LC mi$5.70, ph$16.80 PB 137 433

Films freshly deposited, then heat treated in successive steps up to 400°C or anodized in successive steps up to an oxide thickness of about 625A, have been studied. The theory of reflection based on homogeneous media accounts reasonably satisfactorily for the shape of the reflection curves near the critical angle for total reflection, but it seems necessary for the heat treated and anodized films to introduce a surface model which contains inhomogeneities in order to account for the shapes of the curves at smaller glancing angles.

Florida U. Engineering and Industrial Experiment Station, Gainesville.
FLUOROCARBON N-F COMPOUNDS, by J. A. Young and R. D. Dresdner. Quarterly technical rept. no. 1, 1 Aug-30 Sep 59, on Contract DA 01-009-ORD-772. [1959] 13p.
Order from LC mi$2.40, ph$3.30 PB 144 131

Fluorocarbon NF compounds have been made by three methods: addition of fluorine across C-N unsaturation, fluorination of NH groups, and replacement of acyl groups on nitrogen by fluorine. Formation of the NF group is competitive with N-N coupling or with rearrangement of the free radical first formed. The following group reactions have been found: $R_FCN \longrightarrow R_FCF_2N{=}NCF_2R_F$, $(R_F)_2NH \longrightarrow (R_F)_2NF + (R_F)_2N\text{-}N(R_F)_2$, $(R_F)_2NCOF \longrightarrow (R_F)_2NF + (R_F)_2N\text{-}N(R_F)_2$, $R_FCONH_2 \longrightarrow R_FNCO$, $R_FNCO \longrightarrow R_FN{=}NR_F$, and $R_FNHCOF \longrightarrow (R_FNCOF)_2$. Present production of NF_3 is by the electrochemical method using pyridine in anhydrous HF. The by-products are C_5F_{12} and cyclo-$C_5F_{10}NF$.

Frick Chemical Lab., Princeton U., N. J.
A GENERAL TREATMENT OF EQUILIBRIUM POLYMERIZATION, by A. V. Tobolsky and A. Eisenberg [Technical rept. on Research in High Polymer Chemistry Rates of Initiation in Vinyl Polymerization, Contract DA 36-034-ORD-2190]. [1959] 19p. 12 refs.
Order from LC mi$2.40, ph$3.30 PB 144 389

A general theory of equilibrium polymerization is presented. Three chemical categories are discussed: equilibrium polymerization in the presence of an initiator, e.g., caprolactam, and two categories that do not involve an initiator, represented by sulfur and by vinyl monomers, respectively. Two mathematical approximations are considered. In certain cases the chemical facts and the experimental results allow a treatment based on a single equilibrium constant. In very many cases, however, a two constant treatment is necessary, e.g., caprolactam initiated by water and the polymerization of sulfur. It is suggested that a two constant treatment is also necessary for describing the equilibrium polymerization of vinyl monomers.

Frick Chemical Lab., Princeton U., N. J.
THE THERMAL OZONE-HYDROGEN REACTION, by Theodore P. Williams and David Garvin. Technical note no. 6 on Contract AF 18(603)134. 15 Sep 59, 36p. 18 refs. AFOSR-TN-59-979.
Order from LC mi$3.00, ph$6.30 PB 144 019

The kinetics of the reaction between dilute ozone and molecular hydrogen has been studied in the temperature range 400-500° K using a flow technique. Water is the principal product, small amounts of hydrogen peroxide also are formed. The reaction competes with the thermal decomposition of ozone. It is concluded that the oxidation of hydrogen is initiated by oxygen atoms formed in the thermal decomposition of ozone, and that a short chain sequence occurs. Mechanisms involving either OH or both OH and HO_2 are presented.

General Electric Co., Schenectady, N. Y.
VARIOUS ACTIVATOR-REFRACTORY SUBSTRATE COMBINATIONS, INVESTIGATION OF, by J. H. Affleck. Scientific rept. no. 5 on Contract AF 19(604)4093. 22 Sep 59, 15p. 2 refs. AFCRC-TN-59-757.
Order from LC mi$2.40, ph$3.30 PB 144 187

Thermionic properties of cesium on various refractory materials. Dispenser cathodes have been fabricated using a barium activator. (See also PB 142 346)

Grinnell Coll., Iowa.
CRACKING REACTIONS CATALYZED BY THE SILICA-ALUMINA CRACKING CATALYST, by Joseph D. Danforth. Final rept. for 1948-1957 on Contract N8onr-67100. [1957] 5p. 8 refs. AD-142 932.
Order from LC mi$1.80, ph$1.80 PB 137 704

Harvard U., Cambridge, Mass.
THE MICROWAVE SPECTRUM, BARRIER TO INTERNAL ROTATION, AND STRUCTURE OF METHYL FORMATE, by R. F. Curl, Jr. Rept. on Contract N5ori-1866(14). [1958] 25p. 19 refs.
Order from LC mi$2.70, ph$4.80 PB 143 935

Rotational constants have been assigned to the following isotopic species of methyl formate by investigation of their microwave spectra: $HCOOCH_3$, $DCOOCH_3$, $HCOOCH_2D$, $HCOOCD_3$, $HC^{13}OOCH_3$, $HCOOC^{13}H_3$, $HCO^{18}OCH_3$, and $HCOO^{18}CH_3$. Structural parameters were obtained from these rotational constants. The barrier to internal rotation of the methyl group was calculated from the splittings observed in the rotational transitions of the ground torsional state for several isotopic species. The dipole moment was calculated from the observed Stark effect.

Illinois Inst. of Tech., Chicago.
KINETICS AND MECHANISMS IN IONIC MELTS, by A. G. Kennan. Final rept. for 1 Sep 54-1 Sep 57 on Contract AF 18(600)1148. [1957] 13p. 15 refs. AFOSR TR-57-48; AD-132 478.
Order from LC mi$2.40, ph$3.30 PB 138 490

A spectrophotometric investigation was made of fused NH_4NO_3 with UV spectra. Several successful spectra were obtained for pure fused NH_4NO_3 in repeated trials; the best spectra were measured at 175°. The sample thickness was about 0.2 mm. The data show the manner in which the resolution deteriorated in other samples, and the way in which the total absorbance was decreased where the mounting was less successful. The film was shown to be heterogeneous because of bubbles. The addition of HNO_3 to NH_4NO_3 did not improve the spectra. The data substantiated the conclusion from cryoscopic data that pure fused NH_4NO_3 is a simple ionic system when approaching its melting point.

Instituto de Quimica Fisica (Spain).
KINETICS AND MECHANISMS OF THE THERMAL DECOMPOSITION OF ACETALS, by M. J. Molera, J. Morcillo and others. Annual technical rept. no. 1, 1 Sep 58-31 Aug 59, on Contract DA 91-508-EUC-360, [1959] 65p. 34 refs.
Order from LC mi$3.90, ph$10.80 PB 144 239

As a contribution to basic research on the kinetics of thermal decomposition of organic compounds, four acetals have been selected for study:

formaldehyde dimethyl acetal
formaldehyde diethyl acetal
acetaldehyde dimethyl acetal
acetaldehyde diethyl acetal

The reactions have been studied in a high vacuum apparatus by the static method. It has been proved that the pressure increase inside the reaction vessel may be considered as a reasonable measure of the acetal consumed; consequently, the kinetic constants have been determined from the pressure increase-time curves.

Metcalf Research Lab., Brown U., Providence, R. I.
THE DISSOCIATION ENERGY OF FLUORINE FROM SHOCK WAVE MEASUREMENTS, by Kurt L. Wray and Donald F. Hornig. Technical rept. no. 5 on Contract Nonr-562(06). 1 Feb 58, 31p. 10 refs. AD-154 578.
Order from LC mi$3.00, ph$6.30 PB 138 329

In general, the heat of dissociation of fluorine determined by various workers falls into one of two ranges, the one from 60 to 70 kcal/mole, the other from 30 to 40 kcal/mole. The results of this research indicate that the lower range of values is correct.

Minnesota U., Minneapolis.
Be-C EQUILIBRIA, by R. L. Dowdell. Progress rept. no. 6 on NEPA Proj. AC-2017. 15 Oct 48, declassified 12 Nov 58, 19p. NEPA 794-UM-6; AD-204 967.
Order from LC mi$2.40, ph$3.30 PB 138 462

The study of the system Be-C has been continued with emphasis on the stability of the carbide Be_2C and also its lattice dimensions. Other carbides with Be have not been found, and it now appears certain that Be_2C is the only carbide in the system which is in equilibrium with either excess Be or graphite from room temperature to 2500°F. The new Picker Diffraction X-ray Machine is operating very well and is giving precision measurements by back reflection technic which are very consistent and accurate.

Minnesota U., Minneapolis.
Be-C EQUILIBRIA, by R. L. Dowdell. Progress rept. no. 7 on NEPA Proj. SC-2017. 29 Nov 48, declassified 12 Nov 58, 13p. NEPA 833-UM-7; AD-204 966.
Order from LC mi$2.40, ph$3.30 PB 138 458

The study of the system Be-C is being continued with emphasis on the Be end of the diagram, with the idea that it would be well to find some liquidus and solidus points for alloys containing mechanical mixtures of phases which appear to be Be and Be_2C. (See also PB 138 462)

Minnesota U., Minneapolis.
Be-C EQUILIBRIA, by R. L. Dowdell. Progress rept. no. 8 on NEPA Proj. SC-2017. 15 Dec 48, declassified 12 Nov 58, 18p. NEPA 859-UM-8; AD-204 965.
Order from LC mi$2.40, ph$3.30 PB 138 459

Most of the work has been with hot pressed compacts of Be_2C and graphite prepared by other workers in the field. This staff is endeavoring to determine the structure and the nature of the bond in these compacts. The specimens received from Nepa were labeled "Runs 77 and 80" and were made from mixtures of 20% Be_2C plus 80% graphite. These hot compacts were made at 2300°C for 30 minutes. (See also PB 138 458)

North Carolina U., Chapel Hill.
ADSORPTION IN POLAROGRAPHY, by Charles N. Reilly and Werner Stumm. Technical note UNC Chem no. 3 on Contract AF 49(638)333. 19 Oct 59, 44p. 91 refs. AFOSR-TN-59-1113.
Order from LC mi$3.30, ph$7.80 PB 144 383

Surface active substances, even in trace quantities, can exert a marked and often insidious effect on electrode processes. In polarography, adsorption of such substances at the electrode may decrease the limiting current, shift the half wave potential and in some cases obliterate the entire wave! In addition, they can cause minima or deceiving split waves. The characterization of the mode by which these effects arise and how one may detect their origin constitutes the purpose of this discussion.

North Carolina U., Chapel Hill.
ELECTRICAL METHODS OF ANALYSIS, by Charles N. Reilley. Final rept. for 1 June 54-30 June 58 on Contract AF 18(600)1160. 29 Aug 59, 8p. 22 refs. AFOSR-TR-59-128.
Order from LC mi$1.80, ph$1.80 PB 144 349

During the nearly four years of research under this contract, important progress has been made toward understanding of the mechanism of electrode processes and a number of electrochemical methods -- especially those involving chelate reactions -- were developed. Also, several new procedures of analytical value have been discovered. Some of the results are briefly tabulated and summaries of all published papers covering the research are given.

North Carolina U., Chapel Hill.
METAL CHELATE STABILITY CONSTANTS OF AMINOPOLYCARBOXYLATE LIGANDS, by James H. Holloway and Charles N. Reilley. UNC rept. no. 2 on Contract AF 49(638)333. 11 Sep 59, 30p. 15 refs. AFOSR-TN-59-748.
Order from LC mi$2.70, ph$4.80 PB 144 499

The stability constants for the reaction between a series of divalent metal ions with cyclohexanediaminetetraacetic acid (CyDTA), diethylenetriaminepentaacetic acid (DTPA), ethyleneglycol bis-(β-aminoethyl ether)-N, N'-tetraacetic acid (EGTA), ethylenetherdiaminetetraacetic acid (EEDTA), and N-hydroxethylethylene-diaminetriacetic acid (HEDTA) have been determined potentiometrically with a mercury electrode. The stability constants for the reaction between lanthanum and diethylenetriaminepentaacetic acid has also been determined by the same method.

Noyes Chemical Lab., U. of Illinois, Urbana.
TEMPERATURE DEPENDENCE OF PROTON RELAXATION TIMES IN AQUEOUS SOLUTIONS OF PARAMAGNETIC IONS, by Robert A. Bernheim, Thomas H. Brown and others. Technical rept. no. 15 on Contract Nonr-1834(13). 9 Oct 58, 26p. 19 refs. AD-205 747.
Order from LC mi$2.70, ph$4.80 PB 144 432

The nuclear magnetic relaxation times of protons in aqueous solutions of paramagnetic ions were measured as a function of temperature. For Mn^{++} ions, the proton T_1 and T_2 were measured at 10, 20, and 28 Mc/sec, and for Co^{++}, Cu^{++}, and Gd^{+++} ions, 20 Mc/sec. The temperature effects observed can be explained by incorporating the proper temperature dependences of the several correlation times into the general Bloembergen-Solomon relaxation expressions. Analysis of the data by means of the equations developed provides information concerning the chemical exchange of solvent protons with those in the hydrated Mn^{++} ion. An activation energy of 5.2 kcal/mole and other parameters for this process are evaluated. The temperature dependence of T_1 and T_2 in the Co^{++}, Cu^{++}, and Gd^{+++} solutions can be explained by the temperature dependence of the dipolar interaction alone. Varying the anion in Cu^{++} solutions had little effect on the T_1 or its temperature dependence; also, T_1 for Cu^{++} solutions was found to vary inversely with concentration over the whole temperature range studied.

Oklahoma State U., Stillwater.
RESEARCH IN PHOTOCHEMICAL AND PHOTOEMISSION PROCESSES IN NITROAROMATICS AND IN OTHER COMPOUNDS, by Earl H. Gilmore. Final rept. for 15 Sep 55-31 Aug 58 on Contract DA 23-072-ORD-581. Sep 58, 72p. 45 refs. AD-209 626.
Order from LC mi$4.50, ph$12.30 PB 144 331

None of the results of a complete analysis requiring seven different emission data from the system esculin in glucose glass indicates that the Jablonski model is invalid for the system. A large fraction of the quenching occurring in the system studied occurs from the singlet level. Nonradiative processes can occur from either the excited singlet or the excited triplet level of a molecule. The rate constant for the excited singlet to triplet level transition must be in the order of magnitude of the values of the rate constants for the singlet to ground level transitions if phosphorescence is appreciable.

Pennsylvania State U., University Park.
SIGMA VALUES AND THE EFFECTS OF STRUCTURE ON REACTIVITY. A REVIEW OF DEVELOPMENTS FOR 1957, by Robert W. Taft, Jr. Technical rept. no. 18 on Contract Nonr-656(05). Feb 58, 45p. 123 refs. AD-153 774.
Order from LC mi$3.30, ph$7.80 PB 138 337

Consideration is given to the evaluation of resonance effects, hyperconjugative and conjugative, in both the aromatic and aliphatic series; the determination of the extent of steric inhibition of resonance; the determination of steric inhibition of solvation; the evaluation and correlation of kinetic and potential energy intramolecular steric effects; and the evaluation of driving forces involved in anchimeric assistance (neighboring group participation).

Rensselaer Polytechnic Inst., Troy, N. Y.
FUSED SALT CHEMISTRY, by George J. Janz. Technical note no. 11 on Contract AF 49(638)50. Aug 59, 31p. 27 refs. AFOSR-TN-59-880; AD-226 418.
Order from LC mi$3.00, ph$6.30 PB 143 924

To be published as part of the proceedings of this meeting by the Stamford Research Institute, Menlo Park, Calif. Molten salts from systems which are liquid at temperatures up to 3000°C at atmospheric pressure. They form the largest class of non-aqueous inorganic solvents. The present communication develops some aspects of the structure of molten salts which are of current interest among both theoretical and experimental research workers. The models for molten salts based on liquid state theories and on the electro-chemical properties of these systems are considered. Experimental methods, the information to be gained, and current problems in the fields of pure molten salts, and mixtures are surveyed.

Rosemount Aeronautical Labs., U. of Minnesota, Minneapolis.
BLUFF-BODY FLAME STABILIZATION AT LOW PRESSURES, by C. C. Chang, G. Engholm, and L. H. Zacho. Rept. on Contract AF 18(600)1553. July 59, 61p. 24 refs. Research rept. no. 161; AFOSR-TR-59-111.
Order from LC mi$3.90, ph$10.80 PB 144 346

Blowoff velocities of butane-air flames stabilized on a 3/16 inch diameter cylindrical flameholder were measured as a function of pressure (1/10 to 1 atm) and equivalence ratio for Reynolds numbers ranging from 1945 to 4685. Within this laminar range it was found that blowoff velocity was directly proportional to pressure for equivalence ratios from 0.9 to 1.5 and inversely proportional to pressure for equivalence ratios less than 0.9 or greater than 1.5.

Ultrasonics Research Lab., Western Reserve U., Cleveland, Ohio.
QUANTITATIVE MEASUREMENTS OF COLLOIDAL VIBRATION POTENTIALS, by Joseph Dereska, Ernest Yeager, and Frank Hovorka. Technical rept. no. 20 on Contract Nonr-1439(04). 1 Dec 58, 30p. 16 refs.
Order from LC mi$2.70, ph$4.80 PB 143 858

When ultrasonic waves are transmitted through a colloidal suspension in an aqueous medium, alternating potential differences are produced between points separated by a phase distance other than an even multiple of the wavelength. Quantitative measurements of this effect have been made in colloidal silica suspensions. Light scattering, electron microscopy, electrophoresis, and conductivity measurements have been made on the various silica suspensions to determine particle size and charge. Experimental results are in relatively good agreement with theory for measurements in suspensions of moderately high conductance. Agreement is less favorable for solutions of low conductivity.

EARTH SCIENCES

Geochronometric Lab., Yale U. [New Haven, Conn.]
RADIOCARBON DATING. Final rept. on Contract Nonr-609(05). Jan 58, 16p. 13 refs. AD-154 472.
Order from LC mi$2.40, ph$3.30 PB 138 258

Consideration is given to the instrumental, geochemical, and dating problems in radiocarbon dating. The advantages and use of the CO_2 proportional-counting method are discussed.

Climatology and Meteorology

Electrical Engineering Research Lab., U. of Texas, Austin.
THE USE OF POTENTIAL REFRACTIVE INDEX IN SYNOPTIC-SCALE RADIO METEOROLOGY, by K. H. Jehn. Rept. on Contract AF 19(604)2249. 15 Sep 59, 22p. 3 refs. Rept. 6-29; AFCRC-TN-59-598.
Order from LC mi$2.70, ph$3.80 PB 144 279

The concept of potential refractive index is examined in the light of earlier work and of the present emphasis on synoptic-scale radio meteorology. A new potential refractive index is defined and illustrated. It is concluded that the new parameter has operational utility in long range microwave radio and radar transmission, as well as in refractive index mapping.

Florida State U., Tallahassee.
THE EFFECT OF THE VERTICAL VARIATION OF WIND AND STABILITY ON MOUNTAIN WAVES, by Bo R. Döös. Technical rept. no. 13 on Contract Nonr-1600(00). 30 Dec 58, 36p. 19 refs.
Order from LC mi$3.00, ph$6.30 PB 144 230

The motion over an infinitely long mountain ridge has been studied. The scale of the motion is assumed to be so small that the influence of the earth's rotation can be neglected. It is further assumed that the motion is non-viscous, laminar, steady, and isentropic. The resulting wave equation is solved for certain types of realistic wind and temperature distributions. The wave lengths and the amplitudes have been evaluated for seven different cases which have been selected so that the effect of variation on the wind profile and the temperature distribution can be studied separately.

Florida State U., Tallahassee.
SOME EFFECTS OF THE WESTERN CORDILLERA OF NORTH AMERICA ON CYCLONIC ACTIVITY IN THE UNITED STATES AND SOUTHERN CANADA, by E. Paul McClain. Technical rept. no. 12 on Contract Nonr-1600(00). 15 Dec 58, 64p. 28 refs.
Order from LC mi$3.90, ph$10.80 PB 143 857

This report presents the results of an investigation which sought more satisfactory physical explanations for the observed behavior of cyclonic storm systems over and in the vicinity of the Western Cordillera of North America. Smoothed terrain contours were constructed and then used to estimate where and under what synoptic conditions orographically induced vertical motions might systematically alter the vorticity tendency field. Two general hypotheses evolved from the analysis: (1) Lee cyclogenesis. --A low-level lee-side trough is established and positive vorticity tendencies are generated in this region by the nature of the orographic vertical velocities. Whether or not major cyclonic storms develop from this trough is dependent upon the subsequent superposition of high-level divergence. (2) Windward retardation and cyclolysis. --Mature cyclones approaching the windward slopes decelerate, recurve northward and weaken due to the combined action of low-level orographic vertical velocities, friction, and the relatively unimpeded progression of the high-level portion of the system. A detailed case study is presented to illustrate and, to some extent, to verify the hypotheses outlined above as well as some other synoptic-scale mountain effects.

Institute for Advanced Study, Princeton, N. J.
ATMOSPHERIC RADIATION PROJECT, by Lewis D. Kaplan. Final interim rept. for 1 Feb 54-31 Aug 57 on Contract Nonr-1358(01). [1957] 6p. 5 refs. AD-143 331.
Order from LC mi$1.80, ph$1.80 PB 138 231

The spectral characteristics of the 3 principal absorbing gases in the atmosphere (carbon dioxide, ozone, and water vapor) that would be necessary to investigate radiative heat transfer were studied. New measurements by Eggers were used to determine the 15-μ band intensity and mean line width for CO_2 (J. Chem. Phys. 25:876-883, 1956). Intensities for 3 satellite bands of CO_2 were calculated (J. Chem. Phys. 26:1252-1253, 1957). The O_3 spectra of the 9.6 μ band were successfully analyzed for rotational structure. Line widths were calculated for all water vapor lines; an intensity analysis should produce the basic data necessary for the calculation of the heat transfer. The heat balance of the lower stratosphere was investigated.

McGill U. (Canada).
A SYNOPTIC CLIMATOLOGY FOR LABRADOR-UNGAVA, by Roger G. Barry. Scientific rept. no. 4 on Contract AF 19(604)3865. Aug 59, 256p. 89 refs. Arctic Meteorology Research Group Pub. in Meteorology Research Group Pub. in Meteorology no. 17; McGill Sub-Arctic Research Papers no. 8; AFCRC-TN-59-602.
Order from LC mi$11.10, ph$39.60 PB 144 275

A classification of airflow pattern types is formulated for the region on the basis of synoptic weather maps for November, 1956 to March, 1958. Regional indices of the zonal and meridional flow at mean sea level and the 500 mb level are examined in relation to the airflow types. The spatial and temporal variations of weather phenomena associated with the types are analyzed by quantitative weather parameters and the significance of the results is assessed with reference to local weather forecasting and palaeoclimatic reconstruction. (See also PB 142 028)

Marine Lab., U. of Miami, Coral Gables, Fla.
RADAR METEOROLOGICAL STUDIES, by H. W. Hiser and P. R. Ray. Final rept. for 1 Feb 58-31 Jan 59 on Contract NOas-58-388-d. [1959] 116p. 22 refs. Rept. no. 8904-4.
Order from LC mi$6.00, ph$18.30 PB 144 255

A range corrected logarithmic radar receiver, a master power supply, and an I. F. pulse generator, which were developed under the contract, are described and schematics are presented. Research on anomalous propagation and "thin bands" is described. A comparison of observations on the CPS-9, SP-1M, and MPS-4 radars and a summary of radar observations of 1958 hurricanes that approached South Florida are also included.

Marine Lab., U. of Miami, Coral Gables, Fla.
STUDIES OF THE EVOLUTION AND MOTION OF HURRICANE SPIRAL BANDS AND THE RADAR ECHOES WHICH FORM THEM, by H. V. Senn, H. W. Hiser, and E. F. Low. Final rept. for 1 July 58-30 June 59 on Contract Cwb-9480. Aug 59, 68p. 28 refs. ML-59169; AD-227 258.
Order from LC mi$3.90, ph$10.80 PB 144 247

Studies of radar echo vector motion in relation to a stationary hurricane center have been made for 1573 echo trajectories from hurricanes Edna 1954, Connie, Diane, and Ione 1955, Audrey 1957, and Daisy and Helene 1958. The data indicate that echo trajectories, while generally down spiral bands, have crossing angles which are smaller than those found for spiral bands in previous studies. Furthermore, the radius of a point on a spiral band (not an individual echo) in a given quadrant increases with time, resulting in an outward motion of the band. Preliminary results of several attempts to derive a mathematical model of echo-spiral band motion under various assumptions are also presented.

Naval Ordnance Test Station, China Lake, Calif.
OBJECTIVE FORECASTING OF CIRRUS CLOUDINESS AT THE NAVAL ORDNANCE TEST STATION, by D. L. Farnham. May 59, 18p. 6 refs. NOTS TP 2249; NAVORD rept. 6550.
Order from LC mi$2.40, ph$3.30 PB 144 177

The development of a rapid and relatively simple objective method of forecasting cirrus cloudiness at the Naval Ordnance Test Station, China Lake, California, is presented. Results of its use from March through May 1959 are shown. Conclusions that the method has forecasting advantages are reached.

New York U. Coll. of Engineering, N. Y.
AN ANALYSIS OF UPPER-AIR OBSERVATIONS AT McMURDO SOUND, ANTARCTICA, by James Demetrios Kangos. Scientific rept. no. 7 on Contract AF 19(604)1755. July 59, 33p. 19 refs. AFCRC-TN-59-451.
Order from LC mi$3.00, ph$6.30 PB 144 166

The height of the tropopause is determined at McMurdo Sound for January 1957 and July 1957 using three methods. The tropopause was found to be lower in summer than in winter. Mean temperature soundings for January 1957, July 1957, and October 1957 were determined to study the effect of the sun's rays on the heating of the Antarctic atmosphere. It was found that radiational heating of the atmosphere by the sun seemed to be the predominant process. Mean vertical wind profiles for July 1957 at McMurdo Sound reveal that the wind increases to the top of the sounding, whereas during January 1957 a wind maximum is present in the vicinity of the tropopause.

New York U. Coll. of Engineering, N. Y.
THE SPECTRA OF LARGE-SCALE TURBULENT TRANSFER OF MOMENTUM AND HEAT, by Wan-cheng Chiu. Scientific rept. no. 8 on Contract AF 19(604)1755. July 59, 29p. 11 refs. AFCRC-TN-59-452.
Order from LC mi$2.70, ph$4.80 PB 143 892

The spectra of large scale eddy transfer of angular momentum and heat were constructed for seven levels, ranging from 700 mb to 50 mb over Belmar, N. J., and at the 300 mb and 200 mb levels over Cocoa, Florida.

Woods Hole Oceanographic Institution, Mass.
CLOUD STRUCTURE AND DISTRIBUTIONS OVER THE TROPICAL PACIFIC, PART I, by Herbert Riehl, William S. Gray (U. of Chicago) and others. Technical rept. no. 5 on Contracts [Nonr] 1731(00), N6ori-02036, and Cwb 9509. Jan 59, 131p. Reference no. 58-62.
Order from LC mi$6.90, ph$21.30 PB 144 191

This report contains, in addition to description of purpose and method of the inquiry, the preliminary results of the first flight. Subsequent reports will be issued on the two remaining flights and containing an overall summary and comparison. It is intended that all three will be combined finally in a single publication.

Frost Science

Army Snow Ice and Permafrost Research Establishment, Wilmette, Ill.
A THERMALLY CONTROLLED SOIL FREEZING CABINET, by J. H. Schmertmann. May 58, 39p. Technical rept. 50; AD-208 955.
Order from LC mi$3.00, ph$6.30 PB 144 195

A cabinet providing good thermal control for one-dimensional heat-transfer experiments, control of water access to the sample, proper instrumentation, and adequate utility is described together with theoretical studies and tests conducted during its developemnt.

Institute of Engineering Research, U. of California, Berkeley.
PROGRESS REPORT FOR THE YEAR ENDING JUNE 27, 1953, by R. V. Dunkle and J. T. Gier. Rept. for 27 June 52-27 June 53 on Contract DA-11-190-eng-3. 27 June 53, 74p. 12 refs. Series no. 62,

issue no. 1.
Order from LC mi$4.50, ph$12.30 PB 144 463

The basic activities are: (1) a study of the spectral characteristics of wet and dry snow and the total emissivities and absorptivities of wet and dry snow for temperatures between 0°C and -60°C; (2) the study of the radiant characteristics of various types of paints and materials which might be used in arctic conditions; and (3) determination of criteria for the selection of materials, coatings and clothing for arctic camouflage and for identification under arctic whiteout conditions.

Institute of Engineering Research, U. of California, Berkeley.
RADIATION IN A DIFFUSING MEDIUM WITH APPLICATION TO SNOW, by R. V. Dunkle and J. T. Gier. Rept. on Contract DA 11-190-eng-3. 15 Nov 53, 16p. 3 refs. Series no. 62, issue no. 2.
Order from LC mi$2.40, ph$3.30 PB 144 462

The transmission through an idealized snow cover has been shown to be directly related to the albedo and to be an exponentially decreasing function. Two parameters have been proposed as possible correlating factors for transmission and albedo measurements. The first factor is a characteristic of the surface condition of the cover and the second is a characteristic of the snow beneath the surface. (See also PB 144 463)

Geography

California U., Berkeley.
NOTES ON THE CHIRIQUI LAGOON DISTRICT AND ADJACENT REGIONS OF PANAMA, by Burton Leroy Gordon. Rept. on Contract Nonr-222(11). 1957, 30p. 16 refs. AD-143 127.
Order from LC mi$2.70, ph$4.80 PB 138 226

A report is given of the observations made on a trip from Santa Fe to Calovebora, Panama. The terrain, the flora, the population, and the animals found in the area are described with special details about the Almirante Bay and Chiriqui Lagoon given. The Guaymi Indians cultivate a wax-producing scale insect, the Llaveia axin. A discussion is presented of the people engaged in the work, the habits of the insect, the uses and preparation of the wax, and the general industrial culture of the insect.

California U., Berkeley.
NOTES ON THE GEOGRAPHY OF BARBADOS, by Edward T. Price. Rept. on Contract Nonr-222(11). 1958, 62p. 41 refs.
Order from LC mi$3.90, ph$10.80 PB 144 257

Contents:

California U., Berkeley.
QUINTANA ROO: MEXICO'S EMPTY QUARTER, by Clinton R. Edwards. Rept. on Contract Nonr-222(11). 1957, 189p. 62 refs. AD-143 122.
Order from LC mi$8.40, ph$28.80 PB 137 549

An investigation is made to find an explanation for the abandoment of Quintana Roo's agricultural lands. A geographic description is given of present-day Quintana Roo which includes the geomorphology, climate, vegetation, and soils of the area as well as its population and economic situation. Some similarities and contrasts are pointed out between Yucatan (AD-84 112) and the territory. A discussion is presented on the disparity in population between this territory and Yucatan, which in a smaller area harbors almost 20 times as many people. Besides the general bibliography, references are included at the end of every main subtopic.

Sacramento State Coll., Calif.
GEOGRAPHY OF INDIAN COASTS, by David E. Sopher. Annual summary rept. on Contract Nonr-2329(00). 1958, 18p.
Order from LC mi$2.40, ph$3.30 PB 144 270

This report is confined to observations and conclusions concerning historical and contemporary cultural interrelationships among the strand communities of these areas.

Oceanography

Johns Hopkins U. School of Engineering, Baltimore, Md.
AN ADVECTIVE MODEL OF THE OCEAN THERMOCLINE, by Pierre Welander. Technical rept. no. 7 on Contracts Nonr-248(31) and CWB-9504. Dec 58, 31p. 5 refs.
Order from LC mi$3.00, ph$6.30 PB 143 983

A theoretical study is made of the density field and the associated velocity field produced in an unlimited ocean by a prescribed density distribution at the surface. It is assumed that all motions take place under geostrophic and hydrostatic balance, and that the density is simply advected by the motion. The computation is carried out for a spherical earth.

Oregon State Coll., Corvallis.
BIOCHEMISTRY OF MARINE ORGANISMS, by Vernon H. Cheldelin. Rept. for 1 Jan-31 Dec 58 on Contract Nonr-1286(06). 10 Jan 59, 2p.
Order from LC mi$1.80, ph$1.80 PB 144 256

A summary.

Scripps Inst. of Oceanography, U. of California, La Jolla.
MARINE MICROBIOLOGY, by Claude E. ZoBell and

Leslie Ralph Berger Progress rept. no. 12 (Annual), 1 Jan-31 Dec 58, on Physiological Activities of Marine Bacteria, Contract Nonr-2216(00). 31 Dec 58, 13p. 11 refs. Reference 59-1.
Order from LC mi$2.40, ph$3.30 PB 144 197

Suitable apparatus and procedures have been developed to permit the study of microbial activities at hydrostatic pressures up to 2000 atm. Although some cultures of marine and terrestrial bacteria can grow at pressures as high as 800 atm, prolonged incubation at these pressures is lethal to most organisms. Some deep sea forms, termed barophiles, appear to reproduce only under increased pressure. The morphology of growing cells in pure culture at different pressures has been observed. At increased hydrostatic pressure, protoplasmic synthesis appears to be less inhibited by pressure than is cell-wall formation and cell division. The result is the formation of abnormally large cells, chains of cells, and snake forms. In some cases the cells appear to lyse from "over-growth" The microbial populations in marine sediments have been carefully screened both for the physiological types of bacteria and for their numbers. A number of enzyme systems have been studied under increased pressure. Several cultures of marine bacteria appear to exhibit an unusual growth response to temperatures. When total growth of a culture or its growth rate was plotted against the temperature of the culture, a bimodal curve was obtained. (See also PB 127 188)

Texas A. and M. Research Foundation, College Station.
DIAGENETIC MODIFICATION OF CLAY MINERAL TYPES IN ARTIFICIAL SEA WATER, by U. Grant Whitehouse and Ronald S. McCarter. Technical rept. on Oceanographic Survey of the Gulf of Mexico, Contract N7onr-48702. Mar 57, 65p. 33 refs. Reference 57-5T; AD-134 148.
Order from LC mi$3.90, ph$10.80 PB 137 559

Electron diffraction, electron miscroscopy, X-ray diffraction, and chemical analysis were used for detecting and measuring the extent of modification of clay materials at selected time intervals during a 5-yr period. Relative weight percents of 18.2 for chloritic-clay separates and 4.4 for illitic-clay separates were obtained after more than 4 yr of treatment. Chemical-analysis and electron-microscopy data suggested that latticular alteration preceded the development of 40 to 70% of the chloritic and illitic materials separated. The modification of montmorillonitic clay was more dependent upon the Mg-K ratio in sea water than upon the total salt-concentration levels. The limiting Mg-K ratio was approximately 9.4 with a limiting low K concentration of 0.005 mol/l for montmorillonitic material of less than a 0.5-μ settling diameter. The alteration of the montmorillonitic material was noted only for material that was initially settled through the artificial sea water columns. As the K concentration level of sea water dropped by extraction below 0.005 M, a bulk effect of the settling clay material became operative, and the relative percentage of altered clay material decreased. Further, the relative amounts of modified clay material detected were decreased by the introduction of carbohydrate material into the sea water media. The amounts present after a definite time interval were dependent upon the distributive tendencies of the source clay materials and the physical disturbance of the clay sea water systems. Resuspension of the clay material by reagitation of the systems decreased and significantly governed the rate of diagenetic modification.

Physics of the Atmosphere

Air Force Cambridge Research Center, Bedford, Mass.
THE ARDC MODEL ATMOSPHERE, 1959, by R. A. Minzner, K. S. W. Champion and H. L. Pond. Aug 59, 151p. 141 refs. Air Force Surveys in Geophysics no. 115; AFCRC-TR-59-267.
Order from OTS $2.75 PB 161 305

A model of the earth's atmosphere to 700 kilometers is given. Below 53 kilometers the present model is the same as The ARDC Model Atmosphere 1956. Above this height, changes have been made based on data deduced from rocket flights and from the rate of change of the orbital period of satellites. At approximately 600 kilometers the new model gives densities that are 20 times higher than the 1956 model. Below 600 kilometers the two models gradually come closer together and finally cross at about 150 kilometers. Between 90 and 150 kilometers the density for the 1959 model is lower, being about one half that of the 1956 model at 120 kilometers. At the present time, the maximum altitude at which density data from satellites has been obtained is just below 700 kilometers. For this reason, the tables end at 700 kilometers. Dashed lines in the plots present a tentative extrapolation of the data to 1000 kilometers. The value of the molecular weight, like other atomspheric properties, probably depends on both location and time. The 1959 model curve probably represents the molecular weight at high latitudes, such as Fort Churchill, where the experimental data were obtained. At lower latitudes the molecular weight may be nearer the curve given in the 1956 model.

Cornell U. School of Electrical Engineering, Ithaca, N. Y.
INTERNATIONAL SYMPOSIUM ON ATMOSPHERIC DIFFUSION AND AIR POLLUTION, 24-29 AUGUST 1958, OXFORD, ENGLAND, by H. G. Booker. Technical rept. no. 48 on Studies on Propagation in the Atmosphere, Contract DA 36-039-sc-74903. 23 Sep 58, 76p. 26 refs. Research rept. EE 388.
Order from LC mi$4.50, ph$12.30 PB 144 174

Papers on the following topics were given at this symposium: (1) General survey of atmospheric diffusion and pollution; (2) recent findings on atmospheric turbulence; (3) theory of turbulent diffusion; (4) diffusion of heavy or finite particles; (5) vertical transfer through the troposphere and stratosphere; (6) effects of thermal stratification on diffusion; and (7) pollution patterns from point and area sources.

Ionosphere Research Lab., Pennsylvania State U., University Park.
A COMPUTER PROGRAM FOR OBTAINING REFRAC-

TIVE INDICES AND POLARIZATIONS FROM THE APPLETON-HARTREE EQUATIONS AND MAGNETO-IONIC TABLES FOR CAPE CANAVERAL, by E. A. Mechtly. Scientific rept. no. 116 on Ionospheric Research, Contract DA 36-061-ORD-577. 15 Feb 59, 69p. 3 refs.
Order from LC mi$3.90, ph$10.80 PB 144 242

Program Cc 126 for the Pennsylvania State University's digital computer PENNSTAC is given. This program has been prepared for the computation from the Appleton-Hartree equations of magneto-ionic refractive indices and polarizations for both modes of propagation. Instructions for using this program are given. Magneto-ionic tables for Cape Canaveral, Florida are presented. These tables have been compiled for use in conjunction with the Ionosphere Research Laboratory's project for the determination of electron densities in the ionosphere by means of rockets.

Ionosphere Research Lab., Pennsylvania State U., University Park.
IONOSPHERIC ELECTRON DENSITIES FOR WASHINGTON D. C., PANAMA, TALARA, AND HUANCAYO FOR JANUARY-FEBRUARY-MARCH, 1958, by E. R. Schmerling. Scientific rept. no. 122 on Ionospheric Research, Contract AF 19(604)3875. 15 Aug 59, 245p. 3 refs. AFCRC-TN-59-603.
Order from LC mi$11.10, ph$37.80 PB 144 164

These tables have been computed from routine ionograms by the matrix method of Budden (1955). The details of the method as used here are more fully discussed by Schmerling (1957). 40x40 matrices were used, two matrices being computed for each station, to cover the ranges 1.6(0.2)9.6 mc/s. and 2.0(0.5)22 mc/s. For F2 critical frequencies below 10 mc/s. the former matrices were used, and for F2 criticals above 10 mc/s, the latter. In addition, if significant structural details were seen on ionograms with F2 criticals above 10 mc/s. the former matrices were used to determine the profiles in greater detail below 10 mc/s. The method takes full account of the earth's magnetic field, but ignores electronic collisions. No assumptions are made as to profile shape other than a monotonic variation of electron density with height.

Minnesota U., Minneapolis.
WINDS AND WIND STRUCTURE AT 100,000 FEET FROM CONSTANT ALTITUDE BALLOON TRAJECTORIES, by Homer T. Mantis. Final scientific technical rept. on Atmospheric Physics, Contract AF 19(604)2207. Apr 59, 255p. 4 refs. AFCRC-TR-59-243; AD-214 594.
Order from LC mi$11.10, ph$39.60 PB 144 323

The wind data from constant altitude balloon trajectories were analyzed by 2 methods. The structure of the winds on what might be called a conventional meteorological scale was made by measuring 3-hr average winds (some slightly longer or shorter if the fixes were irregular in time), from the trajectories plotted on the maps at 1:500,000 scale. By using a 3-hr period, the accuracy of the velocities is quite high and most of the remaining variation is comparable to the scale of motion analyzed on synoptic maps. The second type of analysis of the wind structure was an investigation of motions of smaller scale. The existence of smaller scale motions is quite evident in the trajectories at low wind speeds. Several of the flights show complete closed loops in the trajectories. To systematize the observations of wind structure at smaller scale, a type of spectral analysis of the wind measurements was made for higher level flights with camera trajectories.

New York U. Coll. of Engineering, N. Y.
THE SEMIDIURNAL PRESSURE OSCILLATION IN THE STRATOSPHERE, by B. Haurwitz. Scientific rept. no. 7 on Contract AF 19(604)1738. Oct 58, 18p. 3 refs. AFCRC-TN-58-603; AD-206 331.
Order from LC mi$2.40, ph$3.30 PB 137 889

The semidiurnal pressure oscillation was computed for one station pair in the southern U. S. at the 250- and 175-mb level, and for another in the tropical Pacific at the 200-mb level. The accuracy of these values of S_2 is not very great because of the lack of sufficient data. Values show that the pressure maximum is retarded aloft by about 1.5 hr, and that the amplitude increases upwards, in agreement with earlier conclusions based on data from the Caribbean.

ENGINEERING

Bureau of Yards and Docks, Washington, D. C.
WATER SUPPLY FOR ADVANCED BASES. 1 Nov 52, 62p. 7 refs. Technical pub. NAVDOCKS TP-PL-6.
Order from LC mi$3.90, ph$10.80 PB 144 110

This publication is developed as a guide to the selection of equipment that is available for the collection, treatment, and distribution of water (primarily for potable purposes) at advanced bases. It should prove very useful to the officer who is responsible for selecting the proper type and size of equipment for each set of circumstances and for making up allowance lists for various requirements, also to the officer in the field who has charge of water supply systems. This publication contains adequate descriptions of available equipment recommended for both temporary and semipermanent advanced bases, and establishes the criteria that govern the selection of particular systems and equipment for specific cases.

Institute of Tech., U. of Minnesota, Minneapolis.
SURVEY AND EVALUATION OF POWER SOURCES SYSTEMS. PART III. MECHANICAL COMPONENTS, by Adolph O. Lee, M. M. El-Wakil, and William A. Kleinhenz. Rept. for 15 Sep 53-1 Dec 55 on Contract DA 36-039-sc-56649. 1955,131p. 127 refs.
Order from LC mi$6.90, ph$21.30 PB 144 505

Mechanical components of power source systems are limited to those devices or means of transmitting power from a driving unit or prime mover to an electrical generator. Elastic energy storage has been investigated in two forms - solid material elasticity and liquid compressibility. At the present time solid material elasticity in the form of springs is the more practical. Springs serve well as a form of storage energy in limited amounts. Liquid compressibility will need further development before its use will become practical. Wind power has had the benefit of years of experimentation, but has not developed into a major means of providing power. Neither atmospheric pressure variations nor atmospheric temperature variations was found to contribute significantly as a potential energy source. An estimate of the potential availability of the energy consumed by man is provided in the report.

Aero Medical Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
EMERGENCY ESCAPE CAPSULE STUDIES. PHASE I. PRELIMINARY LABORATORY FLOTATION STUDIES, by Allan P. Kearney, Billy J. Mills, and Ronald S. Huey. Rept. on Integration of Personal Equipment. June 59, 21p. WADC Technical rept. 59-247(I); AD-226 055.
Order from OTS $0.75 PB 161 042

Preliminary studies using aircraft canopy escape-type capsules are described. Design of capsule clothing, donning of clothing in confined space, stowage of emergency survival items, air exchange requirements, flotation, inhabitation and communication studies were conducted as individual facets of the program. The studies were culminated with a test in which a human subject remained in a closed capsule for 72 hours. Findings from these preliminary studies are presented. The capsule with an air exchange system successfully served as a temporary shelter while floating in a test pool for a period of 72 hours. Throughout the test, the hatch was closed to simulate a situation which might be necessary operationally only as a result of the most severe environmental conditions.

American Brake Shoe Co. [New York]
DEVELOPMENT OF LOW ALLOY STEEL COMPOSITIONS SUITABLE FOR HIGH STRENGTH STEEL CASTINGS, by Hugo R. Larson, Ronald C. Campbell, and Herbert W. Lloyd. Rept. for July 58-Jan 59 on Metallic Materials, Contract AF 33(616)5299. June 59, 116p. WADC Technical rept. 59-63.
Order from OTS $2.50 PB 161 044

Cast high strength alloy steels were investigated to develop compositions which had 12% elongation, 30% reduction of area and 15 ft. lb. impact strength when heat treated to 180,000 psi tensile strength. In addition the ultra high strength level was studied to determine the tensile strength at which a reduction of area in exceas of 10% could be maintained. A series of alloys based primarily on 4340 were poured. The optimum carbon content was established at approximately 0.35%. High purity raw materials had a definite beneficial effect on ductility both at the 180,000 psi and the ultra high strength level. Two vacuum melted heats met all of the above requirements quite easily. Air hardening die type steels were also inveatigated. Exceptionally good properties were obtained with high purity raw materials and a base analysis of about .30% carbon, 5% chromium, 1.50% molybdenum and 0.50% vanadium. Simple plate castings of varying thickness and length were poured to investigate the feeding characteristics of the 8740 type steel. Tensile bars cut from the castings had properties which correlated well with radiographic soundness of thin slices cut adjacent to the tensile specimens. Both the 8740 and the 5% chromium steels were poured in three typical airframe castings. Tensile properties in the castings were not as good as from test bars.

Army Chemical Warfare Labs., Army Chemical Center, Md.
CONDENSATION TRAIL ELIMINATION, by Bernard E. Simonson and Robert H. Frickel. Sep 59, 33p. 19 refs. CWLR 2304.
Order from LC mi$3.00, ph$6.30 PB 144 107

A theoretical and experimental study was conducted on the elimination of aircraft condensation trails. Various materials were added to the exhaust stream of a laboratory model pulse jet generator which burned JP-4 jet fuel. The exhaust products were conducted into a cold chamber maintained at -50°F where nuclei produced from (1) sublimating silver iodide, (2) a solution containing silver iodide, (3) a hydrophilic colloid, (4) a household detergent, and (5) reacting metallic silver with iodine were added to the exhaust. Most promise was shown when a solution containing silver iodide was injected into the exhaust stream. The optical density of the condensed cloud was decreased by 38.9% when compared to an untreated cloud.

Army Transportation Research and Engineering Command, Fort Eustis, Va.
HELICOPTER WEIGHT AND LOAD COMPUTER, by Gene C. Moen. June 59, 36p. Proj. 9-38-01-000, House Task 12.90.
Order from LC mi$3.00, ph$6.30 PB 144 128

This report contains an evaluation of the design and arrangement of a helicopter weight and load computer and a discussion of the development of optimum features for a computer. Results of the engineering and performance evaluation reveal that additional development of the computer body is required and that the optimum means of presenting the computer scale should be determined. It was concluded that a computer based on the technical characteristics, included in the report, will satisfy the Army's requirement for a helicopter weight and load computer. A contract has been let for the development of an optimum configuration of the computer.

Bureau Technique Zborowski (France).
THEORETICAL INVESTIGATION AND EXAMINATION BY MEASURING TESTS OF THE THRUST CONTROL BY RUDDERS UNIFORMLY FITTED AT THE OUTLET OF A DUCT. Final technical rept. for 1 July 58-30 Sep 59 on Contract DA 91-508-EUC-394. 10 Oct 59, 86p. 9 refs.
Order from LC mi$4.80, ph$13.80 PB 144 249

It is of great importance for VTOL aircraft to dispose at any moment of its ascensional or, at hovering flight, of the full thrust of the motor aggregate. In the case of COLEOPTERS, the ring airfoil permits fitting rudders at the outlet which can assume the role of control surfaces not only for changes of direction, but also for modification of the thrust. A computation method is given which is based on potential-flow theory, permitting the calculation of the thrust reduction in function of the rudder configuration (relative depth and deflection angle) and the flight speed. The method cannot take due account of viscosity influences, necessarily occurring for higher flight speeds at greater rudder deflections. Indeed, flow separation on the back of the rudders seriously changes the computed values, restricting by the perturbations due to its action, even the domain of rudder depths and deflection angles to be admitted. Moreover, the zone occupied by the detached flow reduces in a large extent the control possibilities of the rudder, necessitating special devices to avoid this, as e. g. tangential blowing at the rudder hinge. It seems to follow from calculations as well as from tests that the most favorable results can be expected for rudder depths of approximately 20% of the total wing length and within a range of deflections bounded to 60°. More investigations on boundary-layer behavior and on questions of boundary-layer control in threedimensional flow seem absolutely indispensable for a more pertinent theory than that proposed here.

David Taylor Model Basin, Washington, D. C.
THE PLANING CHARACTERISTICS OF A V-SHAPED PRISMATIC SURFACE WITH 70 DEGREES DEAD RISE, by James D. Pope. Dec 58, 18p. 11 refs. Rept. 1285.
Order from LC mi$2. 40, ph$3. 30 PB 144 217

This report is one of a series on the experimental investigation of the planing characteristics of a series of related prismatic surfaces. The principal planing characteristics have been obtained for a V-shaped prismatic surface having an angle of dead rise of 70 degrees. Wetted lengths, resistance, and center-of-pressure location were determined at speed coefficients from 2. 17 to 36. 85, and trims up to 30 degrees. Keel-wetted-length-beam ratios were extended to approximately 8. 0 in all cases where excessive loads or excessive spray conditions were not encountered.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
FUTURE APPLICATION TRENDS FOR TITANIUM AND STEEL IN MILITARY AIRCRAFT, by W. Stuart Lyman and Fred L. Bagby. 8 May 59. 7p. DMIC-M-17 memo. 17.
Order from OTS $0. 50 PB 161 167

EVALUATION OF EXPERIMENTAL POINT SOURCES AND TRANSPARENCIES FOR HELICOPTER HOVERING FLIGHT SIMULATION DEVICE 2FH2. Rept. on Contract Nonr-1628(00). Feb 59, 72p. Technical rept. NAVTRADEVCEN 1628-11.
Order from LC mi$4.50, ph$12.30 PB 144 272

The visual display produced by the point light source and transparency originally furnished for Device 2-FH-2, an experimental helicopter hovering flight simulation device, and the visual display produced by a new light source and transparency for that device were evaluated by pilots. These evaluations were then compared to determine the relative merits of the original set and the new set of components. An appraisal of the usefulness of such a device for training was obtained also. The improved resolution obtained with the new light source is preferable to the greater brightness of the original one. The photographic techniques used in preparing the new transparancy result in a more realistic display than that obtained with the wholly hand-decorated original transparency. The dished shape of the new transparency is much more rigid than the old one but detracts somewhat from the realism. Three-dimensional objects give the most important cues in the display with horizon and earth texture next in importance. The distortion known as "bowl effect" is the most objectionable distraction. Simulation of all sorts of ambient weather conditions is greatly to be desired for training purposes. Some cockpit motion, even though limited, will add significantly to the effectiveness of the display.

Douglas Aircraft Co., Inc., Long Beach, Calif.
A DESIGN STUDY OF AN AIRCRAFT CARGO-HANDLING SYSTEM FOR HIGH-FLOOR AIRCRAFT. Rept. for 29 July 58-24 Apr 59 on High Floor Study, Contract AF 33(600)37569. 5 June 59, 118p. Engineering rept. LB-30108; WADC Technical rept. 59-264; AD-216 085.
Order from OTS $2. 50 PB 161 294

The purpose of this study is to investigate and design a cargo handling system for the following high-floor aircraft (C-54, C-97, C-118, C-121, KC-135, and the 1920 which is representative of the swing-tail jet transports). This cargo handling system would reduce the loading and off-loading time, thus effectively increasing the utilization of the aircraft. The wide variety of cargo compartment configuration represented by the high floor aircraft were thoroughly analyzed in order to derive a single pallet size which would provide the best utilization of the compartment space. The cargo handling system recommended as a result of the study utilizes rigid, flat pallets, 5 feet by 7 feet in size equipped with web cages for the consolidation and unitization of loads. Ball conveyors at aircraft door entrance provides omni-directional movement of the pallets for proper alignment between the guide rails in the aircraft. Roller conveyors on the floor permit moving the pallet to the proper location in the cargo compartment where quick action locking pins provide the restraint for flight. A self-contained loading capability, jettisoning problems, and application of the system to the Civil Reserve Air Fleet were also studied.

Giravions Dorand (France).
DESIGN STUDY OF THE FEASIBILITY OF FLYING-CRANE TYPE HELICOPTERS INCORPORATING THE JET-FLAP CONTROL SYSTEM. VOLUME I: TEXT, by R. Dorand and S. Tararine. Rept. on Contract DA 91-591-EUC-987, 30 Apr 59, 315p. 87 refs. Rept. no. 1088.
Order from LC mi$11. 10, ph$48. 60 PB 144 460

The object of this report is to study the feasibility of flying-crane-type helicopters incorporating the new and promising concept of the jet-flap control system, to determine the optimum crane helicopter configuration for carrying 20 to 30 tons of cargo a distance of 10 to 100 nautical miles and to estimate the operational costs of such a machine. The flying-crane helicopter program considered here is as follows: - Payload: 20 to 30 tons at sea level, under standard conditions, 10 to 20 tons under tropical conditions - Range: 10 to 100 nautical miles - Ferry range: 500 to 1500 nautical miles - Cruising speed: not less than 60 Kts - Hovering ceiling: 6000 ft at 95° F. Study of this program leads to the consideration of several design studies each including the jet flap control system.

Giravions Dorand (France).
DESIGN STUDY OF THE FEASIBILITY OF FLYING-CRANE TYPE HELICOPTERS INCORPORATING THE JET-FLAP CONTROL SYSTEM. VOLUME II: FIGURES AND CHARTS, [by R. Dorand and S. Tararine] Rept. on Contract DA 91-591-EUC-987. 30 Apr 59, 122p. Rept. no. 1088.
Order from LC mi$6. 30, ph$19. 80 PB 144 461

See PB 144 460

Hiller Aircraft Corp., Palo Alto, Calif.
INVESTIGATION OF A RESONANT BURNER CONCEPT, PHASE I, by R. M. Lockwood. Summary rept. on Contract Nonr-2458(00). 1 Dec 58, 50p. 5 refs. Rept. no. ARD-219.
Order from LC mi$3. 30, ph$7. 80 PB 144 289

A new resonant combustor concept has proceeded to the point of initial evaluation. A shrouded resonant combustor with multiple ejector-type air inlets has been constructed and demonstrated. The main purpose of this research has been to achieve a combustion that can take advantage of the qualities of resonant combustion (a combination of high combustion efficiency with a pressure rise during combustion) without suffering from the air inflow losses characteristic of resonant combustion with increasing airspeed.

Hiller Helicopters, Palo Alto, Calif.
TWO-PLACE OBSERVATION HELICOPTER: PRELIMINARY DESIGN STUDY, by John F. Straubel, ed. Rept. on Contract DA 44-177-tc-421. Aug 57, 136p. Rept. no. 57-76.
Order from LC mi$6. 90, ph$21. 30 PB 138 540

It is the purpose of this report to provide design and operational suitability evaluations of various specimen configurations and individual components within the Army two-place helicopter concept. The study scope has been limited to consideration of single main rotor --anti-torque rotor, mechanically driven helicopters. It has been the intention in compiling this report that it be usable not only as a supplement to the other study reports, but also as a handbook to which the Army can refer in establishing new configurations which may seem worthy of consideration.

Hiller Helicopters, Palo Alto, Calif.
TWO-PLACE OBSERVATION HELICOPTER: PRELIMINARY DESIGN STUDY. RECOMMENDATIONS. Rept. on Contract DA 44-177-tc-421. Aug 57. 28p. 1 ref. Rept. no. 57-77.
Order from LC mi$2. 70, ph$4. 80 PB 138 541

The following report provides Hiller Helicopters' recommendation to the Army for a lightweight, two-place helicopter for operations in the 1960-1970 decade. This material is supplementary to the Two-Place Helicopter Preliminary Design Study, which is presented separately in Report 57-76.

Kellett Aircraft Corp., Willow Grove, Pa.
DESIGN STUDY, ARMY TWO-PLACE HELICOPTER, by Arthur Jennings, J. A. Gaidelis and others. Rept. on Contract DA 44-177-tc-416. Aug 57, declassified 28 Apr 58, 216p. KAC rept. no. 124X90-1.
Order from LC mi$9. 60, ph$33. 30 PB 138 542

Presented in this report are the results of a design study of an Army Two-Place Helicopter which is designed for low-cost, reliability, ease of maintenance, and of smaller configuration size than present reconnaissance helicopters.

Nagler Helicopter Co., Glen Cove, N. Y.
PRELIMINARY DESIGN STUDY OF ARMY TWO-PLACE HELICOPTER, by Eugene K. Liberatore. Final summary rept. on Contract DA 44-177-tc-418. 6 Sep 57, 278p. 16 refs. Nagler rept. 190-F-1.
Order from LC mi$11. 10, ph$42. 60 PB 138 545

Submitted here is the preliminary study of a two place observation helicopter suitable for Army operations. The principle feature of the configuration is the powerplant and drive system in which the engine and crankcase are free to turn in opposite directions. The performance given in the Statement of Work is substantially satisfied with a helicopter of 1750 lbs. gross weight using a 180 HP Lycoming 0-360 Engine. A turbine driven version would have a normal gross weight of about 1500 lbs.

Chemical Engineering

Army Chemical Warfare Labs., Army Chemical Center, Md.
THE PREPARATION OF FAR INFRARED FILTERS POTENTIALLY USEFUL FOR THE DETECTION AND ANALYSIS OF COMPOUNDS CONTAINING THE PHOSPHORUS-OXYGEN-ALKYL LINKAGE, by Arnold Prostak. 1 Oct 58, 10p. 10 refs. CWL Technical memo. 32-35.
Order from LC mi$1. 80, ph$1. 80 PB 144 035

Stable transmission filters have been prepared from talc and Fluorothene for the 10 micron infrared region with a half bandwidth of 0. 9 micron and a peak transmission of 77%. These filters are applicable to a

LOPAIR device for detecting compounds containing the phosphorus-oxygen-alkyl linkage. Replacing the present monochromator with filters should result in greater simplicity, reduction of cost and weight, and perhaps longer range.

Badger, W. L., Associates, Inc., Ann Arbor, Mich.
OPERATION OF PILOT PLANT LTV EVAPORATOR AT WRIGHTSVILLE BEACH, NORTH CAROLINA. Rept. for Nov 57-31 May 59. 30 July 59, 98p. 6 refs. Rept. no. 452; Office of Saline Water Research and Development Progress rept. no. 26.
Order from OTS $2.75 PB 161 290

The primary objective in the development of the W. L. Badger Long Tube Vertical Multiple Effect Evaporator for saline water conversion is to minimize the ultimate cost of producing potable water. To accomplish the primary objective, it is necessary to (1) prevent formation of scale on heating surfaces, and (2) minimize corrosion to permit use of inexpensive materials of construction. The work done leading to this report was guided in the direction of accomplishing the two secondary objectives. The pilot plant was built as a single effect Long Tube Vertical Evaporator supplemented by two Forced Circulation Evaporators. To insure results which could be translated to commercial installations, the system was built with sufficient flexibility to permit operation under the conditions which would exist in any effect of a twelve effect system including one stage of thermocompression. The experimental work was divided into four major classifications: (1) Rising film heat transfer, (2) Falling film heat transfer studies, (3) Scale prevention experiments, (4) Corrosion investigation.

[Massachusetts Inst. of Tech., Cambridge].
FILTRATION OF AEROSOLS, by D. F. Jergensen and R. P. Whitney. 9 Oct 42, declassified 27 Sep 58, 52p. 3 refs. Memorandum rept. M. I. T. - M. R. no. 11.
Order from LC mi$3.60, ph$9.30 PB 143 906

Some of the fundamental factors involved in aerosol filtration have been investigated; principally air velocity, size of fiber, degree of compression of filter pad, type of material, and charge on the smoke particles.

Polytechnic Inst. of Brooklyn, N. Y.
DEVELOPMENT OF EMERGENCY DESALTING KIT, by H. P. Gregor, H. Jacobson and R. Dogan. Final rept. on Contract NObsr-65586. 26 Feb 57, 43p. AD-140 611.
Order from LC mi$3.30, ph$7.80 PB 138 487

Work was undertaken to design, develop, and furnish 2 prototype models of portable desalting unit capable of producing potable water from live sea water by a single pass through an ion-exchange film. Sulfonic cation-exchange membranes were prepared by the interpolymer solution technique. Concentration potentials were 15.5 mv in 0.2 M solutions, compared to a theoretical maximum of 16.1 mv; resistances ranged upwards from about 5 ohm sq cm. Films were incorporated onto microfilter porcelain disks. To prevent the membranes from swelling, several techniques designed to cross-link the matrix were investigated; physical and electrochemical properties were not improved. Interpolymer membranes were subjected to aqueous solutions under a pressure head of about 2000 psi; the films were essentially impervious to water. Water-transport and salt-rejection studies as a function of time were performed. Salt solutions of varying concentrations were opposed to sugar solutions of varying concentrations, and significant desalting was found. Interpolymer membranes were used to separate dry fructose from 0.59 M (3.45%) NaCl solutions. Resulting fructose solutions (via osmosis) of 60-70% H_2O (by weight and of 0.4-0.8% NaCl were obtained. Prototype desalting bags for demonstration purposes were fabricated. This method for desalting sea water will not only provide potable water, but also a food substance. Assuming a 65% water solution of fructose and water, a volume ratio (volume of H_2O/volume of fructose) of 3.97 and an analogous weight ratio of 2.47 is obtainable.

Civil Engineering

Bureau of Yards and Docks, Washington, D. C.
HOUSING AND SUBSISTENCE FACILITIES. 15 May 54, 85p. 12 refs. Technical Pub. NAVDOCKS TP-Pw-23.
Order from LC mi$4.80, ph$13.80 PB 144 109

This publication is intended primarily as a guide for civilian and military personnel responsible for planning, designing, and constructing housing and subsistence facilities at naval shore activities. Reference is occasionally made to maintenance features. Part A presents the general authority under which this Bureau provides public works and public utilities, including housing and subsistence facilities. Part B deals with family quarters, including married officers' quarters, married enlisted men's quarters, and married civilian personnel quarters. Part C data cover planning and architectural requirements for bachelor officers' quarters, male and female. Part D gives data for enlisted men's barracks, enlisted women's barracks, and subsistence facilities. Part E describes commissary stores, including organization and architectural requirements. Part F presents the planning and layout of bread and pastry bakeries, also bread-baking and bread-handling equipment. Part G describes the location and design of laundries, including functional planning and equipment.

Land Locomotion Lab., Ordnance Tank-Automotive Command, Center Line, Mich.
PREDICTION OF "WES CONE INDEX" BY MEANS OF A STRESS-STRAIN FUNCTION OF SOILS, by Zoltan Janosi. Feb 59, 28p. 2 refs. Rept. no. 46.
Order from LC mi$2.70, ph$4.80 PB 144 410

The "cone index" developed by the Waterways Experiment Station (WES) of the Corps of Engineers for the purpose of estimating soil trafficability may be calculated with acceptable accuracy from the appropriate empirically defined stress-strain function of the given terrain. Methods for the determination of that function and the equations which express it were developed by the Land Locomotion Laboratory and successfully used in the prediction of the "cone index."

Stanford U., Calif.
INVESTIGATION OF SHEAR WALLS. PART 12: STUDIES OF REINFORCED CONCRETE SHEAR WALL ASSEMBLIES, by Jack R. Benjamin and Harry A. Williams. Technical rept. no. 10 on Contract DA DA 49-129-eng-193. Dec 56, 224p. 11 refs. AFSWP 891; AD-145 422.
Order from LC mi$9.90, ph$34.80 PB 138 121

Models tested were one and two story assemblies containing two or three shear walls connected by diaphragms in all cases. Some assemblies contained front and back face walls also. The distribution of load in three wall structures is largely dependent on the rigidity of the foundation structure and the supporting soil.

Stanford U., Calif.
INVESTIGATION OF SHEAR WALLS. PART 13: FINAL REPORT-SUMMARY OF RESULTS OF STUDY OF REINFORCED CONCRETE AND BRICK WALLED BENTS UNDER STATIC SHEAR LOADING, by Jack R. Benjamin and Harry A. Williams. Technical rept. no. 11, 31 Mar 51-31 Dec 56, on Contract DA 49-129-eng-193. Dec 56, 40p. 12 refs. AFSWP 892; AD-145 423.
Order from LC mi$3.00, ph$6.30 PB 138 115

Methods of predicting the behavior of one-story reinforced concrete and brick shear walls are given. Various parameters affecting the problem are reviewed briefly. The investigation was restricted to static loading. (See also PB 138 121)

Electrical and Electronic Engineering

Aero Geo Astro Corp., Alexandria, Va.
AN INVESTIGATION OF POLARIZATION RESPONSE FOR RADIATION OVER A FINITE CONDUCTING PLANE, by Duncan M. Bowie. Scientific rept. no. 1 on Contract AF 19(604)5481. 19 Oct 59, 49p. 5 refs. AFCRC-TN-59-772.
Order from LC mi$3.30, ph$7.80 PB 143 996

This report describes an investigation of the radiation patterns obtained from a feed located close to a ground plane. It considers a new technique for increasing the available power in a plane containing the finite ground plane. In particular, the well-known limitations of the horizontally polarized signal were investigated and a technique was developed for enhancing this signal. Improved horizontal polarization response was obtained by using a grounded dielectric foam structure with thickness of the order of a few wavelengths. This structure was extended over the ground plane to provide improvement in horizontal polarization response. Data is given in terms of beam position for a variety of foam dielectric configurations. With a sufficient amount of foam, pattern characteristics are obtained approximately equal to those of the feed in free space. Vertical polarization data regarding beam position is also provided and an Appendix contains the detailed radiation patterns for both polarizations.

Aerosciences Lab., General Electric Co., Philadelphia, Pa.
DESIGN CONSIDERATIONS OF A STEADY DC MAGNETOHYDRODYNAMIC ELECTRICAL POWER GENERATOR, by George W. Sutton. Rept. on Contract AF 04(647)269. 15 Sep 59, 50p. 8 refs. Technical Information Series R59SD432.
Order from LC mi$3.30, ph$7.80 PB 144 200

The design of an mhd generator has been considered, including the length, pressure, magnetic field strength and losses. The geometry chosen is a straight channel of variable cross-section. Only DC power generation is considered utilizing temperatures which may be obtained from conventional thermal sources. Losses due to high exhaust temperature, ohmic heating, wall cooling, magnet power and end effects are amenable to control. As far as magnet power is concerned, indications are that these losses are approximately constant. The implication is that the mhd generator should be large, and formulae are given to determine the various losses for different size units. Since the exhaust gases from the mhd generator are very hot, these gases must be utilized further to obtain a reasonable overall thermal effeciency.

Aerosciences Lab., General Electric Co., Philadelphia, Pa.
ELECTRICAL AND PRESSURE LOSSES IN A MAGNETOHYDRODYNAMIC CHANNEL DUE TO END CURRENT LOOPS, by George W. Sutton. Rept. on Contract AF 04(647)269. 22 July 59, 47p. Technical Information Series R59SD431.
Order from LC mi$3.30, ph$7.80 PB 144 189

The problem of end losses in a magnetohydrodynamic flow has been studied for incompressible inviscid flow in a rectangular channel. Termination of the magnetic field at the ends of the electrodes leads to electrical losses which increase with decreasing aspect ratio of the electrode section of the channel. The losses are also increased with increasing values of the generator coefficient. These electrical losses can be corrected by extensions of the magnetic field beyond the electrode region, but these corrections adversely affect the net pressure change through the device.

Air Force Cambridge Research Center, Bedford, Mass.
SURVEY OF RECENT GEOMETRIC-ANALYTIC WORK ON IMPEDANCE, POWER, AND NOISE TRANSFORMATIONS, by E. Folke Bolinder. May 59, 22p. 50 refs. AFCRC-TR-59-146; AD-215 821.
Order from LC mi$2.70, ph$4.80 PB 144 431

A survey is made of recent geometric-analytic work on impedance, power, and noise transformations. Three basic research publications treating impedance, power, and noise transformations through bilateral 2-port networks are briefly outlined. Analytically, the transformations consist in conformal, projective, and affine transformations. Geometrically, they are performed in the complex plane, in the Cayley-Klein models of 2- and 3-dimensional hyperbolic space, and in the Minkowski model of 4-dimensional Lorentz space.

MAGNETIC TAPE COPY STATION, by C. R. Scott and W. H. Bulter. 12 Aug 58, 15p. AFMTC-TR-58-18; AD-157 101.
Order from LC mi$2.40, ph$3.30 PB 144 318

This paper outlines in a detailed manner the operation of the Magnetic Tape Copy Station presently operational at the Air Force Missile Test Center.

American Electronic Labs., Inc., Philadelphia, Pa.
OMNIDIRECTIONAL ANTENNA SYSTEM AS-631 (XE-2)/U, by Milton Nussbaum. Final rept. for 1 July 55-1 Nov 56 on Contract DA 36-039-sc-64679. [1956] 91p. 5 refs. AD-133 954.
Order from LC mi$5.40, ph$15.30 PB 137 518

Efforts to develop a transportable antenna system capable of receiving vertically polarized electromagnetic energy throughout the 20- to 120-mc range resulted in the development and construction of the AS-631(XE-2)/U system. A rod-type discone antenna, mounted on a telescoping mast, was developed to meet the electrical and mechanical requirements. The frequency coverage was accomplished by splitting the range into low (20 to 62 mc) and high (62 to 120 mc) bands for correlation with the TLR-1 receiving system. Each band requires a separate disk, but both bands have common cone rods. The high-band discone will operate on top of the telescoping mast (24 ft above the ground), but the optimum operating position for the low-band antenna is as close to the ground as possible. The high-band antenna is useful up to 180 mc. The telescoping mast is adaptable for mounting the discone antenna.

Army Signal [Research and Development Lab.] Fort Monmouth, N. J
DESIGN FOR EASE OF MAINTENANCE, by Samuel J. Lanzalotti. 17 July 57, 25p. Technical memo. no. M-1905; AD-144 088.
Order from LC mi$2.70, ph$4.80 PB 138 095

The problems associated with the maintenance of electronic equipment are discussed to indicate some of the difficulties correctable by proper design. Design for ease of maintenance is concerned with keeping the equipment in operation with a minimum down time alloted per malfunction and with designing equipment capable of being maintained by personnel with training equal to that normally required to operate the equipment. Discussions are included on the designers responsibility, specification and designing for maintainability, and the principles of design for ease of maintenance.

Bell Telephone Labs., Inc., Whippany, N. J.
AN ULTRA-PRECISE STANDARD OF FREQUENCY, by A. W. Warner. Interim rept. no. 9, 13 July 58-9 Jan 59, on Contract DA 36-039-sc-73078. 23 Jan 59, 29p. 2 refs. Rept. no. 27480-H.
Order from LC mi$2.70, ph$4.80 PB 144 300

This report includes a discussion of a new phase of the work, the development of a ruggedized high-precision crystal unit capable of maintaining 1 pp 10^9 in an environment incumbent to missile-borne use, and the continuation of work leading to an improved ground station oscillator. One preliminary model of the 5-mc missile crystal unit has been made to obtain dimensional data. Two models of the 2.5-mc ground station crystal unit have been made using thermo-compression bonding, and testing has begun. Vibration equipment, and a centrifuge and oven have been obtained to test the missile crystal unit. A welder and an ultrasonic cleaner have been obtained for use in crystal unit fabrication. An experimental 5-mc transistor oscillator has been designed and built. An improved 2.5-mc three-stage oscillator has been constructed. (See also PB 142 641)

Birmingham U. (Gt. Brit.).
CHARACTER RECOGNITION. Annual rept. for period ending 30 Sep 59 on Contract DA 91-508-EUC-361. [1959] 23p. 7 refs.
Order from LC mi$2.70, ph$4.80 PB 144 238

The five-unit telegraph code is a non redundant code, in as far as all the possible combinations of mark and space digits, except five spaces, are used, and further consideration of the question of correlation detection applied to the recognition of the characters of a non-redundant code showed that there was no advantage over 'digit-by-digit' recognition. Tests were carried out on the recognition of signals from an 'alphabet' of the ten numerals 0 to 9 in a double difference (i.e. redundant) five-unit code using both correlation detection and normal teleprinter recognition. The former showed a considerable improvement in error rate. The amount of extra noise which can be tolerated using the correlation system varied from about 3db at low error rate to 6db at an error rate of about 30%. In the double difference code used each character is different from any other character in at least two and sometimes in four digits. Obviously the probability of a character being received as one different in four digits is less than that of it being received as one different in only two digits and the frequencies of occurrence of both these types of error were noted. The ratio of double difference to quadruple difference error was 263 to 1.

Collins Radio Co., Cedar Rapids, Iowa.
TEST SET, RADIO AN/ARM-22(XN-1) by K. L. Fletcher. Rept. on Contract NOas-52-623-c. 1 Feb 57, 27p. Rept. no. CER-526; AD-127 239.
Order from LC mi$2.70, ph$4.80 PB 144 378

The purpose of work on Radio Test Set AN/ARM-22(XN-1) was to design and develop suitable test equipment for maintenance of Radio Set AN/ARN-21 and associated equipment. The equipment includes six major units as shown in figure 1. Together these units provide complete test facilities for airborne

TACAN equipment. Included are provisions for simulating either the r-f signals received from an AN/URN-3 surface beacon or the corresponding video signals. Also included are channel selection facilities, complete instrumentation, r-f power-measuring circuitry, and other functions necessary for testing of all military airborne TACAN equipment.

Courtney and Co., Philadelphia, Pa.
THE CONTROL OF SPECULAR REFLECTIONS FROM BRIGHT TUBE RADAR DISPLAYS, by Kenneth W. Colman, Douglas Courtney and others. Technical rept. on Contract Nonr-2346(00). 15 Nov 58, 25p. 13 refs. Rept. no 23.
Order from LC mi$2.70, ph$4.80 PB 144 316

Diamond Ordnance Fuze Labs., Washington, D. C.
ANALYSIS OF POWER DISSIPATION IN A TWO-TRANSISTOR FLIP-FLOP, by Philip Emile, Jr. 14 Aug 59, 11p. 2 refs. DOFL rept. TR-746; AD-226 075.
Order from LC mi$2.40, ph$3.30 PB 144 227

The design of an Eccles-Jordan 2-transistor flip-flop is completely determined if one specifies: the output power, V_O^2/R_{EXT}, required in each of 2 symmetrical loads (R_{EXT}); the ratio, K of the output voltage to the collector supply voltage ($K = V_O/V_{CC}$); and the minimum β, β/S, of the transistor. An expression for the power dissipation in the collector resistors of the flip-flop is derived in terms of the above parameters. It is found that the power dissipation varies inversely with β/S. It is further shown that even for $\beta/S \rightarrow$ and K taken at its optimum value that the minimum power dissipated in the circuit is at least 4.8 times the power dissipated in the load ($4.8\ V_O^2R_{EXT}$). This gives a maximum efficiency (Power Out/Power In $= 1/5.8 \times 100$ percent) of 17.3 percent. Curves of maximum efficiency, optimum K and power dissipation versus β/S are included.

Diamond Ordnance Fuze Labs., Washington, D. C.
FLAT ARCHIMEDEAN SPIRAL ANTENNA: PRINCIPLES AND APPLICATIONS, by J. A. Kaiser. 15 Aug 59, 38p. 14 refs. TR-726.
Order from LC mi$3.00, ph$6.30 PB 144 228

A pair of equally excited but oppositely sensed Archimedean two-wire spirals situated close to one another in the same plane - a doublet - is used to generate a linearly polarized field in which the direction of polarization and phase are controlled or varied independently by rotation of the spiral radiators. An array of these doublets can be made to scan by rotation of the several spiral elements; an eight-doublet array which was made to scan over an 83-degree sector with small amplitude variation is discussed. A doublet fed from a ring network can be employed as a polarization diversity circuit. A virtual doublet is achieved by placing a single spiral in a right-angle trough. A preliminary scanning array comprising four spirals in a trough was made to scan ± 36 degrees. The possibility of using a parasitic spiral in conjunction with a driven spiral for obtaining linear polarization of variable direction and phase is indicated. Also, a brief simplified analysis of the two-wire Archimedean spiral is presented, which leads to the concept of higher-order modes of radiation.

Diamond Ordnance Fuze Labs., Washington, D. C.
FURTHER EXTENSIONS OF LOOP ANTENNA THEORY, by J. Herman. 15 July 59, 52p. 12 refs. TR-756.
Order from LC mi$3.60, ph$9.30 PB 144 226

A complete mathematical solution for the thin wire loop antenna, and the subsequent development of the principle of "mode selection and suppression" using inserted distributed and/or lumped internal impedances have been previously reported in DOFL Reports TR-462 and TR-600. The original solution was expressed in the form of wave families, consisting of one TE family and two TM families. In the present report, the two TM families are consolidated into one, and the general solutions for currents, impedances and fields revised accordingly. The solutions are then extended to incorporate the effect of multiple feed points with or without arbitrary phase delays. The problem of a loop with a solid dielectric core is then reformulated, and extended to the case of a hollow spherical dielectric core inclosing a spherical conducting core. It is shown that the basic loop element theory can be used to form the solution to an array of parallel, coaxial, unequally spaced, and unequal size loops, driven or parasitic. The results lead to a high degree of control over radiation coverage, and indicate further possible advantages, such as electronic beam scanning. The use of the theory developed can aid in antenna design to a great extent. The possibilities have not been completely explored. Further work will probably prove quite profitable.

Diamond Ordnance Fuze Labs., Washington, D. C.
LOW-ALTITUDE FM ALTIMETER, by Philip W. Boesch and Kermit E. Hardinger. 10 Aug 59, 23p. 5 refs. Technical rept. TR-740; AD-225 570.
Order from LC mi$2.70, ph$4.80 PB 144 170

With the recent emphasis on aircraft navigation safety, effort has been directed toward developing an altimeter capable of providing adequate altitude information for blind landings. Application of fuzing principles invented at DOFL has led to a radio altimeter which accurately (5 percent) measures distances from 5 ft to several thousand. This altimeter has been designed to furnish the pilot altitude information accurate enough throughout flareout and landing to enable him to make a safe instrument landing. The altimeter could also be adapted to supply this information to a computer for an automatic landing system. This is a signal-seeking altimeter that searches in frequency until a signal is found, then locks on and tracks it. If the signal fades out or is otherwise lost, the system will resume searching until recaptured by the signal. A warning device indicates loss of signal. The basic FM system uses jittered (nonperiodic) triangular modulation of a reflex klystron. This produces a jittered FM transmitted signal, which, when mixed with the return signal, produces an instantaneous difference frequency proportional to the distance from the ground. The aperiodicity eliminates critical distance and range ambiguities. The altimeter has been tested with a moving corner-reflector target out to several hundred

feet and flight tested in a helicopter to 1000 ft. with good results.

Eagle-Picher Co., Joplin, Mo.
SERVICES, FACILITIES AND MATERIALS TO CONDUCT INVESTIGATIONS LEADING TO THE DEVELOPMENT OF RESERVE TYPE BATTERIES (LOW TEMPERATURE). Final rept. on Contract DA 36-039-sc-72413. 7 July 57, 25p. AD-145 981.
Order from LC mi$2.70, ph$4.80 PB 138 421

A completely potted, water-activated battery was developed which meets the physical requirements of the BA-2270/U. The capacity of the battery at -40°F under high-wind-velocity conditions is limited to about 2 hr for the A unit and 4 hr on the B batteries. From 4 to 5 hr of life is possible under carefully controlled conditions. The optimum temperature for the battery is 165°F; the system was considered too critical for general usage. Water-activated batteries liberate heat at rates proportional to their internal temperature as well as the current they are delivering. The batteries can fail by spiraling temperatures which finally boil the unit dry or by cooling which causes a degeneration of chemical action and allows the units to freeze. The temperature band in which a successful battery can be built becomes more narrow with a required longer operation.

Electrical Engineering Research Lab., U. of Texas. Austin.
AN INVESTIGATION OF THE FEASIBILITY OF USING THE BROOKS ANTENNA SYSTEM AT L-BAND, by A. P. Deam, F. E. Brooks, Jr. and A. N. McQuown. Rept. on Contract NObsr-64126. 30 Nov 54, declassified 5 July 57, 65p. 2 refs. Rept. no. 8-02; AD-72 760.
Order from LC mi$3.90, ph$10.80 PB 137 808

This report concerns the adaptation of the Brooks Antenna System as a height finding radar in connection with the AN/TPS-1D radar. The first phase of this contract dealt with studying the feasibility of the system in view of the problems involved. Signal strengths versus elevation of a transmitter at a frequency of 1175 mc are reported over various types of terrain. From these height-gain curves estimates of the performance of a double interferometer used as a height finder were made. The results are presented in the form of distribution curves showing the percentage of time a particular accuracy is reached. The results show that with an interfering signal whose magnitude is 14 db below that of the direct ray the measured elevation angle will be in error by less than 0.2° for 25% of the time. A method is proposed, utilizing a balanced modulator principle, for developing frequency shifts that are equivalent to those normally produced by a continuously varying phase shifter. It is felt that the results of this first phase of the program are encouraging and that work should proceed to the second phase, the construction of a working model of the system.

Electronic [Tech. Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
TECHNIQUES FOR APPLICATION OF ELECTRON TUBES IN MILITARY EQUIPMENT (TUBE TYPES OTHER THAN RECEIVING TUBES) by Rex S. Whitlock. Compiled into book form by McGraw-Hill Book Co. under Contract AF 33(616)3551. Dec 58, 206p. 13 refs. WADC Technical rept. 58-446, Vol. I; AD-205 363.
Order from OTS $3.50 PB 151 979

This report is part of a series of reports covering the application of electron tubes in military electronic equipment. The information contained in the reports is presented as a guide to the engineer so that he can more fully utilize electron tubes with the greatest degree of reliability. The first report of this series, WADC TR 55-1 (PB 111 644R), dated October 1957, covers receiving type tubes and also gives general information on tube properties, ratings, characteristics, and application. This manual is Volume 1 of the second report, which covers microwave and special purpose tubes. Volume 1 contains general information about pulsed magnetrons, diode rectifiers, thyratrons, transmitting triodes, and transmitting tetrodes. Special data are also given for certain tube types.

Electronic Tech. Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
TECHNIQUES FOR APPLICATION OF ELECTRON TUBES IN MILITARY EQUIPMENT (TUBE TYPES OTHER THAN RECEIVING TUBES) by Rex S. Whitlock. Compiled into book form by McGraw-Hill Book Co. under Contract AF 33(616)3551. June 59, 189p. 9 refs. WADC Technical rept. 58-446, Vol. II; AD-215 429.
Order from OTS $3.00 PB 161 088

This manual covers microwave and special purpose tubes. This volume contains general information about twin tetrodes, vacuum rectifiers, grid-controlled rectifiers, transmitting clipper diodes, gas switching tubes, cathode ray tubes, klystrons, and multiplier phototubes. Specific data are also given for certain tube types. (See also PB 151 979)

Electronics Research Lab., U. of California, Berkeley.
ELECTRON AND PLASMA BEAM DYNAMICS, by A. J. Litchenberg, D. H. Sloan and others. Scientific rept. no. 3 (Interim annual rept.) for 1958-1959 on Contract AF 19(604)2270. 15 June 59, 57p. 18 refs. IER Series no. 60, issue no. 238; AFCRC-TN-59-565.
Order from LC mi$3.60, ph$9.30 PB 144 498

Studies cover the following: Vacuum tubes; Cross-field gaseous tubes; Parallel-field gaseous tubes; Semiconductor properties of ionized gas; and Plasma as a means of microwave amplification. (See also PB 137 474)

Erie Resistor Corp., State College, Pa.
ENERGY STORAGE CAPACITATORS, HIGH DIELECTRIC CONSTANT, by Lawrence J. Ruffner. Interim development rept. no. 2, 13 July-13 Oct 59, on Contract NObs-77554. [1959] 102p.
Order from LC mi$5.70, ph$16.80 PB 144 254

Developing a ceramic composition suitable for fabrication of finished capacitors. Barium titanate-magnesium fluoride compositions have been satisfactorily reproduced with some improvement in dielectric constant.

General Electric Microwave Lab., Palo Alto, Calif.
COMPUTER APPLICATIONS, by V. Met and M. P. Forrer. Quarterly progress rept. for 1 Aug-30 Sep 58 on Contract Nonr-2127(00). [1958] 3p. Rept. R58ELM 79-3.
Order from LC mi$1.80, ph$1.80 PB 144 446

Efforts were concentrated on the task of putting the assembled recirculative pulse generator into operation. An automatic gain control could be provided, and a six cavity bandpass filter of 600 mc bandwidth and 0.2 db ripple in the passband has been constructed. The match of components in the circuit was perfected to an excellent standard. External gain modulation was also accomplished from a conventional 10 to 50 mc signal generator, corresponding to the desired pulse repetition rate.

General Electric Microwave Lab., Palo Alto, Calif.
COMPUTER APPLICATIONS, by V. Met and M. P. Forrer. Quarterly progress rept. for 1 Oct-31 Dec 58 on Contract Nonr-2127(00). [1958] 13p. 1 ref. Rept. R 59 ELM 79-4.
Order from LC mi$2.40, ph$3.30 PB 143 986

During the reporting period the regenerative pulse generator with traveling-wave tube expander was put into successful operation. The pulses obtained approach the limits of the resolution of our present test equipment. Thus, having demonstrated the realizability of our suggested scheme, the effort on the contract was temporarily diminished with the contract funds 75 per cent expended. It is felt that a three-month extension of the contract would give us time to evaluate and perfect our present results, which are highly encouraging. (See also PB 139 828)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATION OF METHODS FOR MEASURING THE EQUIVALENT ELECTRICAL PARAMETERS OF QUARTZ CRYSTALS, by James C. Hogg, Jr. Progress rept. no. 1, 15 Mar-15 June 54, on Contract DA 36-039-sc-56730. [1954] 19p. 9 refs.
Order from LC mi$2.40, ph$3.30 PB 138 476

Circuit studies indicate that modification of the present C.I. Meter circuit to incorporate a two-stage amplifier should give reliable operation at frequencies above 150 mc with crystals having resonant resistances equal to or less than 200 ohms. An experimental Impedance-Inverting Pierce Oscillator has been constructed and tested for applicability as a high-frequency crystal test set.

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATION OF METHODS FOR MEASURING THE EQUIVALENT ELECTRICAL PARAMETERS OF QUARTZ CRYSTALS, by James C. Hogg, Jr. and Douglas W. Robertson. Progress rept. no. 2, 15 June-15 Sep 54, on Contract DA 36-039-sc-56730. [1954] 29p. 3 refs.
Order from LC mi$2.70, ph$4.80 PB 138 477

A two-stage version of the C. I. Meter circuit has been constructed and satisfactory operation obtained at 132 mc with substitution resistors having values well in excess of 200 ohms. Phase-detection system and a bridge system for measuring the resonant frequencies of crystals have been investigated. (See also PB 138 476)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATION OF METHODS FOR MEASURING THE EQUIVALENT ELECTRICAL PARAMETERS OF QUARTZ CRYSTALS, by William B. Wrigley and Douglas W. Robertson. Progress rept. no. 3, 15 Sep-15 Dec 54, on Contract DA 36-039-sc-56730. [1954] 29p. 1 ref.
Order from LC mi$2.70, ph$4.80 PB 138 478

A study of the VHF impedance characteristics of low-value resistors with particular attention to the development of low-phase-angle potentiometers and other components to be utilized in various bridge configurations contemplated for use in future C. I. Meters. A two-stage line-coupled oscillator circuit has been developed. (See also PB 138 477)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATION OF METHODS FOR MEASURING THE EQUIVALENT ELECTRICAL PARAMETERS OF QUARTZ CRYSTALS, by William B. Wrigley and Douglas W. Robertson. Progress rept. no. 4, 15 Dec 54-15 Mar 55, on Contract DA 36-039-sc-56730. [1955] 36p. 1 ref.
Order from LC mi$3.00, ph$6.30 PB 138 479

Development of a VHF rheostat to cover a resistance range of 10 to 200 ohms with an acceptably low phase angle from 75 to 200 mc. The bridge system of crystal parameter measurement is very promising. (See also PB 138 478)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATION OF METHODS FOR MEASURING THE EQUIVALENT ELECTRICAL PARAMETERS OF QUARTZ CRYSTALS, by William B. Wrigley, Douglas W. Robertson, and Thomas R. Scott, Jr. Progress rept. no. 5, 15 Mar-15 June 55, on Contract DA 36-039-sc-56730. [1955] 28p. 6 refs.
Order from LC mi$2.70, ph$4.80 PB 138 480

Preliminary studies have been made to determine the effect of drive on the parameters of high-frequency overtone crystals. The frequency and R_e deviations experienced make evident the necessity of specifying the drive or power dissipation in the proposed high-frequency C. I. Meter. (See also PB 138 479)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATION OF METHODS FOR MEASURING THE EQUIVALENT ELECTRICAL PARAMETERS OF QUARTZ CRYSTALS, by William B. Wrigley, Douglas W. Robertson, and Thomas R. Scott, Jr. Progress rept. no. 6, 15 June-15 Sep 55, on Contract DA 36-039-sc-56730. [1955] 23p.
Order from LC mi$2.70, ph$4.80 PB 138 481

Several sets of VHF rheostats have been constructed. Metals of the platinum family are undergoing tests as possible substitutes for nickel. An analysis of a practical method for determining all the equivalent electrical parameters of an active quartz crystal. (See also PB 138 480)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATION OF METHODS FOR MEASURING THE EQUIVALENT ELECTRICAL PARAMETERS OF QUARTZ CRYSTALS, by William B. Wrigley, Douglas W. Robertson, and Thomas R. Scott, Jr. Progress rept. no. 7, 15 Sep-15 Dec 55, on Contract DA 36-039-sc-56730. [1955] 23p. 1 ref.
Order from LC mi$2.70, ph$4.80 PB 138 482

Additional measurements of the harmonic distortion present in the Two-Tube Developmental C. I. Meter. A study of several methods of eliminating or reducing the harmonic content of the companion oscillator. (See also PB 138 481)

Georgia Inst. of Tech. Engineering Experiment Station, Atlanta.
INVESTIGATION OF METHODS FOR MEASURING THE EQUIVALENT ELECTRICAL PARAMETERS OF QUARTZ CRYSTALS, by Douglas W. Robertson, Thomas R. Scott, and William B. Wrigley. Final rept. on Contract DA 36-039-sc-56730. 31 May 56, 114p. 15 refs.
Order from LC mi$6.00, ph$18.30 PB 138 483

Contains resume of work in seven previous quarterly progress reports. The final model of the developmental VHF crystal consists of a combination of three basic developmental devices which have been designated as the VHF Rheostat, the Crystal Parameter Bridge and the Developmental CI Meter. A VHF rheostat minimizes reactive effects and, being variable, eliminates the necessity of interpolation. Several alternate bridge arrangements and additional VHF oscillator configurations are also included. (See also PB 138 482)

Hughes Aircraft Co., Culver City, Calif.
MAXIMALLY FLAT AND QUASI-SMOOTH SECTOR BEAMS, by A. Ksienski. Scientific rept. no. 3508/2 on Contract AF 19(604)3508. July 59, 38p. AFCRC-TN-59-581.
Order from LC mi$3.00, ph$6.30 PB 143 975

Methods for the synthesis of sector beams are presented and illustrated with examples. First a perfectly smooth and square beam, the equivalent of the maximally flat transfer function of network theory, is discussed. It is then shown that realization of such beams by means of relatively short arrays is feasible when a certain amount of oscillation is permissible. An alternative method of obtaining almost equal ripple sector beams is also presented. In this quite general method, the desired beam shapes are synthesized by derivation from elementary optimum patterns.

[Kuthe Labs., Inc., Newark, N. J.].
INDUSTRIAL PREPAREDNESS STUDY ON HYDROGEN THYRATHRON TUBES TYPE VC1257, by A. E. Gordon. Quarterly progress rept. no. 6, 1 Oct-31 Dec 57 on Contract DA 36-039-sc-70288. [1958] 10p. AD-218 438.
Order from LC mi$1.80, ph$1.80 PB 138 097

Following successful life tests, production of a revised new design tube was initiated. An excellent yield was obtained and additional life tests were satisfactory. Ten tubes were selected for qualification approval tests and delivery on the contract. (See also PB 132 080)

Lincoln Lab., Mass. Inst. of Tech., Cambridge.
THE AUTOMATIC DESIGN OF LOGICAL NETWORKS, by T. C. Bartee. Rept. on Contract AF 19(122)458. 3 Dec 58, 27p. 9 refs. Technical rept. no. 191; AD-207 170.
Order from LC mi$2.70, ph$4.80 PB 143 826

The operation of a logical network can be described by means of a set of Boolean expressions which represent, in symbolic form, the relationship between the inputs and outputs of the network. As the number of inputs and outputs to the network increases, however, the complexity of these equations increases significantly and the amount of calculation required to solve certain problems becomes prohibitive. In order to facilitate the design of large networks, a set of computer programs has been prepared which generates the expressions that describe the input-output relationships for given problems, and then automatically minimizes these expressions, presenting the logical designer with a set of expressions which can be used to design the required network most efficiently. This design technique makes possible the construction of logical networks which perform such functions as sine, arc sine and square root. When these networks are used as a part of the arithmetic element of a digital computer, these functions may be yielded by a single instruction, significantly reducing the time required to solve certain problems. The latter section of this report describes a sine instruction which replaces an angle with the sine of that angle, in less than 10 μsec.

Lincoln Lab., Mass. Inst. of Tech., Lexington.
DIGITAL RATE SYNTHESIS FOR FREQUENCY MEASUREMENT AND CONTROL, by T. J. Rey. Rept. on Contract AF 19(122)458. 30 Oct 58, 17p. 5 refs. Technical rept. no. 188; AD-205 596.
Order from LC mi$2.40, ph$3.30 PB 144 224

Digital rate synthesis is a transformation of harmonic synthesis (beat methods) from the frequency to the time domain; the synthesis of harmonics is replaced by pulse techniques. The signal whose period is to be measured or controlled is in the form of a pulse train

that has the repetition rate X. A single reference source drives a rate generator which consists of one or more dividing stages in fixed cascade; the output of the generator is a sequence of nonuniformly spaced pulses whose average repetition rate AS is known from the independently controllable connection between the individual stages and their output bus. A rate difference detector compares the rates X and AS. The smoothed detector output has the proper sign and serves to indicate the magnitude of the difference or to reduce the difference in a closed loop, for example, by controlling a tuning motor. The range of direct operation is limited by pulse techniques, but digital and harmonic synthesis can be combined with division and with phase-lock methods to stabilize an oscillator over a practically unlimited band of frequencies, the precision and purity approaching that of the reference source.

Lincoln Lab., Mass. Inst. of Tech., Lexington.
EFFECTS OF THE FILTER IN OSCILLATOR SYNCHRONIZATION, by T. J. Rey. Rept. on Contract AF 19(122)458. 14 May 58, 21p. 13 refs. Technical rept. no. 181; AD-133 854.
Order from LC mi$2.70, ph$4.80 PB 144 301

Automatic phase control (APC) systems with sinusoidal reference are analyzed; expressions are presented for the stability and the noise bandwidth at lock. The limit of the pull-in range is determined, and the result is in good agreement with experiment.

Litton Industries, College Park. Md.
SURFACE WAVE ANTENNA STUDY, by Murray Hoffman. Final rept. on Contract AF 19(604)1551. [1959] 95p. 14 refs. AFCRC-TR-57-188; AD-133 637.
Order from LC mi$5.40, ph$15.30 PB 138 427

The basic array parameters useful to the antenna designer were investigated during the study. These included relative slot excitation, ground plane current distribution, control of phase, a study of the normalized impedance of the slots, the radiation efficiency of the antenna, and the development of production techniques. The various methods for launching the wave onto the ground plane were not covered in the study. Instead, a horn launcher similar to one used by King was employed to couple to the mode and its characteristics were taken into account in the analysis.

Marathon Battery Co., Wausau, Wis.
INDUSTRIAL PREPAREDNESS STUDY ON MAGNESIUM BATTERIES, DRY CELL TYPE BA-270/U-XM, by George H. Schroeder. Quarterly progress rept. no. 10, 8 Mar-7 June 57, on Contract DA 36-039-sc-66081. [1957] 8p. AD-157 210.
Order from LC mi$1.80, ph$1.80 PB 138 105

The basic design of the cell loading machine has been completed. There has been no cell fabrication during this period. (See also PB 129 922)

Marathon Battery Co., Wausau, Wis.
INDUSTRIAL PREPAREDNESS STUDY ON MAGNESIUM BATTERIES, DRY CELL TYPE BA-270/U-XM, by George H. Schroeder. Quarterly progress rept. no. 11, 8 June-7 Sep 57, on Contract DA 36-039-sc-66081. [1957] 8p. AD-157 208.
Order from LC mi$1.80, ph$1.80 PB 138 104

The design of the cell loading equipment has been completed and fabrication is quite well along. (See also PB 138 105)

Marathon Battery Co., Wausau, Wis.
INDUSTRIAL PREPAREDNESS STUDY ON MAGNESIUM BATTERIES, DRY CELL TYPE BA-270/U-XM, by George H. Schroeder. Quarterly progress rept. no. 12, 8 Sep-7 Dec 57, on Contract DA 36-039-sc-66081. [1957] 10p. AD-157 209
Order from LC mi$1.80, ph$1.80 PB 138 106

The machine for loading the lined Mg cups with mix was completed. The machine receives the mix from a hopper, mechanically extrudes it into molds and dies, and subsequently pushes the mix from the mold into a positioned, lined Mg cup. Experiments indicated that the machine will operate satisfactorily with mixes that are too wet to handle on conventional battery fabricating equipment. (See also PB 138 104)

Material Lab., New York Naval Shipyard, Brooklyn.
SPECIFICATION DEVELOPMENT ON "ENAMEL-B" FILM INSULATED HIGH TEMPERATURE MAGNET WIRE, by H. Pinski. Final rept. 19 Mar 59, 17p. Lab. project 4861-F-27, Pt. 8.
Order from LC mi$2.40, ph$3.30 PB 144 124

Evaluation of film insulated magnet wires for information purposes and for further development of specification MIL-W-19583(NAVY).

Michigan U. Research Inst., Ann Arbor.
FINAL REPORT ON CONTRACT AF 19(604)1949, by K. M. Siegel. Rept. for 1 Oct 56-31 July 59. July 59, 7p. 27 refs. Rept. no. 2591-5-F; AFCRC-TR-59-179; AD-225 015.
Order from LC mi$1.80, ph$1.80 PB 144 319

The major effort was the writing of an instruction manual. The purpose of this manual is to tell engineers, mathematicians, and physicists (with only an undergraduate course in electromagnetic theory and the usual undergraduate courses in applied mathematics) how to compute the radar cross sections of aircraft and missiles.

Michigan U. Research Inst., Ann Arbor.
TRANSISTORIZED CIRCUITS FOR USE IN SPACE-RESEARCH INSTRUMENTATION, by L. H. Brace. Instrumentation rept. no. 1 on Contracts DA 20-018-509-ORD-103; AF 19(604)1843; AF 19(604)1948; and DA 36-039-sc-78131. Oct 59, 31p. 5 refs. 2521; 2804; 2597; 2816:1-3-S.
Order from LC mi$3.00, ph$6.30 PB 144 196

The development of various accessory circuits for use in space research instrumentation is described. The

circuits include dc current detectors, voltage-controlled oscillators, voltage generators, timers and dc-dc convertors.

Microwave Associates, Inc., Burlington, Mass.
DEVELOPMENT OF DIODE TYPE 50649B, by R. B. Collins. Quarterly progress rept. no. 3, 1 Dec 58-28 Feb 59, on Contract DA 36-039-sc-78021. [1959] 18p.
Order from LC mi$2.40, ph$3.30 PB 144 154

The final electrical and mechanical design of the diode are discussed. The preparations for the Pilot Production Run are described. (See also PB 142 761)

Microwave Associates, Inc., Burlington, Mass.
VARIABLE CAPACITANCE MICROWAVE DIODE. Quarterly progress rept. no. 1, 1 Nov 58-31 Jan 59, on Contract DA 36-039-sc-78236. [1959] 18p. 1 ref. AD-215 451.
Order from LC mi$2.40, ph$3.30 PB 143 977

Two of the main technical problems to be solved on this contract are electrical evaluation and packaging. In Chapter 1, 9600 Mc impedance measurements are compared with 1000 Mc measurements made at Bell Telephone Laboratories. Agreement is fairly good. The 9600 Mc measurements are generally more sensitive. A hermetically sealed package is required. The soft-glass package used by many manufacturers of low-frequency diodes was tested by fabricating silicon varactors in it. The cutoff frequency of these varactors, measured at 9600 Mc was much lower than for similar varactors made in a ceramic package, according to results given in Chapter 2.

Microwave Engineering Labs., Inc., Palo Alto, Calif.
RESEARCH AND DEVELOPMENT OF A SOLID STATE PARAMAGNETIC MASER, by Roy W. Roberts. Quarterly progress rept. no. 4, 10 Mar-9 June 59, on Contract AF 19(604)4071. 9 July 59, 19p. AFCRC-TN-59-551; AD-226 814.
Order from LC mi$2.40, ph$3.30 PB 143 973

Successful masering has been achieved in several slow-wave structures with typical figures of 10 db gross gain over a 60 mc bandwidth. Both grounded (bandpass) and ungrounded (low pass) combs have been used with the ungrounded comb giving the best results. Non-reciprocal operation has been obtained by use of a poly-crystalline yttrium iron garnet slab on the side of the comb opposite from the ruby giving a typical backward attenuation of 15 db. (See also PB 142 347).

Microwave Lab., Stanford U., Calif.
A PROPOSED MILLIMETER-WAVE GENERATOR, by G. S. Kino. Technical note on Contract AF 49(638)415. Sep 59, 20p. 11 refs. M. L. rept. no. 606; AFCRC-TN-59-890.
Order from LC mi$2.40, ph$3.30 PB 143 995

A millimeter-wave generator, using a waveguide filled with a plasma of uniform cross-sectional density, but with an axial density variation of the form $n_0(1+\alpha \sin \gamma z)$, is discussed. It is shown, by solving the wave equation for the system, that slow-wave space harmonics, although usually of small amplitude, can have the property that their electric fields are maximum at the center of the guide and minimum at its walls. The design of a possible 1-mm backward-wave oscillator operating at 2.5 kv with approximately 12 ma starting current is dealt with. This design is postulated on the assumption that the so-called Langmuir "electrostatic sound waves" or similar modes may be used to set up the necessary density variation in the plasma.

Microwave Lab., Stanford U., Calif.
RESEARCH IN MICROWAVE TUBES. Scientific status rept. no. 9 (Final), 1 June 56-30 Sep 58, on Contract Nonr-225(26); Continuation of Contract DA 36-039-sc-63178. Sep 58, 16p. 4 refs. M. L. rept. no. 546.
Order from LC mi$2.40, ph$3.30 PB 144 314

The first project involved development work on vacuum windows for high-power microwave tubes. This is a significant aspect of the development of long-life, sealed-off tubes, and of the development of higher power broadband tubes. At the close of this contract a test facility for high-power windows had been constructed and was in operation. This instrument is called a "Circulator," and is being used for the testing of a number of types of high-power windows. The circulator, after some revision, has proved to be a very satisfactory device. Power gains on the order of 20 may readily be obtained, and it is possible to subject the windows under test to peak powers of 20 megawatts or higher. A number of tests have already been made, using both actual operating windows and also slabs of various experimental materials. These are reported here, and a description of the circulator and its operation is given. Use of this device will undoubtedly contribute significantly to the understanding of the mechanisms of failure in high-power windows.

MODAL ANALYSIS AND SYNTHESIS OF ELECTROMAGNETIC FIELDS, by L. B. Felsen and N. Marcuvitz. Rept. on Contract AF 19(604)2031. 19 June 59, 85p. 6 refs. Research rept. R-726-59; PIB-654; AFCRC-TN-59-583.
Order from LC mi$4.80, ph$13.80 PB 144 341

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y.
ON THE IDENTIFICATION AND COMMAND PROBLEMS IN COMPUTER-CONTROLLED ADAPTIVE SYSTEMS, by E. Mishkin and R. A. Haddad. Rept. on Contract DA 30-069-ORD-2646. 3 Sep 59, 36p. 6 refs. Research rept. R-767-59; PIB-695; OOR rept. 2268-1-E.
Order from LC mi$3.00, ph$6.30 PB 144 213

In order to satisfy stringent performance requirements in a dynamic process, a computer is incorporated as a central element in the feedback loop. The computer performs the dual task of identifying or measuring the process' dynamics, and thence generating an appropriate command or actuating signal so as to satisfy the overall specifications. The family of singularity functions (steps, ramps, confluent parabolas) is used as the command signal. The process' dynamics is monitored and identified by the computer without recourse to interrupting test signals such as periodic impulses or white noise. The stored energy term inherent in many measurement problems in continuous processes is accounted for in a novel manner.

Microwave Research Inst., Polytechnic Inst. of Brooklyn, N. Y
THEORY OF THIN DIELECTRIC COVER ON SLITTED RECTANGULAR WAVEGUIDE ANTENNA, by S. Nishida. Rept. on Contract AF 19(604)2031. 13 July 59, 25p. 3 refs. Research rept. R-754-59; PIB-682; AFCRC-TN-59-593.
Order from LC mi$2.70, ph$4.80 PB 143 989

A thin dielectric sheet or slab which covers the radiating surface of a slitted rectangular waveguide can serve as a radome for this type of leaky wave antenna. Theoretical expressions are derived for the propagation constants of a leaky wave on a slitted rectangular waveguide which is covered by such a dielectric slab. Numerical results are presented in graphical form and show that only the attenuation constant of the leaky wave is significantly affected by the presence of the dielectric slab when its thickness is comparable to or greater than the width of the narrow slit.

Minneapolis-Honeywell Regulator Co., Minn.
INDUSTRIAL PREPAREDNESS STUDY ON GERMANIUM POWER TRANSISTORS, by V. K. Erickson, D. J. Noggle and others. Final rept. for 31 Mar 55-30 Sep 57 on Contract DA 36-039-sc-66044. [1957] 411p. 6 refs.
Order from LC mi$11.10, ph$63.60 PB 138 086

Industrial preparedness studies were undertaken to develop a Ge power transistor, and to develop facilities and equipment to mass reproduce this transistor. Extreme precautions must be observed to avoid contamination of the transistor during fabrication and assembly. Experimentation established that a solid encapsulating fill is detrimental to the electrical characteristics of the transistor. A solder seal was also unsatisfactory in that the solder flux introduces contamination. Some type of mechanical seal, such as welding, must be used. Extremely close control must be maintained over the alloying of the emitter, collector, and base ring to the Ge die during the time-temperature cycle. High temperature conditioning (48 hr at 100°C) tends to stabilize the electrical characteristic of the transistor. To obtain the most efficient dissipation of heat from the transistor junction, the thermal resistance of the conduction path from the collector to the external heat sink must be as low as possible. A good heat flow path from the transistor to the mounting surface is obtained by machining an angle of 0°15' on the bottom surface of the base block assembly. A 64 μin. maximum surface roughness on this surface also insures a low thermal interface resistance. The effect of emitter geometry on the current carrying capacity of the transistor is discussed.

Missouri U., Columbia.
ELECTROCHEMICAL SYSTEMS FOR USE IN LOW TEMPERATURE BATTERIES, by G. V. Lago, J. P. Karnes and others. Final rept. for 17 Dec 58-15 Mar 59 on Contract DA 36-039-sc-74994. [1959] 55p. 2 refs.
Order from LC mi$3.60, ph$9.30 PB 143 899

The conductivities of KSCN-CH_3CN, KSCN-C_2H_5CN and $NaClO_4$-C_2H_5CN systems with and without H_2O have been investigated for both dilute and concentrated solutions. Freezing point measurements for the more concentrated electrolyte solutions were made. In addition the viscosities, dielectric constants, and densities of the solvents have been determined. Load tests have been made on a number of experimental cells employing KSCN-H_2O-CH_3CN electrolyte, MnO_2 Shawinigan Black cathodes and either Mg or Zn anodes. Initial and final "no load" voltages have been measured as well as the anodic voltages. Preliminary tests on cells employing $NaClO_4$-H_2O-C_2H_5CN as electrolyte have been made. The load tests were made at room temperature, -45, -50, and -54°C. The causes and effects of polarization and internal resistance were also studied. (See also PB 142 864)

Naval Avionics Facility, Indianapolis, Ind.
THE NOPI-WURF SUB-AUDIO FREQUENCY NOISE GENERATOR, by Robert E. Harrison. Jan 58, 30p. 3 refs. NAFI-TP-39.
Order from LC mi$2.70, ph$4.80 PB 144 185

This report describes a noise generator particularly suited for use in the simulation and study of noise problems in fire control computers and other types of electromechanical systems operating in the frequency range from zero to thirty cycles per second. This equipment was developed by the Washington University Research Foundation, St. Louis, Missouri, under contracts 163s-577 and 163s-1039 in conjunction with a radar noise study program. This report was written in October 1953, but was not prepared for publication due to termination of the author at that time. It is being published now because the noise generator described is currently in use, and the material herein should prove useful.

Naval Ordnance Test Station, China Lake, Calif.
A REVIEW OF MASER AMPLIFIERS, by Albert J. Jaske. 17 July 58, 21p. 15 refs. NOTS-2031; NAVORD rept. 5889.
Order from LC mi$2.70, ph$4.80 PB 144 077

The theory of operation of both the gas and solid-state maser is presented, and aspects of its use as a microwave amplifier, such as band width and noise, are discussed.

Naval Research Lab., Washington, D. C.
AN INVESTIGATION OF IMPULSE-VOLTAGE BREAKDOWN IN POLYETHYLENE, by C. R. Vail. Final rept. 9 Dec 59, 58p. 17 refs. NRL rept. 5374.
Order from OTS $1.50 PB 151 955

The study of the characteristics of dielectric break-

down in commercial polyethylene, under applied high-voltage impulses, divides naturally into two parts: one concerned with single-impulse breakdown during the period of rise of overvoltage impulses and the other concerned with multiple-impulse breakdown at gradients below the threshold level for single-impulse breakdown. Single-impulse breakdown is shown to be a function of rise rate, and to be characterized by breakdown gradients that exceed the dc breakdown level for very high rise rates but that may fall well below the dc level for lesser rise rates. It appears to be independent of thickness in the range from 1.5 to 26.5 mils. The fact that single-impulse breakdown data fit an extremal distribution suggests the applicability of the weakest-link theory. Although multiple-impulse breakdown data are too few for drawing statistically significant conclusions, there is some evidence that there is an inverse relation between breakdown gradient and number of impulses to breakdown. It is concluded that the process of impulse breakdown in commercial polyethylene involves a mechanism of electron avalanching that is influenced, for the lower rise rates, by partial breakdown associated with foreign matter, imperfections, and voids, while for higher rise rates, it is strongly influenced by "electrode conditioning" due to emission from the cathode. Prestressing is thought to increase the breakdown voltage through the electrode conditioning process and through a process of repairing defects in the material.

New York U. Coll. of Engineering, N. Y.
OPTIMIZATION OF THE ADAPTIVE FUNCTION BY Z-TRANSFORM METHOD, by S. S. L. Chang. Rept. on Contract AF 49(638)586. June 59, 39p. 15 refs. Technical rept. 400-6; AFOSR-TN-59-585; AD-217 032.
Order from LC mi$3.00, ph$6.30 PB 144 276

A study is made on the optimization of the adjustment process in a self-optimizing system under rather general assumptions. The system is designed to keep a performance parameter m either at a prescribed value or at an unknown extremal value. A direct measurement on m is made, and the adjustment is based on measured m only. Factors considered are (1) the finite measuring interval, (2) the necessity of looking ahead one interval, (3) the probable error in measurement, and (4) the changing situation. A set of weighting factors on present and past data, and the proper value of test bias for extremal seeking systems, are determined by a least square optimization process. The criterion of optimization is least reduction in m for peak seeking systems and least square error in m for systems with prescribed value of m. Two types of extremal seeking systems are studied. The alternate biasing systems are found to be superior in performance compared to the derivative sensing systems.

[Oxford U. (Gt. Brit.)]
AN S-BAND FERRITE ISOLATOR FOR USE WITH A LINEAR ACCELERATOR. Technical note no. 1 on Contract AF 61(514)1183. [1958] 5p. 4 refs. AFOSR-TN-58-654; AD-162 185.
Order from LC mi$1.80, ph$1.80 PB 138 108

A ferrite isolator that handles 1 megawatt of S-band is described. Results that show the great advantage of using an isolator when operating a magnetron with a narrow bandwidth load are given. It is pointed out that the use of isolators gives designers of electron accelerators freedom to use very high Q or variable impedance devices.

Pacific Semiconductors, Inc., Culver City, Calif.
TRANSISTOR, JUNCTION, DIFFUSED BASE, R. F. POWER OSCILLATOR, by S. H. Barnes, P. H. Dirnbach and others. Quarterly progress rept. no. 1, 27 June-30 Sep 58, on Contract DA 36-039-sc-78033. 68p. 4 refs.
Order from LC mi$3.90, ph$10.80 PB 144 153

Preliminary processes for the fabrication of a 1 w, 70 mc transistor are described. The transistor structure is discussed and a brief summary of the design equations given. Mechanical environmental tests which have been performed to date are discussed. The electrical characteristics of 100 state of the art samples delivered at the end of this period are tabulated and distributions of the important parameters are plotted and discussed.

Pacific Semiconductors, Inc., Culver City, Calif.
TRANSISTOR, JUNCTION, DIFFUSED BASE, R. F. POWER OSCILLATOR, by S. H. Barnes, L. Brown and others. Quarterly progress rept. no. 2, 30 Sep-30 Dec 58, on Contract DA 36-039-sc-78033. [1959] 43p. 4 refs.
Order from LC mi$3.30, ph$7.80 PB 144 156

The processes for the fabrication of the 1 watt, 70 mc power oscillator transistors have remained basically the same as in the previous report, but improvements in process control and reliability have been stressed. Process control effort has been particularly heavy in the diffusion processes. Environmental tests have been initiated and are providing valuable feed-back information. Progress in the design and development of a new environmentally-secure package capable of handling the required power dissipation and still adhering to the TO-9 dimensions is described. Characterization of the contract transistors is continuing. Oscillator and amplifier circuitry and measurements are discussed. (See also PB 144 153)

Philco Corp., Philadelphia, Pa.
INDUSTRIAL PREPAREDNESS STUDY ON SILICON MICROWAVE DIODES, by W. H. Forster. Quarterly rept. no. 1, 1 July-30 Sep 57, on Contract DA 36-039-sc-75943. [1957] 43p. 1 ref.
Order from LC mi$3.30, ph$7.80 PB 138 098

Tools to fabricate 1N26 and 1N78 silicon microwave diodes have been designed and built during this period. Diodes have been assembled in order to check these tools and to develop fabrication techniques. No attempt has been made, as yet, to obtain an hermetic seal in these diodes. Various bead materials have been tried in order to determine the optimum material with respect to electrical requirements and hermetic sealing.

Philco Corp., Philadelphia, Pa.
INDUSTRIAL PREPAREDNESS STUDY ON SILICON MICROWAVE DIODES, by W. H. Forster. Quarterly rept. no. 2, 1 Oct-31 Dec 57, on Contract DA 36-039-sc-75943. [1958] 33p. 1 ref.
Order from LC mi$3.00, ph$6.30 PB 138 102

Silicon microwave diodes types 1N26 and 1N78 produced on a pilot production line.

Philco Corp., Philadelphia, Pa.
INDUSTRIAL PREPAREDNESS STUDY ON SILICON MICROWAVE DIODES, by W. H. Forster. Quarterly rept. no. 3, 1 Jan-31 Mar 58, on Contract DA 36-039-sc-75943. [1958] 34p. 3 refs. AD-206 159.
Order from LC mi$3.00, ph$6.30 PB 138 103

Types 1N26 and 1N78 silicon microwave diodes were prepared. (See also PB 138 102)

RCA Service Co., Camden, N. J.
ELECTRONIC DESIGNER'S SHOCK AND VIBRATION GUIDE FOR AIRBORNE APPLICATIONS, by Robert E. Barbiere and Wayne Hall. Rept. on Contract AF AF 33(616)3257. Dec 58, 260p. 126 refs. WADC Technical rept. 58-363; AD-204 095.
Order from OTS $4.00 PB 161 299

Improvements in the mechanical design of airborne electronic equipment have not kept pace with advances in electrical design. The resulting major inadequacy has been the inability of some equipments to resist a shock and vibration environment. This book is a guide for the designer of airborne electronic equipment to aid him in designing resistance to shock and vibration into equipments. Both the theoretical and practical aspects of shock and vibration are covered. The discussion of shock and vibration concepts and the philosophical approaches to shock and vibration problems serve as a foundation for understanding the complete publication. This makes it unnecessary for the electronics designer to have prior shock and vibration knowledge. Environmental data reveal to the designer the levels of shock and vibration excitation to which electronic equipments are subjected. The practical applications of shock and vibration design practices are emphasized. The relative susceptibilities of component parts and the effects of the mounting orientation of component parts in the equipment are presented. Also covered are the design of racks and chassis for best resistance to shock and vibration and the use of auxiliary means, such as damping or isolation, for either resisting or changing the environment. The balance of the design guide considers the test methods and facilities that can give reasonable assurance that the equipment will eventually be able to withstand its operational environment. A thorough discussion is given of shock and vibration simulators and instrumentation as well as the philosophy of performing laboratory tests.

Rome Air Development Center, Griffiss AFB, N. Y.
AUTOMATIC GROUND CONTROL APPROACH SYSTEM AN/MSN-3, by Rainey M. Brooks and William F. Hoy. June 59, 69p. RADC-TR-59-32; AD-228 502, superseded, AD-211 936.
Order from LC mi$3.90, ph$10.80 PB 144 219

This report presents a general description of the AGCA System and the results of evaluation tests on the system. The tests proved that the AGCA System, utilizing the AN/MSN-3 and the AN/ARR-43, will provide USAF with an approach capability it does not now operationally possess. The report also includes the final tests on the modified Serial #2 AGCA System, as accepted by RADC prior to E & ST by Air Proving Ground Center.

Rome Air Development Center, Griffiss AFB, N. Y.
THE EFFECTS OF WIDE-BAND SIGNALS ON RADAR ANTENNA DESIGN, by Lawrence R. Dausin, Kenneth E. Niebuhr, and Nils J. Nilsson. July 59, 20p. 6 refs. RADC-TN-59-178; AD-216 023.
Order from LC mi$2.40, ph$3.30 PB 144 080

The angle of arrival of a plane wave incident on a line aperture depends on the bandwidth of the incident signal as well as on the extent of the aperture. Conventional antenna theory assumes the angular resolution of an antenna depends only on the aperture extent and illumination function. However, by auto-correlation techniques further angular resolution can be obtained. This additional directivity depends on the extent of the signal bandwidth. The obtainable directivity information for line arrays depends on the aperture illumination function and the auto-correlation function of the incident signal. In view of the vast amount of available information concerning conventional antennas, the results of this report have been related to conventional antenna theory. The antenna designer can specify the desired directivity pattern in terms of a conventional single-frequency aperture illumination function. The effects of this single frequency illumination function can then be achieved for wideband signals by a simpler illumination function. Some examples of the theory are given.

Rome Air Development Center, Griffiss AFB, N. Y.
IMPROVED MILITARY BEACON SYSTEM, by Olindo A. Tagliaferri. Sep 59, 31p. RADC-TN-59-235; AD-226 863.
Order from LC mi$3.00, ph$6.30 PB 144 298

The continued development and use of the Mark X SIF Beacon System has generated many problems especially in reference to high density employment areas. The ability of the system to operate in a particular congested area is part of an overall test program conducted in the New York City area. New techniques to suppress side lobe interference and fruit are described. Test results are given and it is concluded that receiver subtraction shows promise of significantly reducing ring around and eliminating fruit on the display.

Rome Air Development Center, Griffiss AFB, N. Y.
SOLID STATE REAL TIME FAULT ALARM FOR TELETYPE EQUIPMENT, by Murray Kesselman. Sep 59, 17p. RADC-TR-59-70.
Order from LC mi$2.40, ph$3.30 PB 144 484

A solid-state real-time fault alarm was developed to alert Communications Center operators to malfunctions in automatic operation of cryptographic equipment. A detailed technical discussion of the equipment is given.

Rome Air Development Center, Griffiss AFB, N. Y.
TRANSISTORIZED, FOUR-CHANNEL RADIO REMOTE CONTROL UNIT (CONTROL, RADIO SET C-2767/MR) by John J. Guba and William E. Wilbur. Aug 59, 29p. RADC-TR-59-108; AD-225 510.
Order from LC mi$2.70, ph$4.80 PB 144 070

This report describes a radio remote control unit (Control, Radio Sec C-2767/MR) developed by the Rome Air Development Center and fabricated by Allen B. DuMont Laboratories, Inc. The unit provides two-wire operational control of from one to four continuous-wave or voice-modulated transmitters and/or receivers (channels) from a central location (up to three miles from the radio equipments). All operating controls for radio equipments are grouped by channel on the front panel of the unit. Three radio remote control units may be interconnected to provide a maximum of 12 channels at one location. Channels may be shared by paralleling up to eight radio remote control units situated at widely separated locations. Lockout circuitry incorporated in the units prevents the use of a shared channel at more than one location at a time, thereby eliminating any interference or confusion. The unit is of compact design, is transistorized, and features plug-in modular construction. Side-tone oscillators enable monitoring of c-w transmissions, and squelch circuits eliminate output noise when receivers are not in use.

Servo Corp. of America, New Hyde Park, N. Y.
DEVELOPMENT OF A DIRECT-READING FREQUENCY METER. Final progress rept. for 1 Nov 53-31 Dec 54 on Contract DA 36-039-sc-15416. 5 Apr 55, 186p. 23 refs. SCA-3700-RQ5.
Order from LC mi$8.40, ph$28.80 PB 144 021

The format of the present report is arranged so that a reader familiar with the preceding quarterly reports can turn directly to Section 2 which describes the work performed in the interval from 18 November 1953 to 31 December 1954. In Section 2 it is shown that a frequency meter based on the simplified instrumentation has been developed as far as the available wide-range tuning-element art permits. An experimental model of limited performance has been constructed. It is concluded that this basic method of frequency measurement is sound and worthy of further development particularly for higher frequency use. Component development is essential in regard to the wide-range tuning element and is desirable in regard to the counter or register element. A reader not familiar with the preceding reports should direct his attention first to Appendix B, which summarizes the total work performed from the initiation of the project in September 1951 to November 1953. Appendix B describes the originally-proposed instrumentation of the basic method of frequency measurement and the greatly simplified instrumentation which was later adopted for development. Operating sequences and the development of the functional elements are also treated in Appendix B.

Stanford Electronics Labs., Stanford U., Calif.
EXPERIMENTS ON A HIGH-PERFORMANCE CAVITY MASER USING RUBY AS S-BAND, by W. S. C. Chang, J. Cromack and A. E. Siegman. Rept. on Contract AF 33(600)27784. 21 July 59, 27p. 4 refs. Technical rept. no. 156-4; AD-226 295.
Order from LC mi$2.70, ph$4.80 PB 144 061

A 3-level solid-state maser using ruby was operated at frequencies near 3000 mc, using a high-efficiency cavity having TEM modes in a rectangular geometry. Two different operating points in the $\theta = 10^{o}$ to $\theta = 30^{o}$ region of the ruby spectrum gave maser operation with a pump frequency near 10,500 mc, although the inversion obtained was a sensitive function of the exact operating point. An operating point at $\theta = 90^{o}$, requiring pumping at 13,500 mc, gave a gain-bandwidth product of better than 50 mc. It was found possible to pump the 1-4 or $\Delta M = 3$ transition at this same operating point, obtaining 3000 mc amplification with a 23,700 mc pump frequency. Although this mode of operation was not fully explored, it is potentially capable of increasing the gain-bandwidth product by a substantial amount.

Stanford Electronics Labs., Stanford U., Calif.
FERRITE ATTENUATORS FOR TRAVELING-WAVE TUBES, by L. C. Bacon. Technical rept. no. 26 on Contract Nonr-225(24). 11 Feb 58, 181p. 26 refs. AD-153 715.
Order from LC mi$8.40, ph$28.80 PB 138 346

Several ways of employing ferrites in traveling-wave-amplifier attenuator systems are evaluated. The properties of conventional attenuators are reviewed with special attention given to the interrupted-circuited type. The phenomena of nonreciprocal absorption in the region of resonance for a gyromagnetic material is considered. In a discussion of the experiments with the use of ferrites in conjunction with TWT's several difficulties are pointed out, including dielectric loading, beam defocusing, and alteration of circuit phase velocity. Suggestions for ameliorating the conditions are given. A modified version of S. E. Miller's coupled-mode theory is employed to study 2 methods of utilizing nonreciprocal coupled helices with ferrites based above resonance. A description is given of the design and operation of a high power circuit for a travelling-wave amplifier circuit that uses a ferrite attenuator. Comparison is made with the performance of a severed circuit attenuator. The general characteristics of the ferrite attenuators are briefly discussed.

Stanford Electronics Labs., Stanford U., Calif.
GAIN, BANDWIDTH AND NOISE CHARACTERISTICS OF THE VARIABLE-PARAMETER AMPLIFIER, by H. Heffner and G. Wade. Technical rept. no. 28 on Contract Nonr-225(24). 26 Feb 58, 35p. 8 refs. AD-153 170.
Order from LC mi$3.00, ph$6.30 PB 138 141

The variable parameter (or parametric) principle of amplification is characterized by a typical arrangement in which a variable energy-storage element, such as an inductor or a capacitor, is suitably coupled to two resonant circuits. If the value of the energy-storage element is made to vary in the proper way, energy is fed from the source which drives the element (that is, the pump) to the fields of both the resonant circuits. This paper describes the behavior relative to gain, bandwidth and noise of this type of amplifier.

Stanford Electronics Labs., Stanford U., Calif.
A SEMICONDUCTOR-DIODE PARAMETRIC AMPLIFIER AT MICROWAVE FREQUENCIES, by K. L. Kotzebue. Technical rept. no. 49 on Contract Nonr-225(24). 4 Nov 58, 78p. 34 refs.
Order from LC mi$4.50, ph$12.30 PB 143 735

Extensive measurements were made of the microwave characteristics of the type of diode used in the experimental parametric amplifier, with emphasis on the measurement of series resistance. For this diode, a welded-contact germanium diode, the series resistance was a function of frequency, decreasing at a rate of nearly 3 db per octave over the frequency range of 500 Mc to 3,500 Mc. These measurements indicate that the germanium diode may be useful in parametric amplifiers at frequencies much higher than those predicted on the basis of low-frequency measurements.

Stanford Research Inst., Menlo Park, Calif.
INVESTIGATION OF METHODS OF SCANNING THE BEAM OF LARGE ANTENNAS, by J. S. Honda and E. D. Sharp. Scientific rept. 8, 1 Mar-31 May 59, on Contract AF 19(604)2240. June 59, 43p. 5 refs. AFCRC-TN-59-590; AD-226 524.
Order from LC mi$3.30, ph$7.80 PB 144 310

Research continued on the investigation of both mechanical and electrical methods of scanning the beam of large ground-based antennas. The measured performance of an experimental, low-noise up-converter, variable-reactance amplifier, suitable for use with an electronic-scanning receiving array, is presented. The amplifier utilized a back-biased diffused junction diode as the variable-reactance element and was operated both as a two-frequency and as a three-frequency up-converter. An analysis is presented of an array with its antenna elements arranged in a triangular pattern. The reduction in number of antenna elements obtained by arranging them in a triangular pattern over that obtained when they are arranged in the usual rectangular pattern is presented for several ranges of main beam scan angle. It is found that if the main beam is positioned within a constant angle about the normal to the array, the number of antenna elements can always be reduced 13.4 percent by arranging the elements in a pattern of equilateral triangles rather than in the usual square pattern.

Stavid Engineering, Inc., Plainfield, N. J.
INVESTIGATION OF TECHNIQUES FOR DISPLAYING INFORMATION IN AN AIR TRAFFIC CONTROL CENTER, by Richard A. Barker and Robert G. Hertz. Rept. on Contract AF 19(604)1508. May 57, 43p. 9 refs. AFCRC-TR-57-160; AD-117 013.
Order from LC mi$3.30, ph$7.80 PB 138 072

Several types of display were investigated to determine their suitability for use in an enroute ATC center. These devices fall into the categories of (1) large screen projection displays, both photographic and optical-electronic; (2) character writing techniques; (3) third-dimensional presentation; and (4) special (miscellaneous) displays. The problem of displaying radar information on a bright, large-screen display with high accuracy and fine resolution can be solved with the use of a film processor. This entails a major disadvantage: a time lag because of photographic processing time is introduced between the collection of signals by the radar and the presentation of the same information to the controller. The optimum antenna azimuth scan rate of a radar employing photographic projection in its display should be equal to (or less than but never greater than) the film cycling rate.

Sylvania Electric Products, Inc., Mountain View, Calif.
DEVELOPMENT OF LOW-NOISE BACKWARD-WAVE AMPLIFIER TUBE, by Robert E. Vehn. Final rept. on Contract DA 36-039-sc-73181. Apr 59, 138p. 39 refs.
Order from LC mi$6.90, ph$21.30 PB 144 302

The design, construction, and performance of experimental low-noise backward-wave amplifiers electronically tunable over the 12- to 18-kmc frequency range are reported. The design objectives were 50 mc constant bandwidth over the tuning range, and 20 db gain. Both two- and three-helix cascade designs were investigated. The development of the hollow-beam electron gun is described. The performance of the experimental tubes is summarized, and recommendations for further activity are made.

Technical Research Group [Syosset, N. Y.]
TECHNICAL GAIN, by A. F. Kay. Rept. on Contract AF 19(604)5532. Aug 59, 42p. 17 refs. Scientific rept. no. 131-1.
Order from LC mi$3.30, ph$7.80 PB 144 248

Formulas for the ratio ? of received to transmitted power are derived and examined for aperture antennas at any range (a) including supergain and (b) excluding supergain. Only case (b) is considered thereafter. In the far field this formula reduced to the "range equation," which is basic in communications systems design. Some simple illuminations which can be realized practically by defocussed dishes are shown to be sufficiently close to the optimum cases for most practical purposes. A formula for the power density in the near field of a transmitting aperture is also derived and it is shown how to maximize the power flow through any given area of space by design of the transmitting aperture illumination.

Technische Hochschule, Munich (Germany).
INVESTIGATION OF ATMOSPHERICS IN THE FREQUENCY RANGE OF 0-100 CYCLES PER SECOND BY MEANS OF MEASUREMENTS WITH NARROW BAND AMPLIFIERS, by Hans Gunther Jungmeister. Final technical rept. for 1 Oct 58-30 Sep 59 on Contract DA 91-591-EUC-956. [1959] 30p.
Order from LC Mi$2.70, ph$4.80 PB 144 251

A survey is given on the possibilities for realizing narrow band amplifiers for extremely low frequencies. It was found that feed back amplifiers with twin-T RC networks in the feed-back loop are most suitable for lowest frequencies. Such a feedback amplifier filter is theoretically analyzed as to whether it can be used as frequency analyzer. Special methods for measur-

ing and calibrating the Q and the spectral amplitudes are shown. These methods are based on the application of the frequency spectrum of short square pulses.

Transistor Applications, Inc., Boston, Mass.
INVESTIGATION OF THE APPLICATIONS OF NEGATIVE RESISTANCE DIODES FOR SWITCHING CIRCUITS, by A. W. Carlson. Scientific rept. no. 4, 16 Mar-17 June 59, on Contract AF 19(604)3066. [1959] 57p. AFCRC-TN-59-769.
Order from LC mi$3.60, ph$9.30 PB 143 978

This report is concerned with the study and investigation of pulse circuit applications of three-terminal negative resistance devices. The RCA 1832 Thyristor is used as a representative type in the study of the following applications: (1) Capacitive type multivibrators using emitter and collector negative-resistance characteristics. (2) Inductive multivibrator using the base input negative resistance characteristic. (3) Blocking oscillator using transformer feedback. (4) Ring counter. (See also PB 142 804)

Aerosciences Lab., General Electric Co., Philadelphia, Pa.
THE HEAT PROTECTION POTENTIAL OF SEVERAL ABLATION MATERIALS FOR SATELLITE AND BALLISTIC RE-ENTRY INTO THE EARTH'S ATMOSPHERE, by N. S. Diaconis, J. B. Fanucci, and G. W. Sutton. Rept. on Contract 04(647)269. 11 Sep 59, 65p. 18 refs. Technical information series R59SD423.
Order from LC mi$3.90, ph$10.80 PB 143 901

An evaluation of the relative performance advantage of various ablation materials for the heat protection to a non-lifting vehicle during hypersonic re-entry into the earth's atmosphere has been made based on theoretical ablation models substantiated by experiment. Calculations have also been made of the heat penetration within the material. Typical ablation materials from three categories have been investigated, both theoretically and experimentally in air arc facilities at a hypersonic stagnation point. Stagnation point ablation data for an attractive material in each category was obtained for various local heating rates, stagnation pressures and stagnation enthalpies. Effective heats of ablation have been determined experimentally and compared with the theoretical calculations.

Aerosciences Lab., General Electric Co., Philadelphia, Pa.
A STUDY OF HYPERSONIC ABLATION, by Sinclaire M. Scala. Rept. on Contract AF 04(647)269. 30 Sep 59, 64p. 45 refs. Technical Information Series R59SD438.
Order from LC mi$3.90, ph$10.80 PB 143 879

The aerothermochemical response of four broad classes of materials to the severe heating encountered during the hypersonic re-entry of space vehicles is determined theoretically. These materials include quartz-like refractories, graphite, thermosetting plastics and thermoplastics. A unified treatment of the ablation of different classes of materials has been developed. The effective heat of ablation of each material depends critically on the enthalpy level of the flight environment, and increases with increasing flight speed. The effect of an increase in stagnation pressure is to promote a decrease in the effective heat of ablation. The specific area of greatest uncertainty is in the kinetics of condensed phase heterogeneous reactions.

Air Force Missile Development Center, Holloman AFB, N. Mex.
ON SATELLITE ORBITS. IV. SOME NEW METHODS OF SATELLITE ORBIT CALCULATIONS AND STABILITY PROBLEMS, by Herbert Knothe. Sep. 59, 24p. 2 refs. AFMDC-TR-59-37.
Order from LC mi$2.70, ph$4.80 PB 143 992

In Chapter I the equations of motion for a satellite in a rotationally symmetric gravity field are reduced to a system of two ordinary first order differential equations for p and 1/r as functions of the angular polar distance θ by first introducing the arc length s of the spherical image of the orbit on the unit sphere as independent parameter. In Chapter II a system of three ordinary first order differential equations for p, ξ, ϕ_0 as functions of ϕ (ϕ defined by $\cos\theta = \sin i \sin\phi$, ϕ_0 corresponds to the apogee) is derived. A rapidly convergent process of iteration for solving these equations is explained and explicit examples are given. In Chapter III a differential geometrical approach is applied which leads to simple formulae for the calculation of the regression. A vector integral equation is derived for the deviation of the satellite from the plane of the initial osculating ellipse. (See also PB 142 376)

Air Force Missile Development Center, Holloman AFB, N. Mex.
SOME GENERAL CONSIDERATIONS OF THE PROBLEM OF DETERMINING THE ORIENTATION OF A STABILIZED PLATFORM IN MOVING ROCKET SLED, by H. Palmer Hotz. Nov 59, 11p. 1 ref. AFMDC-TN-59-30.
Order from LC mi$2.40, ph$3.30 PB 143 993

The problem is to locate accurately, and with respect to the ground, a stabilized platform inside a rocket sled while it is traveling down the track. Of various methods, only optical methods appear to be practical for making these measurements. Two general classes of optical methods could be used: optical levers, and measurements of the plane of polarization. The optical lever method is shown to be impossible unless the deflection caused by the shock wave is known. The polarization method can probably be made to work on the track.

Air Force Missile Test Center, Patrick AFB, Fla.
POWER SERIES SOLUTION OF ROCKET EQUATIONS OF MOTION, by Robert C. Meacham. Rept. on Missile Test Project, Contract AF 08(606)1156. 18 Sep 59, 109p. 8 refs. RCA Data Processing Technical rept. no. 45; AFMTC-TR-59-18.
Order from LC mi$5.70, ph$16.80 PB 143 990

The equations of motion of a powered rocket subject to aerodynamic and gravitational forces are nonlinear and consequently solutions are difficult to obtain analytically. Numerical solutions are commonplace, however, due to the arithmetic capabilities of high speed digital computers. For general study an analytical solution in terms of physical parameters is usually preferable to particular solutions in the form of numerical tables. In this paper analytical solutions under various conditions will be approximated in the form of truncated Taylor's Series expansions. The position coordinates of the rocket are presented as polynomial functions of time, after the series are truncated

Allied Research Associates, Inc., Boston, Mass.
LAUNCHING OF AIRBORNE MISSILES UNDERWATER. PART II. RESPONSE OF A SLENDER MISSILE TO SEA AND SWELL, by Theodore R. Goodman and Eugene L. Krasnoff. Rept. on Contract Nonr-2343(00). 31 Dec 58, 26p. 4 refs. Document no. ARA-528.
Order from LC mi$2.70, ph$4.80 PB 144 117

The technique of generalized harmonic analysis is employed to evaluate the trajectory responses of a hydrodynamically unstable slender missile moving vertically towards the free surface of a sea with waves. The free surface of the sea is represented by a Gaussian random function. The wave spectrum is composed of the sum of the spectrum of a stormy sea (waves generated by a local storm) and the spectrum of a swell (waves generated by a distant storm). The Neumann-Pierson spectrum is employed for the stormy sea and a line spectrum is assumed for the swell. The missile considered is a body of revolution without fins and its forward speed is taken as constant. General expressions for the mean squares and the correlation coefficients of the trajectory response components are presented in forms which are suitable for numerical evaluation. (See also PB 139 965)

Army Ordnance Human Engineering Lab., Aberdeen Proving Ground, Md.
AN EVALUATION OF MODE SELECTOR SWITCH ARRANGEMENTS, by Gurdon B. Wattles, Edward C. Weiss, and David E. Holzen. Aug 59, 20p. Technical memo. 10-59.
Order from LC mi$2.40, ph$3.30 PB 144 078

A study was initiated to determine the optimum switching arrangement in terms of operator performance for the selection of the track, acquisition and search modes for a proposed AA weapon system. Five switching arrangements were evaluated and these constituted the independent variable conditions. The dependent variables were: (1) Errors of omission; (2) Errors of commission; (3) Breakdown rate; and (4) Subjective statements of preference. One hundred subjects from the Ordnance School, Aberdeen Proving Ground, Maryland were examined in terms of their performance on the various switching arrangements using time as a stressor.

[Army Rocket and Guided Missile Agency] Redstone Arsenal, Ala.
GRAIN DESIGN HANDBOOK, by Baylen Kaskey. 8 June 56, 267p. Rept. no. 3Y12.
Order from LC mi$11.10, ph$41.10 PB 144 125

Parameters for five types of solid-propellant grain configurations have been worked out by digital computer and are presented here. A method of using these results to solve most types of grain design problems is given. The equations and approximations necessary in grain design are presented and explained in handbook fashion.

Army Signal Missile Support Agency, White Sands Missile Range, N. Mex.
AN/DRW-13 (XO-1) RECEIVER SPECTRUM UTILIZATION, by Merwin A. Olson and William E. Castilo. 9 Oct 59, 25p. AFC Rept. DC 9-10-59-RdeC.
Order from LC mi$2.70, ph$4.80 PB 144 280

Results are presented on a partial laboratory investigation of the interference characteristics (affecting spectrum utilization) on an AN/DRW-13 Drone Control Receiver. This information is necessary for frequency allocation purposes. This FM receiver operates in the frequency range from 406 to 549 MCS with signals having 300 KCS deviation. Selectivity, spurious emissions and responses, and interference characteristics were determined empirically. Selectivity was 359 KCS at the half power points. A clear channel width, involving two identical receivers, of 1600 KCS is recommended for J/S ratios of 20 db.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
THE RESPONSE OF TAPERED CANTILEVER BEAMS WITH A TERMINAL MASS WHEN A CONSTANT FORCE IS APPLIED INSTANTANEOUSLY AT THE MASS, by A. S. Elder. Apr 56, 54p. 24 refs. Rept. no. 979.
Order from LC mi$3.60, ph$9.30 PB 144 034

Interaction of a high-speed aircraft machine gun and the mounting structure may severely affect the functioning of both the gun and the mount. An adequate mount may be constructed by mounting the gun in the center of a uniform beam which is hinged or fixed at the ends. Considerations led to the design and construction of an elastic mount in which flat plates were tapered linearly so as to give cantilever beams of constant static bending strength.

California U., Los Angeles.
DIFFERENTIAL EXPRESSIONS FOR LOW-ECCENTRICITY GEOCENTRIC ORBITS, by Samuel Herrick, Louis G. Walters, C. Geoffrey Hilton. Astrodynamical rept. no. 2 on A Range Planning Study for Project Mercury, Contracts [NASA-204] and AF 49(638)498. 11 June 59, 31p. 3 refs. AFOSR-TN-59-768.
Order from LC mi$3.00, ph$6.30 PB 144 277

In the planning and evaluation of a tracking complex for space vehicles, two functions are served by differential expressions relating uncertainties, errors,

or corrections in selected orbital elements to corresponding uncertainties, errors, or corrections in the observed coordinates. These functions are: (1) The translation of orbit uncertainties into observed quantities, or vice versa, for an evaluation of ability to correct an orbit from given observations, or for an evaluation of the accuracy of an ephemeris based upon these observations. (2) The translation of residuals in observed coordinates into differential corrections to the orbital elements (or parameters). The analysis presented here is divided into two steps because of the need for data intermediate between the parameters and the ephemeris.

California U., Los Angeles.
EFFICIENT PRECISION ORBIT COMPUTATIONAL TECHNIQUES, by Robert M. L. Baker, Jr., George B. Westrom, and others. Rept. on Contracts AF 49(638)498 and DA 04-495-ORD-1389. 11 June 59, 77p. 22 refs. Astrodynamical rept. no. 3; AFOSR-TN-59-766.
Order from LC mi$4.50, ph$12.30 PB 144 014

A comparison is made of the methods of Cowell's, Encke's and the variation-of-parameters for the computation of high-precision orbits. Analysis of the integration of an analytical three-body trajectory and an analytical low-thrust spiral trajectory indicated the importance of decreasing the overall number of integration steps to avoid round-off errors. Comparative computations demonstrated that Encke's method is preferable in the ballistic lunar trajectory, variation-of-parameters in the low-thrust trajectory, and Cowell's method in the high-thrust trajectory. The overall computational efficiency of the Encke's and the variation-of-parameters method is also shown.

California U., Los Angeles.
PRECISION ORBITS AND OBSERVATION REDUCTION, by Samuel Herrick. Astrodynamical rept. no. 1 on Contracts AF 49(638)498, AF 33(616)6005, NOas-59-6110-C, DA 04-495-ORD-1389, and NASA-204. 11 June 59, 25p. AFOSR-TN-49-769.
Order from LC mi$2.70, ph$4.80 PB 144 278

The advantages and disadvantages, in the reduction of observations, of "fixes", triangulation, assumed motions or orbits, reduction to the center of the Earth, and reference systems are discussed in the light of astrodynamical experience and the requirements of different types of orbit and of errors of observation. The differential correction is defined and outlined. The "fix" and "complete observations" are discussed in relation to the determination of orbits and compared with the differential correction. The provinces of observer and orbit analyst are differentiated. The need for accurate observations and reductions is stressed.

Cryogenic Engineering Lab., National Bureau of Standards, Boulder, Colo.
CRYOGENIC MATERIALS DATA HANDBOOK: MASTER GRAPHS. Contract AF 04(647)59-3. 10 Dec 59, 36p.

Diamond Ordnance Fuze Labs., Washington, D. C.
CHEMICAL TRANSDUCERS (PROPOSED PROGRAM), by Raymond H. Comyn. 28 May 59, 12p. 9 refs. Technical rept. TR-727.
Order from LC mi$2.40, ph$3.30 PB 144 388

Chemical transducers are those which use chemical reactions in their input, intermediate, or output stages. This report reviews the basic problem of using chemical transducers as sensing devices for ordnance applications. The use of chemical reactions in transducers is discussed, and a summary is made of chemical reactions which are applicable to transducers. It is recommended that a search be made for literature on chemical transducers, and on chemical reactions which are thought to be suitable for future transducers.

General Electric Co. [Schenectady, N. Y.]
AEROELASTIC EFFECTS ON CENTER OF PRESSURE AND NORMAL FORCE COEFFICIENTS, by Helen C. Engvold and Otto Klima, Jr. 24 Nov 52, declassified. 3p. 1 ref. Hermes A-3A Aerodynamic Data Memo. 24G.
Order from LC mi$1.80, ph$1.80 PB 144 357

This memorandum does not affect the validity of previously distributed memos on center of pressure and normal force coefficients. It merely shows the forward movement in the center of pressure and the reduction in missile normal force, caused by deflection of the nose, afterbody, and fins under load. It is necessary to consider these aeroelastic effects in determining the static stability margin for the various trajectories.

General Electric Co. [Schenectady, N. Y.]
AEROELASTIC EFFECTS ON THE FIN NORMAL FORCE COEFFICIENTS, by Otto Klima, Jr. and Patricia E. Adams. 14 Jan 53, declassified. 2p. 2 refs. Hermes A-3A Aerodynamic Data Memo. 3E.
Order from LC mi$1.80, ph$1.80 PB 144 367

This memorandum does not affect the validity of Memo #3D. It merely shows the change in fin normal force coefficient per degree fin deflection as affected by the dynamic pressure. It should be used with Memo #24G to calculate trim conditions for the missile subjected to air loads.

General Electric Co. [Schenectady, N. Y.]
BASE DRAG COEFFICIENTS FROM FLIGHT TEST - ROUNDS 1 AND 3, by Harold L. Bloom and Constance Carhart. 17 Feb 54, declassified 28 May 58. 8p. Hermes A-3A Aerodynamic Data Memo. 7F.
Order from LC mi$1.80, ph$1.80 PB 144 364

This memorandum presents jet-on base drag coefficients derived from flight test measurements of base pressure on Rounds 1 and 3, which were fired on the same theoretical trajectory. Jet-off base pressures are not available for these rounds. No usable base pressure data were obtained from Round 2. The information contained herein is to be considered as a preliminary step toward revision of estimated A-3A base drag coefficients. Such revision, however, of A-3A Aerodynamic Data Memorandum #7D should await the additional data from Rounds 4 through 7, which were fired on a different trajectory from Rounds 1 through 3.

[General Electric Co., Schenectady, N. Y.]
COMPLETE MISSILE CENTER OF PRESSURE AND NORMAL FORCE COEFFICIENT, by O. Klima, Jr. 9 Mar 53, declassified, 1p. Hermes A-3A Aerodynamic Data Memo. 24H.
Order from LC mi$1.80, ph$1.80 PB 144 356

Recent wind tunnel tests on the Hermes A-3A at M-4.06 and 4.50 indicate that the center of pressure in this Mach number range is slightly aft of predicted values. Since this information does not appreciably affect the performance of missiles through #8 a new aerodynamic memorandum will not be issued. Memorandum 24G can be considered final. The effect of pitch angle on stability in the yaw plane was also investigated and found to be negligible for the angle of attack range of missiles through #8. The results of these high Mach number tests are filed in DFB 53 AO 534 and the final results will be issued in a Jet Propulsion Laboratory report. The report is here quoted in its entirety.

[General Electric Co., Schenectady, N. Y.]
COMPLETE MISSILE DRAG COEFFICIENT, by O. Klima, Jr. 9 Mar 53, declassified. 2p. Hermes A-3A Aerodynamic Data Memo. 7E.
Order from LC mi$1.80, ph$1.80 PB 144 365

The drag value given in Aerodynamic Data Memo #7D should be used for performance estimates of Hermes A-3A missiles through #8. Additional drag data for this missile will become available this summer from NACA free flight shoots of a 1/5 scale missile. By comparing this NACA data with drag measurements from the full scale firings of the A-3A, it should be possible to better predict the drag of the full-scale Hermes A-3B. At the present time it does not appear necessary to issue a new A-3A drag memo after the NACA data is obtained. This report is here quoted in its entirety.

[General Electric Co., Schenectady, N. Y.]
COMPLETE MISSILE SUPERSONIC NORMAL FORCE COEFFICIENTS AND CENTER OF PRESSURE, by Robert B. Chamberlin and Helen C. Engvold. 11 Aug 52, declassified. 8p. 3 refs. Hermes A-3A Aerodynamic Data Memo. 24-E
Order from LC mi$1.80, ph$1.80 PB 144 359

This memorandum replaces the supersonic portion of A-3A Aerodynamic Data Memorandum #24-D. Additional supersonic wind-tunnel tests at the Langley Laboratory have made it possible to further refine the original estimates and show the effects of increasing angles of attack. The subsonic data as given in A-3A memorandum 24-C are still valid.

[General Electric Co., Schenectady, N. Y.]
DRAG COEFFICIENTS, by Robert B. Chamberlin and Margaret A. Lavelle. 12 Aug 52, declassified. 8p. 5 refs. A-3A Aerodynamics Data Memo. 7D.
Order from LC mi$1.80, ph$1.80 PB 144 366

This memorandum revises and supersedes A-3A Aero. Data Memo. #7B to account for new information from NACA Free-flight tests for Mach number .8 to 1.4 and later base-drag data.

General Electric Co. [Schenectady, N. Y.]
EFFECTS OF EMERGENCY CUT-OFF ANTENNA ON HERMES A-3A AERODYNAMIC CHARACTERISTICS, by John O. Powers and Patricia A. Gill. 23 Apr 53, 1p. Hermes A-3A Aerodynamic Data Memo. 47.
Order from LC mi$1.80, ph$1.80 PB 144 352

A study has been made to determine the effect of the nose-mounted external emergency cut-off antenna on the Hermes A-3A aerodynamic characteristics. It was considered that the most probable detrimental effect due to the antenna would result from an induced rolling moment.

General Electric Co. [Schenectady, N. Y.]
EFFECTS OF LARGE PITCH ANGLES ON STATIC STABILITY IN YAW FOR SMALL YAW ANGLES, by Helen C. Engvold and Otto Klima, Jr. 12 Nov 52, declassified. 7p. Hermes A-3A Aerodynamic Data Memo. 24-F.
Order from LC mi$1.80, ph$1.80 PB 144 358

Results of wind tunnel tests recently conducted at Aberdeen at M = 3.80 and M = 2.47 to determine the effect of large angles of attack (in pitch) on the center of pressure of the force vector in the yaw plane, for small side slip angles, are presented.

[General Electric Co., Schenectady, N. Y.]
RESULTS OF FORCE TESTS TO DETERMINE BEST POSITION OF JET VANE, by George E. Bowden. 13 Sep 52, declassified. 4p. Hermes A-3A Aerodynamic Data Memo. 16D.
Order from LC mi$1.80, ph$1.80 PB 144 361

This memorandum does not supersede Hermes A-3A Aero. Data Memo. #16C but gives additional information. Hermes A-3A Aero. Data Memo. #16C is still valid for finding the expected values of jet vane forces, while this memorandum shows the effect of jet vane position on these forces. A series of tests have been made at Malta Test Station to determine the loss in jet vane lift due to moving the vanes outward from their original position. Tests were made with jet vanes in their original position (Jet Vane base 1/8" outward from nozzle wall) at 10^{o} and 20^{o} deflection angle. The vane was then moved so that the base was 1/2" outward from nozzle wall and tests made at 10^{o} and 20^{o} deflection angle. The vane was moved as far back as the test rig allowed (Jet Vane base 13/16" outward from nozzle wall) and another set of tests made.

General Electric Co. [Schenectady, N. Y.]
RESULTS OF JET-VANE FORCE TESTS, by R. E. Geiger. 9 Apr 53, declassified. 5p. Hermes A-3A Aerodynamic Data Memo. 16F.
Order from LC mi$1.80, ph$1.80 PB 144 360

The jet-van characteristics presented herein are based on an analysis of the results of a recent experimental investigation conducted at the Malta Test Station. In addition to the A-3A production vane design, an experimental design (designated GEB-11), incorporating a 45° leading-edge sweep, was also tested. This design is of interest because tail-ring burning tests (without a deflector skirt at the nozzle exit) have demonstrated that in contrast to the production type vane, it does not cause burning of the missile tail ring. In order to obtain center of pressure data this recent series of force tests utilized a 5-component strain gage balance of a type used in Hermes wind-tunnel tests.

General Electric Co. [Schenectady, N. Y.]
REVISED ESTIMATION OF TRANSIENT SKIN TEMPERATURE (HA-3A) (NOSE SECTION - STATION 60) by W. D. Breingan and W. W. Fischer. 31 Oct 52, declassified 28 May 58. 2p. 1 ref. Hermes A-3A Aerodynamic Data Memo. 12C.
Order from LC mi$1.80, ph$1.80 PB 144 363

The object was to recalculate HA-3A skin temperature at station 60 using the W.S.P.G. 61 nautical mile trajectory. Other refinements, such as using the Van Driest correction, variable specific heats, and more recent pressure data are also included.

[General Electric Co., Schenectady, N. Y.]
STATIC STABILITY MARGIN FOR ROUNDS 5-8 (61 MILE TRAJECTORY) by Patricia E. Adams and Otto Klima, Jr. 27 Oct 52, declassified. 13 refs. Hermes A-3A Aerodynamic Data Memo. 14B.
Order from LC mi$1.80, ph$1.80 PB 144 351

This memorandum supplements Aerodynamic Data Memorandum #14A by giving the static stability margin versus time for rounds 5-8. The nominal margin is affected by Reynolds Number and aeroelastic effects. Variations from the nominal, caused by atmospheric conditions, missile tolerances, program tolerances and wind-tunnel measuring tolerances are also presented.

[General Electric Co., Schenectady, N. Y.]
STATIC STABILITY MARGIN FOR ROUNDS 5-8 (61 NAUTICAL MILE TRAJECTORY) by Patricia E. Adams and Otto Klima, Jr. 28 Jan 53, declassified. 1p. 2 refs. Hermes A-3A Aerodynamic Data Memo. 14C.
Order from LC mi$1.80, ph$1.80 PB 144 362

This memorandum supplements Aerodynamic Data Memorandum #14B. A revised nominal trajectory study has been run on the ENIAC to account for minor changes in jet vane drag and total missile drag, and the results have been compared with the original. There is no significant difference between the normal static stability margins based on the original and the revised trajectories. This report is here quoted in its entirety.

AN OPTICAL ANALOG-DIGITAL TRANSDUCER FOR USE IN SERVO SYSTEMS, by Philip Warren Cheney. Rept. on Contract AF 04(645)09. Sep 58, 70p. 9 refs. Rept. T-189; AD-203 947.
Order from LC mi$3.90, ph$10.80 PB 144 223

An analysis of the Optisyn, an analog-digital transducer, in several types of servo systems is presented with emphasis upon the digital control features. The Optisyn consists of two glass disks with photographic patterns of alternate transparent and opaque sectors and a light source. As one of the disks is rotated, the resulting modulated light intensity is sensed by phototransistors. By using two cascoded pairs of these phototransistors, two output waveforms 90 degrees out of phase, are generated. These outputs are interpreted to yield shaft rotation or to control other servomechanisms.

Metals Research Lab., Carnegie Inst. of Tech., Pittsburgh, Pa.
EFFECTS OF METALLURGICAL VARIABLES ON GUN STEEL QUALITY, by C. Wells, C. C. Busby and others. Final rept. on Contract NOrd-12672, 1 Aug 58, 69p. 31 refs; AD-201 794.
Order from LC mi$3.90, ph$10.80 PB 144 054

Correlations between transverse reduction of area and yield strength and between transverse impact and yield strength have been determined for a number of heat-treated, low-alloy, medium-carbon, steel forgings. Basic information pertaining to the average, variation, and degree of control with respect to yield strength, transverse reduction of area, and transverse impact in heat-treated wrought steel products was obtained and utilized in the specification of steel for gun tube forgings.

Naval Ordnance Test Station, China Lake, Calif.
DESTRUCTOR CHARGES EX 25 AND EX 26 AND INTERVAL TIMER EX 1 FOR THE SUBROC FLIGHT-INTERRUPTER SYSTEM, by J. H. Davidson. 14 Aug 59, 32p. NOTS TP-2312; NAVORD rept. 6584.
Order from LC mi$3.00, ph$6.30 PB 144 202

The design, development, and test of two destructor charges, plus an interval timer--components of the Command Flight-Interrupter System for the SUBROC missile--are reported.

Office of Ordnance Research, Durham, N. C.
TRANSACTIONS OF THE CONFERENCE OF ARSENAL MATHEMATICIANS [NO. 4] AT PICATINNY ARSENAL, DOVER, N. J., 5-6 JUNE 1958. Apr 59, 158p. 13 refs. Rept. no. 59-1.
Order from LC mi$7.50, ph$24.30 PB 144 052

Picatinny Arsenal, Dover, N. J.
EVALUATION OF BEKEN MIXER FOR PROPELLANT MANUFACTURE, by K. H. Russell. May 59, 65p. Technical rept. DB-TR: 7-59; AD-225 204.
Order from LC mi$3.90, ph$10.80 PB 144 076

Studies with a 15 gallon unit indicate a Beken mixer can be successfully substituted for a sigma blade mixer for the mixing and colloiding of solvent-mixed cannon propellants. The Beken blade design gives good blending of ingredients and provides more efficient mixing action than a sigma blade mixer with solvent-mixed cannon propellants. Single-base propellant dough from a Beken mixer can be directly extruded without need for maceration or screening operations, and at no sacrifice of propellant quality. Triple-base propellant compositions of good quality can be mixed in a Beken mixer in 1/3 or less the time required in a sigma blade mixer for the same compositions. A Beken mixer is safe for use in the above applications. Use of 150-gallon Beken mixers would permit an estimated $755,000 capital cost saving for a plant to manufacture 4,000,000 pounds per month of a single-base propellant (an approximate 39% saving in equipment cost for mixing through graining operations) and mill cost savings of $1.43 per 100 pounds of propellant to operate this plant. Use of 150-gallon Beken mixers would permit an estimated $2,500,000 capital cost saving for a plant to manufacture 3,000,000 pounds per month of triple-base propellant (an approximate 63% saving on equipment cost for mixing area), and some minor savings in mill costs.

Pitman-Dunn Labs., Div., Frankford Arsenal, Philadelphia, Pa.
ARMOR-PIERCING STEEL PROJECTILES: MECHANICAL PROPERTIES, by R. F. Hehemann (Case Inst. of Tech.) and J. G. Kerr (Lehigh U.). Sep 58, 90p. 95 refs. Rept. R-910.
Order from LC mi$4.80, ph$13.80 PB 144 041

Mechanical properties of steels, particularly those of armor piercing projectiles, and the principal mechanical tests (tension, compression, and indentation hardness) which measure the resistance of these steels to plastic deformation are discussed. The relationships between projectile dynamic impact behavior and mechanical properties are shown in terms of correlations with hardness, metallurgical history, and compression tests.

Polytechnic Inst. of Brooklyn, N. Y.
ANALYSIS OF CENTRAL FORCE SYSTEMS IN THE PRESENCE OF SMALL DISTURBING FORCES, by Frederick V. Pohle and Peter Feitis. Rept. on Contract DA 30-069-ORD-2346. June 59, 39p. 12 refs. PIBAL rept. no. 498; AD-226 187.
Order from LC mi$3.00, ph$6.30 PB 144 075

General theorems which relate to central force systems are presented and the effects of drag are included. Perturbation methods of solution are indicated in terms of dynamical invariants and energy equations are given for the cases of disturbed motion. The hodograph representation is used to supplement the discussion.

Watertown Arsenal Labs., Mass.
BUCKLING OF THIN TRUNCATED CONICAL SHELLS SUBJECTED TO UNIFORM EXTERNAL PRESSURE, by P. P. Radkowski. May 58, 28p. 8 refs. Technical rept. 893.3/1.
Order from LC mi$2.70, ph$4.80 PB 143 838

The buckling of simple supported, thin, conical shells subjected to uniform pressure is analyzed in this report. Predicted critical pressure curves are presented in Figures 3 through 9 for various base angles. In using the critical pressure curves for design purposes, it is suggested that the comparison between the predicted results and known experimental values in Figure 11 be taken into consideration.

RATPROOFING OF SHIPS, by Stevens and Wood, Inc., New York. July 59, 73p. 58 refs.
Order from OTS $1.50 PB 161 019

The ratproof construction of a vessel is accomplished by so designing and building it as to eliminate, or to render inaccessible to rats, every space which might afford them harborage to shelter, nest, breed or obtain food. This manual was developed to assist shipyards, Naval Architects, Inspectors and others in designing and constructing a ship which will meet the present ratproofing requirements of the U. S. Public Health Service. Acceptable details for ratproofing are not necessarily limited to the details in this manual.

FOOD, HANDLING, AND PACKAGING EQUIPMENT

Food

Iowa Agricultural Experiment Station, Ames.
STORAGE LIFE OF FRESH, CURED AND PROCESSED MEATS, by John C. Ayres. Rept. no. 36 (Termination) for 16 Mar 53-15 June 54 on Contract DA 44-109-qm-1423. [1954] 29p. 58 refs. File no. M-608.
Order from LC mi$2.70, ph$4.80 PB 144 058

This investigation was divided into three phases. Phase I concerned itself with the development of methods and media to be used in the determination

and characterization of the number and kinds of organisms isolated from fresh, cured and processed meats. Phase II was directed primarily toward the characterization of the organisms isolated from the meats. Species representative of each of the several distinct groups encountered were identified. Phase III was directed to the investigation of the microbiological changes accompanying storage of meats at various time-temperature relationships. Organoleptic changes, moisture loss and changes in pH were recorded. An attempt was made to relate the changes in the number and types of organisms in and on the meat to other changes which occur in the meat.

Quartermaster Food and Container Inst. for the Armed Forces, Chicago, Ill.
FOOD FROM ALGAE: A REVIEW OF THE LITERATURE, by John Lavery and Robert G. Tischer. Oct 58, 32p. 124 refs. Library Bulletin no. 1; AD-206 502.
Order from LC mi$3.00, ph$6.30 PB 138 412

The manuscript was completed in August of 1956 and is here presented without change because as it stands it constitutes an important and basic summary of what was known about algae culture at that time. Some of the titles which have appeared since will be listed in a bibliography on space feeding to appear in the September 1958 issue of FOOD TECHNOLOGY.

Whirlpool Corp., St Joseph, Mich.
EVALUATION OF SHELF LIFE OF IRRADIATED FOOD, by Aaron L. Brody. Rept. no. 8 (Final) for 12 July 56-11 July 58. [1958] 72p. 6 refs. QFCIAF File S-718.
Order from LC mi$4.50, ph$12.30 PB 144 183

Storage characteristics of several foods which had received pasteurizing doses of ionizing radiations and had been stored at refrigerator temperatures were studied. Foods studied were: Frankfurters, raw oysters, strawberries, blueberries, sour cherries, asparagus, snap beans, lima beans, and cauliflower. Several fruits and vegetables including peaches, apples, pears, and tomatoes were given uniform surface doses of irradiation in an effort to suppress mold growth with a minimum of damage to the product. Results, while showing trends toward mold growth retardation, were inconclusive.

MACHINERY, FABRICATION, AND ACCESSORY EQUIPMENT

Engines and Propulsion Systems

Bell Aircraft Corp. [Buffalo, N. Y.]
A HIGH-SPEED AND HIGH-RESOLUTION PHOTOGRAPHIC TECHNIQUE FOR THE OBSERVATION OF PROPELLANTS INJECTED INTO A FIRING COMBUSTION CHAMBER, by Theodor G. Rossmann. Technical note on Contract AF 49(638)260. 18 May 59, 50p. 20 refs. Rept. no. 8007-981-008, Pt. 1; AFOSR-TN-59-8; AD-208 304.
Order from LC mi$3.30, ph$7.80 PB 143 902

Objective is to "conduct research in the general field of Observation of Burning Propellants in Rocket Engines", for the purpose of obtaining design criteria for liquid propellant rockets which will permit a more rational approach to design of rocket engines. An experimental method has been developed employing high-speed and magnifying photographic techniques. The light of a high intensity source, flashing at rates up to 10,000/sec, is directed through two windows in opposite walls of a rocket combustion chamber. It produces, by means of a photographic objective, a series of up to ten consecutive magnified shadow pictures of the liquid core of the evaporating or burning propellant droplets and ligaments on a photographic film. Evaluation of these films enables one to follow the time history of the physical phenomena mentioned before which occur in a firing rocket combustion chamber.

Bell Aircraft Corp. [Buffalo, N. Y.]
A HIGH-SPEED AND HIGH-RESOLUTION PHOTOGRAPHIC TECHNIQUE FOR THE OBSERVATION OF PROPELLANTS INJECTED INTO A FIRING COMBUSTION CHAMBER, by Theodor G. Rossmann. Technical note on Contract AF 49(638)260. 18 May 59, 88p. Rept. no. 8007-981-008, Pt. 2; AFOSR-TN-59-8; AD-208 304.
Order from LC mi$4.80, ph$13.80 PB 143 915

This section of report is exclusively photos involved in the project and must be used in conjunction with Part 1, PB 143 902)

James Forrestal Research Center, Princeton, N. J.
A COOPERATIVE PROGRAM OF FUNDAMENTAL RESEARCH AS RELATED TO JET PROPULSION. Semi-annual progress rept. for 1 Apr-30 Sep 57 on Project Squid, Contract N6ori-105(03). 1 Oct 57, 129p. 101 refs. AD-146 061.
Order from LC mi$6.30, ph$19.80 PB 137 703

(See also PB 130 671)

Materials Lab., Wright Air Development Center, Wright-Patterson AFB, Ohio.
EVALUATION OF PROTECTIVE COATINGS FOR MOLYBDENUM NOZZLE GUIDE VANES, by John R. Giancola. Rept. for Jan 54-Jan 57 on Metallic Materials. June 59, 47p. WADC Technical note 58-241; AD-215 442.
Order from OTS $1.25 PB 151 912

Thirty seven molybdenum nozzle guide vanes, prepared and coated for resistance to jet engine operating conditions, were evaluated in an engine exhaust stream at 1860-1890°F for 4 hours. Non destructive and metallographic examinations revealed the degree of deterioration of each type of coating after test. Results indicate that, in the temperature range of the test, multilayer electrodeposited metallic coatings have the longest service life. No one coating combination survived the test without some serious damage. All coatings tested increased the life of the guide vanes over unprotected molybdenum.

Pennsylvania State U. Coll. of Engineering and Architecture, University Park.
THE FILM VAPORIZATION COMBUSTOR FOR GAS TURBINE ENGINES: THEORETICAL AND EXPERIMENTAL INVESTIGATIONS, by Gunter W. Maybach. Doctoral thesis. Technical rept. on Contract Nonr-656(13). Jan 59, 157p. 34 refs.
Order from LC mi$7.50, ph$24.30 PB 144 371

The objectives of this study were to realize a new combustion principle for gas turbines, one that would inherently reduce the formation of smoke and the formation of deposits inside the combustion chamber; to analyze the mixture formation and combustion mechanisms pertinent to the new combustion principle; and to determine the operational characteristics of a research prototype combustor incorporating the new principle. The new combustion principle is based on the vaporization of the fuel from a liquid film spread along the inner wall surface of a cylindrical combustor section by means of a high-velocity air stream.

Sundstrand Turbo Div., Sundstrand Corp. [Pacoima, Calif.]
SCALING PROCEDURES FOR ROCKETS UTILIZING LIQUID PROPELLANTS OF VARIABLE COMPOSITION AND MIXTURE RATIO, by S. S. Penner. Technical note no. 7 on Contract AF 18(603)107. 31 Aug 59, 20p. 13 refs. S/TD no. 1733; AFOSR-TN-59-908.
Order from LC mi$2.40, ph$3.30 PB 144 012

Generalized scaling rules are derived for liquid-fuel rocket engines on the assumption that the dependence of the overall, effective, conversion time is a known function of propellant mixture ratio and propellant type. The resulting scaling rules provide an important supplementary approach to current programs relating to the development of rational scaling procedures for liquid fuel rocket engines. The present analysis serves to emphasize the importance of continued basic research on the mechanism and rates of combustion reactions in engines.

Manufacturing Equipment and Processes

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
REVIEW OF ELECTRICAL MACHINING METHODS, by Max J. Trzeciak and Francis W. Boulger. 5 Aug 59, 14p. 37 refs. DMIC memo. 28; AD-225 298.
Order from OTS $0.50 PB 161 178

This is a review of recent literature describing the application of electrical machining methods. The three common nonconventional electrical machining methods are the spark-discharge, electrolytic grinding and milling, and arc-discharge methods. Sparking occurs between the tool and workpiece electrodes, which are separated by a dielectric fluid, when the voltage between these electrodes is increased until it exceeds the resistance of the dielectric. The sparking is usually forced to occur at a rate of 20,000 to 300,000 electrical discharges per second. Electrolytic erosion may be considered as an accelerated etching and lapping operation such as that used in preparing metallographic specimens. The metal surface is etched electrolytically and lapped concurrently many times during the course of machining by this method. A rotating metallic (copper or brass) wheel containing abrasive grains imbedded in its surface serves as a cathode. Alternatively, an abrasive wheel impregnated with graphite filler to make it current-conducting can be used. The characteristic of the arc-discharge method is that it thermally erodes the workpiece. The method ordinarily uses a low-voltage, high-amperage direct current power source, although alternating current may be used.

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
SPINDLE SHAPING OF TITANIUM SHEET, by Carl T. Olofson. 15 July 59, 4p. 1 ref. DMIC memo. 26; AD-220 196.
Order from OTS $0.50 PB 161 176

Spindle shaping is a hand-fed, edge-profiling operation for certain types of sheet-metal parts. The blank is firmly clamped to a template of desired edge contour. By means of a suitable fixture, the template and blank are then hand fed into an inverted single-spindle cutter protruding through a table. A bearing surface on the milling-type cutter traces the contour of the template, thereby guiding the cutter as it cuts the profile of the part. Parts can be produced from titanium and titanium-alloy sheet with aircraft-quality edge finish. This method is feasible for shaping sheet metal in gages from 0.060 to 0.187 inch using carbide cutters and carbon dioxide as a coolant.

Lockheed Aircraft Corp., Burbank, Calif.
HIGH ENERGY RATE METAL FORMING, by A. F. Watts and Glen N. Rardin. Interim technical engineering rept. no. 6, 1 July-30 Sep 59, on Contract AF 33(600)35543. [1959] 15p. LR-14059.
Order from LC mi$2.40, ph$3.30 PB 144 411

This report describes the preliminary planning for testing explosive forming on aircraft parts.

Princeton U., N. J.
BENEFICIATION OF UNITED STATES MANGANESE RESERVES, by Oskar Morgenstern. Technical rept. no. 1 on Economics Research Proj., Contract Nonr-1858(02). 15 Jan 57, 54p. 71 refs. AD-147 123.
Order from LC mi$3.60, ph$9.30 PB 138 418

Domestic Mn ore and slag reserves: Oxide and carbonate ores (Cuyuna Range, Chamberlain Region, and Artillery Peak); and silicate ores and slags (Aroostook County and open hearth slags). Mn ore beneficiation processes: Oxide and carbonate ores (Chemical processes include ammonium carbamate-carbonate leach, H_2SO_4 and related compounds leach, HNO_3 leach (Nossen), HCl leach (King), and electrolysis; while physical processes include flotation, heavy media seperation and tabling, and crushing and jigging); silicate ores and slags (pyrochemical processes include lime clinkering (Sylvester), lime clinkering-carbamate leach (Sylvester-Dean), chemical roasting (Bruce Williams), and chlorine vaporization; pyrometallurgi-

cal processes include selective oxidation of slag-spiegel (Bureau of Mines), electric furnace reduction (Udy), and selective oxidation of pig iron (Wright); and the high-intensity-arc physical process). Alloy production methods: Ferromanganese (blast furnace and electric furnace); and silicomanganese. Characterization of physical input coefficients and dollar cost data.

Springfield Armory, Mass.
PREPARATION OF A PRECOAT FOR INVESTMENT CASTING, by G. Pributsky and W. M. Kisner. Rept. on The Application of Cast Materials and Processes to the Manufacture of Small Arms Weapons.
22 Oct 58, 21p. Rept. SA-TR18-1066; AD-225 972L.
Order from LC mi$2.70, ph$4.80 PB 144 055

A study was conducted to obtain data in order to establish a standard precoat formulation for use in precision investment castings. One precoat formulation with a sodium silicate binder had superior properties.

Transport, Traction and Hoist Facilities

Army Engineer Research and Development Labs., For Belvoir, Va.
ENGINEERING TESTS OF THE BRIDGE, FLOATING ALUMINUM LIGHT TACTICAL, PONTON BOAT CRADLE, by Gerard J. Welch. 18p. 2 refs. Technical rept. 1584-TR.
Order from LC mi$2.40, ph$3.30 PB 144 151

Requirements for a versatile cradle capable of supporting eight or less aluminum pontons on standard, general-purpose transportation equipment. Design of a Light Tactical Ponton Bridge Cradle, a 600-pound welded steel, skeleton pallet, designed to carry a maximum load of eight pontons nested in an inverted position on a 2 1/2-ton basic utility trailer.

Land Locomotion Research Branch, Ordnance Tank Automotive Command, Center Line, Mich.
EVALUATION OF VEHICLE SINKAGE IN OFF THE ROAD LOCOMOTION, by M. G. Bekker. June 58, 53p. 4 refs. Rept. no. 35.
Order from LC mi$3.60, ph$9.30 PB 143 949

The problem presented in this paper is to outline the solutions pertaining to vehicle sinkage, and to illustrate them with practical examples in order to assist the user and designer in the application of the latest developments of land locomotion mechanics. The present report has been prepared to provide information which may aid in the design and evaluation of wheeled and tracked vehicles.

Midwest Applied Science Corp., Lafayette, Ind.
BEHAVIOR OF A LINEAR ONE DEGREE OF FREEDOM VEHICLE MOVING WITH CONSTANT VELOCITY ON A STATIONARY GAUSSIAN RANDOM TRACK, by J. L. Bogdanoff and Frank Kozin. Rept. on Contract DA 33-008-ORD-1738. Feb 59, 33p. 6 refs. Rept. no. 48.
Order from LC mi$3.00, ph$6.30 PB 144 233

A method for analyzing a linear one degree of freedom vehicle when excited by a weakly stationary random process is discussed. If the surface of rough terrain is a Gaussian random process, this method can then be applied to determine the motion characteristics of the vehicle. A solution of the power required to maintain a constant velocity is presented.

Rome Air Development Center, Griffiss AFB, N. Y.
EVALUATION OF SURGE-TYPE BRAKE SYSTEM, by Harold Nares. July 59, 21p. RADC-TN-59-138; AD-214 494.
Order from LC mi$2.70, ph$4.80 PB 144 082

A qualitative analysis was made of an automatic trailer-brake system proposed for use in Project Two Wheels which is considered worthy of consideration for use in other military trailer systems. Although there was no attempt made in the reported test program to compile a strict engineering evaluation, sufficient work was done to indicate that the brake system shows considerable merit and that this could profitably become the subject for a funded engineering investigation.

Rome Air Development Center, Griffiss AFB, N. Y.
PROJECT TWO WHEELS, by John J. Guba. Aug 59, 29p. RADC-TR-59-38; AD-212 071.
Order from LC mi$2.70, ph$4.80 PB 144 299

Project Two-Wheels is a series of highly mobile, air-transportable communications and navigational facilities, developed for Airways and Air Communications Service, to support air operations under emergency or austere conditions. The five original facilities were developed by integrating standard communications and navigation equipment with a trailer van specifically designed for the purpose of forming a complete operating system. These facilities are described with primary emphasis on the development in the mechanical area.

MATERIALS

Bockamöllan, Brösarps Station (Sweden).
STATISTICAL EVALUATION OF DATA FROM FATIGUE AND CREEP-RUPTURE TESTS. PART I. FUNDAMENTAL CONCEPTS AND GENERAL METHODS, by Waloddi Weibull. Rept. for 1 Mar 58-28 Feb 59 on Materials Analysis and Evaluation Techniques, Contract AF 61(514)1208. Sep 59, 80p. 19 refs. WADC Technical rept. 59-400, Pt. 1.
Order from OTS $2.00 PB 161 297

Fatigue tests are classified into three types with consideration to the appropriate method of evaluating the data. Fundamental statistical concepts, general methods, and useful tools are presented. The possibilities of estimating distribution parameters have been examined. Starting from the concept of information available in a sample, various methods of extimating the parameters of location, scale, and shape are discussed, completed by a comparison of the efficiency of various estimates. General principles of fitting curves to observations are outlined and applied to the methods of maximum likelihood, linear regression, and best linear estimators.

Michigan U. Research Inst., Ann Arbor.
THE PHOTOGRAPHIC SEQUENCE EFFECT, by J. H. Enns and Ernst Katz. Final rept. pt. 2 on Contract AF 49(638)69. Aug 59, 23p. 5 refs. 2613-9-F; AFOSR-TR-59-122.
Order from LC mi$2.70, ph$4.80 PB 144 152

In Section 1 the motivation of this study is given; In Section 2 the method of sequence exposures is briefly described experimentally and theoretically and the experimental results are described. The results confirm qualitatively the trend of the theoretical work but lead to quantitative difficulties, which are discussed in Section 3. The conclusions are summarized in Section 4.

Metals Processing Lab., Mass. Inst. of Tech., Cambridge.
CHROMIUM COATINGS FROM LIQUID METAL SOLUTIONS, by Peter Schwarzkopf, Ernst B. Weglein and John Wulff. Technical rept. on Contract Nonr-1841(30). Dec 58, 31p. 12 refs.
Order from LC mi$3.00, ph$6.30 PB 143 984

Three types of solid-liquid interface are found to form by continuous cooling of a saturated solution of chromium in tin below the liquidus temperature. It was found possible to produce circa 0.001 inch coatings of chromium which are soft, dense and relatively smooth. Such coatings are too thin to offer protection to molybdenum above about 900°C in air. The .001 inch chromium deposits offer some promise as a barrier substrate for spray coats. (See also PB 151 126)

Virginia Agricultural Experiment Station, Blacksburg.
QUALITY CONTROL METHODS FOR SEVERAL RELATED VARIABLES, by J. Edward Jackson. Technical rept. no. 4 on Development of Statistical Methods for Experimental Designs in Quality Control and Surveillance Testing, Contract Nonr-2352(01). Dec 58, 31p. 7 refs.
Order from LC mi$3.00, ph$6.30 PB 143 925

Ceramics and Refractories

Defense Metals Information Center, Battelle Memorial Inst., Columbus, Ohio.
GLASS-BONDED REFRACTORY COATINGS FOR IRON- OR NICKEL-BASE ALLOYS, by T. E. Cook and B. W. King. 25 Apr 59, 19p. 40 refs. DMIC memo. 16.
Order from OTS $0.50 PB 161 166

Ceramic coatings are applied to metal to (1) prevent oxidation, corrosive attack or erosion, and (2) thermally insulate the metal or change the radiation characteristics of the surface. To be effective, they must be continuous and bond tightly to the metal. Some do not adhere to the metal directly but require an intermediate undercoat. The quality of the coating material, (2) preparation of the metal surface, and (3) application and firing procedures used to obtain a bond between the metal and the glassy coating. Enamels are mixtures of oxides smelted into glasses and fritted by quenching--usually in water. Metals are prepared for coating by degreasing, sand blasting, scouring, pickling or combinations of these methods. The enamel frit is milled with water (and sometimes small amounts of conditioning agents) to form a slip or suspension, similar in appearance to water-base paints, of fine frit particles in water. The slip is applied to the metal by dipping or spraying as uniformly as possible. The coated piece is dried to remove water, sometimes baked at 300 to 600 F, and fired for 4 to 10 minutes at temperatures ranging from 1600 to 2400 F. Recommended coatings for iron- and nickel-base alloys, coating compositions, and details of procedures for metal preparation and application are given.

DEVELOPMENT OF AN INDICATOR TEST PAPER TO DETECT INSTABILITY OF STORED PROPELLANTS, by Phillip Rochlin. Nov 58, 32p. 7 refs. Technical rept. 2567; AD-202 006.
Order from LC mi$3.00, ph$6.30 PB 138 349

To evaluate the abilities of 3 experimental propellant test papers to detect incipient instability in stored propellants.

General Electric Co., Schenectady, N. Y.
FUEL TRANSIENT TEMPERATURE AND PRESSURE DUE TO AERODYNAMIC HEATING, by W. W. Fischer. Rept. on Project Hermes. Dec 50, declassified 17 Mar 58. 38p. Technical Information Series DF 50A0521.
Order from LC mi$3.00, ph$6.30 PB 144 123

An analysis was made of the effect of aerodynamic heating upon the Hermes B-1 fuel temperature and pressure. Both the annular and island fuel tanks were considered for 3 sets of conditions, viz., no insulation on either tank, insulation on diffuser side of island tank and insulation on diffuser side of both tanks. Calculation results indicate that this system of pressurization is unsatisfactory. Without insulation the fuel temperature becomes too high and a low pressure occurs shortly after B-1 launching. Insulation keeps the fuel cool enough but then the fuel pressure is so low that an auxiliary means of pressurization is necessary to prevent fuel pump cavitation.

PREPARATION OF DIBORANE BY REACTION OF LITHIUM HYDRIDE AND BORON HALIDES: USE OF TETRAHYDROFURAN AS A SOLVENT, by E. M. Boldebuck and J. R. Elliot. Rept. on Proj. Hermes. Dec 49, 6 refs. Rept. no. R49A0534.
Order from LC mi$1.80, ph$1.80 PB 144 391

Tetrahydrofuran has been found to be an efficient solvent for diborane, and its use as a solvent in the lithium hydride-boron halide reaction results in good yields of diborane in the absence of catalyst or special operating temperatures.

General Electric Co., Schenectady, N. Y.
PREPARATION OF DIBORANE BY THE REACTION OF LITHIUM HYDRIDE AND BORON FLUORIDE ETHERATE, by J. R. Elliott and F. F. Roedel. Rept. on Proj. Hermes. 18 Feb 48, declassified 11 Aug 49, 54p. 9 refs. Rept. no. TR-55251.
Order from LC mi$3.60, ph$9.30 PB 144 393

A fundamental investigation of the reaction of lithium hydride and boron fluoride etherate in ethyl ether to form lithium fluoride and diborane has been performed under rigidly controlled conditions. Under rigidly controlled anhydrous conditions, no induction period precedes the reaction between lithium hydride and boron fluoride. A method has been found for the elimination of induction periods. This method involves pretreatment of lithium hydride in ether with diborane immediately before addition of the boron fluoride etherate.

General Electric Co., Schenectady, N. Y.
SOLUBILITY OF DIBORANE IN ETHYL ETHER AND IN TETRAHYDROFURANE, by E. M. Boldebuck, J. R. Elliott and others. Rept. on Proj. Hermes. 19 Nov 48, declassified 11 Aug 49, 11p. Rept. no. TR-55288.
Order from LC mi$2.40, ph$3.30 PB 144 395

The pressure over a solution of diborane in ethyl ether and in tetrahydrofurane has been measured in a bomb at different temperatures. From these data the solubility of diborane at 20°C and diborane pressure of one atmosphere has been calculated as 1.1 g. per 100 g. ethyl ether, 8.1 g. per 100 g. tetrahydrofurane. Solubility of diborane in ethyl ether is proportional to pressure and slightly higher than predicted by Raoult's law. In tetrahydrofurane solubility increases as the square root of diborane pressure, suggesting the formation of a complex with the solvent. Molar heat of solution of diborane in ethyl ether has been calculated, roughly, as -2800 cal; in tetrahydrofurane as -4900 cal.

Michigan U. Research Inst., Ann Arbor.
THERMAL CONDUCTIVITY OF LUBRICATING OILS AND HYDRAULIC FLUIDS, by D. W. McCready. Rept. for 1 July 58-30 June 59 on Materials Analysis and Evaluation Techniques, Contract AF 33(616)5745. July 59, 32p. 12 refs. WADC Technical rept. 59-185.
Order from OTS $1.00 PB 161 040

An all-metal concentric cylinder type of thermal conductivity cell was used to measure the thermal conductivity of twelve natural and synthetic base lubricating fluids. Thermal conductivity values in the temperature range of from 70 to 500°F are reported for fluids considered stable to the higher temperature. The maximum temperatures for other fluids were limited by their instabilities under test conditions. Since each fluid has individual characteristics, no correlation of conductivity values appears possible. Values are considered precise and for possible correlation can be compared to those of a fluid chosen as a "standard reference."

Naval [Weapons Plant] Washington, D. C.
PROPERTIES OF DIMETHYL POLYSILOXANE FLUIDS, by S. H. Cole. 23 Dec 58, 9p. 1 ref. NGF-T-34-58; NAVORD rept. 6488.
Order from LC mi$1.80, ph$1.80 PB 144 119

Tests were conducted to determine properties of dimethyl polysiloxane fluids in the viscosity range 0.65 to 214,000 centistokes. These properties included viscosity, viscosity-temperature coefficient, pour point, flash point, specific gravity, refractive index, dielective constant, acid number and volatility of the more viscous grades. A military specification was prepared from the data obtained from these tests.

Rocket Research Lab., Ohio State U. Research Foundation, Columbus.
INVESTIGATION OF LIQUID NITRIC OXIDE AS A ROCKET OXIDIZER, by Loren E. Bollinger and Rudolph Edse. Rept. on Contract AF 33(616)5615. May 59, 29p. 6 refs. WADC Technical rept. 59-12; AD-208 327.
Order from OTS $0.75 PB 161 300

An experimental investigation has been made of the use of liquid nitric oxide as an oxidizer for rocket engines. Since nitric oxide is an endothermic compound, it follows from thermodynamic calculations that nitric oxide - fuel mixtures have a higher specific thrust than do corresponding oxygen-fuel mixtures. It was found that extremely long residence times were required for the propellant in the combustion chamber. Originally it was planned to use JP-4 as the fuel with liquid nitric oxide but methyl alcohol was substituted because of the difficulties encountered in burning JP-4 with liquid nitric oxide. From the limited experiments which were conducted, liquid nitric oxide does not appear favorable as an oxidizer for rockets because of the long residence time required for nitirc oxide to react fully with the fuels used. Most of the experiments were conducted with a nominal 50-pound thrust motor having a characteristic length of 1515 inches; the design chamber pressure was 300 pounds per square inch. An experimental, uncorrected value of 211 seconds was obtained for the specific thrust at a chamber pressure of 327 pounds per square inch for an oxidizer-to-fuel weight ratio of 1.46. In addition, the results of these studies showed that nitric oxide, which is one of the important intermediate products in the combustion of the various nitric-acid type oxidizers, may affect the smooth combustion of nitric acid with a fuel because of the long chemical reaction time of nitric oxide.

Shell Development Co., Emeryville, Calif.
FUNDAMENTALS OF GEAR LUBRICATION, by V. N. Borsoff and R. Lutwack. Final rept. for June 55-May 56 on Contract NOas 53-356-c. [1956] 101p. 8 refs. Rept. no. S-13694; AD-143 172.
Order from LC mi$5.70, ph$16.80 PB 137 817

The extreme pressure film established on the working surfaces of gear teeth becomes gradually attrited when the gears are operated with an unreactive oil. The rate of attrition is high in the beginning of operation with unreactive oil. The rates of attrition decreased with time. Approximately 2/3 of the extreme pressure film could be attrited, and 1/3 remains firmly attached to the surfaces. Rolling motion has little effect on the attrition of an extreme pressure film. When gears with an extreme pressure film on the tooth working surface are operated with an unreactive oil in the thick film zone of lubrication, the mechanism of attrition is primarily that of "washing" by the lubricant. The shifting of the peaks of the extreme pressure film in the direction of sliding suggests a plastic like nature of the E. P. film formed by dibenzyl disulfide compounded oil. When gears with a radioactive E. P. film established on the teeth working surfaces are operated with an inert E. P. compound oil (DBDS in this case), the exchange of atoms of the active ingredient (sulfur) or molecules of the resultant product of reaction (iron-sulfide) in the extreme pressure film is a continuous process. This confirms our previous conclusion that extreme pressure films are being continuously formed and attrited during the operation of gears. The results of the tests with tagged DBDS performed last year confirm well the results of the two previous years of investigations.

Springfield Armory, Mass.
EVALUATION OF SHELL FOUR-BALL TEST RESULTS ON VARIOUS CUTTING FLUIDS AND LUBRICANTS, by L. Krasnor. Partial rept. no. 1, 2 Mar 59, 30p. Rept. SA-TR16-1055.
Order from LC mi$2.70, ph$4.80 PB 144 130

Measurements are given of the extreme pressure properties of more than 110 cutting fluids and lubricants taken in accordance with Federal Standard VV-L-791e, Method 650.3, with Shell Four-Ball Extreme Pressure Lubricants Tester. Highest Mean Hertz Load values were obtained from tests of blended materials of multiple compounding containing sulfur, chlorine, or phosphorus. Three of the four additives tested, which were used with mineral seal oil as a diluent, showed improved performance over their use with 100 second viscosity mineral oil. Adequate explanation for this is not yet available. Copper powder, cuprous chloride, and copper oleate showed some degree of extreme pressure activity especially in conjunction with sulfur and sulfur compounds.

Cornell U., Ithaca, N. Y.
MASS TRANSFER COOLING OF PARACHUTE MATERIALS, by Rodney H. Cornish, Franklin J. Ahimaz, and others. Rept. for June 58-Jan 59 on Parachute Materials and Functional Textiles, Contract AF 33(616)5852. Sep 59, 97p. 7 refs. WADC Technical rept. 58-684.
Order from OTS $2.25 PB 161 293

Seventy-three tests were made on different parachute ribbon materials and protective coatings. These tests were conducted at Mach 5, pressure altitude of 100,000 feet and stagnation temperatures of 700 to 900°F. Most of the effort was devoted to mass transfer cooling (sublimation and melting). Hexachloroethane, Chloro-anthraquinone, Methyl-anthraquinone, Hydroxy-anthraquinone, and Camphene were applied by various techniques in several thicknesses. The results of these tests are plotted in the form of: lifetimes parameterized in terms of coating weight, temperature profiles, and heating rates. Tabular data is presented for all of the runs. This data indicates that coating weights on the order of the weight of the ribbons are required to give significant protection at the test conditions and that mechanical protection must be provided to the coatings to improve their efficiency.

Quartermaster Research and Engineering Center, Natick, Mass.
MEASURING AND PREDICTING THE GENERATION

OF STATIC ELECTRICITY IN MILITARY CLOTHING, by Aldo M. Crugnola and Horace M. Robinson. Sep 59, 71p. 44 refs. Textile Series rept. no. 110. AD-225 497.
Order from LC mi$4.50, ph$12.30 PB 143 888

The study reported in the following pages represents a review of the problem presented by static generation in clothing, and an exploration of the methods by which the problem can be minimized and the generation of a charge be evaluated on a clothing system. An investigation is reported on the effectiveness and durability of 12 antistatic finishes on various fabrics, and one finish is pinpointed which possesses the best combination of effectiveness and durability. From a review of published instrumental methods by which the electrostatic behavior of a fabric may be assessed, it was concluded that none of these is capable of giving an adequate, quantitative forecast of the hazard inherent in a particular multi-layer system. For this purpose, an instrument has been developed and is described herein. Results obtained with this instrument agree with those obtained from "on-the-individual" type test.

GENERAL FORMULA FOR CREEP AND RUPTURE STRESSES IN PLASTIC MATERIALS, by S. Goldfein. 31 July 58, 40p. 14 refs. Rept. no. 2409-17.
Order from LC mi$3.00, ph$6.30 PB 144 044

The purpose of this work was to derive a general formula which would accurately describe the time-temperature relationship for creep and rupture stresses in plastic materials.

Brown U. Div. of Engineering, Providence, R. I.
THE VALIDITY OF MODEL REPRESENTATION FOR LINEAR VISCOELASTIC BEHAVIOUR, by H. Kolsky and Y. Y. Shi. Technical rept. no. 5 on Contract Nonr-562(14). Jan 58, 43p. 27 refs. AD-156 118.
Order from LC mi$3.30, ph$7.80 PB 137 917

The observed mechanical response of some linear viscoelastic materials as measured by Lethersich and others is compared with the response predicted by two and three parameter models. It is found that two parameter models are completely inadequate in describing the observed behavior over even a narrow frequency range. Of the two three-parameter models the standard linear solid is preferable, and this model gives at least qualitative agreement with experiment over a frequency range of one or two decades. It is shown that this degree of agreement is adequate to predict the mechanical behavior of the materials when subjected to smooth stress or strain cycles quasi-statically.

Frick Chemical Lab., Princeton U., N. J.
EXISTENCE OF A SHARPLY DEFINED MAXIMUM RELAXATION TIME FOR MONODISPERSE POLYSTYRENE, by A. V. Tobolsky and K. Murakami. Rept. on Contract Nonr-1858(07). 29 Jan 59, 31p. 8 refs. ONR Technical rept. RLT-28.
Order from LC mi$3.00, ph$6.30 PB 144 144

Relaxation of stress measurements were carried out in the region of rubbery flow on two samples of polystyrene.

Rubber and Elastomers

Frick Chemical Lab., Princeton U., N. J.
THE MECHANISM OF OXIDATIVE SCISSION IN NATURAL RUBBER, by A. V. Tobolsky and A. Mercurio (Doctoral thesis). Rept. on Contract Nonr-1858(07). 29 Dec 58, 24p. 22 refs. ONR Technical rept. RLT-27.
Order from LC mi$2.70, ph$4.80 PB 143 853

The free radical producers 2-azobisisobutyronitrile, di-t-butyl peroxide, and benzoyl peroxide, have been used to initiate the oxidation of natural rubber in dilute benzene solutions at 60-80°C. Quantitative comparisons are made between the measured rate of scission of natural rubber and the known rate of initiation of oxidation chains (in the kinetic sense) by these agents under these conditions. The rate of rubber scission in dilute benzene solutions and in solid rubber has been used to investigate the ability of the systems tetramethyl thiuram disulfide and benzoyl peroxide-dimethyl aniline to initiate oxidation chains. The rates of initiation in both cases depend strongly on rubber concentration approaching, in solid rubber, values comparable to the rates of initiation of polymerization by these agents in bulk styrene and bulk methyl methacrylate.

Rock Island Arsenal Lab., Ill.
EVALUATION OF POTENTIAL AGE RESISTING INHIBITORS FOR SBR 1600 VULCANIZATES, by D. Ilten. 2 Nov 59, 21p. 8 refs. Rept. no. 59-2825.
Order from LC mi$2.70, ph$4.80 PB 144 335

Previous work had indicated that certain organo metallic compounds formed in situ during the vulcanization of rubber were very effective in improving the age resistance of the rubber. This work was done to evaluate related members of this class as antioxidants in order to determine the degree of protection obtained and if possible to find a better antioxidant. It was found that the residues formed during curing in both the sulfur-accelerator cure and a cure based on the use of accelerators only were more effective as antioxidants than any of the potential inhibitors which were evaluated. In all cases investigated, the age resistance of the accelerator cured vulcanizates was superior to that of the corresponding sulfur-accelerator cured vulcanizates. Some of the compounds evaluated made the age resistance of the vulcanizates poorer than that of the control. This was considered to reflect their activity as vulcanization accelerators even at the relatively low aging temperatures.

Rock Island Arsenal, Ill.
SYNTHESIS OF RUBBER COPOLYMERS BY SOME NEW METHODS, by W. Jurgeleit and R. R. Freeman. 28 July 59, 15p. 4 refs. Rept. no. 59-2001. AD-226 101.
Order from LC mi$2.40, ph$3.30 PB 143 885

The copolymerization of butadiene and styrene by Ziegler catalysts was investigated. An adsorption process as the time determining step is suggested in the Ziegler polymerization. Grafting by means of an anionic initiator was accomplished in concentrated solutions and in a solvent free process on a roll mill. The catalyst, Na alcoholate, was prepared from Na or NaH dispersions and an alcohol. It is essential first to bring the Na or NaH dispersions together with the polymer under conditions that might allow at least a partial reaction of the polymer with Na, either substitution or addition. Furthermore, the catalyst must be prepared in the presence of both the monomer and the polymer. The described method was used to graft (a) acrylonitrile onto polybutadiene and a butadiene/styrene copolymer, and (b) styrene onto polybutadiene and a butadiene/acrylonitrile copolymer. The graft copolymers were identified by solubility changes and IR spectra. The solvent free grafting procedure might have some technical possibilities and shows certain advantages when compared with similar methods known to date.

MATHEMATICS

Applied Mathematics and Statistics Lab., Stanford U., Calif.
ON CENTERING INFINITELY DIVISIBLE PROCESSES, by Ronald Pyke. Technical rept. no. 24 on Contract Nonr-225(21). 8 Jan 59, 13p. 10 refs.
Order from LC mi$2.40, ph$3.30 PB 144 291

The concept of centering stochastic processes having independent increments, introduced by Lévy, is applied to processes having both stationary and independent increments. The question of what centering functions preserve the stationarity of the increments is studied.

Applied Mathematics and Statistics Lab., Stanford U., Calif.
ON THE GAUSS CURVATURE OF MINIMAL SURFACES, by Robert Osserman. Technical rept. no. 11 on Contract DA 04-200-ORD-704. 18 Aug 59, 26p. 12 refs. OOR rept. 1323.16-M.
Order from LC mi$2.70, ph$4.80 PB 144 333

The majority of results in this paper are derived from the following observation. Given a point p on a minimal surface, one may assign to each point of a suitable neighborhood N of p two complex variables ζ and w, such that the correspondence between ζ and w is analytic, and for the Gauss curvature K at each point of N we have the formula

$$K = -\left[\frac{4}{(1+|w|^2)^2}\left|\frac{dw}{d\zeta}\right|\right]^2$$

This allows us to translate elementary properties of analytic functions into geometric statements about minimal surfaces.

Applied Mathematics and Statistics Lab., Stanford U., Calif.
THE REPRESENTATIONS OF LINEAR FUNCTIONALS BY MEASURES ON SETS OF EXTREME POINTS, by Errett Bishop and Karel Deleeuw. Technical rept. no. 6 on Contract AF 49(638)294. 26 Oct 59, 44p. 11 refs. AFOSR-TR-59-133.
Order from LC mi$3.30, ph$7.80 PB 144 348

The existence of representations of linear functionals on subspaces and subalgebras of a C(X) by measures on "boundaries" smaller than the Silov boundary are discussed.

Applied Mathematics and Statistics Lab., Stanford U., Calif.
STATISTICAL INFERENCE ON TIME SERIES BY HILBERT SPACE METHODS, I, by Emanuel Parzen. Technical rept. no. 23 on Contract Nonr-225(21). 2 Jan 59, 132p. 14 refs.
Order from LC mi$6.90, ph$21.30 PB 144 406

This paper is the first of a series of projected papers on modern time series analysis, in which it is hoped to show how Hilbert space methods (which were introduced in the 1940's to clarify the probabilistic structure of time series) can be used to clarify, and to solve, various problems of statistical inference on time series. In this paper, among other things, we introduce a tool which plays a major role in our work, namely the representation of a stochastic process with finite second moments by means of a reproducing kernel Hilbert space.

[Army] Chemical Corps Engineering Agency, Army Chemical Center, Md.
METHODS OF SAMPLING ACCEPTANCE BY VARIABLES, by David R. Howes and Evelyn J. Leonard. 21 July 53, 32p. 11 refs. Engineering Agency Manual no. 4; AD-51 450.
Order from LC mi$3.00, ph$6.30 PB 144 394

A discussion is given of the uses of variables acceptance in production and acceptance inspection for percent defective. Charts and tables are given of the levels of protection and discrimination afforded by explicit plans. The basic assumptions, operations, and statements of requirements common to all modern variables acceptance systems are presented. The discussion is intended to make clear the use and advantages of variables acceptance procedures. Arguments and examples are furnished to show that variables sampling is able to (1) reduce inspection and save materials, acceptance delay, man hours, and facilities; (2) improve protection to the consumer by decreasing

the risks that isolated lots of inferior material will escape detection, and (3) improve discrimination. The latter implies that the acceptance quality levels can be relaxed to permit faster production, and that rejections can be reduced while maintaining the same protection to the consumer.

[Army Rocket and Guided Missile Agency] Redstone Arsenal, Ala.
DIAGONALIZATION OF OPERATOR MATRICES, WITH APPLICATIONS TO PARTIAL DIFFERENTIAL EQUATIONS, by Ben Fitzpatrick, Jr. 1 Sep 57, 17p. Rept. no. 2R24F; AD-146 524.
Order from LC mi$2.40, ph$3.30 PB 144 194

Using matrix theoretic methods, conditions for reducibility of a first order linear operator matrix have been determined. When a system of partial differential equations has a coefficient matrix L that can be so reduced, the system is readily solvable. While most systems of partial differential equations cannot be solved in this manner, the method gives the solution in closed form when applicable. It is furthermore to be hoped that some of the results obtained will prove useful in matrix theory as such, in addition to the above applications to partial differential equations.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
ON THE NUMERICAL SOLUTION OF A FOURTH-ORDER PARABOLIC DIFFERENTIAL EQUATION, by Horace Flatt. Apr 56, 18p. 8 refs. Memo. rept. no. 999.
Order from LC mi$2.40, ph$3.30 PB 144 084

The purpose of this report is to describe a numerical method for obtaining the solution of a boundary-value problem involving a fourth-order parabolic differential equation. This method uses finite differences, and a comparison is made between the numerical solution obtained in this way and the solution as obtained by evaluating the analytical solution.

Minnesota U., Minneapolis.
AN ANALYTIC PROBLEM WHOSE SOLUTION FOLLOWS FROM A SIMPLE ALGEBRAIC IDENTITY, by Glen Baxter. Technical rept. no. 8 on Contract AF 18(603)30. 1 June 59, 25p. 6 refs. AFOSR-[TN]-59-592; AD-217 184.
Order from LC mi$3.70, ph$4.80 PB 143 956

The solution of a particular operator equation involving elements in a Banach algebra is shown to follow directly from an algebraic identity involving the operator. A combinatorial lemma of a rather general nature is proved and then used to show the result above. Applications to probability theory, etc. are considered.

WHICH LIE GROUPS ARE HOMOTOPY-ABELIAN? by Ioan James and Emery Thomas. Technical rept. no. 11 on Contract AF 49(638)79. Sep 59, 9p. 12 refs. AFOSR-TN-59-982.
Order from LC mi$1.80, ph$1.80 PB 144 369

We say that a topological group G is homotopy-abelian if the mappings f and $\bar{f}$, of G x G to G, are homotopic, where

$$f(x,y) = xy = f(y,x) \quad (x,y \in G).$$

The problem we consider in this paper is whether any of the non-abelian Lie groups are homotopy-abelian. Our main result is: Theorem: The classical structure classes contain no Lie group which is homotopy-abelian but not abelian. Our method is a generalization of that used by H. Samelson to show that Sp(1) is not homotopy-abelian.

Duke U., Durham, N. C.
SOME PROPERTIES OF THE FUNDAMENTAL SOLUTION OF THE PARABOLIC EQUATION, by Stewart M. Robinson. Rept. on Contract AF 18(600)1341. July 59, 29p. 15 refs. AFOSR-TN-59-789.

NOTE ON DEGREE OF APPROXIMATION BY BOUNDED ANALYTIC FUNCTIONS: PROBLEM β, by J. L. Walsh. Rept. on Contract AF 18(600)1461. Oct 59, 24p. 11 refs. AFOSR-TN-59-952; AD-228 076.
Order from LC mi$2.70, ph$4.80 PB 144 472

The present writer has recently published a general result on Problem β, and now wishes to indicate a stronger result. The older result deals with Lipschitz conditions in the hypothesis, while the new one deals with integrated Lipschitz conditions; the latter were introduced into the theory of degree of trigonometric approximation in theorems stated without proof by Hardy and Littlewood and later proved in detail by Quade. The present note is made possible by an investigation on integrated Lipschitz conditions for the complex variable made by Walsh and Russell.

Harvard U., Cambridge, Mass.
ON THE ANALOGUE FOR MAXIMALLY CONVERGENT POLYNOMIALS OF JENTZSCH'S THEOREM, by J. L. Walsh. Rept. on Contract AF 18(600)1461. Dec 58, 24p. 7 refs. AFOSR-TN-58-1086; AD-207 583.
Order from LC mi$2.70, ph$4.80 PB 144 344

Although sequences of rational and analytic functions of the complex variable have been studied in some detail regarding geometric degree of convergence, and convergent sequences of analytic functions have been basically studied with reference to their zeros, no adequate applications to maximally convergent sequence of polynomials as such have been made. In particular there has been no special study of the analogue of Jentzsch's theorem, that every point of the circle of convergence of a Taylor development is a limit point of zeros of the partial sums. The object of the present paper is to investigate specifically the zeros of maximally convergent sequences of polynomials, including in detail some illuminating special expansions.

Harvard U., Cambridge, Mass.
ON THE ASYMPTOTIC PROPERTIES OF EXTREMAL POLYNOMIALS WITH PRESCRIBED CONSTANT TERM, by J. L. Walsh. Rept. on Contract AF 18(600)1461. Oct 59, 16p. 5 refs. AFOSR-TN-59-1037.
Order from LC mi$2.40, ph$3.30 PB 144 368

The object of the present note is to study the analogue of $\lim_{n\to\infty} \|T_n(z)\|^{1/n} = \tau(E)$,
for the polynomials

$$p_n(z) = z^n + a_1 z^{n-1} + \ldots + a_n$$

of least norm where the numbers $a_n = A_n$ are prescribed; under suitable conditions on E we obtain necessary and sufficient conditions on the A_n that the analogue be valid.

RESEARCH IN ANALYSIS: EXTREME LENGTH, by James A. Jenkins. Final rept. on Contract DA 36-034-ORD-2453. Aug 59, 4p.
Order from LC mi$1.80, ph$1.80 PB 144 028

The work done under this contract has dealt with the method of the extremal metric, the results obtained showing once again the manner in which it provides a unifying principle in the Theory of Functions as well as a powerful method for deriving new results. The range of subjects covered includes quasiconformal mappings, type problems, the trajectories of quadratic differentials and especially the General Coefficient Theorem, its extensions and applications to the theory of univalent functions.

Institute for Advanced Study, Princeton, N. J.
A VARIANT OF HELLY'S THEOREM, by Branko Grünbaum. Rept. on Contract AF 49(638)253. Sep 59, 10p. 18 refs. AFOSR-TN-59-980; AD-228 283.
Order from LC mi$1.80, ph$1.80 PB 144 477

The following modification of Helly's theorem on intersections of convex sets is established, together with some related results. Let K, a subset of Euclidean space, be the union of a finite number of disjoint, compact, convex sets. Then there exists an integer $N = N(K)$ with the following property: For any family $\{K_\alpha\}$, where each K_α is the transform of K by a non-singular affine transformation T_α (depending on α), if any N of the sets K_α have a non-empty intersection, then the intersection of all the sets K_α is not empty. Examples show that none of the underlined conditions may be dropped.

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
NEW INEQUALITIES FOR MEMBRANE AND PLATE EIGENVALUES, by L. E. Payne. Rept. on Contract AF 49(638)228. Sep 59, 16p. 5 refs. Technical note BN-186; AFOSR-TN-59-1040; AD-226 856.
Order from LC mi$2.40, ph$3.30 PB 144 292

Two notes are presented on isoperimetric inequalities for membrane and plate eigenvalues. The first give upper and lower bounds for clamped plate eigenvalues in terms of fixed membrane eigenvalues for the same region. The second gives a natural extension of the isoperimetric inequality of Faber and Krahn.

Institute for Fluid Dynamics and Applied Mathematics, U. of Maryland, College Park.
A THEORY OF LOWER BOUNDS FOR EIGENVALUES, by H. F. Weinberger. Rept. on Contract AF 49(638)228. Aug 59, 99p. 59 refs. Technical note BN-183; AFOSR-TN-59-974.
Order from LC mi$5.40, ph$15.30 PB 144 306

A polynomial equation whose roots are lower bounds for the eigenvalues of a differential operator is derived. The coefficients of the equation depend upon some arbitrary functions and upon the minimal information necessary to determine any lower bounds. Conditions are given under which the lower bounds so obtained converge to the correct eigenvalues as more arbitrary functions are used. The method serves to unify and improve many of the known methods of finding lower bounds.

Institute of Mathematical Sciences, New York U., N. Y.
MATRIX INVERSION AND THE SOLUTION OF LINEAR EQUATIONS, by J. H. Curtiss. Technical rept. no. 5 on Contracts DA 30-069-ORD-1257 and N6ori-201, T. O. 1. Aug 55, 85p. 5 refs. IMM-NYU-220; AD-115 793.
Order from LC mi$4.80, ph$13.80 PB 143 840

There are a number of other ways in which the basic facts concerning the existence of solutions to systems of linear algebraic equations can be stated. The formulation given has the advantage of telling the story with a minimum amount of technical terminology. Also, it is of interest to mathematical analysts because the existence theorems for integral equations can be given a parallel formulation. The proof of the theorem is constructed in the course of the chapter. At the same time a number of other fundamental results are derived, which are essential for an understanding of the theory of linear computations.

CONVERGENT SOLUTIONS OF ORDINARY LINEAR HOMOGENEOUS DIFFERENCE EQUATIONS IN THE NEIGHBORHOOD OF AN IRREGULAR SINGULAR POINT, by William J. A. Culmer. Technical rept. no. 6, 16 June-15 Sep 59, on Problems in the Theory of Ordinary Differential and Difference Equations, Contract DA 11-022-ORD-2042. 31 Aug 59, 136p. 9 refs. OOR rept. 1469-6-M.
Order from LC mi$6.90, ph$21.30 PB 144 245

This paper deals with the solution of the linear homogeneous difference equation $X(S+1) = S^h A(S)X(S)$, where h is a constant; the independent variable S is complex; and A(S) is a 2X2 square matrix representable as a power series in 1/S, namely

$A(S) = A_0 + \frac{A_1}{S} + \frac{A_2}{S^2} \cdots$, $|S| > S_0$, which, as indicated, is convergent in some neighborhood of $S = \infty$. The coefficients A_0, A_1, A_2, $\cdots$ are known constant matrices with complex elements. The unknown X(S) is a 2X2 matrix also.

SINGULAR PERTURBATIONS OF TWO POINT BOUNDARY PROBLEMS FOR SYSTEMS OF ORDINARY DIFFERENTIAL EQUATIONS, by W. A. Harris, Jr. Technical rept. no. 5, 16 Mar-15 June 59, on Problems in the Theory of Ordinary Differential and Difference Equations, Contract DA 11-022-ORD-2042. 15 July 59, 27p. 11 refs. OOR rept. 1469-5-M.
Order from LC mi$2.70, ph$4.80 PB 144 246

Asymptotic solutions of linear systems of ordinary differential equations are employed to discuss the relationship of the solution of a certain "complete" boundary problem.

$$\begin{cases} dx_1/dt = A_{11}(t,\varepsilon)x_1(t,\varepsilon) + \cdots + A_{1\rho}(t,\varepsilon)x_\rho(t,\varepsilon) \\ \varepsilon^{h_2}(dx_2/dt) = A_{21}(t,\varepsilon)x_1(t,\varepsilon) + \cdots + A_{2\rho}(t,\varepsilon)x_\rho(t,\varepsilon) \\ \vdots \qquad\qquad \vdots \qquad\qquad \vdots \\ \varepsilon^{h_\rho}(dx_\rho/dt) = A_{\rho 1}(t,\varepsilon)x_1(t,\varepsilon) + \cdots + A_{\rho\rho}(t,\varepsilon)x_\rho(t,\varepsilon) \end{cases}$$

$$R(\varepsilon)x(a,\varepsilon) + S(\varepsilon)x(b,\varepsilon) = c(\varepsilon)$$

as $\varepsilon \to 0+$ and the related "degenerate" problem obtained by setting $\varepsilon = 0$. Here the h_i are integers, $0 < h_2 < \cdots < h_\rho$, x_i is a vector of dimension n_i, $A_{ij}(t,\varepsilon)$ are matrices of appropriate orders with asymptotic expansions, x is the vector $\begin{pmatrix} x_1 \\ \vdots \\ x_\rho \end{pmatrix}$, R and S are square matrices of order $\sum_{i=1}^{\rho} n_i$ and $\varepsilon > c$. It is shown that under certain conditions the solution of the "complete" problem as $\varepsilon \to 0+$ approaches a solution of the "degenerate" differential system and satisfies n_1 appropriate "degenerate" boundary conditions.

Johns Hopkins U., Baltimore, Md.
ON SPHERICAL IMAGE MAPS WHOSE JACOBIANS DO NOT CHANGE SIGN, by Philip Hartman and Louis Nirenberg. Technical rept. no. 10 on Contract AF 18(603)41. Mar 59, 30p. 11 refs. AFOSR-TN-59-549; AD-216 659.
Order from LC mi$2.70, ph$4.80 PB 144 340

The first part of the paper deals with mappings $p = p(x)$ of an n-dimensional x region into n-dimensional p space with a Jacobian J(x) which does not change sign. A map $p = p(x)$ is called a gradient map if p(x) is locally a gradient. One of the theorems proved, for example, states that a gradient map $p = p(x)$ with a Jacobian which does not change sign is monotone in the sense that the boundary of the image set is contained in the image of the boundary. Analogous results are valid for the spherical image mapping of an n-dimensional hypersurfaces immersed in (n + 1)-dimensional Euclidean space. The next part of the paper concerns applications of the results of the first part; for example, there are obtained an n-dimensional generalization of the Rado (von Neumann) theorem on saddle surfaces, a characterization of complete hypersurfaces of constant zero curvature in Euclidean spaces as cylinders, and, for n = 2, properties of the x sets grad z(x) = const. if the Hessian determinant of z is identically zero.

ON EXPONENTIAL REPRESENTATIONS OF ANALYTIC FUNCTIONS IN THE UPPER HALF-PLANE WITH POSITIVE IMAGINARY PART, by N. Aronszajn and W. F. Donoghue, Jr. Technical rept. 20 on Studies in Eigenvalue Problems, Contract Nonr-583(04). 1957, 76p. 20 refs. AD-145 600.
Order from LC mi$4.50, ph$12.30 PB 137 574

The work presented in this paper has its origin in certain theorems which were needed by the authors for their forthcoming paper on "Finite dimensional perturbations of spectral problems and approximation methods". These theorems were closely related to results obtained by S. Verblunsky and H. Delange but could not be deduced from those results. Thus we were led to investigate in general the question of the exponential representation of functions analytic in the upper half-plane with positive imaginary part there, a class denoted in this paper by P. The results of that investigation form the content of the paper, and the theorems which we required for out future paper as well as the theorems of Verblunsky and Delange occur as very special cases of those results.

MULTIVARIATE CHEBYSHEV TYPE INEQUALITIES, by Albert W. Marshall and Ingram Olkin. Interim technical rept. no. 14 on Contract DA 20-018-ORD-14735. 25 Aug 59, 35p. 9 refs. OOR rept. 1840.12-M.
Order from LC mi$3.00, ph$6.30 PB 144 466

Various inequalities involving the minimum component or the product of components of a random vector are considered. Derivations and proofs of sharpness for these two classes of inequalities show remarkable similarities. Some of each type occur as special cases of a general theorem.

Michigan State U., [East Lansing].
A ONE-SIDED INEQUALITY OF THE CHEBYSHEV TYPE, by Ingram Olkin and Albert W. Marshall. Interim technical rept. no. 13 on Contract DA 20-018-ORD-14735. 25 June 59, 12p. 2 refs. OOR Rept. no. 1840:11.
Order from LC mi$2.40, ph$3.30 PB 144 086

Let $x = (x_1, \ldots, x_k)$ be a random vector with $Ex_i = 0$ and either (i) $Ex_i^2 = \sigma^2$, $Ex_ix_j = \sigma^2\rho$ $(i \neq j)$, $i, j = 1, \ldots, k$, or (ii) $Ex_i^2 = \sigma_i^2$, $i = 1, \ldots, k$. In each case a sharp upper bound (only involving the specified moments) for $P[x_1 \geq 1 \text{ or } \ldots \text{ or } x_k \geq 1]$ is obtained. A formulation for more general one-sided bounds is also discussed.

Michigan State U., East Lansing.
ORTHOGONAL POLYNOMIALS IN ONE AND TWO DIMENSIONS, by Heinrich Larcher and Ingram Olkin. Technical rept. no. 7 on Basic Research in Multivariate Analysis, Contract DA 20-018-ORD-14735. 17 May 57, 17p. 3 refs. AD-131 491.
Order from LC mi$2.40, ph$3.30 PB 137 834

Two methods of obtaining systems of orthogonal polynomials for given 1- and 2-dimensional regions are developed. One technique is the modification of that presented by Grobner (Monatshefte fur Mathematik 52:38-54, 1948) so that the system for certain regions in the x-y plane may be obtained immediately by the calculus of variations. The method concerns itself with regions for which a closed form expression for the polynomial exists. In certain cases the polynomial might be a function of x alone; the procedure may be carried out with x and y interchanged. Examples are worked out which define systems of orthogonal polynomials for the square with corners (1, 1), (-1, 1), (-1, -1), and (1, -1); and for the triangle with vertices (0, 0), (1, 0), and (0. 1). A new method is also developed which permits a generalization to higher dimensions. Two examples are considered, one for a linear interval and a second for a triangular region in the x-y plane. These polynomials are the same as those obtained by Grobner. From this procedure it is evident that by defining polynomials in 2 variables differently, other systems of orthogonal polynomials for a given region which are complete may be obtained.

Minnesota U. School of Business Administration, Minneapolis.
CONTRIBUTIONS TO THE THEORY OF RANK ORDER STATISTICS: THE ONE-SAMPLE CASE, by Richard Savage. Technical rept. no. 3 on Contract Nonr-2582(00). 25 Jan 59, 10p. 4 refs.
Order from LC mi$1.80, ph$1.80 PB 144 399

The one-sample problem is considered using techniques developed earlier. Let $Z=(Z_1, \ldots, Z_N)$ be a random vector with $Z_i=1(0)$ if the i-th smallest in absolute value in a sample of N from the density f(x) is positive (negative). Then

$$P(Z=z) = N! \int \ldots \int \prod_{i=1}^{N} [f^{1-z_i}(-y_i) f^{z_i}(y_i) dy_i]$$

$$0 \le y_1 \le \ldots \le y_N \le \infty$$

Conditions are found implying $P(Z=z) > P(Z=z')$ where z is derived from z' by replacing a 0 by a 1, or interchanging a 0 and 1 in z' by moving the 1 to the right. These conditions are met by the normal and other distributions.

PROPERTIES OF SOLUTIONS OF A RICCATI MATRIX DIFFERENTIAL EQUATION, by William T. Reid. Technical rept. no. 3 on Contract AF 49(638)400. Aug 59, 30p. 17 refs. AFOSR-TN-59-826.
Order from LC mi$2.70, ph$4.80 PB 144 497

In the present paper it is shown that the analytic methods of the author's earlier paper yield properties of the type presented by Redheffer; an amended form is given for the final conclusion of Redheffer's Theorem XII, which is in error. In addition, certain results of the present paper are cast in a form to establish the existence of solutions, rather than to postulate their existence as in the earlier treatments of the author and Redheffer. In particular, the improved result corresponding to Theorem 4.1 of the author's earlier paper involves an extension of a quadratic form problem considered a number of years ago by the author and several other writers. Special attention is given to Riccati equations arising as the Legendre equation for a variational problem. Finally, it is shown that the methods of the author provide the main theorem of a recent report by Redheffer on the Mycielski-Paszowski diffusion problem.

GROUPS OF AUTOMORPHISMS OF KAEHLER MANIFOLDS, by S. I. Goldberg. Rept. on Contract AF 49(638)14. July 59, 8p. 4 refs. AFOSR-TN-59-727.
Order from LC mi$1.80, ph$1.80 PB 143 953

Lichnerowicz proved that the largest connected Lie group of conformal transformations of a compact Einstein-Kaehler space $M^{2k}(k>1)$ leaves invariant the Kaehlerian structure. In this note the following much stronger result is obtained: The largest connected Lie group of conformal transformations of a 4k - dimensional compact Kaehler manifold coincides with the largest connected group of automorphisms. Theorems of a less general nature but with no restriction on the dimension of the manifold are also obtained. These results can be partially extended to the open Kaehlerian manifolds and hold also for those symplectic manifolds in which the fundamental exterior 2- form is harmonic.

Air Force Cambridge Research Center, Bedford, Mass.
THE USE OF COSET EQUIVALENCE IN THE ANALYSIS AND DECODING OF GROUP CODES, by Eugene Prange. June 59, 32p. 12 refs. AFCRC-TR-59-164.
Order from LC mi$3.00, ph$6.30 PB 143 967

For an error-correcting code group A, the group G of coordinate permutations that map A onto itself is used to define an equivalence relation on A-cosets. It is shown that this equivalence relation can be used in the analysis of the error-correcting properties of A, and in the definition and verification of operationally feasible decoding algorithms that satisfy the minimal distance criterion. Decoding algorithms under a (weak) block length criterion are also considered for a special class of group codes. Applications are made to some specific codes, the largest being a code in two symbols whose words have 45 information and 28 check positions.

Avion Div., ACF Industries, Inc., Alexandria, Va.
TWELVE DIGIT BINARY ENCODER, by R. W. Smith. Final rept. on Research and Development of an Experimental Model Binary Encoder, Contract DA 36-039-sc-72814. 15 Aug 57, 50p. AD-144 403.
Order from LC mi$3.30, ph$7.80 PB 138 092

An analysis is presented of the work done on developing and constructing a 12-digit binary encoder which converts dc analog voltages to corresponding binary numbers. The device produces binary digital numbers consisting of 11 bits and a sign bit at the rate of 500 complete codes per second. The encoding rate is determined by the frequency of an external start pulse and can vary from zero to the maximum of 500 codes per second. The analog input range is -50 v to +50 v, while the binary parallel output range extends from all zeros at -50 v to all ones at 50 v. The 5 phases of the project are discussed; they include system study and design, circuit design and test, prototype construction and test, final model construction and test, and the instruction manual and final report. The problems encountered are pointed out and their solutions are given. Photographs of the final model are included with drawings and specifications. The conclusions indicate that the unit can be reproduced easily and economically. The feasibility of transistorizing the encoder is discussed.

Ballistic Research Labs., Aberdeen Proving Ground, Md.
EDVAC SYNCHRONOUS MAGNETIC DRUM, by Chester H. Wallin and John G. Gregory. Apr 56, 24p. 5 refs. Memo. rept. no. 1001.
Order from LC mi$2.70, ph$4.80 PB 144 085

The electrical, logical, operational and servicing features of the EDVAC Synchronous Magnetic Drum Storage System are described in this report. The technique used to synchronize drum rotation with the EDVAC system, the method of transferring information to and from the drum, and the necessary controls for controlling the flow of information are completely described. Schematic, logical and mechanical drawings are included.

Columbia U. School of Engineering, New York
A DIGITAL ANALOG CONTROLLER FOR SAMPLED DATA SYSTEMS, by Stephen C. Bigelow. Technical rept. no. T-36/B on Contract AF 18(600)677 22 July 59, 55p. 6 refs. CU-56-59-AF-677-EE; AFOSR-TN-59-803.
Order from LC mi$3.60, ph$9.30 PB 143 961

This report describes a practical digital controller for sampled data control systems designed and constructed by the author under this contract. The controller is a hybrid digital-analog computer programmed to solve the control equations. The machine input and output signals are voltage analogs in the

range of from -50 to +50 volts. Arithmetic operations are performed using analog computer circuits, while storage is accomplished in digital storage registers. Analog-to-digital and digital-to-analog conversions are performed internally. It is believed that this controller serves a twofold purpose: First to demonstrate the feasibility of applying the well-developed theory of sampled data control systems to real processes, and second to provide a useful tool for further study of such systems.

General Kinetics, Inc., Arlington, Va.
OPTIMUM CODING 1103A COMPUTER, by A. C. Hendrikson, J. G. Mackinney, and A. E. Roberts, Jr. Final technical rept. on Contract DA 36-034-ORD-2519. 7 Jan 59, 60p. AD-210 180.
Order from LC mi$3.60, ph$9.30 PB 144 243

This report presents detailed results of a study performed to develop an "optimum" coding for the ERA 1103A type high-speed electronic computer. This coding is constructed to obtain characteristic values and vectors of symmetrical 2x2, 3x3, and 4x4 matrices (formed from coefficients of normal equations derived by least squares methods). The coding is general and intended to separate two, three, or four nearly identical characteristic values. Provision is included for print-out of direction cosines, magnitude, square root of magnitude and its reciprocal; checks are made for orthogonality of vectors to six significant figures and agreement to ± 10 units upon substitution in the original normal equations. Options for conversion of direction cosines to direction angles or to azimuth and elevation angles for print-out are supplied. The studies upon which coding was based included analysis of the many mathematical methods available and selection of those most appropriate for the required purpose. It is contemplated that a complete listing of the program code, together with operating instructions, will be included in a later Supplementary Report covering operational verification of the coding, which was not obtained during the subject contract period.

Northeastern U., Boston, Mass.
AN EXAMPLE AND EXTENSION OF CAPACITY CALCULATION OF A CERTAIN DISCRETE CHANNEL WITH MEMORY, by Sze-Hou Chang and Paul G. McHugh. Scientific rept. no. 2 on Contract AF 19(604)3053. 31 Aug 59, 21p. 2 refs. AFCRC-TN-59-569.
Order from LC mi$2.70, ph$4.80 PB 144 419

In a previous report the capacity of a certain binary channel with finite memory is studied. To illustrate the method of capacity calculation a channel is devised which possesses two types of imperfections, (1) the distortion due to memory and (2) contamination due to noise. This example demonstrates the relative effects of noise and memory, the increase of capacity by tolerating a greater interdigital interference and the use of pulse weighting to counteract the effect of memory. The method of calculation is further extended from the binary channel to the m-nary channel.

Rome Air Development Center, Griffiss AFB, N. Y.
IBM MILITARY COMPUTER SYSTEM, by Frank S. Morreale. Oct 59, 19p. 2 refs. RADC-TN-59-283.
Order from LC mi$2.40, ph$3.30 PB 144 467

The general design characteristics of a computer system developed by International Business Machines, Inc., is described. The system was developed to meet the data processing requirements of Semi-automatic Ground Environment (SAGE) and the Strategic Air Command Control (SACCS) Systems. The term "IBM Military Computer" is an IBM nomenclature. Air Force nomenclature for the SAGE version is AN/FSQ7-A. SACCS version has no Air Force nomenclature. Brief functional descriptions of the major computer elements are given. Typical peripheral equipments that make up the complete data processing system are also given a brief resumé.

MECHANICS

Brown U. Div. of Engineering, Providence, R. I.
ON THE STABILITY OF RIGID-PLASTIC SOLIDS, by G. R. Cowper and E. T. Onat. Technical rept. no. 10 on Contract Nonr-562(20). Dec 58, 10p. 5 refs. Nonr-562(20)/10.
Order from LC mi$1.80, ph$1.80 PB 143 982

An alternative derivation of the stability of a rigid strain-hardening body under dead loading bases on a rational perturbation procedure.

Brown U. Div. of Engineering, Providence, R. I.
PREDICTION OF ELASTIC CONSTANTS OF MULTI-PHASE MATERIALS, by B. Paul. Technical rept. no. 3 on Contract Nonr-562(19). Jan 59, 17p. 5 refs. Nonr-562(19)/3.
Order from LC mi$2.40, ph$3.30 PB 144 146

The energy theorems of elasticity theory are used to find upper and lower bounds on the elastic moduli in tension and shear for two-phase materials. A "strength of materials" type of approximate solution is also given. Comparison with experimental data for a particular alloy system shows good correlation for the approximate solution, with the scatter band bounded by the predicted limits. It is shown that the method may also be used for more general multi-phase systems, and to predict temperature dependence of the elastic constants of the composite material.

Brown U. Div. of Engineering, Providence, R. I.
AN EXPERIMENTAL INVESTIGATION OF THE INTERNAL FRICTION OF THIN PLATINUM ALLOY WIRES AT LOW FREQUENCIES, by J. Kestin and J. M. Moszynski. Technical rept. 11 on Contract AF 18(600)891. July 58, 32p. 7 refs. AF-891/11; AFOSR-TN-58-752; AD-201 516.
Order from LC mi$3.00, ph$6.30 PB 137 431

Measurement of viscosity of gases and vapours by the method of small oscillations requires the knowledge of the internal friction of the suspension wire, and of its variation with temperature. An instrument was built for the measurement of internal friction of thin wires at low frequencies and at elevated temperatures. Wire made of No. 479 Platinum Alloy (8% Tungsten, 92% Pt), stress relieved and in sizes of 0.002" diameter or over are most suitable and their damping characteristics and elastic constants at any temperature in the range up to 400 C can be predicted quite accurately.

STRESSES IN THE PLASTIC RANGE AROUND A NORMALLY LOADED CIRCULAR HOLE ON AN INFINITE SHEET, by O. L. Mangasarian. Technical rept. no. 4 on Contract Nonr-1866(02). Dec 58, 38p. 16 refs.
Order from LC mi$3.00, ph$6.30 PB 143 987

The stresses in the plastic range around a normally loaded circular hole in an infinite sheet are found numerically on the basis of both J_2 deformation and incremental theories. The results of deformation theory are quantitatively assessed in the light of a criterion, recently developed by Budiansky, for the acceptability of deformation theories. The criterion is completely satisfied. Moreover, the results obtained by using these two different theories of plasticity do not differ greatly despite the fact that the stress paths are far from being radial.

YIELD CONDITIONS FOR ROTATIONALLY SYMMETRIC SHELLS, by Philip G. Hodge, Jr. Rept. on Contract Nonr-1406(04). Dec 58, 34p. 12 refs. DOMIIT Rept. no. 1-4.
Order from LC mi$3.00, ph$6.30 PB 143 985

The yield condition for a rotationally symmetric shell may be represented as a surface in a four dimensional stress space. The exact yield surface according to the Tresca yield condition is compared with various approximations. A new approximation is suggested which combines the advantages of mathematical simplicity and reasonable accuracy. The theory is illustrated with reference to a spherical cap under uniform pressure.

DYNAMICAL RESPONSE OF AN ELASTIC HALF-SPACE TO TANGENTIAL SURFACE LOADINGS, by Chi-chang Chao. Technical rept. no. 11 on Contract Nonr-266(20). Mar 58, 62p. 22 refs. CU-11-58-ONR-266(20)CE.
Order from LC mi$3.90, ph$10.80 PB 138 589

Exact and closed-form solutions are obtained for both tangential and vertical surface displacements of a homogeneous isotropic elastic half-space due to the application, at a point on the surface, of a concentrated force tangential to the plane boundary and varying with time as the Heaviside unit function. Similar expressions for the displacements in the interior of the body along a line directly below the applied force are derived. Solutions are obtained by a semi-inverse method with the aid of Laplace and Hankel transforms. Combination of these solutions with those given earlier by Lamb and Pekeris, which give the surface displacements due to the application of a normal time-dependent force, will give the response to any inclined time-dependent force applied on the plane boundary. The reciprocal relation in the static case, between tangential surface displacement due to a vertical force and vertical surface displacement due to a tangential force applied on the plane boundary is preserved in the dynamic case.

MOMENTS OF INERTIA OF N-GONALLY SYMMETRIC BODIES, by R. S. Sery. 6 Apr 59, 21p. 5 refs. NAVORD rept. 6301.
Order from LC mi$2.70, ph$4.80 PB 144 334

Moment of inertia problems usually involve single objects such as cubes, spheres, cones or more complicated types. Occasionally a problem arises in which a group of identical, symmetrically arranged objects must be considered as an entity in order that its moment of inertia may be determined. The five fins of a hypothetical guided missile, for example, can be considered as a compound body. If the symmetry of this body is such that a rotation of $2\pi n/N$ ($n = 1, 2, 3, 4$) about the axis of symmetry is a covering operation, i.e., the final distribution of matter in the body is identical to the initial distribution, then the compound body is N-gonally symmetric. In this report three N-gonal moment of inertia equations are derived. The first of the two equations gives the moments of inertia of the body about the two principal axes which are transverse to the axis of symmetry. The second equation gives the moment of inertia of the body about the third principal axis (the axis of symmetry).

EQUATION OF STATE FOR BINARY FLUID MIXTURES, by Charles E. Hecht. Rept. on Contract N7onr-285(11). 9 Aug 57, 20p. 16 refs. WIS-ONR-24; AD-143 280.
Order from LC mi$2.40, ph$3.30 PB 137 695

range of from -50 to +50 volts. Arithmetic operations are performed using analog computer circuits, while storage is accomplished in digital storage registers. Analog-to-digital and digital-to-analog conversions are performed internally. It is believed that this controller serves a twofold purpose: First to demonstrate the feasibility of applying the well-developed theory of sampled data control systems to real processes, and second to provide a useful tool for further study of such systems.

OPTIMUM CODING 1103A COMPUTER, by A. C. Hendrikson, J. G. Mackinney, and A. E. Roberts, Jr. Final technical rept. on Contract DA 36-034-ORD-2519. 7 Jan 59. 60p. AD-210 180.
Order from LC mi$3.60, ph$9.30 PB 144 243

This report presents detailed results of a study performed to develop an "optimum" coding for the ERA 1103A type high-speed electronic computer. This coding is constructed to obtain characteristic values and vectors of symmetrical 2x2, 3x3, and 4x4 matrices (formed from coefficients of normal equations derived by least squares methods). The coding is general and intended to separate two, three, or four nearly identical characteristic values. Provision is included for print-out of direction cosines, magnitude, square root of magnitude and its reciprocal; checks are made for orthogonality of vectors to six significant figures and agreement to ±10 units upon substitution in the original normal equations. Options for conversion of direction cosines to direction angles or to azimuth and elevation angles for print-out are supplied. The studies upon which coding was based included analysis of the many mathematical methods available and selection of those most appropriate for the required purpose. It is contemplated that a complete listing of the program code, together with operating instructions, will be included in a later Supplementary Report covering operational verification of the coding, which was not obtained during the subject contract period.

AN EXAMPLE AND EXTENSION OF CAPACITY CALCULATION OF A CERTAIN DISCRETE CHANNEL WITH MEMORY, by Sze-Hou Chang and Paul G. McHugh. Scientific rept. no. 2 on Contract AF 19(604)3053. 31 Aug 59, 21p. 2 refs. AFCRC-TN-59-569.
Order from LC mi$2.70, ph$4.80 PB 144 419

In a previous report the capacity of a certain binary channel with finite memory is studied. To illustrate the method of capacity calculation a channel is devised which possesses two types of imperfections, (1) the distortion due to memory and (2) contamination due to noise. This example demonstrates the relative effects of noise and memory, the increase of capacity by tolerating a greater interdigital interference and the use of pulse weighting to counteract the effect of memory. The method of calculation is further extended from the binary channel to the m-nary channel.

IBM MILITARY COMPUTER SYSTEM, by Frank S. Morreale. Oct 59, 19p. 2 refs. RADC-TN-59-283.
Order from LC mi$2.40, ph$3.30 PB 144 467

The general design characteristics of a computer system developed by International Business Machines, Inc., is described. The system was developed to meet the data processing requirements of Semi-automatic Ground Environment (SAGE) and the Strategic Air Command Control (SACCS) Systems. The term "IBM Military Computer" is an IBM nomenclature. Air Force nomenclature for the SAGE version is AN/FSQ7-A. SACCS version has no Air Force nomenclature. Brief functional descriptions of the major computer elements are given. Typical peripheral equipments that make up the complete data processing system are also given a brief resumé.

PREDICTION OF ELASTIC CONSTANTS OF MULTI-PHASE MATERIALS, by B. Paul. Technical rept. no. 3 on Contract Nonr-562(19). Jan 59, 17p. 5 refs. Nonr-562(19)/3.
Order from LC mi$2.40, ph$3.30 PB 144 146

The energy theorems of elasticity theory are used to find upper and lower bounds on the elastic moduli in tension and shear for two-phase materials. A "strength of materials" type of approximate solution is also given. Comparison with experimental data for a particular alloy system shows good correlation for the approximate solution, with the scatter band bounded by the predicted limits. It is shown that the method may also be used for more general multi-phase systems, and to predict temperature dependence of the elastic constants of the composite material.
